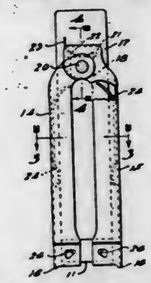
2,438,172
BOBBY PIN OPENER
Alden M. Johnson, Santa Barbara, Calif.
Application March 9, 1945, Serial No. 581,848
2 Claims. (Cl. 132—1)

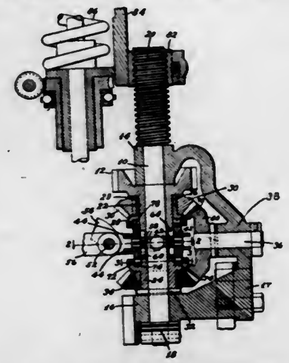
1. A bobby pin opener of the character described comprising an attaching member, a screw threaded through said attaching member, and a longitudinal blade integral with the other end of the screw and engageable between the legs of a bobby pin for spreading said legs when said bobby pin is turned about said blade, the blade including longitudinal marginal portions and a free end portion of substantially ovate section to facilitate slipping the bobby pin thereon.



2,438,173
PORTABLE AND COLLAPSIBLE SCAFFOLDING UNIT
Wallace J. S. Johnson and Thomas H. Harvey, Berkeley, Calif.; said Harvey assignor to said Johnson
Application June 24, 1946, Serial No. 678,790
11 Claims. (Cl. 304—2)

1. A scaffold unit comprising a rigid platform section, a rigid supporting section at each end of the platform section, a hinged connection between adjoining ends of the platform and supporting sections, a ladder section hingedly connected at one end to the end of one supporting section at the junction between it and the platform section, and a detachable connection between the other end of the ladder section and the other supporting section at the end of the

latter opposite its connection with the platform section.



2,438,174
FASTENER APPLYING TOOL
Howard M. Laing, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application February 28, 1944, Serial No. 524,189
5 Claims. (Cl. 29—270)

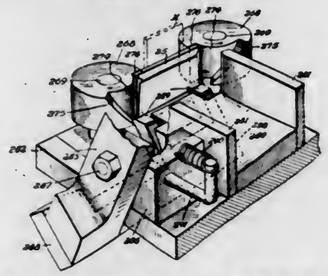
1. A tool for installing a fastener in materials to be attached together, comprising a pair of gripping members having lower ends adapted to engage the fastener and grip the same therebetween, a slide member interposed between said gripping members, the adjacent edges of said slide member and said gripping members having cooperating guide portions for guiding the slide by said gripping members for sliding movement relative thereto, and a pivotal connection between the upper end of said gripping members extending through the upper end of said slide member, said slide member having means engageable with the fastener intermediate the gripping members and cooperating with the latter to grip the fastener and also slidable relatively thereto for forcing the fastener out of gripped position therebetween.

2,438,175
AXIALLY ENGAGING POSITIVE CLUTCH
John T. Lancaster, Newton, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application October 10, 1945, Serial No. 621,523
1 Claim. (Cl. 192—67)

In a rotary clutch, a driving member, a driven member, at least one antifriction roll journaled for idle rotation on one of said members with its axis substantially radial with respect to the axis of rotation of the clutch, a plurality of abutments on the other clutch member, and means for shifting one of said clutch members axially to engage said roll with and disengage it from one of said abutments, each of said abutments having a leading and a trailing face, one of said faces being plane and parallel to and slightly offset from the

axis of the clutch for drive-transmitting engagement with said roll and the other face being sloped away from said drive-transmitting face to provide a maximum of circumferential clearance space between the abutments for easy entry of the roll between the abutments and also to provide for the abutment a maximum of strength consistent with such clearance space.

2,438,176
PRODUCTION OF GASPROOF COMPOUND FABRICS
Louis Amédée Lantz and Arthur Schofield, Manchester, England, assignors to The Calico Printers' Association Limited, Manchester, England, a British company
No Drawing. Original application July 16, 1943, Serial No. 495,077. Divided and this application July 8, 1944, Serial No. 544,144. In Great Britain May 20, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires May 20, 1962
11 Claims. (Cl. 154—140)

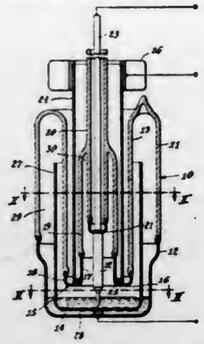


1. A method of producing a composite flexible fabric adapted to resist penetration of liquid and gaseous chemical warfare agents, comprising applying to a plurality of fabric webs an aqueous solution containing a substance selected from the group consisting of polyvinyl alcohol and water-soluble partial polyvinyl alcohols, an acid catalyst, and an aldehyde in a quantity sufficient only to insolubilise the alcohol, combining the webs by means of the interlayers formed from this solution and then heating to form a condensation product in situ which is insoluble both in water and organic solvents.

2,438,177
C - p - AMINOBENZENESULFONAMIDO - SUBSTITUTED THIAZOLINES AND METHOD FOR THEIR PRODUCTION
William A. Lott, East Orange, and Frank H. Bergeim, Highland Park, N. J., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application March 18, 1939, Serial No. 262,729
4 Claims. (Cl. 260—239.6)

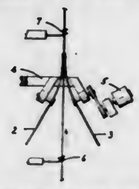
1. C-p-amino-benzene-sulfonamido-substituted thiazolines.

4. The method of preparing C-p-amino-benzene-sulfonamido-substituted thiazolines which comprises reacting a p-amino-benzene-sulfonyl halide, the amino group thereof being protected, with a C-amino-substituted thiazoline in a suitable inert solvent.



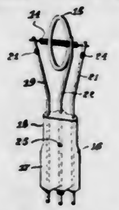
2,438,178
MECHANISM FOR CONVEYING, DISCHARGING, AND ASSORTING WRAPPED ARTICLES
Clarence J. Malhiot, Oak Park, Ill., assignor to F. B. Redington Co., Chicago, Ill., a corporation of Illinois
Original application May 8, 1942, Serial No. 442,205. Divided and this application September 9, 1944, Serial No. 553,450
17 Claims. (Cl. 209—72)

17. Article conveying and discharging mechanism for discharging wrapped articles to discharge position and comprising operable discharge members arranged adjacent opposite sides of the articles to be discharged, each of said discharging members being provided with means for discharging properly wrapped articles to a given position, means adapted to drive said discharging members in timed relation with the delivery of the wrapped articles to the discharge members, and additional means for separately discharging damaged articles, said additional means embodying an operable member for normally supporting articles adjacent a given position and upon which operable member the articles are successively moved to position to be supported thereby, urging means for urging said operable member toward said supporting position, said operable member being shiftable against the stress of the urging means by an advancing article engaging a damaged article that is upon said operable member and forcing the damaged article to shift the operable member to a position to permit discharge of the damaged article away from said given position.



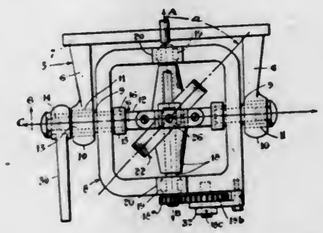
2,438,179
VAPOR FILLED ELECTRONIC DEVICE
Julien J. Mason, Montclair, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 26, 1946, Serial No. 705,883
5 Claims. (Cl. 250—27.5)

1. An electronic device comprising a sealed container having a recurringly vaporizable and condensible liquid cathode therein gravitating to the bottom thereof, an anode within said container above the cathode, and a cup-shaped shield the bottom wall whereof is submerged in the cathode and the side wall whereof projects above the cathode between said anode and the outer side wall of the container, said cup-shaped shield having holes therein below the surface level of the cathode for equalizing level of the said cathode inside and outside of said shield, and means at



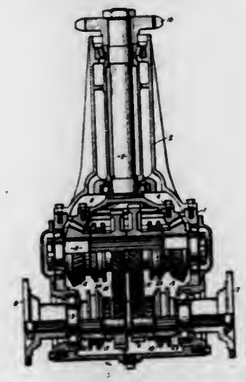
the underside of said bottom wall of the shield constituting the sole support for said shield.

2,438,180
TENSION DEVICE
Henry J. McDermott, Prospect Park, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application March 16, 1945, Serial No. 583,128
8 Claims. (Cl. 242—150)



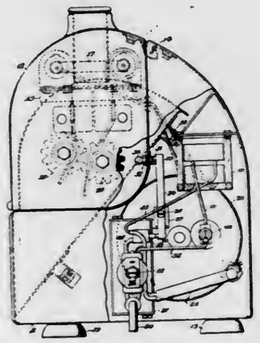
1. A thread tension device comprising two rotatable members mounted on axes of rotation inclined with respect to each other and arranged to press against each other along an outer portion of their opposed faces, at least one of the members being driven on its axis, and at least one of the members being of resiliently flexible character and being flexed out of its normal plane of disposition by pressure against the other member.

2,438,181
FLUORESCENT AND/OR CATHODE GLOW LAMP AND METHOD
Chalmers Morehead, East Orange, and Daniel S. Gustin, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 27, 1943, Serial No. 488,654
12 Claims. (Cl. 176—122)



1. A negative-glow lamp of the gaseous conduction type comprising an enclosing translucent envelope, closely spaced electrodes functioning as cathode and anode, and getter material disposed adjacent but beyond the path of the discharge to be produced between said electrodes and between one of said electrodes and the inner surface of said envelope, said material being of such a character as to lower the ionization potential of the envelope filling and make it possible to operate the lamp on low voltage.

2,438,182
MOTION-TRANSMITTING UNIT
Arnold G. Parker, Longueuil, Quebec, Canada
Application July 16, 1945, Serial No. 605,309
6 Claims. (Cl. 74—60)

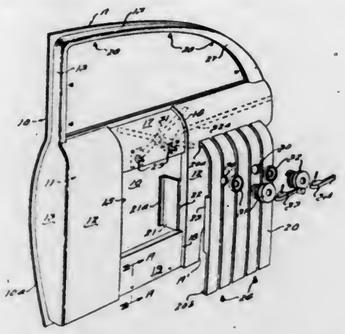


1. A motion-transmitting unit comprising a shaft, means for rotating said shaft about its central longitudinal axis, means for tilting said shaft about a transverse axis, an inclined disk carried by said shaft, a yoke through which said shaft extends, means mounting said yoke for swinging movement about said transverse axis and means interconnecting said yoke and disk so that swinging movement is imparted to the yoke by either rotary or tilting movement of said shaft.

2,438,183
POWER TAKE-OFF
Carl D. Peterson and Elmer J. Barth, Toledo, Ohio; Marion F. Peterson, executrix of said Carl D. Peterson, deceased, assignors to Dana Corporation, Toledo, Ohio, a corporation of Virginia
Application May 17, 1944, Serial No. 535,944
3 Claims. (Cl. 74—11)

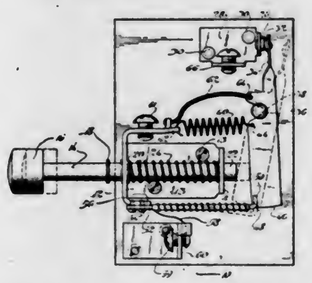
1. A power take-off comprising a casing, an input shaft and a countershaft mounted in parallelism in the casing, and an output shaft extending at an angle to the countershaft, gear trains between the input and the countershafts including gears on the input shaft, one for each train, and clutches for selectively connecting and disconnecting said gears to and from the input shaft, gears in said trains respectively on the countershaft, a gear on the output shaft, additional gears mounted on the countershaft and meshing with the gear on the output shaft on opposite sides of the axis of the output shaft, clutches for clutching and unclutching the last gears to and from the gears on the countershaft respectively and selecting and shifting means for the clutches.

2,438,184
FOOD TENDERING MACHINE
Harry C. Pfister, Long Beach, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana
Application June 16, 1944, Serial No. 540,669
4 Claims. (Cl. 99—253)



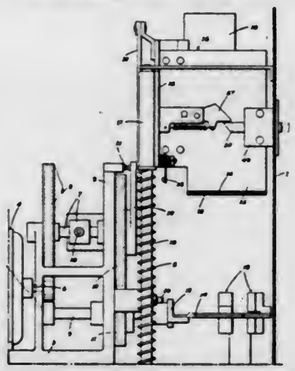
1. In a food tendering machine a movable cover, a drive motor, ultraviolet ray emitting means, switch mechanism operated by the cover and adapted to disconnect the drive motor and the ultraviolet ray emitting means from a source of electrical power when the cover is opened, and hand operated auxiliary mechanism operable when the cover is opened and adapted to reconnect the drive motor to the source of electrical power and to simultaneously disconnect the ultraviolet ray emitting means from the source of electrical power, said auxiliary mechanism including an auxiliary switch in the electrical circuit to the ultraviolet ray emitting means, said switch being mechanically connected with the hand operated mechanism.

2,438,185
DOOR STRUCTURE FOR MOTOR VEHICLES
Alvin W. Prance, Royal Oak, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application August 30, 1944, Serial No. 551,789
15 Claims. (Cl. 296—44)



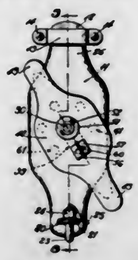
1. A door structure comprising an outer metal panel and an inner non-metallic panel spaced apart and secured together around their marginal edges, the inner panel having an opening be-

tween opposite edges thereof and recessed portions at opposite sides of the opening, and a clo-



sure panel for said opening having edge flanges fitting into said recessed portions.

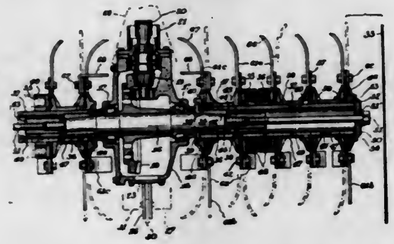
2,438,186
TIME-DELAY SWITCH
Ross D. Randall, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application January 25, 1946, Serial No. 643,329
6 Claims. (Cl. 200—116)



1. A time delay switch of the type including a bimetallic element and a heating element arranged in thermal relation therewith, comprising, in combination, a stationary contact, a movable contact associated therewith, a pivotally mounted blade carrying said movable contact at one end, a latching mechanism, including said bimetallic element, associated with the opposite end of said blade adapted to unlatch said blade when heated, a pivot pin associated with said blade at a point between said stationary contact and said latching mechanism, said pin having a groove therein, said blade having a slot therein adapted to fit said groove, resilient means connected to said blade adapted to rotate said blade around said pivot pin so as to separate said contacts when said blade is unlatched, and manual means adapted when actuated to urge said blade in the opposite direction so as to rotate said blade around said pin to bring said contacts together and thereafter to urge said blade slightly away from said pin and into latching position, said slot in said blade and said groove in said pin cooperating to prevent the tilting of said blade about its transverse axis or rotation of said blade about its longitudinal axis.

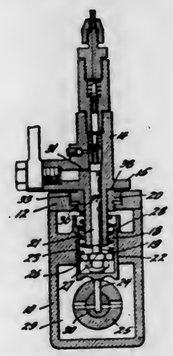
2,438,187
FLORIST'S WIRE TWISTING MACHINE
Theron E. Reynolds and Everett Fyffe, Lodi, Calif., assignors, by direct and mesne assignments, to Farmers and Merchants Bank of Lodi, Calif.
Application September 22, 1945, Serial No. 617,986
20 Claims. (Cl. 140—93)

1. A twisting machine for a florist's wire having a pair of divergent legs one of which is adapted to be held against rotation and to have a flower stem disposed therealong, said machine comprising a support, a rotary holder, means rotatably mounting the holder on the support, means on the holder to releasably secure a florist's wire thereon in position with one leg adjacent and extending lengthwise of the axis of rotation of said holder, and means to rotate the holder whereby to wrap the other leg of the wire about said one leg and a flower stem extending therealong; there being releasable catch means operative to engage and maintain said holder in a certain starting position, and the holder rotating means being operative to actuate said plate through a predetermined number of full revolutions from said starting position.



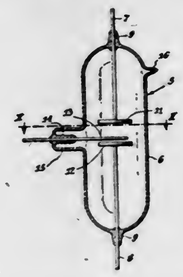
2,438,188
CLOTHESLINE REEL
William John Thrower, Chester, W. Va.
Application February 16, 1945, Serial No. 578,192
1 Claim. (Cl. 242—100)

A clothesline reel comprising a base having narrow end portions for attachment to a stationary support and an axle disposed thereon and extending outwardly therefrom, the face of said base having indentations arranged around the axle, a reel hub journaled on the axle having an inner flange and an outer flange having diametrically disposed extensions forming operating



handles, said hub and flanges being provided with a through passage parallel to the axis, a spring pressed plunger in said passage cooperating with said indentations for locking the reel in different positions, a retracting rod on the plunger having a head extending beyond the outer flange and a cam boss on the latter with which said head may be engaged to hold the plunger in retracted position.

2,438,189
ROTARY GROUNDWORKING IMPLEMENT
Harry J. Seaman, Milwaukee, Wis.
Application December 4, 1944, Serial No. 566,407
10 Claims. (Cl. 97—212)

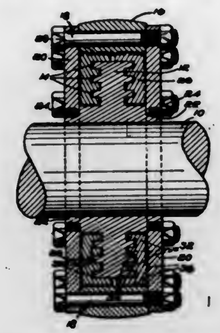


1. In a rotary implement, a rotatable tubular shaft member, a driving shaft member having an end portion rigidly mounted in an end portion of said tubular shaft member, a screw-threaded member disposed axially within said tubular shaft member and having a screw-threaded engagement with said driving shaft member for detachably securing said shaft members together, tool-carrying means on said tubular shaft member and relatively rotatable with respect thereto about the axis thereof, and friction clutch means on said tubular shaft member for drivingly connecting said tool-carrying means with said tubular shaft member.

2,438,190
FUEL INJECTION PUMP
Richard H. Sheppard, Hanover, Pa.
Application February 6, 1942, Serial No. 429,825
16 Claims. (Cl. 103—41)

1. In a Diesel engine of the type in which the plungers of the fuel injection pump are reciprocated by means of adjustable cams on a driving shaft, and no pumping action takes place until the intake fuel port is completely covered, a casing in which said shaft rotates about a fixed axis, a cylinder block assembly including a cover removably secured to the casing, a plurality of cylinder bodies individually supported by the cover and projecting through the cover into the casing for varying distances, means for moving each cylinder body a minute amount with respect to the cover and at right angles to the axis of said shaft, and means for locking each cylinder to the cover in such adjusted position, whereby any one of the cylinder bodies may be released for readjustment without disturbing any of the other cylinder bodies, and the adjustment is made without altering the position of the plungers or the cams.

2,438,191
HIGH-PRESSURE MODULATOR TUBE
Charles M. Slack, Glen Ridge, and Clarence E. Dawley, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 19, 1943, Serial No. 491,497
7 Claims. (Cl. 250—27.5)

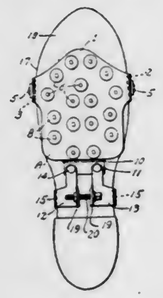


1. A high pressure and triggered spark-gap device comprising an envelope, a pair of disc-shaped main electrodes in said envelope for supporting a high current arc discharge during operation of said device, an ionizable medium in said envelope at high pressure greater than one atmosphere, and a trigger electrode disposed parallel to the surface of said main electrodes and operable upon the application of a potential between said trigger electrode and the adjacent main electrode to initiate the high current discharge in said device.

2,438,192
BEARING
Robert A. Smith, Mahwah, N. J.; Mary Gray Smith, Margaret Smith Pryde, and Mary Smith van Brederode, executrices of said Robert A. Smith, deceased, assignors to Smith & Serrell, Inc., Newark, N. J., a corporation of New Jersey
Application June 17, 1943, Serial No. 491,098
12 Claims. (Cl. 308—78)

1. In a device of the character described, a collar bearing mounted on a shaft for rotation therewith, a plurality of substantially concentric, spaced, annular, weight-supporting rings rigidly affixed to said collar bearing, said rings providing a plurality of pairs of axially spaced annular bearing surfaces, a plurality of bearing lining elements comprising annular, weight-supporting rings cooperating with the rings of said collar

bearing and radially positioned therebetween, said lining rings providing a plurality of pairs of axially spaced bearing surfaces in operative engagement with the annular bearing surfaces of



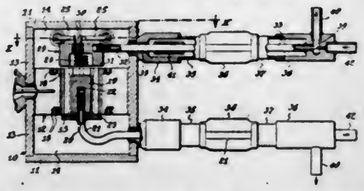
said first-named rings, means providing an enclosure, means to fixedly position said lining elements within said enclosure, and means for insuring lubrication of the surfaces in contact of said collar bearing and said lining elements.

2,438,193

SHOE ANTISKID DEVICE

Wayne Smith, Decatur, Ga.

Application November 8, 1946, Serial No. 708,609
2 Claims. (Cl. 36—7.7)



1. A non-skid shoe attachment of the character described comprising, a flat metallic plate of substantially rectangular shape, a plurality of surface engaging spikes secured to and depending from said plate in a set pattern, a pair of oppositely disposed vertical ears upwardly flanged from forward sides of said plate, an adjustable strap secured to and interconnecting said ears in a manner adapting it to encircle the shoe upper and maintain said plate adjacent the underside of the sole of said shoe, a pair of oppositely identical braces disposed at the rearward end of said plate, hinge means and pivot means attaching said braces to said plate for movement about a common axis substantially parallel to the rearward edge of said plate and about individual axes substantially perpendicular to said common axis, means carried by the outside edges of said braces adapted to securely engage the extended portion of the sole of said shoe, and screw means operatively connecting said braces to clamp said shoe sole between said sole-engaging means.

2,438,194

MAGNETRON

Howard L. Steele, Jr., Bloomfield, and John W. McNall, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application June 18, 1946, Serial No. 677,463
11 Claims. (Cl. 250—27.5)

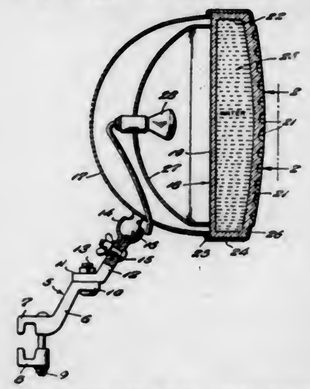
1. A magnetron comprising an evacuated enclosing housing having an anode therein, said anode providing a cathode cavity longitudinally central thereof, a cathode coaxial of and within said cavity and emission from which is substantially secondary electrons only, and means at one end of said cathode for conducting a cooling medium both to and from said cathode.

2,438,195

PRESSURE-SENSITIVE ADHESIVE TAPE

Hubert J. Tierney, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware

No Drawing. Continuation of application Serial No. 437,831, April 6, 1942. This application December 5, 1946, Serial No. 714,151
4 Claims. (Cl. 117—122)



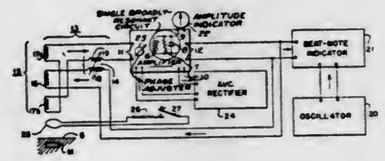
1. A pressure-sensitive adhesive tape comprising a flexible fibrous backing impregnated and unified by a non-tacky polyacrylate elastomer of the class consisting of methyl acrylate polymers, ethyl acrylate polymers and co-polymers of methyl and ethyl acrylates, and a normally tacky and pressure-sensitive non-offsetting adhesive coating firmly united to the backing.

2,438,196

HEADLIGHT AND SUPPORTING MEANS THEREFOR

Lemuel H. Washington, Portsmouth, Va.

Application May 11, 1945, Serial No. 593,204
2 Claims. (Cl. 240—41.3)



1. An anti-glare headlight construction of the class described comprising an outer shell constituting a casing, a reflector mounted in said casing, a bulb supported on said reflector, a relatively wide annular lens supporting member, said lens supporting member being in the form of a non-transparent frame substantially channel-shaped in cross-sectional form, said frame being mounted on and projecting beyond the outer end of said casing, and a dual lens unit fitted and mounted in said frame, said lens unit being a one-piece device fashioned of glass or equivalent transparent material and embodying a flat, disc-like inner lens, an outwardly spaced concavo-convex outer lens, the latter having its outer surface provided with light-diffusing projections, said lenses being connected together by an annular rim and providing a receptacle for a filtering liquid.

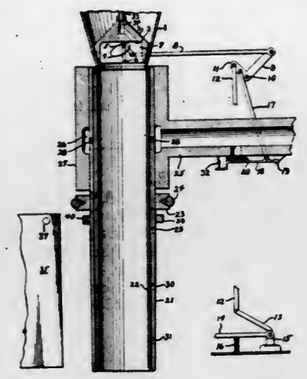
2,438,197

PHASE-SELECTIVE VARIABLE-FREQUENCY OSCILLATORY SYSTEM

Harold A. Wheeler, Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois

Application December 31, 1942, Serial No. 470,786
19 Claims. (Cl. 250—36)

1. A variable-frequency oscillatory system comprising, a stable amplifier having input and output terminals and having substantial amplification and a positive phase slope over a predetermined frequency range, a single feed-back path substantially nonselective over said range coupling said output terminals to said input terminals, means included in said feed-back path for establishing a feed-back component of coupling of a type effective primarily to cause sustained oscillation of said amplifier at a frequency in said range but ineffective to cause substantial variations of the oscillation frequency of said amplifier with variations of said component, and means included in said feed-back path for establishing a second component of feed-back coupling substantially independent of and in quadrature relation to said first-mentioned component, said second component being variable in response to a frequency-control condition external to said last-mentioned means and being effective primarily to cause variations of the frequency of oscillation in accordance with variations of said condition.



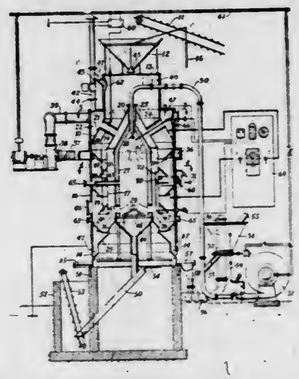
2,438,198

TUBULAR PACKAGE FORMING AND FILLING METHOD AND APPARATUS

Joseph J. Barnett, Chicago, Ill., assignor to Chase Candy Company, Chicago, Ill., a corporation of Missouri

Application March 14, 1946, Serial No. 654,369
6 Claims. (Cl. 93—5)

1. A method of forming and filling a tubular package comprising engaging a sheet of flexible material with a rotating mandrel having suction ports thereon, causing the mandrel to grip the sheet by suction exerted through said ports and wrapping the sheet about the mandrel to form a tubular structure, allowing a portion of the sheet during wrapping to protrude beyond the lower end of the mandrel, twisting together the protruding portion of the package to form a tail and



inserting the tail upwardly into the mandrel, releasing the suction applied to said package through said ports and sliding the package off the mandrel, and introducing filling material into the package as it is being slid off the mandrel.

2,438,199

METHOD AND APPARATUS FOR THE HEAT-TREATMENT OF LOW GRADE COAL

Henry E. Becker, Chicago, Ill.

Application January 12, 1942, Serial No. 426,409
3 Claims. (Cl. 202—16)

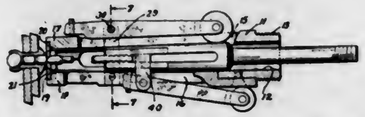
1. The method of treating a low grade coal to increase the thermal value of the coal while retaining it in the form of coal, which consists in subjecting the coal to an atmosphere of heated carbon monoxide and other reducing gases in the absence of any appreciable quantity of oxygen, in the presence of a metallic catalyst, and at the same time subjecting the coal to an alternating electrostatic discharge, and heating the coal in such atmosphere at temperatures in the approximate range of 800° F.–1260° F. for a predetermined length of time.

2,438,200

N,N'-BIS(3-DIETHYLAMINOPROPYLAMIDE) OF DIBASIC ALIPHATIC ACIDS

Lyell C. Behr and Richard S. Schreiber, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application March 4, 1946, Serial No. 651,981
1 Claim. (Cl. 260—561)



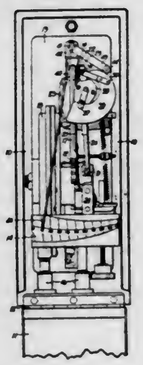
The N,N'-bis-(3-diethylaminopropylamide) of a dicarboxylic acid, $R(COOH)_2$ wherein R is a polymethylene, $-(CH_2)_n-$, radical and n is an integer from four to eight.

2,438,201

RIVET STEM PULLER AND CUTTER

Conrad R. Buchet, Pasadena, Calif., assignor of three-fourths to B. F. B. Engineers, Incorporated, a corporation of California, and one-fourth to Milton H. Lees, Jr.

Application June 23, 1944, Serial No. 541,698
8 Claims. (Cl. 218—19)



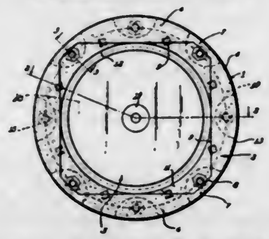
1. In a rivet working device, a body, a slide member mounted within said body, said slide member including a pair of jaws arranged in opposed relation, a link on one of said jaws, an arm mounted on said link, said arm engaging the other jaw, and means on said body for engaging said arm to rock the arm.

2,438,202

ADJUSTABLE CAM

Frank Donald Burns, Long Beach, Ind., assignor to The Hays Corporation, Michigan City, Ind., a corporation of Indiana

Application December 22, 1943, Serial No. 515,207
5 Claims. (Cl. 74—568)



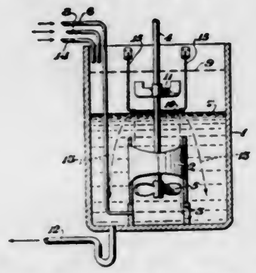
1. An adjustable cam comprising a carrier adapted to be mounted on a rotatable member, an ear projecting outwardly from and terminating in a portion off-set from said carrier, a flat cam plate of elongated curved outline, an arm projecting from one end of said cam plate and terminating in a portion off-set therefrom, means pivotally connecting the off-set terminal portions of said ear and arm, and releasable means for clamping the opposite end of said cam plate against said carrier.

2,438,203

GRINDING WHEEL

Leo F. Carr, Painesville, Ohio

Application June 11, 1945, Serial No. 598,876
3 Claims. (Cl. 51—209)



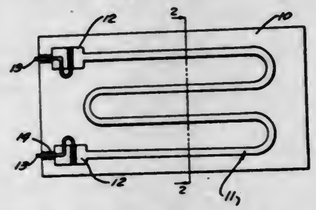
1. A rotary one-piece dynamically balanced abrading element of bonded abrasive material having a completely closed continuous external perimeter and a central opening in the front end, said opening being substantially square in shape and defining a continuous circumferential front end face adapted for grinding, said face consisting of four uniformly peripherally spaced chordal segments integrally joined at their contiguous ends, said element having an inwardly extended back at the rear end defining an annular mounting face and underlying the corners of said opening which extends thereto, a wire mesh molded in said element adjacent said mounting surface and being coextensive in area therewith, and a plurality of uniformly peripherally spaced screw elements molded in said element against the inner surface of said wire mesh for securing said element to a rotary support.

2,438,204

NITRATION APPARATUS

James B. Castner, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Original application June 10, 1943, Serial No. 490,285. Divided and this application February 8, 1945, Serial No. 576,851
1 Claim. (Cl. 23—252)



A nitration apparatus for the nitration of liquids wherein the reaction occurs at the interface of the acid and liquid to be nitrated, which comprises a reaction vessel, an elongated vessel of lesser diameter open at both ends, a mechanical agitator positioned to revolve within said elongated vessel, a shaft supporting said agitator, a plate above the upper open end of said elongated vessel a second mechanical agitator above said plate, and an inlet pipe opening substantially at the lower open end of the said elongated vessel.

2,438,205

MEASURING INSTRUMENT

J. Edwin Coates, Santa Monica, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.

Application September 15, 1945, Serial No. 616,515
11 Claims. (Cl. 201—63)

1. A strain gauge comprising: a body member adapted to be bonded to a member subject to strain; a grid carried by one face of said body member, said grid comprising a film of current-conducting material bonded to said body member throughout its length so that strains induced in said body member will be transmitted to said film; and a layer of current-conducting material carried by said film.

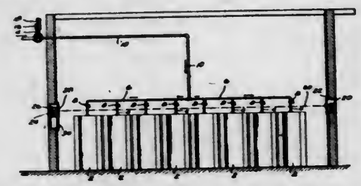
2,438,206

ROTOR FOR VIBRATOR UNITS

William P. Day, Cleveland Heights, Ohio, assignor to The International Vibration Company, Cleveland, Ohio, a corporation of Ohio

Application October 3, 1944, Serial No. 557,002
1 Claim. (Cl. 74—572)

A rotor for vibrator units comprising an inner portion, and a circular portion cast about said inner portion, said two portions being eccentrically disposed and said inner portion being formed of a heavier material than said outer portion, said outer portion having its peripheral surface recessed to provide a turbine wheel, said inner portion having a shaft formed integral therewith and extending on opposite sides thereof.



2,438,207

MEANS FOR CONTROLLING THE FLUSHING OF URINALS

John H. Derby, Scarsdale, N. Y., assignor of one-third to C. Milton Wilson and one-third to H. Dorsey Spencer, both of New York, N. Y.

Application March 16, 1944, Serial No. 526,679
2 Claims. (Cl. 4—99)

1. In semi-automatic means for controlling the flushing of urinals, the combination with a plurality of individual urinals arranged side by side, and means associated with each for directing flushing water thereover and therethrough, of manifold connections from said flush-directing means to any suitable supply of flushing water, an electrically operable valve between said manifold and said flushing water supply for controlling the simultaneous flow of water to all of said flush-directing means, a relay-controlled electric circuit for opening said valve and relay governing

means arranged to be actuated by the presence of a user of any one of said urinals in position to make use thereof, said relay governing means being arranged to maintain said valve in open condition to effect flushing of all of said urinals so long as the user remains in the aforementioned position and being so located as to insure such flushing flow before use of any urinal can take place.

2,438,208

CONTINUOUS PROCESS OF CONVERTING LACTIC ACID TO POLYLACTIC ACID

Edward M. Filachione, Philadelphia, and Charles H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application July 10, 1943, Serial No. 494,174
4 Claims. (Cl. 260—78.3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The continuous process of converting lactic acid to produce polylactic acid comprising continuously introducing an aqueous solution of lactic acid into a heated zone, disposing the lactic acid in said zone in the form of a relatively extensive moving liquid surface, compared with the volume of the acid, continuously distilling off and removing water vapor, the water vapor moving in a direction countercurrent to that of the moving liquid and in contact therewith, and removing the polylactic acid formed in the zone, the temperature in the zone being in the range 100° to 175° C., an acidic esterification catalyst being present in the lactic acid in the heated zone.

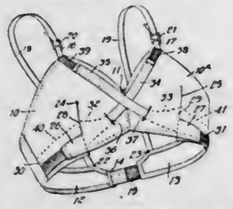
2,438,209

REACTION PRODUCT OF GRAMICIDIN AND FORMALDEHYDE AND METHOD OF PRODUCTION

Heinz L. Fraenkel-Conrat, Harry Humfeld, and James C. Lewis, Berkeley, Keene P. Dimick, Lafayette, and Harold S. Olcott, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application September 25, 1945, Serial No. 618,605
4 Claims. (Cl. 260—236.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. The method of preparing a new medicinal compound having high antibiotic and low hemolytic and toxic properties comprising dissolving granicidin in ethanol, adjusting the pH to an alkaline reaction thence adding formalin, permit-



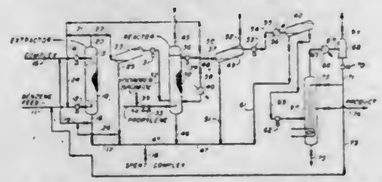
ting the reaction between the gramicidin and the formaldehyde to proceed to substantial equilibrium, diluting the resulting mixture with water and adding a salt to precipitate the gramicidin-formaldehyde, thence separating the precipitate and washing and drying it.

2,438,210

BRASSIÈRE

Edwin W. Gluckin, Brooklyn, N. Y.

Application February 21, 1945, Serial No. 578,978
4 Claims. (Cl. 2—42)



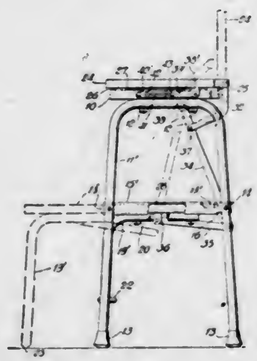
1. A garment of the class described comprising breast pockets, means for supporting the pockets on the body of the wearer, each pocket comprising lower relatively movable inner and outer sides having overlapping portions centrally of the pockets and at free edges thereof, the inner sides having wide extending portions overlying lower portions of the outer sides, elastic straps joining side extensions with outer side portions of the pockets, means extending from the outer sides of the pockets to upper central portions of opposed pockets for supporting said outer sides firmly upon the breasts of a wearer, said last named means comprising wide pad portions of lastex material arranged adjacent lower portions of the inner sides of the pockets, and other pad portions extending from free inner edges of the outer sides of the pockets to outer side edges of the pockets and arranged upon inner surfaces of the outer side portions of said pockets.

2,438,211

PROCESS USING ALUMINUM BROMIDE-HYDROCARBON COMPLEX TO PROMOTE ALKYLATION OF AROMATIC HYDROCARBONS BY OLEFINS OF MORE THAN TWO CARBON ATOMS PER MOLECULE

Manuel H. Gorin and Lorld G. Sharp, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York

Application May 4, 1946, Serial No. 667,297
7 Claims. (Cl. 260—671)



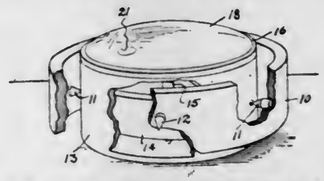
1. The continuous process for alkylating a normally liquid aromatic hydrocarbon with an aliphatic olefin containing at least three carbon atoms per molecule which comprises the steps of (1) continuously contacting said liquid aromatic hydrocarbon with a liquid aluminum bromide-aliphatic hydrocarbon complex in a contact zone to extract from said complex a sufficient amount of an organic, aluminum bromide-containing component of said complex to obtain an aromatic hydrocarbon solution containing an amount of said component equivalent to at least 0.2 weight per cent of aluminum bromide and not more than 1.0 weight per cent of aluminum bromide, (2) continuously passing the aromatic hydrocarbon solution of step 1 to a reaction zone at a temperature within the range of from 10° C. to about 65° C. and contacting said solution therein with an amount of said aliphatic olefin equal to at least two times the weight and not more than seven and one-half times the weight of the liquid aluminum bromide-aliphatic hydrocarbon complex from which the aluminum bromide-containing component is extracted in step 1 for a sufficient time to convert at least a part of said aromatic hydrocarbon to alkylated aromatic hydrocarbon and to convert a part of said aluminum bromide-containing component to insoluble, aluminum bromide-aromatic hydrocarbon complex and maintaining said contacting for an insufficient time to reduce the concentration of organic, aluminum bromide-containing component dissolved in the aromatic hydrocarbon reaction mixtures below an aluminum bromide equivalent of 0.1 weight per cent based on the weight of the aromatic hydrocarbons in said reaction mixture, (3) continuously separating the insoluble aluminum bromide-aromatic hydrocarbon complex from the aromatic hydrocarbon solution of aluminum bromide-containing component of step 2, (4) continuously separating the residual dissolved organic, aluminum bromide-containing component from the aromatic hydrocarbon solution of step 3, (5) fractionating the aromatic hydrocarbons of step 4 to obtain a stream of unreacted aromatic hydrocarbon and alkylated aromatic hydrocarbons produced in step 2, (6) recycling the unreacted aromatic hydrocarbon of step 5 to step 1, and (7) recovering at least one alkylated aromatic hydrocarbon from step 5 of the process.

2,438,212

COMBINATION LADDER STOOL

David Greene, Brooklyn, N. Y., assignor to Esmco Auto Products Corporation, Brooklyn, N. Y., a corporation of New York

Application June 21, 1945, Serial No. 600,702
7 Claims. (Cl. 155—42)



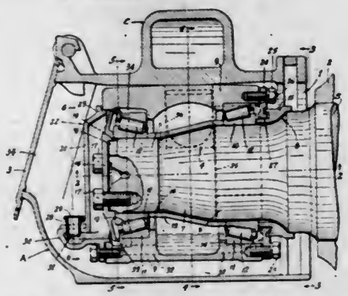
1. A chair of the class described comprising two U-shaped leg frames, a main seat joining and spacing upper ends of said frames, a reinforcing U-shaped frame bridging the leg members of the leg frames and joining two leg members of each leg frame, said reinforcing frame having channelled side portions, a step member slidably engaging said channelled side portions, said step member having substantially L-shaped leg portions, a supplemental seat normally arranged over and hingedly coupled with the main seat, a lever pivoted to the supplemental seat, an arm pivoted to and extending downwardly from the main seat to which said lever is pivoted, a link pivotally coupled with said step member and with the end of said arm providing linkage coupling between the supplemental seat and the step member whereby movement of the supplemental seat into raised position will automatically extend the step member forwardly with respect to the leg frames, and means bracing the supplemental seat in its raised position and checking inward movement of the step member.

2,438,213

GYROSCOPE ERECTION SYSTEM

Hugh G. Hamilton, Baldwin, N. Y., assignor to Eastern Air Devices, Inc., Brooklyn, N. Y., a corporation of New York

Application July 10, 1945, Serial No. 604,159
5 Claims. (Cl. 74—5)



4. In a device of the type described, a housing forming two compartments one above the other, a liquid substantially filling said upper compartment but containing a bubble, a gyroscope rotor journaled in said housing on a vertical axis, and means for supporting said housing on a pair of axes at right angles to each other and the axis of rotation of said gyroscope rotor, said liquid body providing means in itself for returning the rotor axis to the vertical upon displacement therefrom.

2,438,214

ROLLER BEARING RAILWAY CAR AXLE AND JOURNAL BOX ASSEMBLY

Ralph E. Horger, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio

Application May 22, 1944, Serial No. 536,669
5 Claims. (Cl. 308—180)

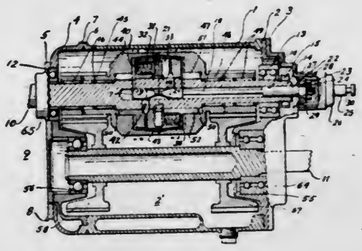
1. A railway roller bearing axle and journal box assembly comprising a conventional one-piece plain bearing journal box having an enlarged dust guard opening in the inner end thereof and the usual interior journal bearing retaining and thrust lugs in the side walls thereof, an axle having a journal portion extending into said journal box through said opening, two axially spaced roller bearings mounted on the journal portion of said axle, and a sealed lubricant containing housing for said bearings and supporting said journal box from the top thereof, said housing having vertical channels in the exterior side faces thereof in which are received said lugs, there being a clearance between the housing and the bottom of the journal box large enough to permit relative vertical movement of said journal box and housing to engage and disengage said journal box lugs and said housing channels and said opening being large enough to permit passage of said housing through said opening.

2,438,215

TREATMENT OF POLYALKYL AROMATICS

Vladimir N. Ipatieff and Louis Schmerling, Riverside, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

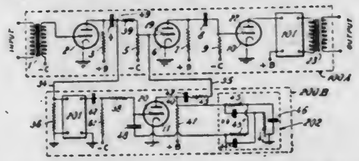
No Drawing. Application February 8, 1943, Serial No. 475,180
4 Claims. (Cl. 260—671)



1. A process for the manufacture of ethyl benzene which comprises subjecting a proportioned mixture of a polyethyl benzene and benzene to reaction in contact with a phosphoric acid catalyst.

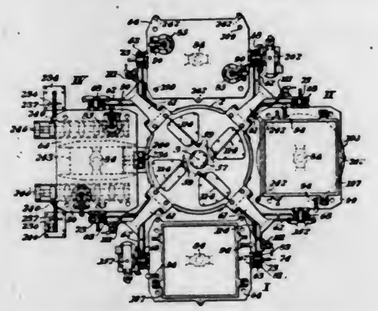
2,438,216

REVERSIBLE CLUTCHING MECHANISM



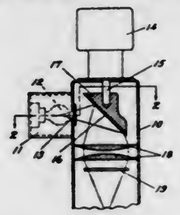
Arnold H. Jessen, Los Angeles, Calif.

Application August 17, 1943, Serial No. 498,932
10 Claims. (Cl. 74—377)



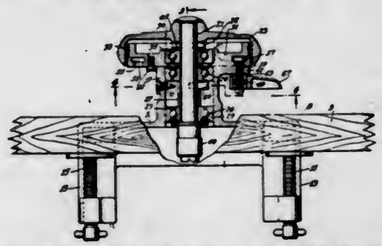
1. In a device for securing a power transmitting element to its shaft, a shaft having a bore opening to one end thereof, a first element having means journalling it to the shaft, an annular chamber in the first element adjacent the shaft, a plurality of spaced apart rollers in the chamber, a plurality of shallow grooves alined around the shaft and open to the chamber, a second element concentric with the shaft and having extensions therefrom entering the chamber and between the rollers, means on the first and second elements for frictionally engaging one another, a pawl slidable radially in the shaft and exposed to the bore of the shaft and also partially slidable in a portion of the second element, means shiftable in the bore of the shaft for allowing the pawl to be moved to release the second element, and pressure means to shift the second element when free.

2,438,217
METHOD FOR ELIMINATION OF PERIODIC STRAY SIGNALS FROM SEISMIC SIGNALS
Curtis H. Johnson, San Marino, Calif., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application June 30, 1944, Serial No. 543,035
1 Claim. (Cl. 179—171)



A method of eliminating a fundamental undesired steady-state signal and its odd harmonics from a signal that it is desired to record that comprises the steps of introducing the composite signal into a main amplifier, diverting a portion of the composite signal from the amplifier to an auxiliary circuit, there amplifying the fundamental steady-state signal relative to the remainder of the composite signal, thereafter in the auxiliary circuit distorting the fundamental steady-state signal to introduce odd harmonics thereof, returning the amplified steady-state signal and its odd harmonics to the main amplifier respectively 180° out of phase with the fundamental steady-state signal and its odd harmonics in the undiverted portion to effect substantial cancellation of the steady-state signals whereby the output signal of the main amplifier will be substantially free of the steady-state signal and its odd harmonics.

2,438,218
MOLDING MACHINE
Loyal L. Johnston, Zellenople, Pa., assignor to Herman Pneumatic Machine Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application July 6, 1944, Serial No. 543,656
11 Claims. (Cl. 22—20)

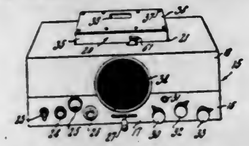


1. A molding machine comprising a carrier, a plurality of supports adapted to be carried by the carrier, a plurality of operating stations at which the carrier is adapted successively to position the respective supports, means at one station for packing mold forming material against a pattern in a flask supported by a support to form a mold, means at a second station for separating the mold and flask from the support and pattern, means also at the second station for inverting the assembly of support, flask, pattern and mold when it is desired to deliver the mold in inverted position and means at a third station for separating the mold and flask from the support and pattern when the mold is delivered thereto in inverted position.

2,438,219
PROJECTION LIGHT SOURCE FOR PHOTOGRAPHIC DEVICES
Robert C. Johnston, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application January 5, 1945, Serial No. 571,550
5 Claims. (Cl. 88—24)

1. A source of illumination for photographic printing or projecting means including in combination a central chamber, independent light sources associated with said chamber so that light from each of said sources is directed into the chamber, a filter for each of the independent sources by which certain colors of the light are absorbed before entering the chamber, and means for gathering and reflecting the colored light within the chamber including a reflector for successively intercepting rays from each source, and means for rotating it at a relatively rapid rate and so that the light rays entering the chamber through the said filters are integrated into an apparently continuous beam, and optical means to direct said beam through an original to be printed or projected.

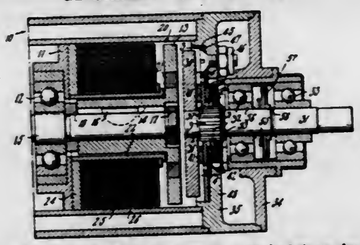
2,438,220
DRAFTING MACHINE
Leendert Ketting, Secaucus, N. J., assignor to Keuffel & Esser Company, Hoboken, N. J., a corporation of New Jersey
Application October 2, 1943, Serial No. 504,668
10 Claims. (Cl. 33—79)



4. In a drafting machine of the wheel and band type having an anchor, the combination with a pulley therein about which the band passes in maintaining the straight edge means in orientation: of means mounting said pulley for free rotation, said pulley being formed with an arcuate groove concentric with the axis of the pulley and T-shaped in cross-section and clamping means T-shaped in cross-section carried by the anchor and disposed in the groove to retain the pulley in adjusted position.

10. In a drafting machine of the wheel and band type having an anchor, the combination with a pulley therein about which the band passes in maintaining the straight edge means in orientation: of an annular passage in the pulley having a surface, means in the passage carried by the anchor and adapted to engage the surface to retain the pulley in adjusted position, said anchor also comprising stop means and a lug on said pulley engageable by the stop means and limiting rotation of the pulley in either direction.

2,438,221
METHOD OF MAKING A HARD FACING ALLOY
Jacob Kurtz, Teaneck, and Enrico Zampieri, Union City, N. J., assignors to Callite Tungsten Corporation, Union City, N. J., a corporation of Delaware
No Drawing. Application August 13, 1942, Serial No. 454,672
1 Claim. (Cl. 75—137)

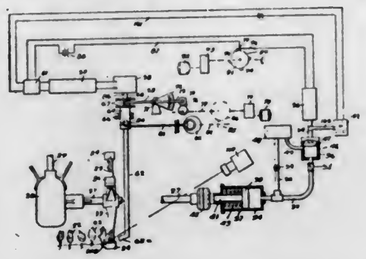


Process of making a hard facing alloy which comprises pressing into pellets and sintering about 95% by weight of tungsten carbide powder and about 5% by weight of iron carbide powder; preparing a melt of chromium and cobalt and adding thereto and fusing therewith said tungsten iron carbide pellets; then adding deoxidizing and grain refining material of the group consisting of calcium, silicon, manganese, boron, alloys of silicon, aluminum, and zirconium, and ferrous alloys of titanium, vanadium and chromium; and casting the same into ingots; the proportions of the ingredients forming said alloy being about 24% to 45% of tungsten, 1% to 5% of iron, 2% to 5% of carbon, 20% to 25% of chromium, 0.5% to 5% of deoxidizing and grain refining metal and the balance cobalt.

2,438,222
MAGNETIC SOUND TRANSLATING SYSTEM
William P. Lear, North Hollywood, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich., a corporation of Illinois
Application May 22, 1945, Serial No. 595,240
20 Claims. (Cl. 179—100.2)

19. In a magazine type magnetic sound translating apparatus including a magazine containing a pair of reels for traversing a linear magnetic recording medium with respect to a magnetic translating head, spooling mechanism for layer winding the medium onto and off of the reels and mechanical coupling means for each of the reels and for the spooling mechanism, a sound translating unit interchangeably cooperative with the magazine comprising a casing; a mounting plate mounted in said casing; a magazine supporting plate; a pair of shaft housings interconnecting said plates in vertically disposed relation; a pair of shafts each rotatably mounted in one of said housings; a coupling element on the upper end of each shaft projecting through said supporting plate for detachable cooperation with the reel coupling means of the magazine; a coupling gear projecting through said supporting plate for cooperation with the spooling mechanism coupling means; reduction gearing connecting said coupling gear to one of said shafts; a pair of friction driven wheels each secured to the lower end of one of said shafts; a driving roller rotatably mounted on said mounting plate; an electric motor coupled to said driving roller; an idler wheel normally mounted on said mounting plate intermediate and normally out of engagement with said driven wheels; a manually operable selector pivotally secured to said plate intermediate said wheels; a movable operator operative to selectively engage said idler wheel with either of said driven wheels and with said driving roller; resilient means biasing said operator to follow the movements of said selector; means restraining movement of said operator in response to movement of said selector until said selector has approached its limit of movement in either direction, said last-named means thereupon releasing said operator to be biased in the same direction by said resilient means; spaced latches pivotally mounted on said supporting plate and automatically engageable with latching means on the magazine when the latter is placed on said supporting plate; and manually operable releasing means for said latches.

2,438,223
MAGNETICALLY ACTUATED CLUTCH AND BRAKE CONSTRUCTION
William P. Lear, North Hollywood, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich., a corporation of Illinois
Application October 30, 1945, Serial No. 625,495
11 Claims. (Cl. 192—18)



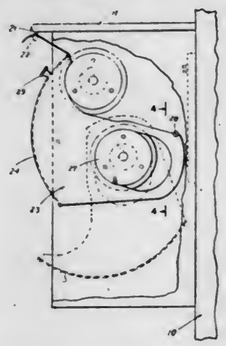
1. A clutch and brake unit comprising, in combination, a driving member; a driven member; power drive means coupled to said driving member; a shaft rotatable with said driven member; a braking member rotatable on said shaft; means biasing said driven and braking members into frictional engagement; a device engageable with said braking member to lock the same against rotation; means normally biasing said braking member and said device into engagement to exert a frictional braking drag on the shaft through said driven member; and means operable, when activated, to engage said driving and driven members and to disengage said braking member from said device to provide for rotation of said shaft by said power drive means.

2,438,224
PLANT THINNING MACHINE
Leo A. Marihart, Salinas, Calif.
Application November 2, 1942, Serial No. 464,184
6 Claims. (Cl. 97—15)

1. In an agricultural machine, a rotatable tool having ground engaging means, a frame serving to support the tool for rotation and for general movement in a direction corresponding to the axis of rotation of the tool, the engaging means of the tool being adapted to undercut the soil

along a row of plants, power means for driving the tool, actuating means for abruptly advancing the ground engaging means relative to the frame

and in the direction of movement of the frame and for causing return of the same to normal position, whereby the ground engaging means skip an area of the row of plants, and light sensitive means for controlling said actuating means to provide skip intervals between intervals during which the ground engaging means operates on the ground.



2,438,225

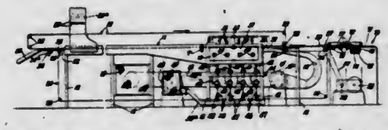
COVER AND RECEPTACLE FOR DRY PRINTING MACHINES

Willibald Martin, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

Application March 14, 1945, Serial No. 582,696

3 Claims. (Cl. 95—75)

3. In a printing machine of the type described, the combination of a feed table, supporting means for a roll of sensitized printing material positioned beneath the feed table over which that material is drawn from the roll and fed, and a combined sensitized material protecting cover and receptacle for original material to be printed, comprising light shielding end members and a connecting light shielding member extending from one end member to the other and along the length of the roll of sensitized material, means upon which said end members are pivoted comprising an elongated bearing in each end member and cooperating fixed pivots adjacent the supporting means for the roll about which the end members and the connecting member may be swung to a position in which the material is shielded and from that position to one in which the connecting member is substantially horizontal for retaining the material to be printed, and means to retain the said members in the first-mentioned position including a cooperating notch and a fixed stop member, one in one of the pivoted end members and the other carried by an adjacent fixed portion of the machine, said notch and stop member being interengaged when the shielding means is raised and the end members moved inwardly to the extent permitted by their elongated bearings, but being disengageable, one from the other, upon outward movement of said end members as permitted by the elongated bearings.



2,438,226

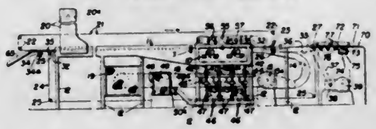
CARROTING AND DRYING OF FUR-BEARING ANIMAL SKINS

Robert E. Naumburg, West Englewood, N. J., assignor to Jonas & Naumburg Corporation, New York, N. Y., a corporation of New York

Application July 10, 1944, Serial No. 544,294

13 Claims. (Cl. 8—112)

1. In the art of preparing fur for felting, a method of treating fur-bearing animal skins from which said fur may be produced which comprises passing the fur-bearing skins which have been moistened by the application of carroting solution thereto through a zone of radiant heat energy, wherein the radiant heat rays strike the fur, simultaneously passing air over said skins while said skins are passing through said zone whereby the atmosphere adjacent the fur is maintained in a state of turbulence, said radiant heat being of sufficient intensity to singe the fur if said atmosphere is maintained quiescent.



2,438,227

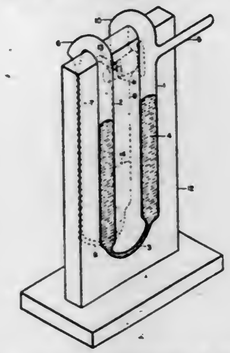
APPARATUS FOR TREATING FUR-BEARING ANIMAL SKINS

Robert E. Naumburg, West Englewood, N. J., assignor to Jonas & Naumburg Corporation, New York, N. Y., a corporation of New York

Original application July 10, 1944, Serial No. 544,294. Divided and this application April 18, 1945, Serial No. 588,977

15 Claims. (Cl. 69—28)

1. In an apparatus for treating fur-bearing animal skins the fur of which may be used for hat making, a heating chamber having a head end and a tail end, an elongate tunnel connected in tandem with the interior of said chamber at its tail end, movable means providing a conveyor for conveying said skins through said chamber and tunnel, means disposed within said chamber only and for generating radiant energy directed toward said conveyor, means for supplying air at substantially room conditions into said chamber adjacent said conveyor in the direction of travel of said conveyor to inhibit singeing of the fur and means for exhausting said air from said tunnel.



2,438,228

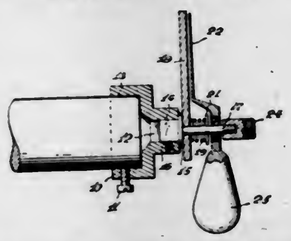
MANOMETER

Reuben A. Osten, Wilmington, Del., assignor to Wyandotte Chemicals Corporation, Wyandotte, Mich., a corporation of Michigan.

Application September 14, 1945, Serial No. 616,190

3 Claims. (Cl. 73—401)

2. A manometer comprising a vertical U-tube adapted to contain a body of mercury, said U-tube consisting of two non-capillary arms joined at their bottom ends by a capillary tube, a vertical capillary tube connected at its top to the top of one of said arms, a non-capillary tube connected at its lower end with the lower end of said vertical capillary tube and at its top to the top of the other of said arms, an outlet connection adjacent the upper end of said last-named arm leading to the source of pressure to be measured, a port leading to the atmosphere and located between said non-capillary tube and said last-named U-tube arm, and a three-way valve located at said port.



2,438,229

PENDULOUSLY OPERATED CRANK TIMING INDICATOR

Eugene A. Price, Spokane, Wash.

Application December 4, 1944, Serial No. 566,489

1 Claim. (Cl. 33—215)

An instrument for indicating the amount that a rotatable device is turned from its original position, comprising, a supporting plug for attachment to the device, a shoulder on said plug, a dial, a shaft projecting through the dial from said plug, a coiled spring secured on the projecting shaft and pressing the dial against the shoulder thereby frictionally opposing rotation of the dial on the shaft, a pointer having a plumb weight thereon, an antifriction bearing mounting the pointer on the projecting shaft beyond the spring and a head on the end of the projecting shaft for turning the shaft.

2,438,230

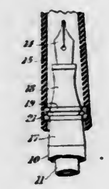
PRODUCTION OF AQUEOUS SOLS OF HYDROUS OXIDES

John W. Ryznar, La Grange, Ill., assignor to National Aluminate Corporation, Chicago, Ill., a corporation of Delaware.

No. Drawing. Application October 26, 1944, Serial No. 560,521

10 Claims. (Cl. 252—313)

6. The process of producing a colloidal aqueous sol of a hydrous oxide which consists in passing an aqueous solution of a salt of an element capable of forming such an oxide through a mass of alkali-regenerated anion-exchange material, the concentration of said salt in said solution not exceeding about 1% by weight of the solution.



2,438,231

CLOSURE FOR FOUNTAIN PENS AND THE LIKE

Edward S. Schultz, Buffalo, N. Y., and Charles D. Morton, Oak Park, Ill.; said Morton assignor to said Schultz.

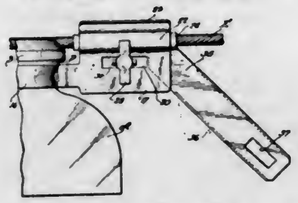
Application January 18, 1946, Serial No. 641,896

9 Claims. (Cl. 120—42.01)

1. As a new article of manufacture, a fountain pen comprising a barrel of non-ferrous material, a telescopically detachable cap of non-ferrous material, and a closure comprising an annular closure member of magnetic material secured to said barrel with a frusto-conical outer surface, and an annular member of magnetic material secured to said cap with a frusto-conical inner surface complementary with the frusto-conical outer surface of said first-named closure member and adapted for sealing contact therewith in the closed position of said cap, one of said closure members being permanently magnetized.

2,438,232

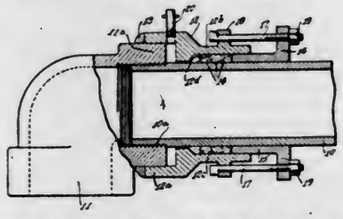
PREPARATION OF CHOLIC ACID



Robert H. Sifferd, Hollywood, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Illinois

No Drawing. Application January 7, 1944, Serial No. 517,435

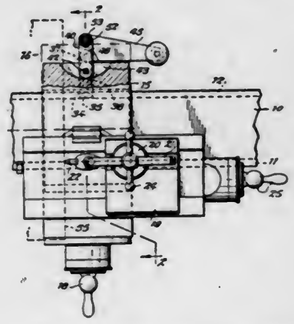
10 Claims. (Cl. 260—397.1)



1. In a process for isolating cholic acid from bile, the steps of treating the cholic acid and other bile substances associated therewith with a water-immiscible aliphatic alcohol solvent for cholic acid and an organic liquid miscible with said solvent and in which cholic acid is substantially insoluble, said liquid being selected from the group consisting of aromatic, aliphatic and chlorinated hydrocarbons, the ratio of the organic liquid to the solvent being at least two to one, and separating solid cholic acid therefrom.

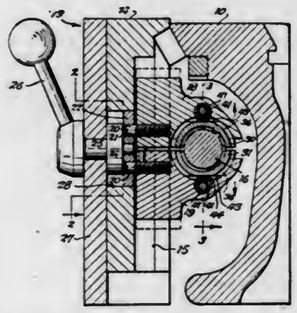
2,438,233
CONDUCTOR GRIP FOR INSULATORS
Harold S. Sines, Chicago, Ill.
Application December 13, 1945, Serial No. 634,643
6 Claims. (Cl. 174—172)

1. A conductor grip attachable to a line conductor insulator and comprising spaced-apart pairs of jaws, each jaw being beaded to provide it with a channel presented to the channel of its opposed jaw, conductor engaging liners for said channels, devices associated with the respective pairs of jaws to cause them to embrace a conductor engaged by said liners, one of said liners being formed of electricity-conducting material, and an arm formed integral with said last-mentioned liner and projecting away from the conductor grip for the support independently of the conductor of auxiliary equipment electrically connected with the conductor through said arm and the liner of which it is an integral part.



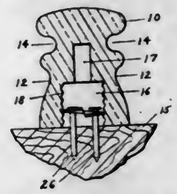
2,438,234
ROTATABLY ADJUSTABLE PIPE JOINT
Charles H. Stewart, Wilmington, Del.
Application June 9, 1944, Serial No. 539,449
1 Claim. (Cl. 285—135)

A rotatable joint comprising a first pipe member having a threaded portion, a second pipe member adapted to be threaded thereon and adjusted rotatably with respect to said first pipe member, a collar united rigidly with and in airtight relation to said second pipe member having an internal diameter larger than the external diameter of said first pipe member providing a space therebetween for receiving packing, an internal shoulder in said collar, an annular sleeve fitting in said space and means connecting said sleeve and said collar for adjusting them relatively in an axial direction to compress said packing against said internal shoulder and expand it against said sleeve and said first pipe member.



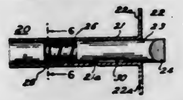
2,438,235
MEANS FOR CLAMPING MACHINE PARTS TO BEDS
David W. Strom, Elmira, N. Y., assignor to Hardinge Brothers, Inc., Elmira, N. Y.
Application April 25, 1945, Serial No. 590,269
6 Claims. (Cl. 29—1)

1. Clamping means for securing to a bed having a flat face and inclined sides converging from said flat face, a machine part having a portion formed to seat on said flat face and a portion on a side thereof for engaging one of said sides of said bed, said clamping means including a clamping bolt guided on said machine part for movement toward and from the other side of said bed, a link pivoted at one end thereof to



said machine part, a lever pivoted to said link and said bolt for moving said bolt toward and from said bed, the pivotal connection of said lever and said bolt lying substantially parallel to the direction of movement of said bolt when said bolt is in clamping engagement with said bed.

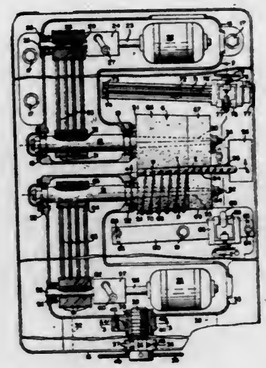
2,438,236
LEAD SCREW NUT CONSTRUCTION FOR LATHES AND THE LIKE
David W. Strom, Elmira, N. Y., assignor to Hardinge Brothers, Inc., Elmira, N. Y.
Application June 11, 1945, Serial No. 598,761
15 Claims. (Cl. 74—424.8)



1. In a machine having a lead screw, a pair of jaws movable toward and from said lead screw, and a pair of half nuts formed to be releasably secured to said jaws, that improvement which includes cooperating parts on said jaws and said half nuts for positioning said half nuts on said jaws and including collars on said half nuts and grooves in said jaws formed to receive said collars to hold said half nuts in correct relation to each other, to said jaws and to said lead screw, interengaging means on said jaws and said half nuts for holding said half nuts against movement about the axis of said lead screws, and gripping means for releasably securing said half nuts to said jaws.

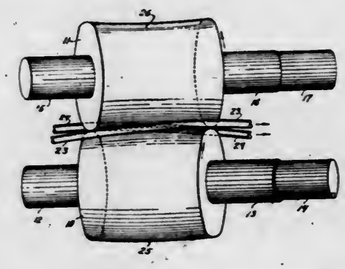
2,438,237
FENCE KNOB
August F. Toelke, St. Louis County, Mo., assignor to The Alamo Corporation, Clayton, Mo., a corporation of Missouri
Application January 7, 1944, Serial No. 517,441
15 Claims. (Cl. 174—158)

1. The combination of a fence knob and a support for said knob, said fence knob being an insulator of electricity and having a helical thread thereon, said support comprising means adapted to engage a fence post in substantially stationary engagement and a disc-shaped movable member held against rotation by said substantially stationary means and adapted to engage said helical thread on said knob, said movable member being loosely and tiltably coupled to said substantially stationary means, whereby said movable member and said knob can be tilted relative to said substantially stationary means.



2,438,238
MOTOR VEHICLE DOOR LOCK
George Tonkin, Klamath Falls, Oreg.
Application November 7, 1944, Serial No. 562,322
2 Claims. (Cl. 292—182)

1. An attachment for locking the rear door of an automobile in a closed position whenever the front door thereof is closed comprising a thin metal cylindrical casing, a cylindrical latching bolt slideably mounted within said casing, said bolt having an elongated flat surface, means for guiding said bolt and preventing rotation thereof comprising a finger having a flat end portion formed from said casing and bent inwardly into slidable engagement with said flat surface to prevent rotation of said bolt and to limit outward movement of said bolt relative to said casing, said casing having means for mounting the same adjacent said front door, said bolt having an inclined end engageable by said front door for displacement of said bolt from a door-opening position to a position for positive locking of said rear door in a closed position, said bolt having a reduced diameter along an intermediate portion thereof and a coil spring disposed in said intermediate portion for biasing said bolt to said door-opening position and against said finger.



2,438,239
BALL GRINDING MACHINE
Harry A. Toulmin, Jr., Dayton, Ohio, assignor to The Thompson Grinder Company, Springfield, Ohio, a corporation of Ohio
Application July 23, 1946, Serial No. 685,714
21 Claims. (Cl. 51—79)

6. In a ball grinding machine, a conically shaped grinding wheel and conically shaped regulating wheel located adjacent one another to form a variable width throat therebetween, means for rotating said grinding wheel at grinding speeds, means for rotating said regulating

wheel at feeding speeds, and means formed on said regulating wheel to move a spherical work piece when placed in the narrower end of said throat toward the wider portion of said throat.

2,438,240
METHOD FOR STRAIGHTENING RODS
André Joseph Trudeau, Waterbury, Conn., assignor to Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation
Application September 28, 1945, Serial No. 619,136
1 Claim. (Cl. 153—60)

The process of simultaneously straightening two rods or the like including: passing two rods in the same general direction longitudinally into rod-straightening mechanism having a pair of straightening-rolls arranged adjacent but spaced apart from one another and rotating in the same direction of rotation about their respective longitudinal axes, which said axes are arranged in angularly crossed relation to one another, and which said mechanism has two rod-guides located between said rolls and at opposite sides of the median plane of said rolls and spaced apart from one another, and which said rolls and guides simultaneously support, rotate, feed longitudinally, guide and thereby straighten said two rods at opposite sides of said median plane and spaced apart from one another with each said rod in contact with both of said rolls and one of said guides.

2,438,241

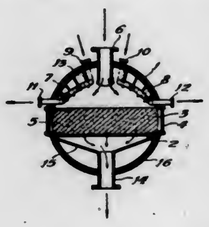
METALLATION OF BETA-KETO ESTERS

Vernon H. Wallingford, Ferguson, and August H. Homeyer, Webster Groves, Mo., assignors to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri

No Drawing. Application May 17, 1945, Serial No. 594,372
4 Claims. (Cl. 260—483)

3. The method of metallating a β-keto ester of the following structure:

$$R.CO.CHX.CO_2Y$$



where R is a hydrocarbon radical selected from the group consisting of aromatic and saturated aliphatic hydrocarbon radicals, X is a saturated aliphatic hydrocarbon radical, and Y is an alkyl radical which comprises reacting the ester with an anhydrous alcoholate of a metal selected from the group consisting of sodium, potassium and magnesium, in a reaction medium consisting essentially of a dialkyl carbonate, and removing alcohol.

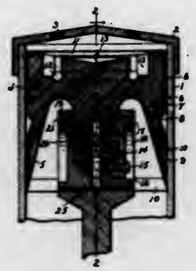
2,438,242

CATALYTIC REACTOR

Charles C. Watson, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Application May 15, 1943, Serial No. 487,086
2 Claims. (Cl. 23—288)

1. A catalytic reactor comprising in combination a shell, a relatively shallow catalyst bed disposed within said shell, an inlet conduit projecting into the shell on one side of said bed for supplying a fluid reactant to the bed, heating tubes in the shell on said side of and spaced from the catalyst bed and adapted to heat the bed substantially by radiation, said tubes being disposed out of the path of flow of the fluid reactant from said inlet conduit to the catalyst bed whereby to minimize contact of the reactant with the heating tubes, means for removing reaction products from the shell on the other side of said bed, and means for passing a heating medium through the heating tubes.



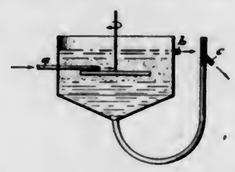
2,438,243

INTERNAL-COMBUSTION ENGINE PISTON

Stanley M. Zoromskis, Kenosha, Wis.

Application October 20, 1944, Serial No. 559,549
7 Claims. (Cl. 309—14)

1. In a piston for an engine having a cylinder, the improvement which comprises: a head portion; a skirt extending from the head portion and having an outer annular groove; said head portion having at least one inwardly-downwardly directed V-shaped annular groove in its outer side defining a prong; annular-band slippers on the outer face of said piston head and its prong; said skirt having at least one inwardly-upwardly directed V-shaped annular groove in its outer



side defining a prong; annular band slippers on the outer face of said skirt and its prong.

2,438,244

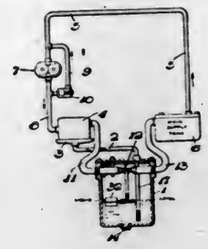
PROCESS FOR THE SEPARATION OF LIQUID EMULSIONS

Mario Biazzi, Brig, Switzerland

Application August 14, 1939, Serial No. 290,138
In Germany August 15, 1938
Section 3, Public Law 690, August 8, 1946
Patent expires August 15, 1958
4 Claims. (Cl. 252—349)

1. In the separation of emulsions of liquids having different specific gravities, the process which comprises introducing an emulsion comprising a nitrated liquid explosive in its nitrification medium into a cylindrical separating zone having a vertical axis, imparting to the emulsion in the central section of said zone a slow rotary motion in a horizontal plane, whereby the emulsion separates into layers above and below said central section, and continuing said rotary motion in said central section without any substantial centrifugal action and without substantial disturbance of the separated liquids above and below said central section while withdrawing said separated liquids from points above and below said central section.

2,438,245



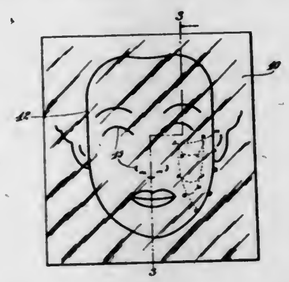
SYSTEM AND MEANS FOR RETURNING LEAKAGE FLUID TO A MAIN FLUID SUPPLY

David Gregg, Caldwell, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Application March 21, 1944, Serial No. 527,509
4 Claims. (Cl. 60—52)

1. An automatic circulating system, comprising, in combination, a source of fluid, a pressure pump, a device for utilizing said fluid under pressure of said pump, means for collecting fluid leakage from said device, a single conduit for returning fluid from said device under pressure of

said pump to said source, Venturi means provided in said single conduit and operated by said



return fluid for drawing the leakage fluid from said collecting means into said return conduit.

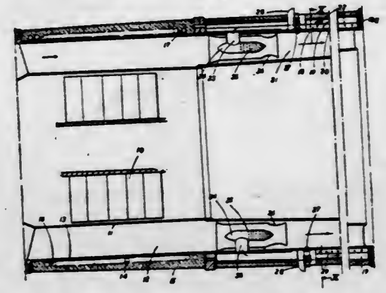
2,438,246

FACIAL ANALYSIS CHART

George L. Henry, Chicago, Ill., assignor to American Molded Products Co., Chicago, Ill., a corporation of Illinois

Application March 27, 1945, Serial No. 585,156
4 Claims. (Cl. 35—59)

1. A device for comparing variations or departures in the facial features and outlines of a subject with those of a model, comprising a hand mirror in which an image of the face may be viewed, and having markings of the features and outlines of a model face visible on the front of the mirror, the assembly of the model features and outlines being of a size to substantially coincide with those of the face image when the mirror is held at a conventional viewing distance from the face.



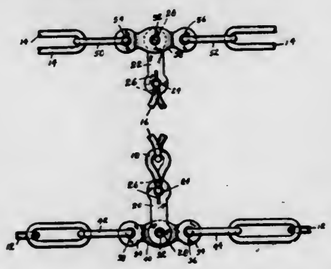
2,438,247

PREHEATING AND VAPORIZATION OF FUEL FOR INTERNAL-COMBUSTION REACTION MOTORS

Hans Knudsen, London, England

Application August 19, 1946, Serial No. 691,593
In Great Britain August 27, 1945
3 Claims. (Cl. 60—44)

1. Fuel preheating and vaporizing means for an internal combustion turbine, comprising a casing for the turbine, a helically coiled pipe surrounding the casing, and connected with a source of supply of fuel to be preheated, a combustion chamber, an annular space surrounding the combustion chamber, a blind-ended pipe in communication with one end of said helically coiled pipe and extending along the upper part of said annular space, said blind-ended pipe being perforated along its sides and permitting preheated fuel to issue therefrom and be distributed over and vaporized by the heated outer surface of the



combustion chamber, a plurality of angularly spaced outlets located at one end of said annular space, and a corresponding plurality of perforated mixing nozzles adjacent said outlets, for supplying air to said combustion chamber, said nozzles being situated in said passage.

2,438,248

TIRE CHAIN LINKAGE

Harry Madison, Fullerton, Calif.

Application January 10, 1946, Serial No. 640,258
7 Claims. (Cl. 152—241)

6. In a chain assembly, two elongated chain-links each having approximately semi-circular end portions, said assembly having a chain provided with an opening at its end, a pair of juxtaposed link members, each of said members having an aperture at each of their ends, said chain-links being respectively slidably disposed through two apertures at opposite ends of said pair, a pin carried by one of said members, the other member being provided with a hole between its ends, the said end of said chain being disposed between said members, the shank of said pin being disposed through the opening of said end of said chain and through the hole of said other member, and means for maintaining said pin disposed through said aperture and said hole during operation.

2,438,249

ROLLER EXERCISING MACHINE

Frank R. Mattison, Burbank, Calif.

Application January 4, 1946, Serial No. 639,031
1 Claim. (Cl. 128—57)

A device of the character described comprising a pair of parallel side plates each including

a straight lower edge and a convexly curvilinear upper edge conforming to a portion of the human anatomy and having ears formed thereon, a stationary cylinder immovably secured between said side plates adjacent each end thereof and extending below the lower edge thereof to form a support for the device, a plurality of rotatable

cylinders having their ends journaled in said ears intermediate said stationary cylinders in conformity to the curvilinear upper edge, a hand support means formed in each side plate, and laterally extending members secured to said side plates and extending therebetween for spacing and bracing said side plates.

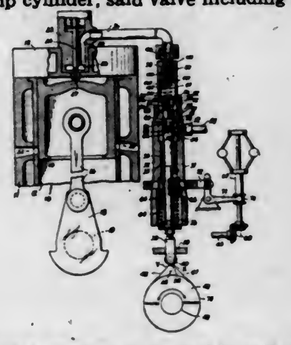
2,438,250

FILM-TYPE RESISTOR AND METHOD OF MANUFACTURING THE SAME

David W. Moore, Jr., New York, N. Y., assignor to Fairchild Camera and Instrument Corporation, a corporation of Delaware

Application December 8, 1944, Serial No. 567,220
16 Claims. (Cl. 201—75)

1. A resistor having a predetermined resistance-displacement characteristic comprising, an elongated form, a plurality of open circuit parallel conductors secured to a surface of said form and including aligned exposed portions adapted to be wiped by an adjustable contact, and a thin deposited high-resistance film formed directly on, bonded to, and bridging said conductors and having a tapered configuration correlated to said predetermined characteristic.



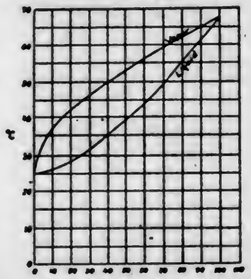
2,438,251

ENGINE FUEL SUPPLY MEANS

Tage Pedersen, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois

Application January 22, 1945, Serial No. 574,010
3 Claims. (Cl. 103—41)

1. In a fuel pump assembly for an internal combustion engine, a plunger type fuel pump including a fuel delivery passage extending therefrom, said pump comprising a pump cylinder in communication with said delivery passage and having a fuel inlet port, a plunger reciprocable in the cylinder, means for rotating the plunger to control the angular position thereof in the cylinder, port-control means movable with said plunger and adapted to close said inlet port at a time in the fuel delivery stroke of the plunger determined by the angular position of the latter as controlled by said plunger rotating means, said port-control means further being adapted for opening said port to the pump cylinder during the delivery stroke of the plunger and before the latter attains the end of its delivery stroke, and a control valve in said fuel delivery passage adjacent said pump cylinder, displaceable from a closed position in response to fuel-pressure delivery by the pump, whereby to open said passage to the pump cylinder, said valve including means



for receiving a portion of the fuel in said passage and retaining such fuel portion in isolation from the pump cylinder and from the passage beyond the valve, in the closed position of said valve.

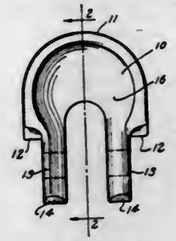
2,438,252

PURIFICATION OF HYDROGEN PEROXIDE BY A NONCONCENTRATING DISTILLATION

Chester Northup Richardson, Youngstown, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia

Application February 26, 1942, Serial No. 432,419
8 Claims. (Cl. 202—39)

1. The method of separating an aqueous hydrogen peroxide solution from relatively nonvolatile impurities which comprises heating the solution under vacuum at a substantially constant temperature such that a safe concentration is maintained, condensing a portion of the vapor under vacuum at a substantially constant temperature adapted to afford a condensate having a concentration of hydrogen peroxide substantially the same as that of the original impure aqueous hydrogen peroxide solution subjecting the remaining vapor to a second condensation at a lower temperature and returning the second condensate to the solution.



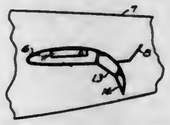
2,438,253

HEEL-SEATING PLATE

Hollis V. Shirling, Haverhill, Mass.

Application May 23, 1947, Serial No. 749,985
4 Claims. (Cl. 12—103)

1. In a device of the character described, a plate of semi-circular configuration adapted for positioning between the heel of a last and an inner sole of a shoe having a heel applied thereto, and



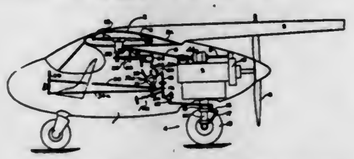
tongues extending forwardly from said plate adapted to fit between the sides of the shoe.

2,438,254

AIRCRAFT

Edward A. Stalker, Bay City, Mich.

Application August 20, 1943, Serial No. 499,391
6 Claims. (Cl. 244—42)



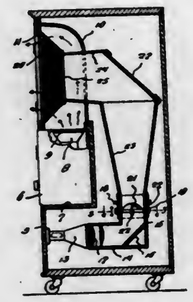
1. In combination to form a wing, a wing main body, a flap, means to support said flap on said body for adjustment to a lowered high lift position forming a highly cambered wing surface, a fuselage supported by the wing, the width of the fuselage at the wing rear portion being greater than the width at the wing front portion and progressively increasing rearwardly between said portions to create a favorable pressure gradient along the fuselage above the wing to preserve the lift of the wing portion adjacent the side surface of said fuselage, said side surface having a slot therein adjacent said rear portion of the wing, and means to induce a flow through said slot to augment said favorable pressure gradient.

2,438,255

WING LIFT CONTROL FOR AIRCRAFT

Edward A. Stalker, Bay City, Mich.

Application October 13, 1943, Serial No. 506,019
4 Claims. (Cl. 244—40)



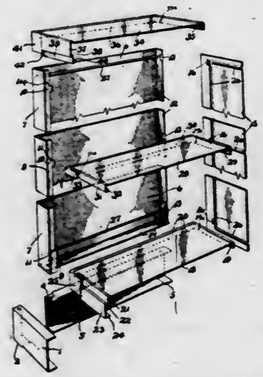
1. In combination in an aircraft having landing gear, a hollow wing, having a slot in the wing surface leading into the wing interior, boundary layer control means for increasing the lift of said wing including a blower in communication with the wing interior to induce a flow through said slot, readily controllable means for reducing the flow induced by said blower through said slot, and means responsive to the operation of said landing gear upon the landing of the aircraft for actuating said flow reducing means to reduce the flow through said slot.

2,438,256

TELEVISION CABINET

John I. Stein, Muncie, Ind.

Application April 27, 1945, Serial No. 590,645
2 Claims. (Cl. 178—5.8)

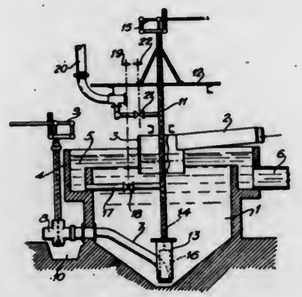


1. In combination, a generally rectangular cabinet, a receiving and amplifying unit in said cabinet between the end portions thereof disposed at the front of said cabinet, said cabinet having an opening in its front wall above said unit, a sound chamber in the cabinet behind the said opening and having communication with said unit, a picture screen mounted in said sound chamber with its edges spaced inwardly from the edges of said opening, a reticulated screen around said screen and inclined to the plane thereof to support said screen from said cabinet while passing sound waves therethrough, a television image projector in the bottom portion of said cabinet and a tubular passage connected at one end to the screen and connected at its other end to the picture receiver for projecting images from the picture receiver onto the screen.

2,438,257

KNOCKDOWN SHEET METAL CABINET

Ralph Stevenson and Isaac Nadolsky, Grand Rapids, Mich., assignors to Grand Rapids Metal Cabinet Company, Grand Rapids, Mich., a corporation of Michigan

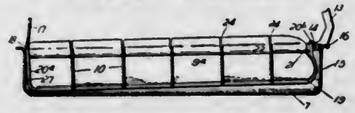


Application January 21, 1946, Serial No. 642,507
3 Claims. (Cl. 312—143)

3. In a structure as described, a base support, vertical sides of sheet metal having inturned

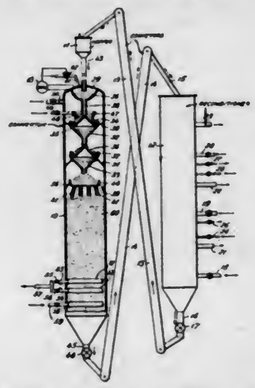
front and rear flanges connected to and extending upwardly from the base support at opposite sides thereof, a back of sheet metal located between said sides and at the front of the rear flanges thereof, said back having openings and said flanges having forwardly extending tongues passing through said openings, a bottom shelf, a plurality of intermediate, vertically spaced horizontal shelves and a top, all of sheet metal, said shelves and top having downturned front and rear flanges, said rear flanges being located forwardly of said back, and said front flanges on the vertical sides having rearwardly extending tongues, said flanges on the shelves being slotted for the reception of said tongues, said front flanges of the vertical sides at their inner edges having rearwardly turned terminal flanges from which said tongues of the front flanges extend rearwardly, said rearwardly turned terminal flanges having notches at the upper edges of said tongues receiving portions of the bottom and intermediate shelves.

2,438,258
PULP EJECTOR
Rupert Octavius Stokes, London, England
Application October 2, 1945, Serial No. 619,833
In Great Britain October 4, 1944
8 Claims. (Cl. 302—14)



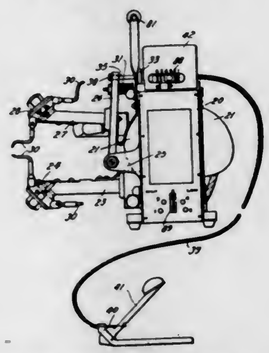
1. A pulp ejector in a vessel from which pulp is to be discharged comprising a first tubular member projecting downwards into the vessel and terminating there with an open end, a second tubular member projecting downwards within and spaced from the first and likewise terminating there with an open end, a third tubular member having an open end within and spaced from the second tubular member and having its other end arranged for the discharge of pulp outside the vessel, means for supplying water to the space between the first and second tubular members, and means for providing a pressure difference to discharge through the third tubular member the pulp teetering due to the water supplied to the space between the first and second tubular members.

2,438,259
d-LYSERGIC ACID DIETHYL AMIDE
Arthur Stoll and Albert Hofmann, Basel, Switzerland, assignors to Sandoz Ltd., Fribourg, Switzerland, a Swiss firm
No Drawing. Application April 28, 1944, Serial No. 533,264. In Switzerland April 30, 1943
1 Claim. (Cl. 260—236)



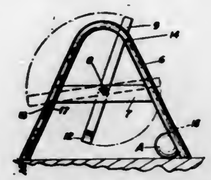
The crystalline d-lysergic acid diethyl amide, which crystallizes from benzene in prisms melting with decomposition at 80–85° C., which is difficultly soluble in water but easily soluble in methanol and in ethanol, which possesses the specific rotation $[\alpha]_D^{20}=30°$ (c=0.4 in pyridine) and which corresponds to the formula $C_{20}H_{25}ON_3$.

2,438,260
ICE TRAY AND GRID ARRANGEMENT
Richard M. Storer, Denver, Colo., assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application January 21, 1936, Serial No. 60,074
17 Claims. (Cl. 62—108.5)



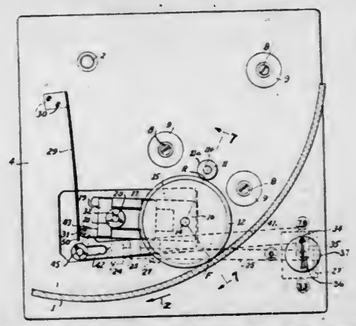
13. A unitary grid structure for disposition in a freezing tray and removable therefrom as a unit, said grid structure comprising a longitudinal wall member and a plurality of spaced apart separate and independent one-piece transverse wall members extending continuously from one side of said grid structure to the other and being interlocked with the longitudinal wall member to provide a permanent unitary structure forming ice block compartments within the tray, the mounting of said longitudinal wall member and said transverse wall members being so constructed and arranged as to permit movement of one of said members relative to another of said members in said unitary structure, and mechanism for imparting such relative movement to said wall members.

2,438,261
METHOD AND APPARATUS FOR CONVERSION OF FLUID HYDROCARBONS
Ernest Utterback, New York, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application July 3, 1946, Serial No. 681,223
15 Claims. (Cl. 196—52)



1. A method for the conversion of high boiling fluid hydrocarbons to lower boiling gaseous hydrocarbon products in the presence of a moving particle-form contact material which method comprises: introducing particle-form contact material at a suitable temperature for supporting the hydrocarbon conversion into the upper section of a confined, elongated conversion zone, passing said contact material as a substantially compact continuous stream downwardly through an upper portion of said zone in a downwardly sloping zigzag path in which it is subject to abrupt change in direction of its downward flow, directing the flow of said compact stream onto the surface of a substantially compact accumulation of contact material therebelow in said conversion zone, passing contact material from the bottom of said accumulation as a plurality of compact streams to a plurality of points uniformly distributed on the surface of a substantially compact column of said contact material maintained in said conversion zone below said accumulation, withdrawing contact material from the lower section of said column at a controlled throttled rate so as to maintain continuity of compact contact material body from the location of withdrawl to the initial point of contact material introduction into said conversion zone, spraying a high boiling liquid hydrocarbon charge onto said contact material introduced to said conversion zone at a location near the beginning of its zigzag path of travel so as to become thoroughly mixed with the contact material by the time it reaches said column within said conversion zone, passing the hydrocarbons downwardly through said column to effect the desired conversion of said hydrocarbons to lower boiling gaseous hydrocarbon products, and withdrawing gaseous hydrocarbon products separately of said contact material from the lower section of said conversion zone.

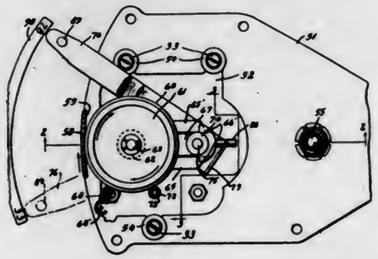
2,438,262
ELECTRIC WELDING MACHINE
Harold Gladstone Watkin, Liverpool, England
Application February 21, 1945, Serial No. 579,081
In Great Britain February 16, 1944
3 Claims. (Cl. 219—4)



1. Switching mechanism of the type employed in connection with a welding machine of the kind specified and having a timing switch for the welding current comprising a spring-controlled cam shaft, an arm on said cam shaft, a pawl on a part of the machine-operating member which pawl moves forward with said part when the machine is operated and engages said arm and carries it and the cam shaft with it against the control spring thereof and subsequently releases said arm and permits return movement of the cam shaft under the action of its spring, a cam on said cam shaft, resilient contact means adapted to be closed by the cam on return movement of the cam shaft and means for adjusting the point of engagement of said resilient contact means with the cam so as to vary the length of time the cam closes said contact means.

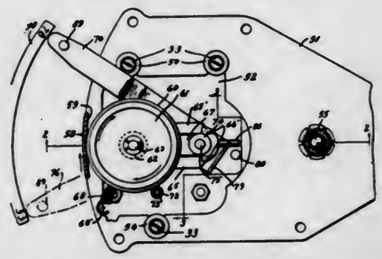
2,438,263
PADDLE TARGET UNIT FOR BALL GAMES
David S. Alves, Richmond, Calif.
Application May 22, 1946, Serial No. 671,436
1 Claim. (Cl. 273—127)

A game comprising a pair of end pieces spaced one from the other, a shaft extending between said end pieces, a rod extending between said end pieces and positioned to one side of the vertical plane through said shaft and near the upper end of said end pieces, a second shaft extending between said end pieces and mounted below the horizontal plane of said shaft, paddles pivotally mounted on said shaft and having one end longer than the other, whereby said paddles will overbalance and rest against said first-mentioned rod, said second-mentioned rod being covered with a resilient material, whereby, when said paddles are forcibly moved from their normal over-balanced position, they will engage said resiliently-covered rod and tend to bounce and return to their normal position against said first-mentioned rod.



2,438,264
PHONOGRAPH DRIVING MECHANISM
Joseph Bender, Jr., Elyria, Ohio, assignor to The General Industries Company, Elyria, Ohio, a corporation of Ohio
Application April 4, 1946, Serial No. 659,531
17 Claims. (Cl. 74—190)

1. In a two-speed friction drive for phonograph turntables, a motor, a vertically extending driving shaft, said shaft provided with two different axially aligned roller portions of different diameters disposed at relatively different levels, a turntable and a frictional wheel constantly in engagement therewith and adapted to transfer torque from said shaft to said turntable, a mount upon which said friction wheel is journalled, said mount adapted for adjustment to either of the levels of the two different roller steps and adapted to be shifted laterally in opposite directions to effect engagement of said wheel with or to effect disengagement from either step which may be disposed at the level of said wheel, manually operable controlling means comprising an oscillatory handle adapted for movement and a



plurality of motion communicating members so interconnecting said handle and said members to adapt them for sequential idler wheel moving operations, a first of said members adapted to respond to an initial portion of the movement of said handle to move said idler wheel mount and wheel laterally outwardly to disengage the wheel periphery from the preengaged roller step, means adapting said second member to respond only to a continuing movement of the said handle means in the same direction to move said mount and idler wheel vertically from the level of said preengaged step to the level of the alternate step, in combination with spring means constantly exerting pressure on said idler wheel tending to shift said wheel laterally inwardly to effect engagement with either roller step when said idler wheel is at the level of said step, and means associated with said first member and said handle and adapted to be moved only responsive to a final continuing movement of said handle to disable said first member whereby said spring means is again effective to resiliently press said idler wheel into engagement with the roller step which is disposed at the readjusted level of said idler wheel.

2,438,265
TWO-SPEED PHONOGRAPH TURNTABLE DRIVE
Robert G. Metzner, Los Angeles, Calif., assignor to The General Industries Company, Elyria, Ohio, a corporation of Ohio
Application May 1, 1946, Serial No. 666,313
14 Claims. (Cl. 74—190)

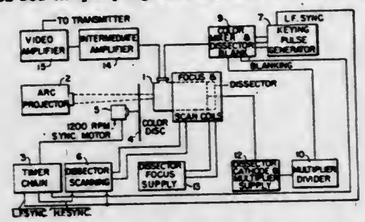
1. The combination with a peripherally flanged phonographic turntable and a motor disposed therebelow, said motor provided with an upwardly directed power shaft upwardly formed to provide two superposed steps of different diameters disposed within the vertical limits of said flange, an idler friction wheel adapted for horizontal floating movements and vertical adjustment movements, spring means biasing said wheel horizontally towards said shaft steps and said flange, a manually operable adjustment device comprising a movable controller adjustably movable in a non-stepped path between two extreme adjustment positions, camming mechanism comprising a cam and a cam follower, said cam movable responsive to movement of said controller from an initial to an alternate adjustment position and adapted to cammingly adjustably move said cam follower so as to cause it to successively move said wheel from engagement with a preengaged shaft step, and to shift it to the plane of the alternate step, including means operative responsive to a final portion of said adjustment movement of said controller adapted to free said wheel to permit movement thereof horizontally inwardly towards, and to effect peripheral frictional engagement with said alternate step, responsive to the retractive effect of said spring means.

2,438,266
TWO-SPEED DRIVE FOR PHONOGRAPH TURNTABLES
Charles E. Ewing, Elyria, Ohio, assignor to The General Industries Company, Elyria, Ohio, a corporation of Ohio
Application March 18, 1947, Serial No. 735,461
14 Claims. (Cl. 74—193)

1. In a change speed adjustment mechanism for two-speed phonograph turntable drives of the type described, the combination with an upright motor driven roller having a pair of superposed friction driving steps of different diameters, a friction wheel rotatable on a vertical axis adapted to alternately peripherally engage and be driven by one or the other of said steps, a laterally and vertically movable mount for said wheel, a first spring continuously exerting pressure tending to move said mounted wheel towards peripheral engagement with that roller step which at the time is disposed at the same level as said wheel, means for adjusting said wheel mount laterally beyond said steps and from the level of either of said steps, said adjustment means comprising a laterally movable cam element adapted to be moved laterally in a continuous uniform path, a projection of said wheel mount being disposed in the path of movement of said cam element and affording a cam follower therefor, and a relatively stationary abutment member having an upwardly extending guide surface presented toward said cam-follower and being so disposed as to be engageable by said follower when moved by said cam element, said cam element being so formed as to provide a follower-engaging surface comprising a pair of relatively upper and lower substantially horizontal lands which are relatively transversely interspaced, and a substantially steeply inclined cam surface extending between most nearly adjacent ends of said lands, a second spring constantly exerting pressure tending to move said mount in a single vertical direction, and said mount projection interchangeably adjustable by opposite lateral adjustment movements of said cam element to make pressure engagement with either of said lands responsive to pressure of said second spring, and said follower upon movement of said cam in at least one lateral direction of movement adapted to be simultaneously engaged on its two sides by relatively converging portions of said cam and guide surfaces whereby continued adjustment movement of the cam element against said follower is effective to force said follower and said mounted wheel to a different level against the opposing pressure of said second spring.

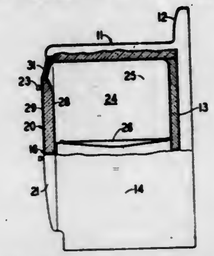
2,438,267
GRAPHITIC STEEL
Frederick R. Bonte, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
No Drawing. Application March 23, 1942, Serial No. 435,842
4 Claims. (Cl. 75—128)

3. Alloy steel containing about 1 to 2 per cent of carbon, about 0.25 to 1 per cent of chromium, about 0.75 to 1.5 per cent of manganese, about 0.25 to 1 per cent of molybdenum, about 1.5 to 2.5 per cent of nickel, about 0.75 to 1.25 per cent of silicon, and the remainder effectively iron, and characterized by capability of being hot worked and of producing upon heat treatment austenitic-martensitic structures containing graphitic carbon and spheroidized carbides dispersed finely through the structure.



2,438,268
FLEXIBLE BRISTLE HEAD TOOTHBRUSH
Louis R. Bressler, Southampton, Mass.
Application June 3, 1946, Serial No. 673,985
1 Claim. (Cl. 15—167)

A toothbrush construction comprising in combination, an integral handle portion having a bristle portion at the outer end thereof made from relatively yieldable material, said bristle portion including a plurality of bristle sections spaced apart longitudinally of the toothbrush and connected together by spaced connectors extending between adjacent bristle sections and the innermost section and handle whereby said handle and bristle sections are integral and the sections and handle are relatively yieldable, a flexible member within the handle portion adjacent the bristle sections and extending through said connectors and bristle sections so as to be concealed thereby, and bristles secured to said bristle sections.

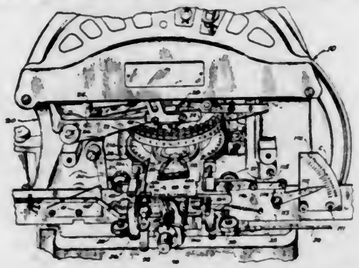


2,438,269
COLOR TELEVISION SYSTEM
John A. Buckbee, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application February 20, 1942, Serial No. 431,645
8 Claims. (Cl. 178—5.2)

1. In a television system, means for forming optical images representative of individual, primary colors in an image, means for generating electrical signal groups each of which is representative of an individual, primary color in the image; means associated with said generating means comprising successive electron-multiplier stages for amplifying said signals; and means for

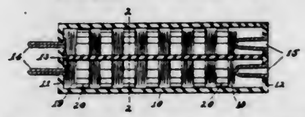
sequentially controlling the gain in said multiplier in synchronism with said signal groups.

2,438,270
WINDOW FOR COOKING RANGE OVEN DOORS
Mervin F. Cotes, East Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application November 8, 1944, Serial No. 562,424
2 Claims. (Cl. 126—200)



2. A cooking range including, in combination, a top wall, means including a plurality of substantially vertical walls forming a compartment below said top wall, one of said vertical walls being provided with an access opening of substantially the full height and width of said compartment, a door for closing said opening comprising spaced inner and outer panels, said inner and outer panels being substantially uniformly spaced from each other throughout the lower portion of the door, the outer panel being inclined upwardly and toward the inner panel adjacent the upper extremity of the door, the inner panel being inclined upwardly and toward the outer panel in a zone adjacent to and below the inclined portion of the outer panel, said door being provided with an inspection opening in the portion of the door including the inclined portion of the outer panel, and a transparent closure for said opening.

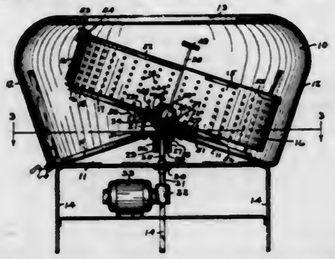
2,438,271
APPARATUS FOR INDENTING CHARACTERS IN MEDALS AND THE LIKE
Franklin E. Curtis, Willoughby, Ohio, assignor to Addressograph-Multigraph Corporation, Wilmington, Del., a corporation of Delaware
Application February 6, 1946, Serial No. 645,887
14 Claims. (Cl. 197—6.6)



1. In an apparatus for indenting type characters so as to form names and other data in the surface of a medal or the like, means for supporting and traversing such a medal or the like comprising a reciprocable carriage mounted for character spacing movement with relation to said operating position, a cross slide mounted on said

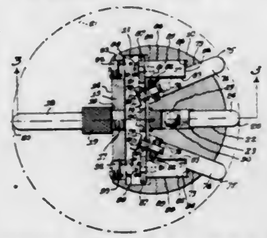
carriage for line spacing movement relative to said carriage, a shiftable stop arm mounted on said carriage, spring means urging said arm in one direction toward one position, manually operable means for moving the arm in the opposite direction, a work holding plate having supporting and positioning means thereon to receive and hold a selected medal or the like of a predetermined form in a predetermined relation on said

plate, means on said cross slide for releasably securing said plate in a predetermined relationship thereon, an abutment block having a plurality of shoulders and mounted on said plate for cooperation with said stop arm and so disposed on said plate that said shoulders may cooperate with said stop arm to accurately locate each line spacing position of such a selected medal or the like with respect to the predetermined configuration of such selected medal or the like.



2,438,272
STATIC ELIMINATOR FOR RADIO RECEIVING SETS
Darnell Asbery Dance, Salem, Ark.
Application February 28, 1947, Serial No. 731,631
6 Claims. (Cl. 201—63)

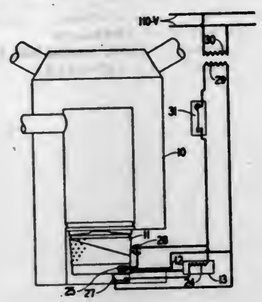
6. In a resistor for reducing static interference in radio signal receiving sets, the combination with a hollow casing having circuit terminals at its ends, of a series of resistance units each composed of laminated and pleated foil strips loosely folded and extending with their pleats crosswise of the casing and in spaced relation in the casing, those at the ends contacting said terminals, other similar formed units extending with their folds disposed longitudinally of the casing and interposed between the first mentioned units and contacting them edgewise.



2,438,273
WOBBLE BASKET WASHING MACHINE
James A. Eastes, Mount Comfort, Ind.
Application August 29, 1945, Serial No. 613,312
11 Claims. (Cl. 68—152)

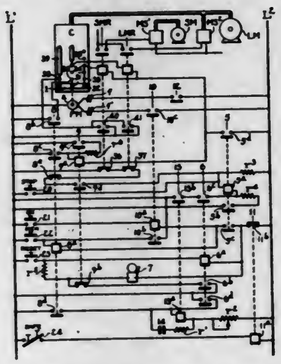
1. In a washing machine having a tub and a perforate basket therein, means for wobbling the basket comprising a central basket support ball on which the basket may universally pivot; said basket having an annular member therearound; a member extending from said support slidingly engaging said annular member; gear means intermeshing between said tub and said basket restraining the basket against circumferential travel; and means for revolving said support to carry said engaging member therewith; said extending member and said annular member being

disposed and interengaged to hold the axis of the basket at an angle to the axis of revolution of said ball to progressively tilt said basket in relation to said tub.



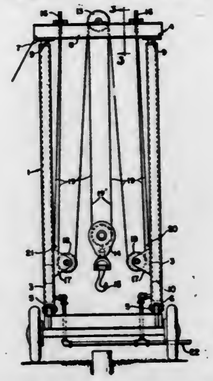
2,438,274
INTERNAL BORE GAUGE
Andrew Eisele, Detroit, Mich.
Application October 19, 1945, Serial No. 623,199
4 Claims. (Cl. 33—178)

4. In a gauge, a head, a stationary measuring pin and a movable measuring pin mounted in alignment in said head, a pair of movable notched locating pins arranged at an acute angle on opposite sides of said movable measuring pin, a measurement indicator operatively connected to said movable measuring pin, and a pair of spring-loaded plungers mounted in said head obliquely to said locating pins with their outer ends engaging said notches and urging said locating pins outwardly relatively to said head.



2,438,275
FUEL SUPPLY CONTROL MEANS FOR COMBUSTION APPARATUS
Raymond E. Fell and John W. Miller, Lansing, Mich., assignors to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application October 25, 1943, Serial No. 507,524
2 Claims. (Cl. 158—28)

1. Fuel supply control means for combustion apparatus including a pot-type liquid fuel burner having a bottom wall adapted to serve as a fuel receptacle, comprising in combination, an electrical fuel ignition unit is said burner, said unit comprising an electrical heating element in heat exchange relation with the bottom wall of the burner, means including an adjustable fuel metering device for supplying liquid fuel to the burner, a motor associated with said metering device adapted to move the latter from opened to fully closed position, a circuit for said motor including a thermostatic switch mounted exteriorly of the burner bottom wall adjacent said heating element and in heat exchange relation with said burner bottom wall, said switch being adapted to open or close said motor circuit when



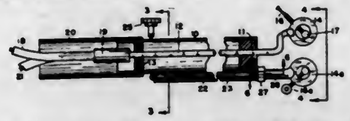
the temperature of the burner bottom wall adjacent the switch falls below or exceeds, respectively, a predetermined temperature.

2,438,276
CONTROLLER FOR MOTOR-DRIVEN PRINTING PRESSES AND OTHER MACHINES
Cyril P. Feldhausen, Wauwatosa, and Robert M. Lommen, Milwaukee, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application June 27, 1946, Serial No. 679,836
9 Claims. (Cl. 318—490)

1. In a controller for motor driven printing presses and other machines, in combination, manual control means requiring a given operation preparatory to starting and further manual operation to effect starting, a signal device for warning of starting, and means rendering said signal device effective upon preparatory operation of the first mentioned means, and normally rendering starting by further operation of the first mentioned means subject to a given time delay after initiation of signaling, the second mentioned means comprising a relay which in response to preparatory operation of the first mentioned means moves to a given position subject to a time element affording the aforementioned time delay and which when released has a time element incident to moving out of such given position thereby to enable for a transient period under given conditions restarting by the first mentioned means subject to signaling but quicker than is otherwise possible.

2,438,277
OIL WELL MAST
Roy E. Fife and Roy E. Fife, Jr., Long Beach, Calif.
Application January 3, 1945, Serial No. 571,178
1 Claim. (Cl. 254—139.1)

In a portable mast mounted on a transporting vehicle and having the form of a structural bent including hollow legs: a hydraulic strut telescopically mounted in each leg; a crown member connecting the struts together; hydraulic means adapted to effect outward movement of the struts with respect to the hollow legs; a double sheave member mounted on the crown member; a single sheave type pulley at each side of the double sheave pulley, said single sheave pulley lying transversely of the crown and at right angles to the double sheave pulley; a single sheave pulley operably attached to each leg, said pulleys having their major plane parallel to that of the double sheave and perpendicular to the planes of the first mentioned single sheave; a continuous cable led from a dead end anchorage on each leg around each of the first mentioned single sheave pulleys, thence around each of the second single sheave pulleys, thence around the respective sheaves of the double sheave pulley and depending therefrom in a loop; and a traveling block having a sheave supported by the loop portion of the cable.



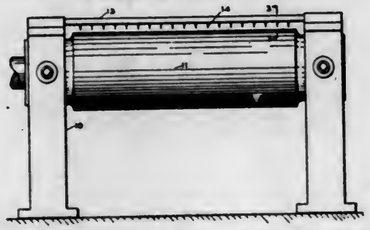
2,438,278
METHOD FOR AZEOTROPIC DISTILLATION OF ACETIC ANHYDRIDE
Charles H. Fisher, Abington, Pa., and Martin L. Fein, Riverside, N. J., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application June 29, 1944, Serial No. 542,790
10 Claims. (Cl. 202—42)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

7. In the process of purifying methyl alpha-acetoxypropionate contaminated with acetic anhydride, the steps comprising adding ethylcyclohexane, followed by distillation thereof.

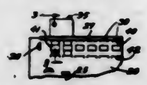
2,438,279
ELECTRODE HOLDER
James D. Forney, Fort Collins, Colo.
Application June 24, 1946, Serial No. 678,789
3 Claims. (Cl. 219—8)

1. A welding electrode holder, comprising a tubular handle, a conductor extending there-

through, means for spacing and electrically insulating the conductor from the handle, the handle forming the other conductor, a rod-like conductor secured to the handle for rocking motion about an axis parallel with the axis of the handle, the first conductor having its front end provided with means for clamping and supporting an electrode, in angular relation to the axis of the handle, the rockable conductor having its front end provided with an electrode clamp, the other end of the rockable conductor being bent laterally and curved about a portion of the outer surface of the handle, forming a lever for rocking the conductor and electrode clamp with respect to the other electrode clamp.

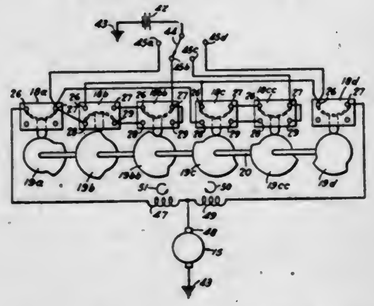


2,438,280
STOCKING HEEL PROTECTOR
Florence L. Gailey, Los Angeles, Calif.
Application November 21, 1945, Serial No. 629,973
1 Claim. (Cl. 36—55)



The combination with a stocking heel protector formed of thin, soft material and comprising a bottom and an upright wall having its lower edge secured to the side and rear edges of said bottom of a reinforcing member of thin flexible plastic material secured to the outer face of the upright wall of the rear portion of said protector and a narrow strip of plastic material integral with the lower edge of said reinforcing member, which strip extends forwardly beneath and is secured to the under face of the bottom of said heel protector and which reinforcing member and strip are provided with smooth finished outer surfaces.

2,438,281
METHOD FOR PROCESSING PLASTIC SHEETS
Sheldon Gordon, Madison, Wis., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application December 10, 1945, Serial No. 634,044
2 Claims. (Cl. 18—48)

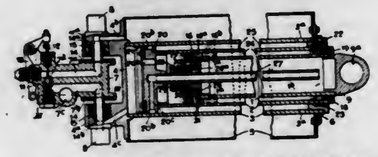


1. In the process of rolling an ignitable colloidable material, wherein protruding bubbles are undesirably formed and present a potential ignition hazard if compressed between the rolls, the improvement which comprises rupturing and deflating the bubbles reaching a predetermined height before entry into the bite of the rolls.

2,438,282
INDEX TAB FOR PRINTING DEVICES
John H. Gruver, East Cleveland, and Carl J. Hueber, Euclid, Ohio, assignors to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware
Application August 24, 1942, Serial No. 455,900
6 Claims. (Cl. 129—16.8)

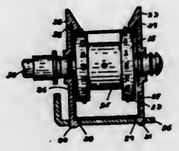
1. A tab for use with printing and like devices including a relatively flat body formed from sheet material and having a pair of mounting stems formed integrally with the body and projecting in substantially parallel relation from one edge of said body, said stems being adapted for insertion into adjacent mounting sockets on a printing or like device to support said body in projecting relation upon a printing or like device, at least one of said stems having a latch element formed thereon for cooperation with a part of a printing or like device to hold the tab removably in position on a printing or like device, said body having a portion thereof cut away to impart digital significance to said tab in accordance with a predetermined digtal code, and abutment means formed on said tab for engagement with a part of a printing or like device to prevent completion of a mounting operation when said tab is positioned relative to a printing or like device in other than in a predetermined manner.

2,438,283
SWITCHING SYSTEM
Louis Hegy, Burbank, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application January 13, 1945, Serial No. 572,644
5 Claims. (Cl. 318—33)



1. In a system of the type described, a member to be moved in either direction past an intermediate station in a predetermined position and means for moving it comprising: a reversible driving motor having two circuits for rotating it in opposite directions respectively; a pair of switches associated with said station for controlling stopping of said member at said station, each switch having first contacts which it closes in a first state and having second independent contacts which it closes in a second state; means for successively actuating the two switches of each pair from their first to their second states as said member moves through the associated station in one direction and for successively actuating them in inverse sequence from their second to their first states as said member moves through the associated station in the opposite direction; a current source; and means including a master selector switch for connecting the first contacts of said two switches in series with said source and one of said motor circuits and connecting the second contacts of said two switches in series with said source and the other motor circuit; whereby one motor circuit is energized when both switches are in said first state, the other motor circuit is energized when both switches are in said second state, and neither circuit is energized through said two switches when they are in opposite states.

2,438,284
VEHICLE WHEEL
Harry J. Horn, Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application October 14, 1943, Serial No. 506,163
5 Claims. (Cl. 152—99)

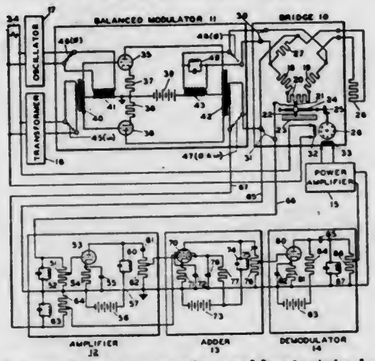


1. A vehicle wheel comprising radially spaced concentric rim members, a plurality of coiled compression springs positioned between said rims, the axes of adjacent springs being oppositely inclined to the plane of said wheel, and universal pivotal connections between the ends of said springs and said rims, said springs when fully compressed being greater in length than the radial distance between said pivotal connections whereby excessive lateral stress on one of said springs causes alternate springs to fully compress and act as an unyielding link between said rims which limits the relative lateral displacement of said rims.

2,438,285
TELESCOPIC HYDRAULIC JACK
Robert Houldsworth, Breightmet, Bolton, England
Application February 2, 1945, Serial No. 575,841
In Great Britain December 1, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 1, 1963
6 Claims. (Cl. 60—52)

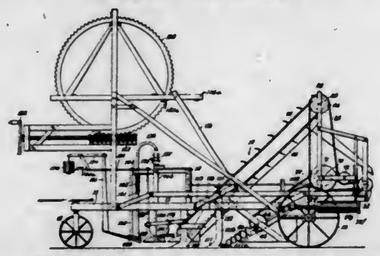
6. A hydraulically operated telescopic jack, comprising a hollow ram, a cylinder, a fluid supply reservoir connected to said cylinder, a pressure relief chamber in said hollow ram, a spring-closed relief valve adapted to normally seal said chamber and adapted to open at excessive pressure, a return duct anchored at an end to the inner end of said cylinder in which the ram slides, said duct being connected to said chamber and to said reservoir to return fluid to the reservoir a packing gland mounted in said hollow ram, said duct extending through said gland into the interior of the ram and maintaining sliding connection with said chamber throughout the full stroke of the ram, and abutment means adapted to limit the outward stroke of the ram under operating pressure, whereby at the end of said stroke an excessive pressure increase serves to open said relief valve, so as to permit escape of excess fluid into said relief chamber.

2,438,286
FILM RETAINER
John Eugene Huber, Cincinnati, Ohio, assignor to Illinois Watch Case Co., Elgin, Ill., a corporation of Illinois
Application September 11, 1945, Serial No. 615,563
5 Claims. (Cl. 271—2.3)



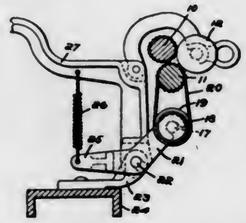
4. Film sprocket mechanism comprising: a sprocket wheel; a mounting therefor; film retainer guide members having portions extending toward each other and provided with film retainer surfaces disposed over the marginal portions of said wheel; mountings for said members; and a substantially U-shaped spring having portions bearing against said guide members to hold said portions flexibly adjacent said sprocket for the purposes set forth.

2,438,287
FISHING REEL
Adam Hypnarowski, Buffalo, N. Y.
Application January 3, 1946, Serial No. 638,798
1 Claim. (Cl. 242—84.1)



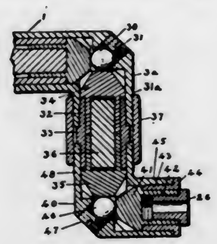
A fishing reel comprising a spool having an inner disk and an outer disk in spaced relation to said inner disk, separator means securing said disks in spaced relation, a centrally arranged bearing sleeve having an outwardly extending mounting flange located near its longitudinal center, said inner disk being mounted upon one end of said bearing sleeve and attached to said mounting flange, a hub sleeve having one end mounted upon said bearing sleeve and its opposite end bearing against said outer disk, and an anti-friction bearing mounted within said bearing sleeve, a bracket for supporting said spool, and means for mounting said bearing upon said bracket.

2,438,288
APPARATUS FOR DETERMINING BALANCE IN AN ELECTRICAL NETWORK
Abraham Walter Jacobson, New Haven, and Elliott M. Whitney, Woodbury, Conn., assignors to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application January 3, 1945, Serial No. 571,176
15 Claims. (Cl. 318—28)



1. In combination, a balanceable electrical network comprising a plurality of branches and a bridge arm interconnected therewith to have between its terminals a potential dependent upon the degree of electrical unbalance existing among said branches, two sources of alternating potential one having a relatively high frequency and the other comprising side bands derived from said frequency as a carrier modulated by a relatively low frequency, means for applying potential from one of said sources to said network, means for mixing potential from the other of said sources with potential from said bridge arm to produce a mixed voltage, together with demodulating means to retrieve from said mixed voltage a component having said relatively low frequency and of amplitude and phase position depending upon the condition of balance in said network.

2,438,289
BEET HARVESTING MACHINE
Lawrence Barayuga Karaang, Santa Maria, Calif.
Application September 8, 1943, Serial No. 501,525
1 Claim. (Cl. 55—107)



A beet harvester consisting of a member adapted to slide over the tops of beets to press them downwardly, a weighted beam having connection with said member to vary its pressure on the beet tops, a conveyor for removing severed beet tops, a rotary cutter arranged between the lower end of the conveyer and the member, means for rotating the cutter, and a spring having connection with the member and the cutter to hold the same downwardly.

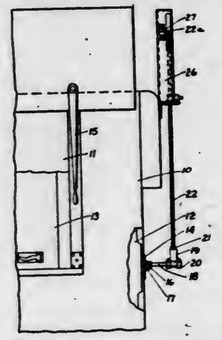
2,438,290
SCAVENGER ROLL MECHANISM
John A. Kooistra, North Andover, Mass., assignor to Davis & Furber Machine Company, North Andover, Mass., a corporation of Massachusetts
Application June 4, 1947, Serial No. 752,412
5 Claims. (Cl. 57—34.5)

4. In a yarn forming frame provided at spaced intervals with sets of horizontally alined cooperating drawing rolls including a common horizontal driven shaft therefor the combination of a stub shaft having free ends, a frusto-conical scavenger roll mounted on each end of the stub shaft, a belt extending around the central portion of the stub shaft and the driven drawing roll shaft between said adjacent sets of drawing rolls, a bearing bracket having bearings for the stub shaft at opposite sides of the belt and between the belt and the larger ends of the scavenger rolls and pivotally mounted on the frame beneath and parallel to the drawing rolls to position the scavenger rolls respectively beneath adjacent sets of drawing rolls, and a spring between the bearing bracket and the frame acting to tension the belt.

2,438,291
ANGLE DRIVE CONSTRUCTION
Charles A. Koza, Pittsburgh, Pa.
Application April 13, 1943, Serial No. 482,874
6 Claims. (Cl. 74—423)

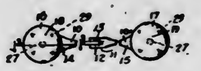
2. In an angle drive the combination of a tubular housing having the form of an elbow with a chamber in each end of the elbow, a second elbow also having two chambers, an internal sleeve connecting the adjacent chambers of said elbows, a collar on said sleeve, which is engaged by the adjacent ends of the chambers and by which the chambers are spaced apart, an external sleeve making threaded engagement with the two adjacent chambers and coupling them together, a first and second bevel gear mounted to rotate in the first elbow, a third and fourth bevel gear mounted to rotate in the second elbow, and means for connecting the second and third bevel gears together so that the first bevel gear drives the second, third and fourth bevel gears.

2,438,292
MEANS TO FLARE TUBE ENDS AND TO PREVENT THEIR RUPTURE
William L. Linker, Warwick, and James R. Welshman, Cranston, R. I., assignors to Grinnell Corporation, Providence, R. I., a corporation of Delaware
Application January 29, 1946, Serial No. 644,110
5 Claims. (Cl. 153—79)



1. Means for flaring tubing having a longitudinal seam, comprising a flaring tool having a shank fitting within the tubing, having a flaring surface to form the flare on the tubing and having a head adapted to be acted upon to force the flaring surface within the tubing; and a dished-shaped washer having a hole corresponding in size to that of the shank of the flaring tool and having a ring disposed outwardly at an angle to the axis of the washer; the washer being initially placed on the shank of the flaring tool with the inner edge of its ring resting on the edge of the tubing and acting thereafter while the tubing is flared to maintain a resisting force on the tubing to prevent opening-up of the said longitudinal seam; said washer being expanded simultaneously with the flaring of the tubing so as to be removable upon the completion of the flaring operation.

2,438,293
MEANS FOR BOTTOM HOLE ORIENTATION
Herman G. Livingston, Houston, Tex., assignor, by direct and mesne assignments, to Eastman Oil Well Survey Company, Denver, Colo., a corporation of Delaware
Application July 12, 1943, Serial No. 494,315
15 Claims. (Cl. 255—1.6)



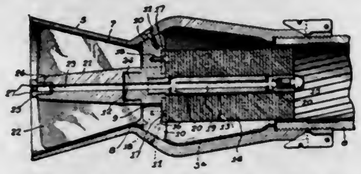
7. The combination with a whipstock comprising an elongate wedge-shaped body whereby an inclined guide face is formed, said body having a longitudinal bore with its lower end open, of a well survey instrument insertable within said bore, co-acting means on said instrument and within the bore of the body for non-rotatably maintaining the instrument in a predetermined position with respect to the inclined face of the whipstock, and a removable closure for retaining the instrument therein.

2,438,294
POSITION INDICATOR FOR CYLINDER DOORS
Albert Matthews, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a corporation of Ohio
Application December 16, 1944, Serial No. 568,449
4 Claims. (Cl. 116—124)

1. A device for indicating the angular position of the rotatable door closed drum of a washing machine including a door closed casing enclosing the drum and a shaft supporting the drum and extending to the outside of the casing, said device comprising a crank adapted for attachment to one end of the shaft, a rod pivotally connected at one end to said crank, and means for supporting said rod intermediate its ends for both sliding and pivoting motion, whereby the other free end of the rod travels in an endless elliptical path and by its position in said path indicates the position of the drum door relative to the casing door.

2,438,295
CLIP FOR FORMING NECKTIES
Harley Walker Morden, Toronto, Ontario, Canada, assignor of fifty per cent to Harry H. Gies, Toronto, Ontario, Canada
Application August 11, 1944, Serial No. 549,040
1 Claim. (Cl. 2—152)

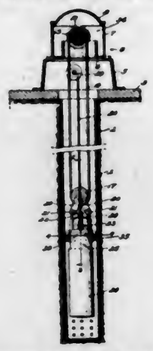
A clip for neckties designed to underlie a tie and to be partially concealed thereby and to hold an unknotted tie in fixed simulation of a knotted tie and comprising: a pair of arms, a tongue formed on one end of one arm, a fork formed on one end of the other arm and adapted to receive said tongue, a screw passing through said fork and said tongue whereby said arms are pivotally connected, thread means in one of the prongs of said fork to mate with the threads of said screw, the head of said screw and the other prong of said fork including means for frictionally re-



straining said screw in said latter prong, said screw creating friction between said tongue and said prongs when tightened, a pair of pin-like members projecting substantially at right angles from the opposite ends of said arms and designed to project towards one another to grip a portion of said tie when the arms are swung together whereby to secure opposed portions of the tie to simulate a knot.

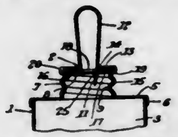
2,438,296
COVER ON TAKE-UP ROLL FOR LOOMS
Ernest Nassimbene, Denver, Colo., assignor to Gates Rubber Company, Denver, Colo., a corporation of Colorado
Application June 1, 1945, Serial No. 597,015
1 Claim. (Cl. 139—307)

A rubber covering for takeup rolls having a diameter D comprising, a strip of a uniform width w, the ends of the strip being oppositely tapered commencing at diagonally opposite corners, the length of the tapered edges being πD, one surface having spaced ridges perpendicular to the inclined edges of the tapered sections, whereby when the strip is wound about a roll with the inclined edges lying in planes perpendicular to the axis of the core, the ridges will be parallel with the axis of the core.



2,438,297
RECOILLESS GUN
Winslow B. Pope, Detroit, Mich., assignor, by mesne assignments, to United States of America
Application April 5, 1944, Serial No. 529,577
1 Claim. (Cl. 89—1.7)

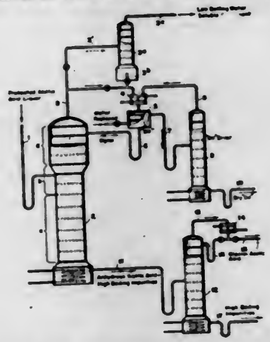
In a recoilless gun having a casing provided with a pressure developing chamber and a coaxial Venturi passage leading from said chamber, a spider element fixed within said chamber in advance of said passage and having a threaded boss-like portion coaxial with said passage, and a one-piece vaned member having a rigid post coaxial with said passage and a plurality of vanes integral with said post, said vanes extending outwardly from said post and being disposed at an angle relative to the axis of said post and said post having a threaded connection with said boss-like portion.



2,438,298
LIQUID ELEVATING APPARATUS
Jesse C. Reed, Dayton, Ohio
Application June 29, 1946, Serial No. 680,410
5 Claims. (Cl. 103—72)

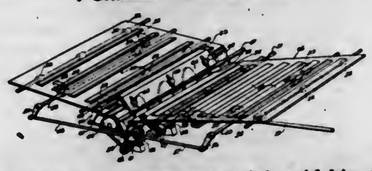
1. Apparatus for elevating liquids from underground wells, comprising a housing arranged substantially at ground level above such a well, a driving pulley rotatably mounted in said housing, a continuous belt having its upper portion passing around said pulley, a second pulley disposed in the well and around which the lower portion of said belt passes, a weight arranged below said second pulley, lever arms pivotally carried by

said weight, devices carried by said arms at their lower ends adapted for engagement with the sides of the well, and means linking said arms at their upper ends with said lower pulley.



2,438,299
INFANT'S FORMULA CAN AND CAN OPENER AND NIPPLE ATTACHMENT
Walter Relis, Lomita, Calif.
Application July 1, 1946, Serial No. 680,819
1 Claim. (Cl. 215—11)

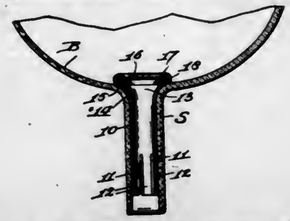
In combination, a can containing a liquid, which can is formed with a threaded spout closed by an end wall, a can opener and nipple attachment formed with a threaded cap, a blade and a nipple, which cap is screwed on said threaded spout to cause said blade to cut an opening in said spout end wall, through which opening the liquid may flow from said spout into said nipple, said cap being provided with an opening in its top wall through which opening extends the inner end of said nipple, which end of said nipple is formed with an external flange extending under said top wall of said cap, and a blade disc provided with an opening therein, on which disc the can opener blade is formed at the edge of said disc opening, said cap being crimped under said blade disc for securing said blade disc in said cap, and clamping said nipple flange between said disc and the top wall of said cap, for securing the inner end of said nipple in said opening in said top wall of said cap.



2,438,300
PROCESS FOR THE PURIFICATION OF ACETIC ACID BY AZEOTROPIC DISTILLATION
Lester E. Schniepp, Peoria, Ill., assignor to the United States of America as represented by the Secretary of Agriculture
Application April 7, 1944, Serial No. 530,071
3 Claims. (Cl. 202—42)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

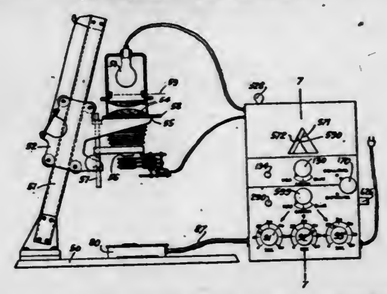
1. In a continuous process for separating acetic acid from the liquid condensate mixture obtained from the pyrolysis of 2,3-butylene glycol diacetate, continuously adding water to the liquid condensate mixture in an amount corresponding to 15 to 30 percent of the mixture, continuously distilling off the water-azeotropes of the esters, ketones, and hydrocarbons present in said liquid condensate mixture, continuously separating the condensed and stratified water-azeotropes, into

water and organic liquid components, continuously returning the water for reutilization in adding to more liquid condensate mixture, and continuously dehydrating the esters, ketones, and hydrocarbons by continuously distilling from them the azeotropes formed with the water remaining dissolved, or mechanically suspended, in them on stratification in a continuous separator.



2,438,301
MIXING AND SELF-UNLOADING FARM TRUCK
James A. Schulte, Sperry, Iowa
Application March 16, 1945, Serial No. 583,158
7 Claims. (Cl. 259—45)

1. A bin for receiving material, said bin comprising sloping converging bottoms, means for vibrating said bottoms toward and from the convergence thereof, sloping projections on and secured to the upper faces of the bottoms to agitate and push the material toward said convergence in the vibration of said bottoms, a conveyor at the convergence of said bottoms to receive and carry the material therefrom to the outside of the bin, and power means to simultaneously operate said bottoms and conveyor.

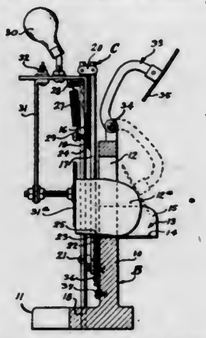


2,438,302
PERCOLATOR BOWL STRAINER
Matt Simcich, Los Angeles, Calif.
Application May 14, 1946, Serial No. 669,643
1 Claim. (Cl. 210—162)

A strainer for percolator bowls having depending tubular stems, comprising a tube of such size and shape as to fit snugly within the depending stem of the bowl, the upper end of said tube being flared so as to fit snugly on the curved shoulder between the bowl and its stem, an externally threaded flange projecting upwardly from the flared upper end of said tube, a screen resting on top of said threaded flange and an internally

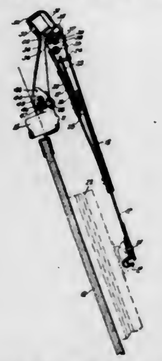
threaded ring screw seated on said flange and overlying the edge of said screen.

2,438,303
DEVICE FOR MAKING COLOR PRINTS
Alfred Simmon, Jackson Heights, N. Y., assignor to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Application February 28, 1947, Serial No. 731,435
15 Claims. (Cl. 88—24)



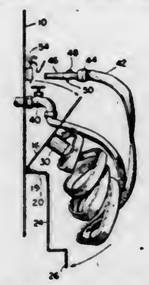
1. A device for making color prints, comprising means to support a test print made on color print material and containing in systematic arrangement numerous areas representing different combinations of three primary colors in varying intensities, a printer including a source of light, a support for transparencies from which prints are made, and a support for said color print material on which said prints are made, said transparencies including records of the respective intensities of three primary colors, means to measure said recorded intensities of light of said three primary colors passing selected points of a transparency, means to adjust the exposure time to which said color print material is subjected, means to compute from said measured light intensities and from said exposure time a set of three values of foot-candle-seconds for each selected point of said transparency, and means to locate on said test print areas exposed to substantially the same three values of foot-candle-seconds as obtained by said computing means, whereby the rendition of selected points of said transparency on said color print material under the chosen light and time conditions can be predicted before a print is made.

2,438,304
SLICING DEVICE WITH A VERTICALLY RECIPROCATING CUTTER
Charles Lloyd Slingerland, Niagara-on-the-Lake, Ontario, Canada
Application December 13, 1946, Serial No. 716,019
5 Claims. (Cl. 146—158)



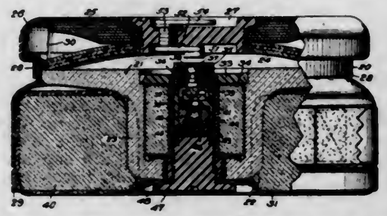
1. In a chopper of the class described a frame, a blade, guides spaced apart to guide the blade

between them in a reciprocating movement, the guides on one side of said blade being rigidly mounted on said frame, pivotal connections connecting said rigidly mounted guides to the guides on the opposite side of said blade adjacent the free end of the rigidly connected guide, a ledge to hold the material to be chopped rigidly connected to said latter mentioned guides said ledge having an edge adapted to coact with said blade as it reciprocates between said guideways to shear



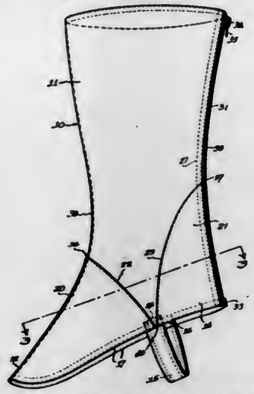
off the portion of the material being chopped which overhangs said ledge in the path of said blade, said guides carrying said ledge being connected to said rigidly connected guides beyond said pivotal guide connections so that as pressure is exerted on said ledge by the blade through the material being chopped, said guides carrying said ledge will move towards said rigidly connected guides to cause said blade to coact with the edge of said ledge to make a sharp cut.

2,438,305
WINDSHIELD WIPER ARM
Theodore J. Smulski, Gary, Ind., assignor to Productive Inventions, Inc., a corporation of Indiana
Application January 16, 1942, Serial No. 426,936
17 Claims. (Cl. 15—255)



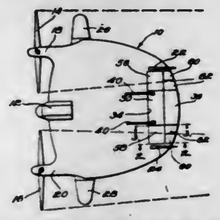
10. A windshield cleaner adapted for mounting in a support adjacent a windshield, comprising a drive shaft, an offsetting member fixed to the shaft and extending radially therefrom away from the windshield, the outer end of the offsetting member having an arm engaging head and a wiper arm having a mounting section with a socket receiving such head and a wiper carrying section pivotally connected to the mounting section above the drive shaft and extending across the axis of the latter for actuating a wiper in an arcuate path about the axis.

2,438,306
HOSE STORAGE REEL
Benjamin F. Souther, Seattle, Wash.
Application May 6, 1946, Serial No. 667,628
7 Claims. (Cl. 242—86)



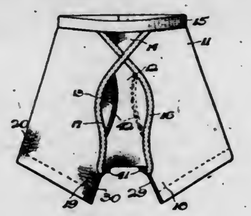
7. A dumpable hose storage reel, comprising: a hub rotatably mounted to turn about a horizontal axis, a plate forming an outer flange for said hub and having a lower hinge mount transverse the axis of said hub, a latch slidably mounted opposite said hinge and adapted to engage said plate upper edge to normally retain it upright, said slidable latch being adapted to receive a latch pin, and camming means on said latch pin operable upon said latch when the latch pin is being removed from association therewith to move said latch to the unlatched position whereupon said plate may move and the hose may fall away from said hub.

2,438,307
NONMETALLIC MINE
John J. Taylor and Paul M. Ross, Wadsworth, Ohio, assignors to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application January 10, 1946, Serial No. 640,247
4 Claims. (Cl. 102—8)



2. In a non-metallic explosive mine, a non-metallic frame member, a non-metallic belleville spring positioned on the upper surface of said frame member, a non-metallic operating plate associated with the upper surface of said spring, and tape means retaining said operating plate and belleville spring in association to prevent separation thereof, said operating plate having a lower surface curved to bring only the center thereof in contact with said spring at no load condition, said spring and said operating plate being constructed and arranged to have a rolling contact which moves radially outwardly of the mine towards the applied force when an edge load is applied to said operating plate so as to reduce the lever effect of the edge load.

2,438,308
WATERPROOF HOSIERY PROTECTOR
Evalyn Wheaton, Detroit, Mich.
Application October 24, 1945, Serial No. 624,213
2 Claims. (Cl. 36—2)

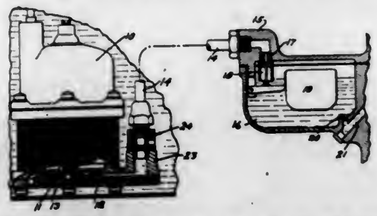


1. A waterproof hosiery protector, comprising a sheath of transparent plastic material having a forward edge and a rearward edge and open along one of said edges, a slide fastener mounted thereon along said open edge for selectively opening and closing the same, the lower part thereof having a forwardly-projecting instep-covering portion and a rearward portion, both of said portions being of materially greater thickness than said sheath whereby to reinforce said protector forwardly and rearwardly, the edges of said thickened portions being directed downwardly in an approximate V-shape on both sides thereof from the forward and rearward edges of said sheath respectively and substantially effecting a junction with one another on each side at the bottom edge thereof, and a shank strap having its opposite ends secured to said bottom edge on opposite sides thereof and also to said thickened portions substantially at said junction.

2,438,309
CONTROL DEVICE FOR AIRPLANES
Charles H. Zimmerman, Nichols, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application April 11, 1944, Serial No. 530,541
14 Claims. (Cl. 244—13)

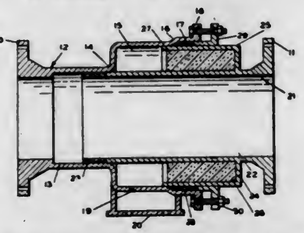
5. In an airplane, a main lifting surface, a propeller located at the leading edge of said surface, a stabilizing surface pivotally supported adjacent the trailing edge of said main surface, and means for biasing said stabilizing surface into the airstream beneath the main surface for automatically changing the angle of attack of the airplane an amount sufficient to return the airplane to its predetermined trim speed upon any departure of the airplane from its trim speed, said stabilizing surface having upwardly and downwardly deflected tabs attached to its trailing edge, said upwardly deflected tab being located in the slipstream from said propeller and said downwardly deflected tab being located substantially out of said slipstream.

2,438,310
UNDERGARMENT
Edward J. Ashe, Knoxville, and Otis E. Webber, Fountain City, Tenn., assignors to Standard Knitting Mills, Inc., Knoxville, Tenn., a corporation of Tennessee
Application November 27, 1945, Serial No. 631,043
4 Claims. (Cl. 2—224)



1. An undergarment of the support type for male wear comprising a body formed of a unitary piece of laterally stretchable material adapted to cover the back, sides and portions of the front of the wearer between the waist and the crotch, a waistband secured to the upper edge of said body, and a front piece of laterally stretchable material secured to the lateral edges of said body and completing the front of the garment, said front piece having an integral extension forming the crotch of the garment and extending upwardly in the rear of the garment above the point of the crotch, said front piece being so constructed and arranged as to provide a fly-closed opening in the front of the garment and a pouch therebelow, and also being connected to said waistband so as to support the pouch therefrom, the lower edge of said body being cut upwardly in the rear of the garment to receive the upwardly extending portion of said extension, the area of the upwardly extending portion of said extension being greater than that of the cut so as to provide extra material in the seat of the garment, said cut material and said upwardly extending portion of said extension being sewn together along a curved seam of such configuration that the material of the garment in the region of said seam is relatively free to stretch laterally.

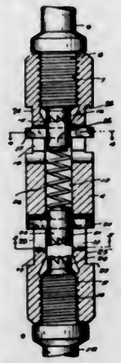
2,438,311
PUMP DISCHARGE FITTING
Russell G. Berry, Maplewood, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a corporation of Delaware
Application May 15, 1944, Serial No. 535,644
3 Claims. (Cl. 158—36.3)



2. In combination, a substantially constant speed, centrifugal pump, a device having a connection with said pump for normally utilizing less liquid than the pump is constructed to supply, a yieldably seating valve for intermittently opening and closing said connection to said device, and a replaceable fitting interposed between said pump and said device comprising a tubular part having a flow limiting restriction and a re-

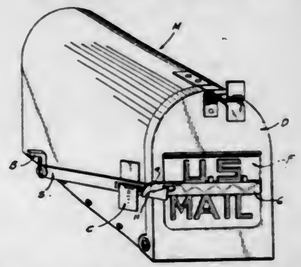
stricted relief by-pass orifice, said restriction and by-pass being proportioned with relation to each other and to the pump capacity and normal requirements of said device to reduce the maximum

fuel supply when said valve is open to the maximum required and to limit the pressure in said connection when said valve is closed to the maximum said valve is constructed to resist.



2,438,312
EXPANSION JOINT FOR HIGH TEMPERATURES
George P. Bunn, Bartlesville, Okla., and Howard J. Pankratz, Borger, Tex., assignors to Phillips Petroleum Company, a corporation of Delaware
Application January 24, 1944, Serial No. 519,522
6 Claims. (Cl. 285—162)

1. An expansion joint for a high temperature pipe line comprising a female member and a male member slidably received in the female member, said female member having a plurality of sockets of increasing diameter, the innermost socket of least diameter receiving the end of the male member, a first sealing means between this socket and the end of the male member, an integral flange on the male member having an extension at right angles to the flange forming a collar, said collar fitting snugly into the second socket in the female member and operating to confine an insulating member, the collar forming with the third socket in the female member a space to receive a second packing, a second packing in said space with means for compressing the packing, and the temperature at the said second sealing means being lowered materially over the temperature in the pipe line thus insuring a leak proof seal at this point.

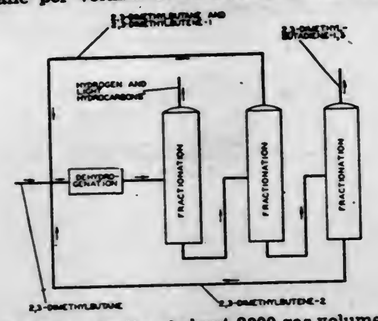


2,438,313
SAFETY LOCKING DEVICE FOR SUCKER ROD COUPLINGS
Clyde E. Burton, Overton, Tex.
Application February 17, 1945, Serial No. 578,421
1 Claim. (Cl. 287—117)

A safety coupling for sucker rods each having an externally threaded boss at its end and ratchet teeth on the free end of the boss comprising a sleeve having an internally threaded socket at each end, and a transverse keyhole slot adjacent each socket, a plug slidable in the sleeve near each socket, ratchet teeth on the outer end of each plug, a spring between the plugs arranged yieldingly to hold the plugs in their outermost positions and the teeth on the outer ends of the

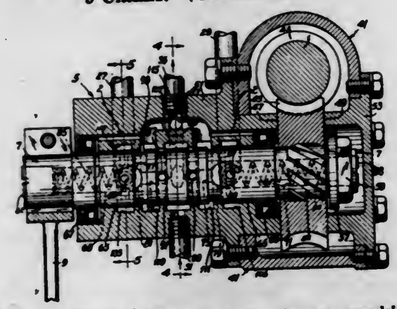
plugs for meshing engagement with the teeth on an adjacent sucker rod and a pin extending transversely through each plug and operable in an adjacent keyhole slot whereby the plugs will be held against turning movement in the sleeve.

2,438,314
SIGNAL STAFF HOLDING FINGER
Joseph P. Dalton, Berlin, N. J.
Application September 20, 1945, Serial No. 617,569
8 Claims. (Cl. 232—35)



3. A lock bolt for hinged door flaps and the like, comprising a bar with one end bent to form a U-shaped clip and with the upper and lower edges of the other end formed to define cam surfaces, and a projection extending from said bar, said projection being spaced a predetermined distance from and adapted to co-operate with the clip at the end of the bar to secure the bar on the hinged flap of the door.

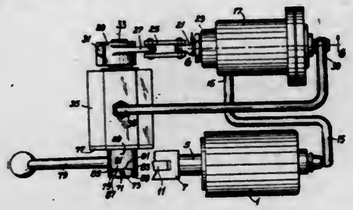
2,438,315
DEHYDROGENATION OF 2,3-DIMETHYLBUTANE
Frederick E. Frey, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application January 3, 1944, Serial No. 516,799
2 Claims. (Cl. 260—680)



1. A process for the production of 2,3-dimethylbutadiene-1,3 which comprises admixing 2,3-dimethylbutane with an inert diluent, passing the resulting mixture into contact with a catalyst comprising alumina impregnated with chromium

oxide at substantially atmospheric pressure and at a temperature of about 1100° F. and a space velocity of about 550 gas volumes of 2,3-dimethylbutane per volume of catalyst per hour and a

total space velocity of about 2800 gas volumes per volume of catalyst per hour effecting conversion of 2,3-dimethylbutane to 2,3-dimethylbutene-1, 2,3-dimethylbutene-2, and 2,3-dimethylbutadiene-1,3.



2,438,316
PRESSURE FLUID FOLLOW-UP SERVOMOTOR
Adam Gabriel, River Forest, Ill., assignor, by mesne assignments, to Acme Industrial Hydraulics, Inc., Chicago, Ill., a corporation of Illinois
Application April 7, 1945, Serial No. 587,152
9 Claims. (Cl. 121—41)

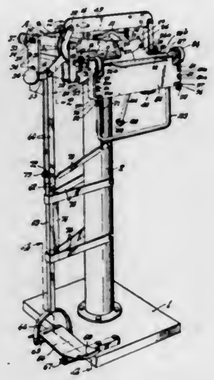
5. In a servo steering mechanism a combined valve and gear train comprising a casing formed as a valve cylinder, a drive shaft formed as a valve fitting said cylinder, said drive shaft being rotary for mechanical force transmission and having limited axial movement for valve action, a rotary driving member in the casing, means for rotating said rotary member, and a lost-motion helical connection between said rotary member and the shaft, whereby the rotary member may initially move the shaft axially for valve action and thereafter rotate it without further axial movement for mechanical transmission action.

2,438,317
SERVO ACTUATOR
Adam Gabriel, River Forest, Ill., assignor, by mesne assignments, to Acme Industrial Hydraulics, Inc., Chicago, Ill., a corporation of Illinois
Application April 7, 1945, Serial No. 587,153
10 Claims. (Cl. 121—41)

10. In combination with a fluid pressure actuated servo device, a fluid circuit including a valve for controlling the supply of fluid to said device, said valve comprising a valve housing having a valve member mounted for axial and rotary movement therein, said valve member being movable axially from an initial position to an operative position for supplying fluid to the servo device, a control element rotary on the valve member, means including cooperating camming elements upon the control element and valve

member for moving the latter axially from its initial position to its operative position upon rotation of the control element relatively to the valve member, and a mechanical connection between the servo device and the valve member for rotating the latter relatively to the control element upon operation of the servo device following actuation of the control element to return the valve member to its initial position through said means.

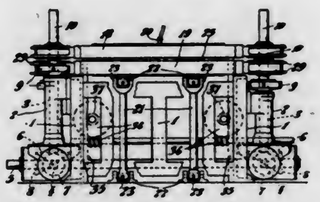
2,438,318
INCREASING ADHESION OF BITUMINOUS MATERIALS TO MINERAL AGGREGATE
James M. Johnson, New York, N. Y., assignor to Nostrip Inc., a corporation of Delaware
No Drawing. Application September 29, 1942, Serial No. 460,175
2 Claims. (Cl. 106—281)



1. A paving material comprising stony aggregate and a salt of an acylamidoamine containing at least 1 free amine group with a freely water soluble acid, the salt being disposed as a film on the aggregate and serving to increase the adherence of a flowable bituminous material when contacted with the aggregate and applied film, the acyl in the amidoamine being the acyl group of a higher fatty acid and the amine group which is reacted with the water soluble acid, to form the salt, being unsubstituted.

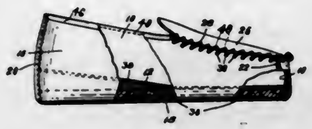
2,438,319
BENDING BRAKE
Peter Kilham, Attleboro, Mass.
Continuation of application Serial No. 451,001, July 15, 1942. This application September 9, 1944, Serial No. 553,322
22 Claims. (Cl. 153—16)

1. In a bending and forming brake, a stationary bed, clamping means mounted above said bed for clamping the work downwardly thereagainst, and a bending element pivoted adjacent the forward edge of the bed, and means for adjusting the axis of rotation of said bending element in relation to the forward upper edge of the bed, including a pair of arms located adjustably one at each side of a front portion of the bed, a pivotal connection between each said arm and the bending element, and means for adjusting each said arm in relation to said bed.



7. In a bending and forming brake, a stationary horizontal bed having a free forward working edge, a clamp structure rotatably mounted at its rear end in normally fixed relation to the bed and extending forwardly above the bed and

adjacent said working edge, said clamp structure having at its forward end a blade receiving seat, means for securing a selected one of a plurality of clamp blades of different form to said seat, means for applying downward pressure against a forward portion of said clamp structure at an area intermediate the sides of the bed,

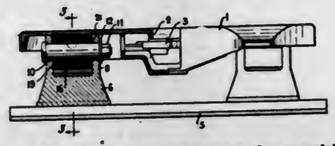


and overlying the bed, and for thereby moving the clamp blade about the axis of the clamp structure, downwardly against the bed, and a bending blade rotatably mounted adjacent the forward edge of the bed and means for rotating it upwardly against the work held by the clamp blade and for thereby upwardly bending the work.

2,438,320
FELT HARDENING MACHINE
William Henry Kingston, Drighlington, Bradford, England, assignor of one-half to William Bywater Limited, Holbeck, Leeds, England, a corporation of Great Britain and Northern Ireland
Original application November 30, 1944, Serial No. 565,985. Divided and this application March 26, 1946, Serial No. 657,288. In Great Britain December 7, 1943
1 Claim. (Cl. 28—14)

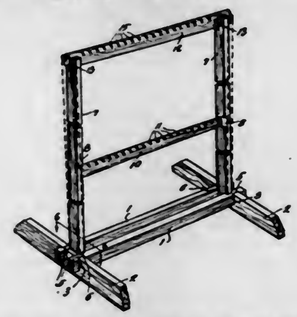
A felt hardening machine comprising a pair of superposed tables, a plurality of supports on which the lower of said tables is mounted, said supports each comprising a substantially vertically disposed pedestal having universal joints at its upper and lower ends, said pedestals being of such a length that the horizontal movement of the lower table is accompanied by a negligible vertical movement thereof, and means for imparting motion to the lower table.

2,438,321
FOOTWEAR
Roy Maling, Chestnut Hill, Mass.
Application September 19, 1945, Serial No. 617,222
3 Claims. (Cl. 36—11)



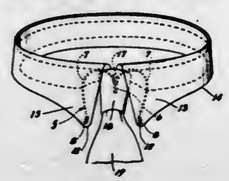
1. An article of footwear, comprising an upper lining and a sock-lining stitched together all around the sock-lining, a platform and heel unit underlying the sock-lining, and a unitary tread sheet extending integrally under the platform and heel unit and integrally upward all around the article and over the upper lining and secured to the top edge of the upper lining all around the article, said sheet having smooth continuity of extent from the plane of the tread surface of the article to the top edge of the article all around the article.

2,438,322
CATTLE-RESTRAINING CHUTE
William P. McDonough, Gunnison, Colo., assignor to Roy Andrews, Colorado Springs, Colo.
Application December 20, 1944, Serial No. 569,015
6 Claims. (Cl. 119—99)



1. In a cattle-holding and restraining enclosure of the class described, a frame-work comprising a horizontal base frame, a rectangular horizontal top frame, vertical corner posts connecting said frames in superposed vertically spaced relation, a longitudinal plank supported on the base frame and forming a stall platform, a horizontal rocker shaft commensurate in length with and mounted for oscillation in bearings in the top frame, upstanding, opposed, hingedly mounted stall walls mounted on said base frame and located along opposite longitudinal sides of said platform, operating connections between the opposite end portions of the rocker shaft and the upper end portions of said walls, stanchions independently and operatively mounted on the framework at one end of said stall, means for moving the stanchions toward and from each other, and a slidable captive confining door operatively mounted on said framework at the opposite end of the stall.

2,438,323
TRACTOR FIFTH WHEEL MOUNTING
Elmer L. Miller, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a corporation of Ohio
Application May 10, 1946, Serial No. 668,896
4 Claims. (Cl. 280—33.05)



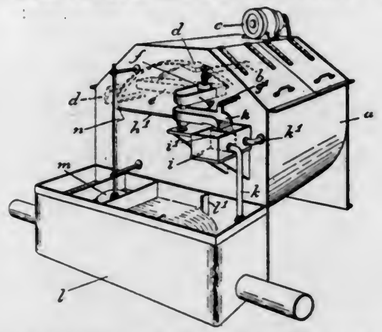
1. In a fifth wheel for tractors the combination of a support, a load bearing platform on the support, a pivotal mounting for the platform containing a resilient bushing immovably connected to the support and the platform, said bushing being so mounted that there is tension in the bushing when in horizontal position, said tension being relaxed when the platform is tilted downwardly.

2,438,324
DRYER FRAME
Anton W. Pfeffer, Spokane, Wash.
Application September 26, 1945, Serial No. 618,628
5 Claims. (Cl. 211—177)

1. A clothes rack comprising a base having longitudinally extending bars and cross bars, the cross bars being formed with slots leading from their upper edge faces and having inner side faces formed with vertical recesses between the vertical slots, the longitudinally extending bars having end portions fitting into the slots of the cross bars and formed with outer vertical recesses receiving portions of the cross bars and inner recesses, vertical standards having lower portions fitting snugly between the longitudinally extending bars and engaged in the recesses found in inner faces of the cross bars and the longitudinally extending bars and holding the standards and the bars in interlocked engagement with each other, said standards having recesses leading from their upper ends and each being formed intermediate its height with a recess in its inner side face extending transversely thereof and having its inner end portion deepened to form a seat, a rail extending between said standards with its ends fitted into the recesses in the inner side faces of the standards and seated in the deepened inner ends thereof, and an upper rail extending between upper ends of the standards and engaged in the recesses leading from upper ends thereof, said upper rail having the end portions thereof formed with side recesses for receiving portions of the standards, for holding the upper rail and the standards interlocked with each other.

2,438,325
COLLAR STAY AND NECKTIE SUPPORT
Eric Gustave Pophal, St. Pauls, N. C.
Application March 22, 1946, Serial No. 656,413
3 Claims. (Cl. 2—132)

3. A collar stay and necktie support, comprising in combination, a one-piece wire-like rod doubled upon itself medially of its length to provide a forwardly and upwardly directed prong, the doubled end portion of said rod being disposed at the upper end of said prong and forming a rounded extremity, lower end continuations of said prong extending upwardly in a mutually divergent relation and thence being arcuated outwardly and rearwardly to form a pair of collar-engaging shoulders, the end portions of said rod constituting continuations of said shoulders and providing downwardly extending arcuate arms, and collar wing engaging extremities formed at the free ends of said arms, said prong being insertable between the overlapping layers in the knot of the necktie.



2,438,326
LACTIC ACID COMPOSITION
Herman H. Schopmeyer, Hammond, Ind., assignor to American Maize-Products Company, a corporation of Maine
No Drawing. Application April 13, 1945, Serial No. 588,249
3 Claims. (Cl. 99—206)

1. In forming a solidified composition including lactic acid, the method which comprises forming a solution of lactic acid in starch conversion syrup, spray drying the solution in heated air to a water content not above 4% of the weight of dry product, and then cooling the product to room temperature, the lactic acid being used in proportion not in excess of that which is soluble in the syrup and in the solids derived therefrom, at all temperatures of evaporation and subsequent cooling.

2,438,327
APPARATUS FOR ADDING ONE LIQUID TO ANOTHER
William Smalley, London, England, assignor to The Paterson Engineering Company Limited, London, England
Application February 16, 1944, Serial No. 522,613
In Great Britain February 24, 1943
7 Claims. (Cl. 210—18)

1. Apparatus for effecting the proportional addition of one liquid to another comprising a dosage regulating device to which an excess of addition liquid over the maximum required is fed, said device comprising a first feed control means in the form of a gate, means ahead of the gate adapted to maintain a constant liquid head on the gate and including a source of supply and means following the gate for dividing the liquid which passes through the gate into two parts including a trough member and a dividing box member having chambers for receiving said two parts, one of the chambers receiving the correct dose and the other receiving the excess liquid,

means for passing the correct dose from the chamber to the liquid to which it is to be added, means for passing from the other chamber the excess liquid and returning it to the source of supply, said trough member and said box member being laterally shiftable one relative to the other in a direction to change the relative position of the trough member on the one hand and

the box member on the other hand, means for shifting the shiftable of said members including a movable member and means for moving said movable member by the liquid to be dosed in response to the variations in the rate of flow of said liquid and means for transmitting motion from the last mentioned movable member to the shiftable of the first two mentioned members.

2,438,328

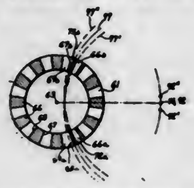
FINISHING TEXTILE MATERIALS COMPOSED OF OR CONTAINING ANIMAL FIBRES

John Bamber Speakman and Emma Whewell, Leeds, England, assignors to The Fullers' Earth Union Limited, Redhill, England, a company of Great Britain

No Drawing. Application October 2, 1944, Serial No. 556,898. In Great Britain November 11, 1943

6 Claims. (Cl. 26—18.5)

1. The process for the treatment of a textile fabric containing animal fibers in order to reduce its shrinkage during subsequent laundering which comprises mechanically working the fabric with an abrasive powder in the presence of a non-aqueous oily liquid medium which is chemically inert to the fabric and the abrasive and in which the fabric and the abrasive are insoluble.



2,438,329

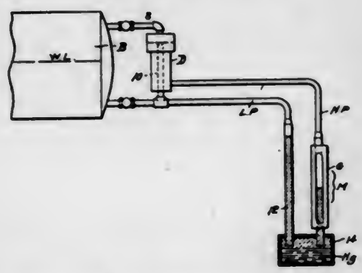
METHOD FOR PRODUCING FACE CLUTCHES

Ernest Wildhaber, Brighton, N. Y., assignor to Gleason Works, Rochester, N. Y., a corporation of New York

Application December 21, 1942, Serial No. 469,610

18 Claims. (Cl. 90—1.4)

1. The method of chamfering the teeth of a toothed face clutch member or the like which comprises positioning a face mill cutter in engagement with the work so that it will cut along the length of a tooth of the work as the cutter rotates on its axis, and rotating the cutter on its axis while effecting a relative helicoidal movement between the cutter and the work in the direction of the work axis to cause the cutter to produce a helicoidal chamfer surface on the tooth of the work along its length.



2,438,330

LIQUID LEVEL INDICATOR

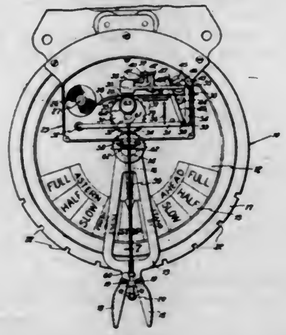
Lewis B. Winton, Greenwich, Conn., assignor, by mesne assignments, to Jerguson Gage & Valve Co., a corporation of Massachusetts

Application October 14, 1942, Serial No. 461,944

14 Claims. (Cl. 73—299)

4. Mechanism for indicating the liquid level in a container subject to bodily displacement comprising a conduit communicating at one end with the liquid-containing space of the container to receive a liquid column of variable head therefrom and receiving at the other end a liquid column of constant head, there being a body of different liquid interposed between said columns of liquid in the conduit to indicate by its position the liquid level, the space receiving one of the liquids including a chamber depending below the conduit, the upper portion of which provides when the structure is plumb a passageway for the liquid along the conduit, the bottom of the chamber receiving a relatively heavy liquid which when the system which comprises the mechanism and container with which it is associated is inclined to a determined angle rises at one side of the chamber to close off said passageway.

2,438,331



SHIP'S TELEGRAPH RECORDER

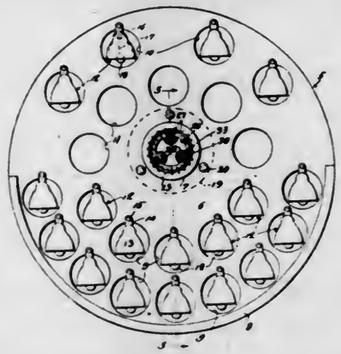
Hugh J. Callahan, Wilmington, Del.

Application May 10, 1945, Serial No. 592,942

4 Claims. (Cl. 234—27)

1. The combination with a ship's telegraph, of a recorder, said telegraph including a dial having different orders thereon, a handle having a pointer movable with respect to said dial by the observer thereof to indicate a selected one of said orders, said recorder including means to support a movable strip of material to receive print, means operable to move said strip step-by-step, a printing member having spaced orders thereon corresponding to the orders on said dial, a hammer operable to coact with said printing member to print a selected order on said strip, means operated in response to the movement of said handle to a position in registry with a selected order to move the printing member into a selected printing position, and means which may be manipulated and released to perform the following functions, namely, to operate the handle,

printing member, the strip moving means and the hammer, as and for the purposes specified.



2,438,332

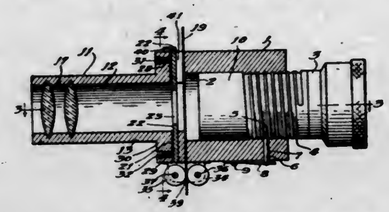
SOUNDING DEVICE

Charles J. Clarke, Syracuse, N. Y.

Application January 24, 1947, Serial No. 724,093

5 Claims. (Cl. 116—37)

5. In an audible device of the character described, a body member, mounting means for rotatably supporting said body member on a rotating element having translational motion varying proportionately to the speed of rotation of said element, means carried by said body member for preventing the rotation thereof with the rotating element and whereby said body member will be caused to oscillate in response to variations in the translational motion of the rotating element, and audible means carried by said body member and constructed and arranged to be actuated by the oscillation thereof, said body member comprising a disk having an eccentric opening therein, said mounting means including a plate secured to one side of said disk and over said opening and having an annular flange extending therethrough and ball bearing means supported in said flange and including an inner race rotatably mounted relatively to the flange and detachably connected to said rotatable element.



2,438,333

MOTION-PICTURE PROJECTOR ADAPTER FOR SHOWING STILL PICTURES

Joseph E. Dickman, Chicago, Ill.

Application August 20, 1945, Serial No. 611,504

4 Claims. (Cl. 88—28)

1. An adapter for showing still pictures in a motion picture projector, comprising a tubular member of a size at one end adapted to be removably inserted in the light projecting tube of a moving picture projector, and at its other end having an opening adapted to receive a focusing lens member, said tubular member having a transverse slot opening through one of its sides and extending laterally beyond the vertical diameter of the tubular member, said slot in one face having an enlargement for slidably receiving a film and in its other face having an enlargement for receiving a pressure plate, a pressure plate in said last mentioned enlargement, resilient means for urging the pressure plate toward the film when in the slot, a pair of soft-faced rollers at one end of the slot between which the film is adapted to be gripped for movement through the slot when the rollers are rotated, a condenser lens in said tubular member near its inner end, and a spring pressed pin in the other end portion of the tubular member.

2,438,334

KETONE PRODUCTION

Thomas F. Doumani, Long Beach, and Joseph Francis Cuneo, Los Angeles, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California

No Drawing. Application November 22, 1943, Serial No. 511,320

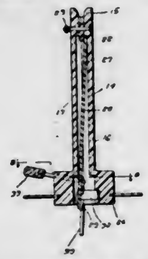
9 Claims. (Cl. 260—597)

1. A process for the production of unsaturated ketones which comprises reacting an olefinic hydrocarbon with a material selected from the class consisting of acid halides of monocarboxylic acids having between 2 and 6 carbon atoms and acid halide producing mixtures consisting essentially of a polyvalent metal halide plus an anhydride of a monocarboxylic acid having between 2 and 6 carbon atoms at a temperature above about 150° C. and a pressure not substantially greater than atmospheric, in the vapor phase, and thereby producing an unsaturated ketone.

2,438,335

METHOD OF MAKING CERAMIC STAINS

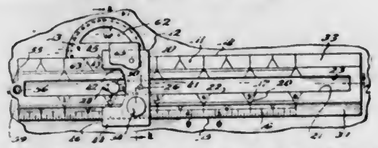
John Alfred Earl, Pittsburgh, Pa., assignor to The Vitro Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania



No Drawing. Application August 23, 1944, Serial No. 550,909

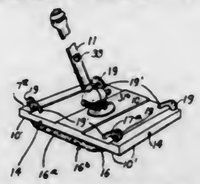
2 Claims. (Cl. 106—34)

1. The method of making a ceramic stain ranging from ivory through yellow in shade, which comprises intimately mixing pure zirconium oxide with ammonium metavanadate, calcining



the mixture in a furnace to a temperature of about 2550° F., and grinding the resultant product to a fine subdivision for adidtion to a glaze as described.

2,438,336
COIN RECEIVING DEVICE
Alexander M. Gordon, Providence, R. I., assignor to Money-Meters, Inc., a corporation of Rhode Island
Application January 25, 1943, Serial No. 473,499
2 Claims. (Cl. 232—12)



1. A device of the character described including a transparent substantially vertically disposed front plate, a complementary closely adjacent rear plate, said plates being recessed to provide a coin chamber therebetween having an upper coin receiving slot, an intermediate plate pivotally mounted at its upper end in the rear plate and spring urged at its lower end to swing into contact with the front plate, whereby coins inserted in the slot drop and are retained between the intermediate plate and the front plate, and a control member engageable with the lower end of the intermediate plate for swinging it towards the rear plate to release the coins.

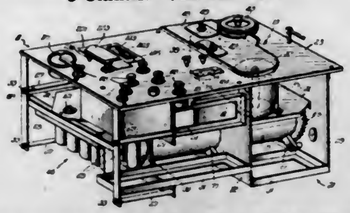
2,438,337
COMBINATION RULE AND COMPASS
Louis J. Gordon, Chicago, Ill.
Application September 27, 1944, Serial No. 555,905
8 Claims. (Cl. 33—27)

3. In a scale, the combination of a ruler comprising a supporting body provided with upper and lower straight edges substantially parallel to each other and with the lower longitudinal corners of said body beveled upwardly, a slider mounted on said body and having flanges extending over the side edges and securing flanges extending under the beveled portions of the body, the said slider having its lower surfaces spaced above the plane contacted by the lower side of the ruler whereby the slider may be caused to move freely when the ruler is resting upon the work, said ruler being provided at one end with an aperture for a pencil, said aperture having its center in alignment with the end indicia of the ruler, and said slider being provided with a resiliently supported center point, said center point being located to project through a slot, said slot extending longitudinally and centrally of said ruler, and said center point being in longitudinal alignment with said aperture.

2,438,338
PAD-MOUNTING DEVICE FOR APPLYING AND DISTRIBUTING WAX, OIL, AND OTHER LIKE MATERIAL TO FLOORS AND LIKE SURFACES
Jacque E. Horn, New York, N. Y.
Application July 29, 1944, Serial No. 547,228
4 Claims. (Cl. 15—131)

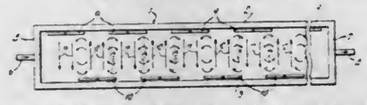
1. A pad-mounting device for applying and distributing liquid wax or oil and like liquid materials to floors or like surfaces, comprising a base member having on its bottom face a pad mounting surface provided with a material-outlet duct, a pad of absorptive poriferous spongy material mounted on said mounting surface and having a surface contacting and covering said material-outlet duct to absorb and distribute material passing therethrough, transverse bails of rigid material mounted adjacent to the ends of said base member and extending across the surfaces of said pad at the opposite ends thereof, and means for pulling up and tightening said bails to cause the same to be deeply embedded in and to compress the ends of said pad while leaving a free material-applying portion between said bails.

2,438,339
LAMINATED SHEET AND COMPOSITION FOR COATING LAMINAE
Maurice Jacobs, Ridgefield, N. J., assignor, by mesne assignments, to Albert W. Clurman, New York, N. Y., as trustee
Application July 16, 1942, Serial No. 451,240
19 Claims. (Cl. 154—45.9)



9. A building element consisting of alternate laminations of sheets of fibrous material and of a composition composed of emulsion of sodium silicate of 40° to 47° Bé., a high boiling mineral oil, a tung oil, a mica filler and titanium dioxide, formed by high pressure into the form of a building element in the proportions of sodium silicate 44 gallons, mineral oil 1⅜ gallons, and drying oil 2¾ gallons.

2,438,340
LOW TEMPERATURE POLYMERIZATION OF OLEFINIC HYDROCARBONS
Herbert L. Johnson, Norwood, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application April 27, 1944, Serial No. 533,061
2 Claims. (Cl. 260—86)



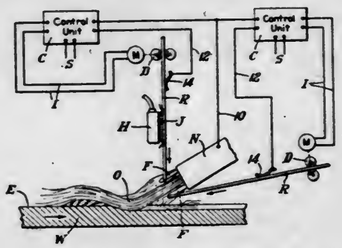
1. In a process wherein a polymerizable olefinic hydrocarbon monomeric mixture consisting of 35%–60% by weight of isobutylene, 20%–45% by weight of butadiene and the remainder of styrene is polymerized at a temperature of minus 40° C. to form polymers of high molecular weight, the step of utilizing as a catalyst a previously prepared solution of aluminum bromide dissolved in a saturated hydrocarbon liquid.

2,438,341
ELECTROCARDIOGRAPH
Arthur J. Kizaur, Cicero, Ill., assignor to General Electric X-Ray Corporation, Chicago, Ill., a corporation of New York
Application August 27, 1942, Serial No. 456,373
5 Claims. (Cl. 234—60)

1. In an electrocardiograph adapted to reproduce an oscillating beam of light upon a moving film, a framework including a rigid tubular member and frame means on and outwardly of said tubular member, film carrying and moving means, and oscillating light beam producing means supported on said framework outwardly of said tubular member, motor means supported on said tubular member and drivingly connected with said film moving means, said rigid tubular member forming a backbone for the framework and serving as the main support for the moving film and the oscillating beam of light, whereby motor induced vibrations in the electrocardiograph are reduced to a minimum to thereby increase the accuracy of reproduction.

2,438,342
WASTE LIQUOR AERATOR
Edward B. Mallory, Tenafly, N. J.
Application September 6, 1944, Serial No. 552,848
7 Claims. (Cl. 210—8)

1. In a waste purification process, the method of aerating waste containing liquors comprising incoming wastes in admixture with so-called returned sludge which includes passing the liquors progressively through successive zones spaced horizontally along an aerating tank, injecting oxygen containing gas into one bottom portion of one such zone of the tank on one side thereof to set up a rotary column of liquors rotating in one direction about a substantially horizontal axis, and also injecting oxygen containing gas into an adjacent bottom portion of an adjacent zone the tank at points spaced transversely and also longitudinally of the tank with respect to said first mentioned bottom portion, to set up a rotary column of liquors rotating in the other direction about a substantially horizontal axis and in direct interacting engagement with said first mentioned rotary column of liquors and thereby create vortical currents of liquor between the oppositely rotating columns of liquor in said adjacent zones.

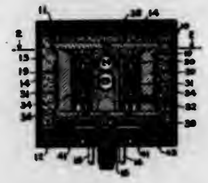


2,438,343
HIGH-FREQUENCY RADIATION SYSTEM
Cyril E. McClellan, Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 9, 1942, Serial No. 450,301
5 Claims. (Cl. 250—33.65)

4. In combination, a paraboloidal reflector, a dipole radiator positioned with its mid-point at the focus of said reflector and parallel to the axis thereof, and a dielectric body disposed about the axis of said reflector in front of the aperture thereof and so distributed in thickness that radiation emanating from said reflector on one side

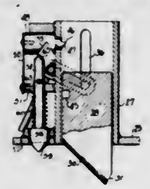
of a plane passing through the reflector axis is changed in phase by 180 electrical degrees relative to radiation emanating from points symmetrically disposed thereto on the other side of said plane.

2,438,344
AUTOMATIC ROD FEED FOR METAL REMOVAL
Edward Meincke, Scotch Plains, N. J., assignor to The Linde Air Products Company, a corporation of Ohio
Application May 19, 1945, Serial No. 594,659
6 Claims. (Cl. 148—9)



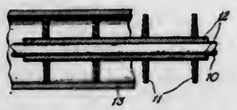
6. The method of removing metal from a body composed of metal which ordinarily resists progressive oxidation by the sole action of an oxygen jet on a heated portion thereof, which method comprises feeding relatively to the body being treated an elongated member composed of readily oxidizable adjuvant metal into a work-preheating oxy-fuel gas flame and a stream of metal removing oxygen which are applied to such body so as to thermochemically remove metal from the body, automatically feeding the member longitudinally of itself at a substantially constant rate first into such flame and then into the stream of oxygen, and heating said member to a temperature approaching its ignition temperature with oxygen directly before it is fed into such flame, so as to increase the stability and efficiency of the metal removal operation.

2,438,345
CRYSTAL OVEN
August E. Miller, Cliffside Park, N. J.
Application December 5, 1946, Serial No. 714,275
9 Claims. (Cl. 171—327)



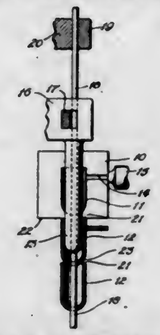
1. A piezo electric crystal holder comprising a metallic housing of such dimensions as to enclose heater and control elements and at least one piezo crystal assembly, at least one crystal cavity therein to receive a crystal assembly including the piezo crystal, crystal electrodes and case, a slow electric heater coil wound around the metallic housing, spaced holes through the housing, a fast electric heater extending into the spaced holes, a pair of thermostat cavities in the

housing, and a thermostat in each cavity, one thermostat being connected with each heater to



control the current supplied to its respective heater.

2,438,346
SAFETY DEVICE FOR TRAILERS
Charles F. Mooney, Charlotte, N. C.
Application November 30, 1945, Serial No. 632,009
7 Claims. (Cl. 280—33.05)



1. In a tractor and trailer, the tractor having a fifth wheel on which the front end of a trailer is adapted to rest, a downwardly projecting dog mounted on the front portion of the trailer and having a substantially vertical rear surface and a downwardly and rearwardly sloping front surface and having its lower end normally occupying a position in front of the fifth wheel of the trailer when the tractor and trailer are coupled together to prevent disengagement of the trailer from the fifth wheel, means for moving the dog upwardly to remove the lower end thereof above the path traveled by the fifth wheel, means for latching the dog in raised position, and means engageable by the fifth wheel for moving the latching means to releasing position to allow the dog to fall downwardly when the tractor and the trailer are separated.

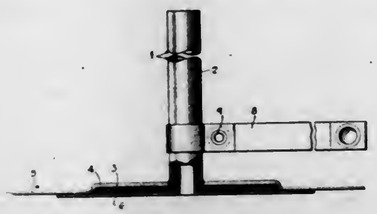
2,438,347
COAXIAL CABLE
Louis H. Morin, Bronx, N. Y., assignor of one-half to Davis Marinsky, Bronx, N. Y.
Application May 13, 1944, Serial No. 535,406
4 Claims. (Cl. 174—28)

1. In coaxial cable comprising a conducting outer sheath, a conductor arranged within and extending longitudinally of said sheath, disc-like insulators spaced longitudinally of the conductor for spacing the conductor from the sheath and cord means arranged on and along said conductor and firmly clamped thereto by said insulators to maintain the spaced relationship of the insulators one to the other on said conductor.

2,438,348
METHOD OF FORMING AND ARRANGING CASTINGS ON ELONGATED MOUNTINGS
Louis H. Morin, Bronx, N. Y., assignor of one-half to Davis Marinsky, Bronx, N. Y.
Application June 16, 1944, Serial No. 540,717
9 Claims. (Cl. 18—59)

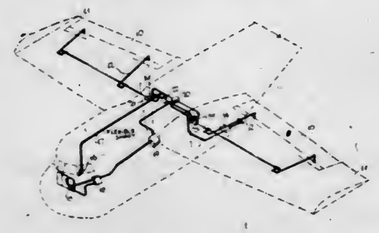
1. The method of forming articles of manufacture of the character described, comprising arranging an elongated mounting member between relatively movable dies and extending through a tubular core arranged between and movable relatively to said dies, gripping said mounting member, forming a casting on the mounting member and around said core, separating the dies, then moving the core and mounting member with the casting thereon to a position out of the path of movement of said dies, with a surface of the casting arranged adjacent an outer surface of the dies, then partially closing the dies to bring said surface of the dies into contact with the surface of the casting, then moving the core and the mounting member in the opposite direction while maintaining the casting in stationary position by abutment of the casting with said outer surface of the dies, then releasing the mounting member and gripping the same to check further movement thereof relatively to the casting, continuing the movement of the core to remove the same from the casting and reposition the same between the dies, and then again closing the dies preparatory to forming the next successive casting on said mounting member.

2,438,349
BENDING OF CORKWOOD
Frederick F. Pollak, New York, N. Y.
Application April 28, 1944, Serial No. 533,219
5 Claims. (Cl. 144—309)



1. Method for the manufacture of a curved workpiece from corkwood comprising compressing a sheet thereof, slowly bending same to curved formation short of its final curved shape, confining said bent sheet between spaced shape-confining faces having the desired curved shape of the finished article and while so confined, imbibing said sheet, reswelling same to occupy the space between said faces, to form a curved workpiece and drying the thus produced curved workpiece while maintaining the same between said space confining faces.

2,438,350
TEST PROBE
William C. Reichard, Stanhope, N. J.
Application August 22, 1945, Serial No. 611,983
2 Claims. (Cl. 173—273)



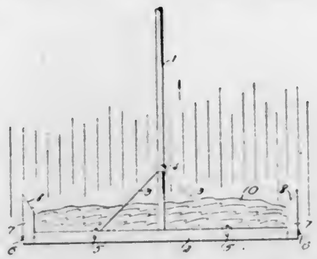
2. An electrical contact member adapted to make contact with a wire or terminal member comprising a first insulating casing member which is open at one end thereof, a second insulating casing member adapted to make a sliding fit with said first casing member so as to move freely with respect thereto in a lateral direction and having an end surface outside said first member, a metal contact member which has one end fastened within said first casing member to an electrical terminal and which extends through said opening in the end thereof and through said entire second casing member to terminate in a hook-shaped clip, and resilient means in the interior of said first casing member positioned to force said second casing member toward and sufficiently close to the inside surface of the hook of said clip so that the wire or terminal member can be tightly gripped between the end of said second casing member and the inside surface of said hook, a portion of the inner surface of the hook which is substantially parallel to the said end surface of the second casing member having a knife edge and portions of said clip inner surface on each side of said knife edge being blunt.

2,438,351
FLEXIBLE COLLAPSIBLE FLUID BLADDER
Abraham N. Spanel, Princeton, N. J.
Original application May 7, 1943, Serial No. 486,031. Divided and this application May 23, 1945, Serial No. 595,466
7 Claims. (Cl. 285—38)

1. In a bladder, the combination of a hollow body having a flexible thermoplastic resinous side wall provided with a filling opening and a surrounding integral annular skirt portion, a flexible filling nipple providing a flexible tubular portion and an integral flexible annular skirt portion, one of said skirt portions comprising two plies and the other skirt portion comprising one ply interposed between said two plies, respectively contiguous of said skirt portions being intimately secured in sealing relationship to thereby provide two separate annular seals between said two integral skirt portions, whereby two independent seals are interposed in series between and form the juncture of the said side wall and flexible flange of said filling nipple.

2,438,352
CONTROL APPARATUS
Elbie C. Strong, Long Island City, and Leverett M. Clark, Tuckahoe, N. Y., assignors, by mesne assignments, to Waugh Equipment Company, New York, N. Y., a corporation of Maine
Application November 17, 1943, Serial No. 510,590
5 Claims. (Cl. 318—545)

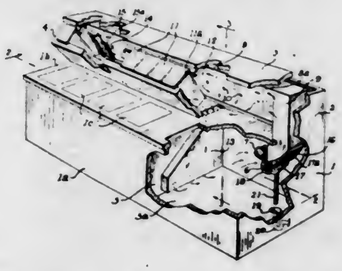
1. Apparatus for measuring and controlling loads, movements and the like, comprising in combination, a push-pull rod, a switch box mounted on said push-pull rod, a control rod secured to said push-pull rod at a spaced point from said switch box and having its free end extending into said box, and a plurality of switches in said switch box moved concurrently by said control rod but having effective operation at different positions of said control rod, means for changing the load on said push-pull rod, and means for selectively operating said load changing means through one of said switches.



2,438,353
METHOD OF CONTROLLING THE GROWTH AND FATTENING RATE OF LIVESTOCK AND POULTRY AND COMPOSITION USED IN CONNECTION THEREWITH
Charles W. Turner and Ezra P. Reineke, Columbia, Mo., assignors to American Dairies Incorporated, Kansas City, Mo., a corporation of Maryland, and The Quaker Oats Company, Chicago, Ill., a corporation of New Jersey, jointly
No Drawing. Application December 8, 1943, Serial No. 513,496
13 Claims. (Cl. 99—2)

1. A method of controlling the fattening rate of livestock and poultry comprising the steps of administering to said animal and bird during a limited selected period of their life span a substance of low toxicity containing the thiourelyene radical —NH·CS·NH— in an amount equivalent to a range of 0.01% to 0.15% for each 100 pounds of feed.

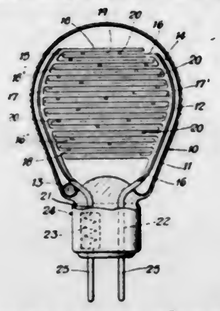
2,438,354
APPLICATOR FOR BOWLING ALLEY FINISHES
Victor Unterbrink, Ottawa, Ohio
Application May 24, 1945, Serial No. 595,591
2 Claims. (Cl. 91—37)



1. An applicator for surface coatings, comprising a handle, a transverse head on the handle having bolts for attaching weights, and extensions on the head disposed at right-angles

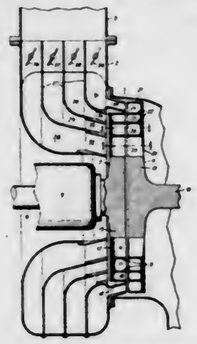
to the head in the direction of travel of the head, and a material distributing agent on the under-

surface of the head and the extensions, said extensions having beveled ends.



2,438,355
FOUNTAIN FIXTURE COOLED BY FORCED AIR CIRCUIT
Emery E. Wilson, Portland, Oreg.
Application January 11, 1944, Serial No. 517,825
12 Claims. (Cl. 62—102)

8. In a fountain fixture, the combination of a syrup rail, a storage compartment, cold air circulating means including a fan in said compartment, refrigerating coils arranged adjacent the point of discharge from said fan and a vent leading exteriorly from said compartment for discharging condensate collected upon said coils, said cold air circulating means having an air inlet communicating with said compartment, an air duct having communication with said cold air circulating means for distributing cold and dehydrated air to the syrup rail, and an air return duct placing the syrup rail in communication with said compartment.

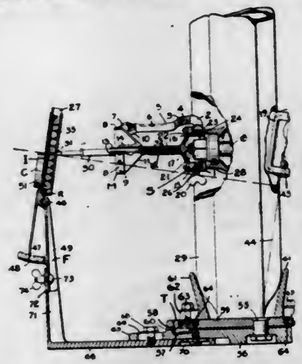


2,438,356
GASEOUS DISCHARGE DEVICE
Focsaneanu Alexander, Flushing, N. Y., assignor of one-half to Albert Lavenburg, New York, N. Y.
Application July 15, 1944, Serial No. 545,036
5 Claims. (Cl. 176—122)

1. A glow discharge lamp comprising an envelope containing mercury vapor, electrodes within said envelope, each electrode having a rib having a plurality of spaced fins of electrically conductive material with the fins of the rib of one of the electrodes being disposed closely between and in spaced relation to opposed fins of the rib of another of the electrodes and presenting a plurality of short paths between opposed fins, and mercury particles from said vapor each connecting opposed fins thereby pro-

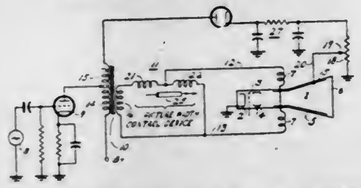
viding a plurality of short circuited paths between said electrodes.

2,438,357
DOUBLE ROTATION TURBODRIVE
David J. Bloomberg, Newton, Mass., assignor to General Electric Company, a corporation of New York
Application November 22, 1944, Serial No. 564,647
8 Claims. (Cl. 253—16.5)



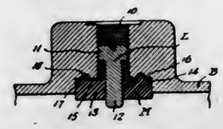
1. A dual rotation fluid pressure turbine comprising a first wheel having concentric inner and outer bucket passage sections, a second mechanically independent wheel having concentric inner, intermediate and outer sections, the inner and intermediate sections of the second wheel being arranged to receive fluid discharged from the inner and outer sections of the first wheel respectively, means for conducting operating fluid to the first wheel, and other means for bypassing fluid around the first wheel and conducting it directly to the outer section of the second wheel, the inner section of the second wheel having bucket blades shaped so as to extract substantially no energy from the operating fluid under normal operating conditions.

2,438,358
WHEEL GAUGE FOR VEHICLES
Biagis Castiglia, New York, N. Y., assignor to Wheel Aligning Necessities, Inc., New York, N. Y., a corporation of New York
Application April 21, 1943, Serial No. 483,898
6 Claims. (Cl. 33—203.12)



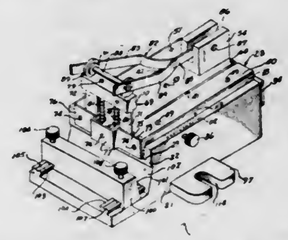
3. In a vehicle wheel gauge, for determining wheel mounting characteristics, having a turn-

table on which the wheel to be aligned may be swung as in steering the vehicle, means rotatably supporting the turntable, a record holding means secured to said turntable supporting means in fixed relation thereto, and means swung with the wheel contacting the face of the record on said record holding means and indicating thereon the swinging movement of the wheel, the face of said



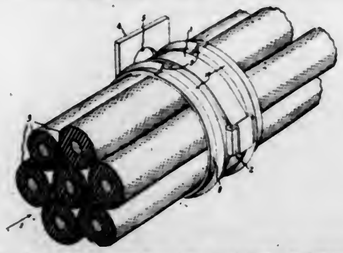
record holding means being cylindrically curved to substantially conform to the path traveled by said indicating means and also to indicate any vertical travel of said indicating means, adjusting means for said record holding means to adjust the face of said record holding means to bring it into parallelism with the inclination of the kingpin on which said wheel swings.

2,438,359
TELEVISION RECEIVER CIRCUITS AND APPARATUS
Richard G. Clapp, Haverford, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 1, 1946, Serial No. 687,639
2 Claims. (Cl. 315—27)



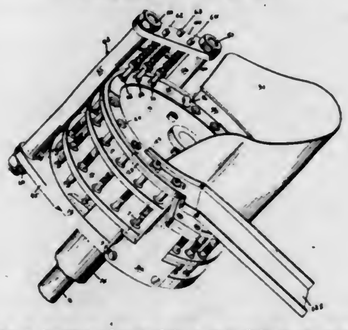
1. In a television receiver, a source of deflecting signals, a cathode ray tube having a deflecting coil and a high voltage anode, means including said source for generating a high, direct-current potential, means for applying said potential to said anode, and an attenuator inserted between said source and said deflecting coil, said attenuator being constructed and arranged, in conjunction with said load, to maintain the effective load on said source fixed despite variations in the adjustment of said attenuator, said attenuator comprising: a first inductance coil connected serially between said source and said deflecting coil, a second inductance coil connected in shunt with said deflecting coil, and an inductance-varying core member common to both of said inductance coils and movable with respect thereto, movement of said core member affecting the inductance of said coils in opposite senses.

2,438,360
REGULATOR STEM SEAL
John J. Delany, Brooklyn, N. Y., assignor to Delany Realty Corporation, New York, N. Y., a corporation of New York
Application November 11, 1944, Serial No. 562,957
1 Claim. (Cl. 286—26)



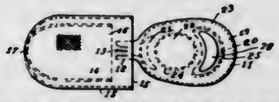
In a device of the character set forth, a casing adapted to contain a fluid under pressure in excess of atmospheric pressure, said casing having a recess in its inner surface defined by an inner wall and an angularly related side wall extending inwardly from said inner wall, said recess being formed with an aperture opening at its opposite ends respectively through the outer surface of the casing and the inner wall of the recess, a regulating element fitted within and adjustable longitudinally of said aperture with its inner terminal extending through and protruding from the recess into said casing, a compressible elastic sealing member having an opening compressed about the regulating element and arranged within the recess for preventing leakage through the aperture in the casing, said inner wall of the recess being formed with an endless groove spaced from and disposed in surrounding relation to said aperture therein and said sealing element being formed with an endless rib on the face thereof confronting the inner wall of the recess, said rib being of greater height than the depth of the groove and of lesser width than the width of the groove to permit the fluid pressure within the casing to depress the height and increase the width of the rib so as to fill the groove and render the action of the sealing member more effective.

2,438,361
BELT SPLICING DEVICE
Percy W. Doblin, Brooklyn, and Handel Ashworth, Baldwin, N. Y.
Application January 3, 1946, Serial No. 638,870
9 Claims. (Cl. 1—3)



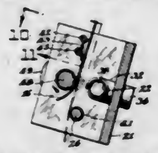
1. In a device for splicing V belts, a base, means on said base to hold the beveled ends of a V belt in matched relation, said means having angular faces corresponding to the side edges of said belt, a carriage on said base, means in said carriage adapted to receive a plurality of staples, and means on said carriage for forcing at least one of said staples through the matched ends of said belt.

2,438,362
WIRE CLEAT
George F. Dunkelberger, Yeadon, and Charles A. Schehl, Manoa, Pa., assignors to General Electric Company, a corporation of New York
Application September 29, 1945, Serial No. 619,406
2 Claims. (Cl. 174—40)



1. In an arrangement for holding a bundle of wires together for attachment to a support, a strip of insulating material adapted to surround the bundle of wires with the ends of the strip overlapping, a pair of parallel arranged longitudinally extending indentations on one side of said strip and corresponding ridges on the other side of the strip, said ridges on one end of the overlapping portions of said strip being adapted to interengage with the indentations on the other end of the strip to prevent lateral displacement of the overlapping ends thereof and an adjustable loop clamp around the outside of said strip between said ridges for preventing relative lateral movement of the clamp and the strip.

2,438,363
BUTTON BROACHING MACHINE
Jules Friedman, New York, N. Y.
Application October 27, 1943, Serial No. 507,821
4 Claims. (Cl. 79—1)

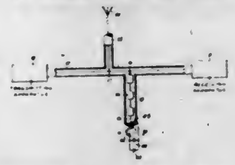


1. In a button broaching machine; a continuously rotatable member having a plurality of recesses for receiving and positioning buttons having holes to be broached; each of said recesses having an opening registering with the section of the button having said holes; a punch individual to each recess and having prongs introducible into the opening of said recess; and means for mounting each of said punches in a position normal to the plane of the recess with which it cooperates; said punch mounting means being connected to the said continuously rotatable member and movable therewith; each punch being at all times in registry with its recess; and a stationary guide plate mounted beneath said continuously rotatable member and said punch mounting means; the lower end of each punch moving along the surface of said guide plate; said guide plate having a ramp in the path of movement of said punches; the punches successively rising as their lower ends move onto the ramp; the opposite ends of the punches carrying the prongs moving into engagement with the button positioned with respect thereto; a stationary curved friction surfaced member disposed above the plane of said stationary guide plate and substantially in alignment with said ramp; said last mentioned member extending along the path of movement of said punches; a friction surface on said punches registerable with said friction surfaces member; said punches moving successively into engagement with said friction surfaced member and being rotated by their movement with respect thereto, as they are raised, to cause said prongs to register with said holes to be broached; and means cooperating with each punch as it is raised to effect the broaching of the button.

2,438,364
BUNION PROTECTOR AND MEANS THEREON FOR HOLDING THE SAME IN PLACE
Milton B. Goldbaum, Brooklyn, N. Y.
Application August 21, 1945, Serial No. 611,709
2 Claims. (Cl. 128—81)

1. As an article of manufacture a bunion protector and a tubular member of soft elastic material of relatively excessive length open at the outer end thereof, and connected at the inner end thereof to the protector, said member being adapted to enclose the toe of the patient, the length of said member being greater than the possible distance from the bunion of any patient to the end of his toe, and the outer end of the said member being adapted, when the said protector is in position, to extend beyond the tip of the toe and to be twisted and retroverted over the end of the toe, whereby to keep the protector from being displaced longitudinally on the foot of the patient.

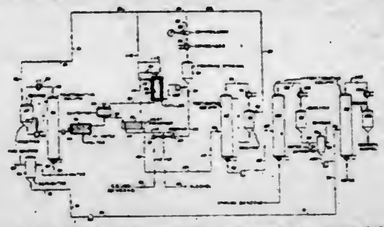
2,438,365
STOP MEANS FOR TEXTILE APPARATUS AND THE LIKE
Carlos A. Hepp, Palisade, and Peter Schoenster, West New York, N. J., assignors, by mesne assignments, to Alfred Hofmann & Company, West New York, N. J., a corporation of New Jersey
Application November 17, 1944, Serial No. 563,930
10 Claims. (Cl. 66—163)



1. A device of the character described for controlling an apparatus in response to strand failure comprising a vertically suspended laterally movable circuit control switch element adapted to be positioned adjacent a portion of the strand moving along the normal path of travel determined by the machine, and pressure means operative upon failure of the strand to forcibly move said portion laterally so that it will operate the element.

2,438,366
DRYING OF TEXTILE MATERIALS
James William Illingworth, Little Aston, Sutton Coldfield, England, assignor to Dunlop Rubber Company Limited, London, England, a British company
No Drawing. Application February 19, 1946, Serial No. 648,816. In Great Britain April 1, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 11, 1964
6 Claims. (Cl. 117—103)

1. The process of treating tire fabrics which comprises impregnating the fabric with an aqueous dispersion of rubber hydrocarbons and phenolic resin forming reagents and subjecting said fabric for a fraction of a second to dry steam at substantially atmospheric pressure and at a temperature of about 140° C.



2,438,367
TRANSMITTER-RECEIVER SWITCHING SYSTEM
James E. Keister, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application October 24, 1942, Serial No. 463,173
3 Claims. (Cl. 250—13)

1. In combination, a transmission line, receiving apparatus connected thereto to receive oscillations over said line, a transmitter connected to said line to supply oscillations thereover, an impedance means connected across said line at a point between said transmitter and receiver, an output terminal connected to said line between said point and said transmitter, the impedance of said means being low during the high voltages produced by said transmitter and high during the absence of said high voltages, said means comprising a branch transmission line having a length equal to a multiple of a quarter wave length of said oscillations and having a plurality of quarter wave length sections of alternately high and low impedance, and a non-linear impedance element connected across said branch line at its end remote from said point, the distance between said end and said terminal being equal to an odd number of quarter wave lengths at the frequency of said oscillations.

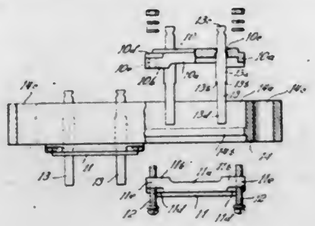
2,438,368
METHOD OF PURIFYING BENZENE
William O. Keeling, Pittsburgh, Pa., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
Application April 9, 1945, Serial No. 587,254
7 Claims. (Cl. 260—674)

1. A method of recovering benzene of a high degree of purity from impure benzene comprising: mixing under pressure impure benzene with a mixture of solvents comprising propane and isopropyl alcohol which forms an azeotropic mixture with the benzene, reducing the pressure of the mixture while thoroughly stirring the mixture to evaporate the propane and rapidly crystallize the benzene as fine-grained separate crystals, separating the crystallized benzene from the

liquid mixture, melting the crystals and distilling the benzene to recover a pure benzene, distilling the liquid mixture separated from the crystals to recover pure benzene from the solvent-benzene azeotropic mixture.

2,438,369
PRODUCTION OF DICARBOXYLIC ACIDS OR ANHYDRIDES THEREOF
Irving E. Levine, Berkeley, Calif., assignor to California Research Corporation, San Francisco, Calif., a corporation of Delaware
Application May 30, 1945, Serial No. 596,645
14 Claims. (Cl. 260—342)

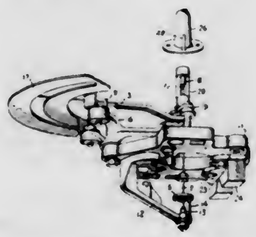
1. A process of manufacturing a benzene ortho dicarboxylic acid anhydride by oxidation in vapor phase of a mixture of aliphatic substituted benzenes having aliphatic radicals of 1 to 3 carbon atoms, a major proportion of said aliphatic substituted benzenes having two aliphatic groups positioned ortho to each other on the benzene ring and a minor but substantial proportion having meta and para aliphatic substituents, said process comprising the steps of oxidizing the ortho aliphatic substituted benzenes to a benzene ortho dicarboxylic acid anhydride and simultaneously selectively over-oxidizing said meta and para aliphatic substituted benzenes at least to the point of ring rupture by passing said mixture in vapor phase over a vanadium oxide catalyst at a catalyst temperature of from about 990 to about 1175° F., and separating said benzene ortho dicarboxylic acid anhydride from said oxidized gases.



2,438,370
INSECTICIDE
Allen H. Lewis, Berkeley, Calif., assignor, by mesne assignments, to California Research Corporation, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 27, 1943, Serial No. 496,310
2 Claims. (Cl. 167—24)

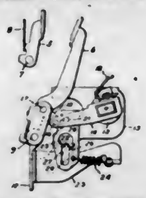
1. An insecticidal composition comprising as its principal toxic ingredient pyrethrum and the benzene sulfonic acid amide from the reduced nitrogen bases from petroleum.

2,438,371
DISENGAGEABLE ELECTRICAL CIRCUIT CONNECTOR
Richard C. Marholz, Chicago, Ill., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill., a corporation of Illinois
Application July 21, 1944, Serial No. 545,911
4 Claims. (Cl. 173—328)



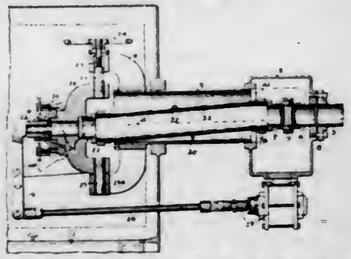
1. A disengageable electrical circuit connector including in combination an open frame, an in-

ternal rib within said frame, a pair of complementary opposed wafers of insulation material positioned within said open frame on opposite sides of said internal rib and each having a plurality of recesses oppositely positioned and each pair of opposed recesses providing a cavity therebetween, contact means in each pair of recesses having a portion in the cavity dimensioned for



floating movement therein as limited by the walls of such recesses, said contact means having another portion extending out of a wafer for receiving a circuit connection thereto, and fastening means through said wafers to clamp the pair of wafers toward one another against the internal rib, said wafers being maintained rigid in the frame but each said contact means floating within limits in the wafers.

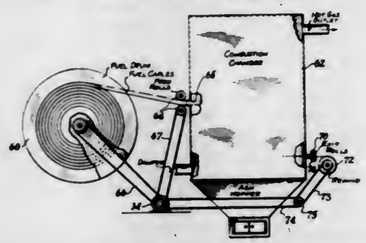
2,438,372
PRECISION MAGNETOMETER
Lewis I. Mendelsohn, Lynn, Mass., assignor to General Electric Company, a corporation of New York
Application October 1, 1945, Serial No. 619,659
2 Claims. (Cl. 175—183)



1. A magnetometer comprising a pivoted shaft having thereon a pointer and an armature polarized at right angles to the shaft, a scale with which said pointer cooperates, a stop for said shaft, a spring for rotatively biasing the shaft with its pointer downscale against said stop such position being referred to as the pointer stop position, said spring being adjusted such that if the stop were removed the spring would rotate the shaft and pointer further in a downscale direction through an angle of the order of 80 degrees from the pointer stop position, said instrument being adapted to be placed in a unidirectional magnetic field to be measured with its shaft at right angles to such field and with the polarized armature, in the pointer stop position thereof, partially opposing such field and with its polarized axis at an angle of the order of 50 degrees to the direction of such field and with such field producing upscale torque on said armature.

2,438,373
ELECTRIC SWITCH
John A. Oppel, Upper Darby, Pa., assignor to General Electric Company, a corporation of New York
Application April 12, 1946, Serial No. 661,551
8 Claims. (Cl. 200—169)

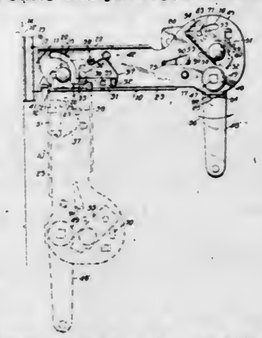
3. For use with a circuit breaker provided with a stationary contact and a movable contact and wherein the movable contact tends to move from the circuit open position into engagement with or arc-striking proximity to the stationary contact under the abrupt effects of shock and rebound, an arrangement for preventing such movement of the movable contact under such conditions comprising a catch mounted to partake of the movement of the movable contact and to move relatively thereto, said catch being provided with a longitudinal slot having a relatively narrow straight portion with substantially parallel sides of different lengths and a wider portion having a plane deflecting surface intersecting the longer side of the straight portion and a plane catch surface intersecting the shorter side of the straight portion, a semicylindrical stationary pin mounted to project into the slot in said catch for engagement of its plane surface with one or the other of the plane surfaces of the slot, and means biasing said catch for movement in a direction to cause the side of the slot having the deflecting surface to bear on said pin, the construction and arrangement of parts being such that when the movable contact is in the circuit open position sudden movement thereof toward the stationary contact effects movement of the catch against the bias thereon to cause the catch surface of the slot to engage the flat side of said pin whereby to arrest movement of the movable contact in the circuit closing direction and upon subsidence of the condition causing such movement the narrow portion of the slot becomes relocated relatively to said pin whereby to permit a normal circuit closing operation of the circuit breaker.



2,438,374
APPARATUS FOR FLUID-TREATING LENGTHY MATERIAL
Justin H. Ramsey, Allendale, N. J.
Application October 19, 1945, Serial No. 623,346
4 Claims. (Cl. 18—6)

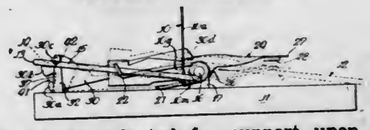
4. In an apparatus for individually fluid-treating lengths of flexible material differing in diam-

eter, the combination of a fluid-receiving passaged structure including three adjoining sections together providing, uninterrupted, the passage of said structure through which to pass each length lengthwise of itself and of the passage and in one direction, the three adjoining sections lying in a vertical plane, the two sections first and last to be passed by such length having their passage-portions substantially horizontal and the latter of such two sections having means to hold therein any one of a set of fluid seals having apertures of different diameters and with the aperture of the seal so held coaxial with the passage portion of such section, the intermediate section of the passaged structure being flexible throughout its length, so that the passaged structure in such intermediate section is flexible in a vertical plane, and supporting structure for said first and last sections including means to adjust one of them vertically relative to the other, said adjusting means comprising a first adjusting part fixed with relation to the first section of the passaged structure, a second adjusting part fixed to the last section of the passaged structure, and an adjustable connection between the first and second parts of the adjusting means, said adjustable connection providing for the substantial vertical adjustment of such first and second parts of the adjusting mechanism and thus the adjustment of the first and last sections of the passaged structure.



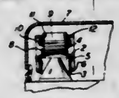
2,438,375
APPARATUS FOR FEEDING FUEL CABLES TO FURNACES
Sydney Rogow, New York, N. Y.
Application March 29, 1945, Serial No. 585,517
1 Claim. (Cl. 110—101)

In fuel burning apparatus of the character described, a furnace structure having a combustion chamber, a drum carrying a fuel cable at one side of the furnace, said fuel cable being carried by a non-combustible strand, a rewind roll at the opposite side of the furnace to receive thereon the non-combustible strand, a set of guide rolls for directing the cable into the combustion chamber, a set of guide rolls for directing the strand onto the rewind roll with the fuel cable consumed during passage through the combustion chamber and a motor drive for the drum and rewind roll.



2,438,376
CAN OPENER
George Randall Squires, Rockaway, N. J.
Application February 26, 1945, Serial No. 579,714
9 Claims. (Cl. 30—8)

1. In combination, a substantially horizontal bracket plate disposed in a vertical plane, the outer end being provided with a bearing opening; a shaft in said opening having a crank fast on one end and a traction wheel on the other; a pivot pin above the shaft fast in the plate; a knife plate having a cutting end, and pivoted on the pivot pin with the pointed cutting end normally angularly disposed rearwardly relative to the forward rotation of the wheel; a lever pivoted near its inner end on the bracket plate near said shaft and having an end projection pointing toward the shaft; the outer arm of the lever having its outer end part approximately parallel

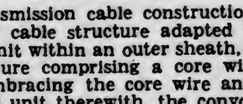


to said knife plate; a link connecting the outer end of the lever and the outer end of the knife plate; a cam plate on said shaft having a forward cam edge adapted to engage said end projection as the shaft rotates forwardly to cause the pointed knife end to puncture a can head the rim of which is placed against said wheel between said wheel and blade.

2,438,377
BARRIER FOR ANIMAL TRAPS
Herbert A. Stilson, Chicago, Ill., assignor to McGill Metal Products Corporation, Marengo, Ill., a corporation of Illinois
Application July 26, 1945, Serial No. 607,152
14 Claims. (Cl. 43—81)

1. A barrier adapted for support upon the coiled striker biasing spring of an animal trap to block one animal approach to the bait treadle of the trap, comprising a body portion adapted to extend upwardly from the trap base to provide the approach barrier, and support means adapted to be wrapped around the coiled striker biasing spring to provide a pivotal support for said body portion.

2,438,378
SNUFFER CAP ASSEMBLY
Eric Wedemeyer, Floral Park, N. Y., assignor to Hamilton Art Metal Corporation, New York, N. Y., a corporation of New York
Application December 30, 1944, Serial No. 570,518
2 Claims. (Cl. 67—7.1)

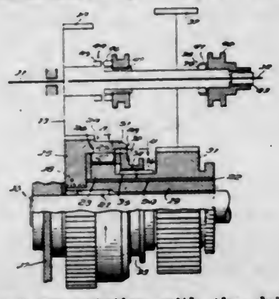


1. In a snuffer cap assembly for pyrophoric lighters, the combination of a frame member of inverted U-shaped longitudinal sectional configuration and having two opposed open sides, a

spring retainer of inverted cup shape configuration removably mounted in the upper portion of said frame member, a coil spring having an end extending into the interior of said cup shaped spring retainer, and a wick cap slidably disposed in said frame member and having a cylindrical portion closed at one end by a spherical portion with the convex side on the outside, the other end of said coil spring bearing against the concave side of said spherical portion.

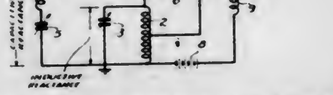
2,438,379
PRODUCTION OF CATALYSTS
Raymond C. Archibald, Berkeley, and Bernard S. Greensfelder and Frank T. Eggertsen, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application February 20, 1946, Serial No. 649,122
7 Claims. (Cl. 252—259)

1. Process for the production of gel type catalysts which comprises displacing water in a hydrous inorganic oxide gel with a non-aqueous organic liquid at least partially miscible with water and having a boiling point below about 200° C., heating the gel with said liquid under a pressure of at least 100 p. s. i. to a temperature between the normal boiling point and the critical temperature of said liquid and then exploding the gel by sudden release of the pressure.



2,438,380
TRANSMISSION CABLE
Charles A. Arens, Chicago, Ill., assignor to Arens Controls, Inc., Chicago, Ill., a corporation of Illinois
Application May 31, 1944, Serial No. 538,170
1 Claim. (Cl. 74—501)

In a transmission cable construction, a composite inner cable structure adapted for movement as a unit within an outer sheath, said inner cable structure comprising a core wire, a first wire coil embracing the core wire and forming a structural unit therewith, the convolutions of the wire coil being in spaced relation, but being sufficiently closely spaced so as to enable the core wire to resist stresses of compression without lateral buckling, and a second helically formed wire coil, the convolutions of said second wire coil also being in spaced relation and being of the same pitch as the convolutions of the first named wire coil, said second wire coil being materially shorter than the first wire coil and the two wire coils being arranged in interthreaded engagement substantially along the length of the second wire coil.



2,438,381
LOCKUP ONE-WAY TORSIONAL FORCE EXERTING DEVICE
Oscar H. Banker, Evanston, Ill., assignor to New Products Corporation, Chicago, Ill., a corporation of Delaware
Application February 25, 1946, Serial No. 649,930
9 Claims. (Cl. 192—48)

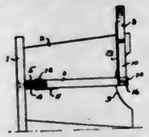
1. In an overrunning power transmitting train, an overrunning clutch device including a rotatable driving part and a rotatable driven part coaxial with the driving part, a rotatable driven member coaxial with said driven part, and means for driving said driven member optionally from said parts comprising a bridging structure having meshed-element connections with said driven part and said driven member and adjustable axially of said parts and said elements incident to sliding the elements in said connections, and a dental clutch including components respectively

constrained for rotation with the driving part and with said bridging structure and optionally meshable by the axial adjustment of said structure, and the connection between said structure and said driven part being constructed and arranged to provide for limited relative rotation of said structure and said driven part.

2,438,382
OSCILLATION GENERATOR
Leo W. Born, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 5, 1945, Serial No. 592,091
5 Claims. (Cl. 250—36)

1. An oscillation generator comprising an electron discharge tube having a cathode, an anode and at least one grid, a direct current source having its negative terminal grounded and its positive terminal connected to said anode through an inductive impedance, a parallel resonant circuit connected from ground through a grid resistor to said grid, a capacitor in shunt with said resistor, a conductor interconnecting the cathode and an intermediate point on the inductive element of said parallel resonant circuit, and a series resonant circuit in shunt with said parallel resonant circuit and having its inductive and capacitive elements adjusted to produce resonance at a frequency somewhat higher than the frequency of the oscillations to be generated.

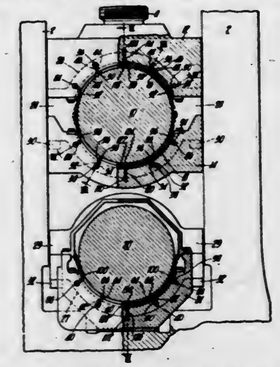
2,438,383
UNSHORTING SWITCH
Robert B. Brode, Berkeley, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application September 4, 1943, Serial No. 501,305
6 Claims. (Cl. 200—80)



1. An unshorting switch for use in the electrical control circuit of a projectile and including

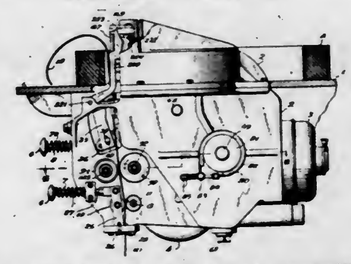
a cylindrical container body, a shorting wire having a portion stretched across a radially extending opening in said body, an element in said opening having a cutting edge rotatable about a shaft with its ends slidably mounted in a pair of axially disposed tracks in the sides of said opening at a distance from the center of the

body, a cover on the top of said body, resilient means for normally holding said element against said cover within said opening with its cutting edge upward and radially inward of the shaft, said element being movable downwardly in the opening in response to the force of set-back and turnable radially outwardly in response to centrifugal force so as to cut the shorting wire.



2,438,384
TOILET STOOL
Albert M. Broudy, Pittsburgh, Pa., assignor of one-half to James R. Snyder, Wilkinsburg, Pa.
Application April 18, 1945, Serial No. 589,042
2 Claims. (Cl. 155—31)

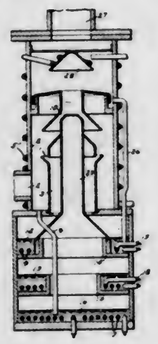
2. A toilet stool of the character described, comprising the combination of a pair of supporting legs, an oblong rectangularly-shaped top mounted on said legs, a toilet seat secured in the vertically edgewise position between said pair of legs and beneath said top, said toilet seat being provided with a seat opening that is open at its lower end, the lower end of said toilet seat being formed to provide a pair of depending bearing members, a closure panel mounted in said opening, a pair of pivoting pins fixed in respective bearing members and engaging said closure panel for pivotally connecting the latter to said toilet seat, a stop plate secured against the rear face of said toilet seat and depending into said opening for preventing the shifting of said closure panel in the rearward direction from said opening, a latching element mounted on the front face of said toilet seat and being adjustable for securing said closure panel in said opening, a holding bar mounted against said bearing members for preventing the shifting of said closure panel in the forward direction beyond a position at right angles with respect to said toilet seat, said closure panel having recessed side edges to provide clearances when said closure panel is in said rightangular position, means for securing said holding bar in position against said bearing members and for reenforcing the latter, and a sanitary shield mounted against the rear face of said closure panel.



2,438,385
METHOD AND APPARATUS FOR COOLING AND LUBRICATING BEARINGS
Raymond A. Burkhart and William M. Finlayson, Pittsburgh, Pa., assignors to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application July 7, 1945, Serial No. 603,612
14 Claims. (Cl. 308—123)

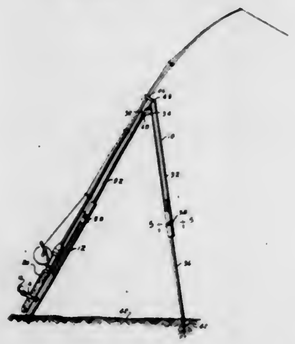
11. A bearing which partially encompasses a rotating shaft and has load bearing contact therewith, means for introducing lubricating water under pressure directly between the shaft and the bearing at a point of substantially maximum bearing pressure, means for introducing water soluble oil under pressure directly between the shaft and the bearing substantially at the crown of the bearing, and means for spraying

water along the exposed surfaces of the rotating shaft substantially tangentially thereto and in a direction away from the bearing edges in the bearing area of the shaft, whereby the shaft and bearing are cooled and foreign substances are prevented from entering between the shaft and bearing.



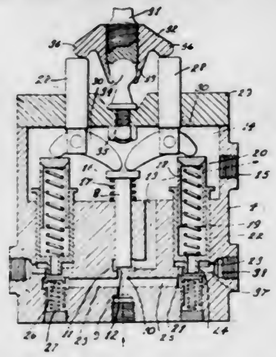
2,438,386
BUNDLE BINDING MACHINE
Paul A. Chamberlain, Chicago, Ill., assignor to Signode Steel Strapping Company, Chicago, Ill., a corporation of Delaware
Application July 12, 1945, Serial No. 604,615
10 Claims. (Cl. 100—31)

1. A bundle-binding machine comprising a support for holding a bundle in binding position; means for feeding binder forward from a source of binder supply to the binding position to enable the operator to loop it about the bundle; means for guiding the free end of the binder to a sealing position lapping the binder from the source; a gripper for pressing the binder near its free end against the bundle to cause said end to be anchored; tensioning means for retracting the binder to shrink and tension the loop thereof upon the bundle; sealing means for deforming the lapping portions of binder to form joint therebetween to render the tensioned loop permanent; a cutter for severing the binder between the loop about the bundle and the source of supply; a series of cams, one for actuating the gripper, a second for actuating the tensioning means, and a third for actuating the sealing means and cutter; operative connections between the several cams and respectively the gripper,



the tensioning means, and the sealing means and cutter; a motor; and a common driving connection between the motor and the cams.

2,438,387
PUMP
August P. Colaiaco, Pittsburgh, Pa., assignor, by mesne assignments, to the United States of America, as represented by the United States Atomic Energy Commission
Application September 18, 1945, Serial No. 617,125
6 Claims. (Cl. 230—101)

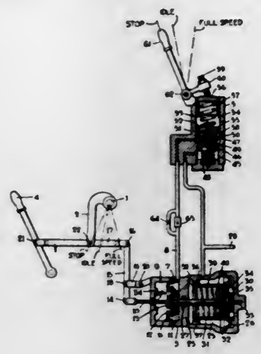


1. A vapor pump for operation against high back pressures comprising a pumping jet, a boiler for supplying large quantities of vapor to said jet, said boiler including a main boiler area and a superimposed boiler area and individual heating means for each of said boiler areas.

2,438,388
FISHING POLE HOLDER
Harold George Dolk, Hoquiam, Wash., assignor of one-half to Clarence M. Manker, Portland, Oreg.
Application May 8, 1946, Serial No. 668,120
1 Claim. (Cl. 248—42)

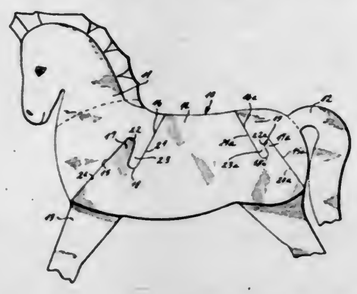
A device of the character described, comprising several tubular members, an ovalized bevelled face on the upper end of one of said tubular members which is adapted to engage the rod-like member in the other tubular member to limit the pivotal movement of said rod-like member and said tubular member, rod like members telescopically mounted in said members, a pair of opposed parallel projections formed on the tubular member having the ovalized bevelled face below said face and a pin connecting said projections to said rod-like member for pivotally connecting said tubular member to said rod like member and means on one of said tubular members and said rod like members for supporting a fishing rod in parallel alignment therewith.

2,438,389
HYDRAULIC SELECTOR VALVE MECHANISM FOR HYDRAULIC SERVOMOTORS
Stanley Howard Edge, Lincoln, England
Application December 10, 1942, Serial No. 468,566
In Great Britain October 20, 1941
6 Claims. (Cl. 60—97)



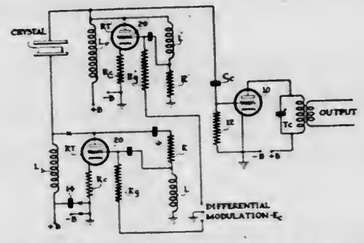
1. Hydraulic control mechanism comprising a valve housing having an inlet and an outlet, means connected to the inlet and outlet for circulating fluid under pressure through said housing, a number of hydraulic servomotors connected to said housing, a shut-off valve interposed between the inlet and outlet of the housing for controlling the circulation of fluid therethrough, said shut-off valve being normally urged to open position, a number of selector valves disposed operatively in positions parallel to said shut-off valve and each communicating with the inlet side of the shut-off valve and adapted to control the flow of pressure fluid to one of said servomotors, a number of depressible plungers each having a beam pivoted to its lower end, one end of said beam bearing upon the shut-off valve and the other end of said beam bearing upon a selector valve, a common actuating member adapted to engage selectively any one of said plungers to cause diversion of pressure fluid from the inlet to the appropriate servomotor, and spring means for restoring the parts to inoperative positions after operation.

2,438,390
CONTROL APPARATUS
Erik G. Erson, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application March 30, 1944, Serial No. 528,699
6 Claims. (Cl. 121—38)



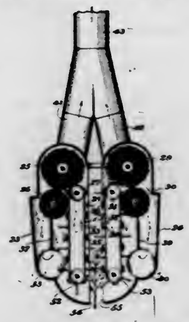
1. In combination, a source of fluid under pressure, an adjustable member having two different positions, control means operable by fluid under pressure to move said member from one of said positions to the other position, mechanism con-

nected to said control means for operating said control means to move said member to said one position upon release of fluid under pressure from said control means, other control means operable by pressure of fluid in said source to render



said mechanism effective, and upon loss of fluid under pressure from said source ineffective, and means for supplying fluid under pressure to and releasing fluid under pressure from said control means.

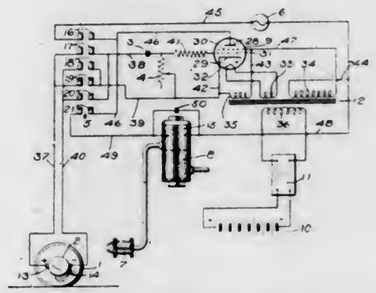
2,438,391
JOINTED STRUCTURE
Mabel H. Gallagher, Chicago, Ill.
Application April 4, 1945, Serial No. 586,602
2 Claims. (Cl. 46—22)



1. A toy comprising a solid body shaped in the similitude of an animal and having a separable head and a separable tail, said body having a slot at its head end and a second slot at its tail end, the sides of said slots being closed with the ends of the slot being open, said head having a part enterable in the head end slot, said tail having a part enterable in the tail end slot, the head end slot and margins of the enterable parts of said head having complemental surfaces to interlock against relative rocking or tilting motion when the head is entered in its slot, the tail end slot and the margins of the enterable part of said tail having complemental surfaces to interlock against relative rocking or tilting motion when said tail is entered in its slot, and the complemental surfaces of the head and the head end slot being different from the complemental surfaces of the tail and the tail end slot to prevent insertion of the tail into the head end slot and of the head into the tail end slot, said parts being connectable and disconnectable by relative movement endwise of the slots with the direction of movement of the parts being connected and disconnected in planes parallel to the planes of the side surfaces of the body.

2,438,392
OSCILLATION GENERATION CONTROL
Paul D. Gerber, Woodlynne, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 6, 1944, Serial No. 534,429
17 Claims. (Cl. 179—171.5)

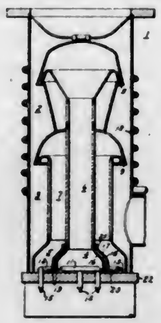
3. In apparatus for controlling the frequency of operation of a generator of the type wherein a crystal is in shunt to the control grid to cathode impedance of an electron discharge device, the apparatus comprising a variable inductance and a variable capacity in series with the crystal for altering the point of operation of the crystal on its frequency versus reactance characteristic, and means for controlling the varying inductance and the capacity differentially in accordance with control potentials.



2,438,393
MACHINE FOR PICKING COTTON
James Henry Hamner, James Carl Hamner, and Lloyd Henry Hamner, Clarksdale, Miss.
Application August 12, 1946, Serial No. 690,064
13 Claims. (Cl. 56—49)

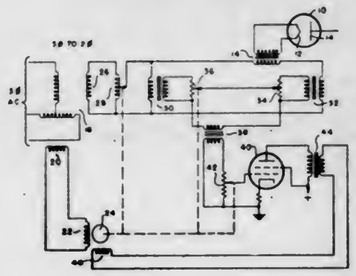
1. In a cotton picker machine, including a pair of cotton picking belt units comprising flights, each of said upwardly traveling belt flights being in opposed position facing each other, said upwardly traveling flights having surfaces which extend from front to rear of said machine, said belt surfaces of each belt having a plurality of spaced spindles projecting therefrom, at least one of said belt surfaces having a plurality of members provided with tooth means, said last

named members projecting a lesser distance than said spindles toward the upwardly traveling flight of the other belt, whereby the said spindles strip the cotton from the stalks and bring the cotton into contact with said members while simultaneously guiding the stalks from the advancing to the trailing ends of said units while said members provided with tooth means engage the lint cotton brought in contact with said members by said spindles, and means located adjacent the tops of the said flights of said belts for removing the lint cotton from said members, at least some of said members with tooth means on one upwardly traveling flight being opposed to at least some of said spindles on the upwardly traveling flight of the other belt.



2,438,394
ELECTRONIC VEHICLE CONTROL APPARATUS
Claude M. Hines, Verona, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application July 28, 1944, Serial No. 547,031
14 Claims. (Cl. 192—2)

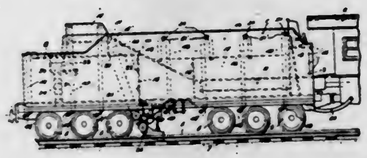
1. In a propulsion and braking control apparatus for a vehicle of the type having a controller operative at one time to effect application of propulsion power to a wheel unit of the vehicle and at another time to effect application of braking power to the said wheel unit, the combination of means selectively and alternatively conditioned under the control of the said controller for operating responsively to the slipping of the wheel unit during application of propulsion power to the wheel unit or for operating responsively to the slipping of the wheel unit during application of braking power to the wheel unit, signal means arranged to be responsive to operation of said wheel slip responsive means during application of propulsion power to the wheel unit for indicating wheel slippage, and means arranged to be responsive to operation of said wheel slip responsive means during application of braking power to the wheel unit for causing a reduction in the degree of braking power applied to the wheel unit.



2,438,395
PUMP
Dwight L. Hopper, Wilkinsburg, Pa., assignor, by mesne assignments, to the United States of America, as represented by the United States Atomic Energy Commission
Application October 12, 1944, Serial No. 558,355
6 Claims. (Cl. 230—101)

1. A multistage vapor pump comprising a plurality of pumping stages, a boiler compartment for each pumping stage, heating means for each

boiler compartment, and a double walled heat barrier between the boiler compartments.



2,438,396
ELECTRONIC DEVICE CIRCUIT
Gordon B. Jacobs, Carthage, N. Y., and Oliver I. Steigerwalt, Chicago, Ill., assignors to the United States of America as represented by the Secretary of War
Application March 4, 1946, Serial No. 651,935
3 Claims. (Cl. 315—106)

1. A circuit arrangement for maintaining substantially constant temperature in a magnetron filamentary cathode, that comprises a source of polyphase alternating current, means for heating the cathode from said source, said means comprising an adjustable autotransformer for furnishing one phase of said alternating current to said cathode, and a multiwinding filament transformer between said autotransformer and said cathode, a multiwinding voltage transformer connected in parallel with the primary winding of said filament transformer, a multiwinding current transformer connected in series with the primary winding of said filament transformer, a compensating potentiometer connected across one winding of said voltage transformer, a second potentiometer connected across one winding of said current transformer and manually adjustable for presetting the temperature of said cathode, an amplifier for amplifying any difference voltage developed across said potentiometers, a multiwinding transformer coupling said potentiometers to the input of said amplifier, a gain adjusting potentiometer across the input to said amplifier, an induction motor having a pair of field windings, one of said windings being

energized with one phase of said polyphase alternating current, means for connecting the output of said amplifier to the second of said motor field windings to energize said second winding for movement of said motor upon development of a difference voltage between said compensating and manually adjustable potentiometers on change in temperature of said cathode, and means connecting said motor and said autotransformer, compensating potentiometer and gain adjusting potentiometer for adjustment of said autotransformer and potentiometers in accordance with movement of said motor.

2,438,397
LOCOMOTIVE TENDER AND WATER SCOOP
Carl F. Kantola, Dumont, N. J.
Application July 6, 1944, Serial No. 543,709
10 Claims. (Cl. 105—236)

3. A locomotive tender having a water chamber, a top filling inlet for delivering water into the chamber from a water column, a scoop for taking up and delivering water into the chamber from a track-pan, and a normally automatically closed closure for the filling inlet acting as a check valve adapted to open under the weight of the water when it is taken from a water column and to be held closed by and against the water pressure within the chamber when scooping.

2,438,398
PREPARATION OF CYCLOPENTADIENE
Robert M. Kennedy, Drexel Hill, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application August 19, 1947, Serial No. 769,521
3 Claims. (Cl. 260—666)

1. A process for the dehydrogenation and cyclization of 1,3 pentadiene to 1,3 cyclopentadiene which comprises subjecting said 1,3 pentadiene to dehydrogenation at a temperature within the range of 300° C. to 700° C. for a time sufficient to effect a desired extent of dehydrogenation and cyclization.

2,438,399
PREPARATION OF CYCLOPENTADIENE
Robert M. Kennedy, Drexel Hill, and Stanford J. Hetzel, Cheltenham, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application November 24, 1945, Serial No. 630,691
5 Claims. (Cl. 260—666)

1. A process for the dehydrogenation and cyclization of 1,3 pentadiene to 1,3 cyclopentadiene which comprises contacting 1,3 pentadiene with silica gel at a temperature of at least about 300° C. but not substantially above a temperature at which substantial decomposition of hydrocarbons present will take place for a time sufficient to effect a desired extent of conversion.

2,438,400
PREPARATION OF CYCLOPENTADIENE
Stanford J. Hetzel, Cheltenham, and Robert M. Kennedy, Drexel Hill, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application November 24, 1945, Serial No. 630,692
5 Claims. (Cl. 260—666)

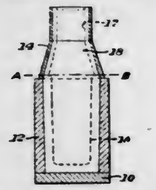
1. A process for the dehydrogenation and cyclization of 1,3 pentadiene to 1,3 cyclopentadiene which comprises contacting 1,3 pentadiene with a mass consisting essentially of chromic oxide on alumina at a temperature of at least about 300° C. but not substantially above a temperature at which substantial decomposition of hydrocarbons present will take place for a time sufficient to effect a desired extent of conversion.

2,438,401
PREPARATION OF CYCLOPENTADIENE
Robert M. Kennedy, Drexel Hill, and Stanford J. Hetzel, Cheltenham, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application February 26, 1946, Serial No. 650,394
2 Claims. (Cl. 260—666)

1. A process for the dehydrogenation and cyclization to 1,3 cyclopentadiene of 1,3 pentadiene which comprises subjecting said compound to a dehydrogenation temperature within the range 300° C. to a temperature above which substantial decomposition of the hydrocarbons will take place in the presence of a contact mass consisting essentially of silicon carbide for a time sufficient to cause a desired extent of conversion to cyclopentadiene.

2,438,402
PREPARATION OF CYCLOPENTADIENE
Robert M. Kennedy, Drexel Hill, and Stanford J. Hetzel, Cheltenham, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application August 19, 1947, Serial No. 769,522
5 Claims. (Cl. 260—666)

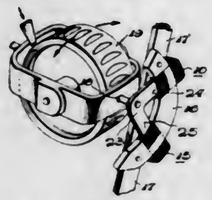
1. A process for the dehydrogenation and cyclization of 1,3 pentadiene to 1,3 cyclopentadiene which comprises contacting 1,3 pentadiene with fused alumina at a temperature of at least about 300° C. but not substantially above a temperature at which substantial decomposition of hydrocarbons present will take place for a time sufficient to effect a desired extent of conversion.



2,438,403
PREPARATION OF CYCLOPENTADIENE
Robert M. Kennedy, Drexel Hill, and Stanford J. Hetzel, Cheltenham, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application August 19, 1947, Serial No. 769,523
5 Claims. (Cl. 260—666)

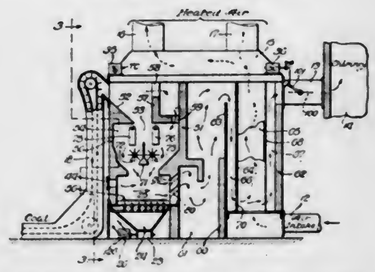
1. A process for the dehydrogenation and cyclization of 1,3 pentadiene to 1,3 cyclopentadiene which comprises contacting 1,3 pentadiene with a contact mass selected from the group consisting of subdivided iron and steel at a temperature of at least about 300° C. but not substantially above a temperature at which substantial decomposition by hydrocarbons present will take place for a time sufficient to effect a desired extent of conversion.

2,438,404
TREATMENT OF HYDROCARBONS
Stanford J. Hetzel, Cheltenham, and Robert M. Kennedy, Drexel Hill, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application January 20, 1948, Serial No. 3,373
4 Claims. (Cl. 260—666)



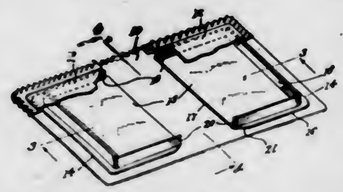
1. A process for the dehydrogenation and cyclization of 1,3 pentadiene to 1,3 cyclopentadiene which comprises contacting 1,3 pentadiene with a mass consisting essentially of a porous adsorbent alumina at a temperature of at least about 300° C. up to a temperature at which excessive decomposition of hydrocarbons present will take place for a time sufficient to effect a desired extent of dehydrogenation and cyclization.

2,438,405
METHOD FOR MANUFACTURING BIMETALLIC BODIES
James W. Kinnear, Jr., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application May 14, 1946, Serial No. 669,573
13 Claims. (Cl. 29—189)



1. The method for making composite steel bodies, which comprises partially solidifying a body of molten steel while retaining an inner portion thereof liquid, alloying the liquid portion of said body by adding alloying metal thereto of predetermined composition, solidifying said liquid alloyed portion, providing an axial opening in said solidified body, enlarging the radial dimensions of said opening, longitudinally severing the wall of the body, imparting a substantially planar shape to said body, and hot deforming the resulting composite body to the desired dimensions.

2,438,406
VANE TYPE TRANSMITTER
Henry Konet, Paramus, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application December 16, 1943, Serial No. 514,523
5 Claims. (Cl. 177—380)



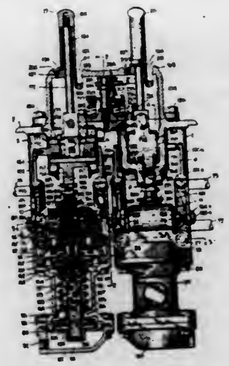
1. Means for transmitting signal voltage representative of a condition to a remote control point, comprising a normally energized and balanced bridge circuit including a pair of spaced inductances and a V-shaped rotor vane mounted for rotation opposite said inductances in response to the condition to be transmitted to said remote control point, to thereby vary the value of said inductances whereby said bridge circuit is unbalanced for transmission of a signal voltage corresponding to said condition to said remote control point.

2,438,407
HEATING PLANT AND FURNACE
John A. Kreuser, Chicago, Ill.
Application April 13, 1944, Serial No. 530,901
22 Claims. (Cl. 110—32)

10. In a furnace of the class described, wall means defining a coking chamber, a rotatable feed member disposed in said coking chamber, said feed member having radial vanes forming pockets for receiving coal, a conveyor for supplying coal for deposit in the pockets of said feed member, wall means defining a chamber forming a firebox provided with a grate disposed underneath said coking chamber, the heat radiating upwardly from said firebox being utilized for the conversion of the coal in the pockets of the rotatable member to form coke, a motor for controlling the operation of said rotatable member, variably adjustable timing means for periodically operating said motor for successive intervals of set duration, whereby said rotatable member is rotated by predetermined angular amounts to dispose said pockets angularly so as to release amounts of coke successively into said firebox for burning on the grate therein, and means governed by said motor for actuating the coal supply conveyor for like intervals of operation, whereby amounts of coal are supplied to the pockets of said rotatable member for coking therein which correspond substantially to the amounts of coke removed therefrom for burning on the grate in said firebox.

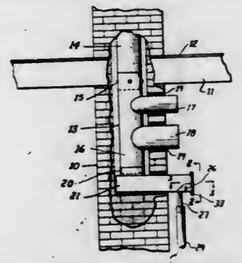
2,438,408
FLEXIBLE CIGARETTE CASE WITH REINFORCING MEANS
John A. Mace, Tampa, Fla.
Application September 22, 1944, Serial No. 555,310
1 Claim. (Cl. 206—41)

In combination with a flexible cigarette case having a pocket, a removable protective attachment comprising a substantially rigid plate having diagonal flanges extending upwardly from three edges thereof with the other edge flat and adapted to be slid into the pocket of the cigarette case with the flat edge toward the open mouth of the pocket, and a distending device associated with the said plate and consisting of three side members and an open side, two of the side members having their outer edges unsupported at the outer side and being resilient and flexible and given an outward bias diverging from one another, said device adapted to be slid into the pocket of said cigarette case on said plate and with the members of the device engaging the flanges of the plate, said members being substantially of the height of the thickness of a cigarette, said outwardly sprung members adapted to frictionally bind in the pocket of the case.



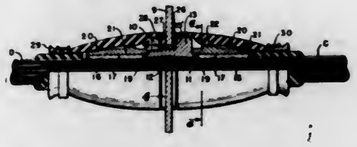
2,438,409
ADJUSTABLE HEADBAND CONSTRUCTION
Robert L. Malcom, Chicago, Ill., assignor to Chicago Eye Shield Company, a corporation of Illinois
Application August 7, 1946, Serial No. 688,917
2 Claims. (Cl. 2—8)

1. A head band comprising, a curved strip having adjacent the ends thereof elongated slots formed lengthwise of the strip and transverse slots intersecting the elongated slots, the ends of the strip being in overlapping relationship, a bolt member having a shank and a head and an elongated shoulder with the elongated shoulder located in the elongated slots and with the head adapted to be inserted through the transverse slots when they are aligned, and a nut member carried by the shank for clamping the ends of the strips between the head and the nut member.



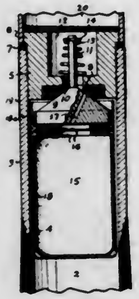
2,438,410
MANUALLY OPERATIVE SELECTIVE CONTROL DEVICE
Harry C. May, East McKeesport, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application April 30, 1943, Serial No. 485,114
4 Claims. (Cl. 74—471)

1. A mechanism for controlling operation of a plurality of independently operative devices comprising in combination, a rockable shaft operable upon rocking to control one of said devices and having an axial bore, a plunger slidably mounted in said bore, a lever having connections with said shaft and plunger and operable upon movement in a direction circumferentially of said shaft to rock same and upon movement in the direction of one end of said shaft to move said plunger axially in one direction relative to said shaft and upon movement in the reverse direction to move said plunger axially in the opposite direction relative to said shaft, means operable upon movement of said plunger



in one direction in said shaft to actuate a second one of said devices and in the opposite direction in said shaft to actuate a third one of said devices, and means cooperative with said lever rendering same operative to rock said shaft in positions of said lever in which said second or third device is actuated and rendering said lever non-operable to rock said shaft when said lever is out of said positions.

2,438,411
CHIMNEY CONSTRUCTION AND FITTING THEREFOR
Daniel Verne Meiller, Maywood, J. Donald Preble, La Grange, and Loren W. Tuttle, Mount Prospect, Ill.
Application May 9, 1945, Serial No. 592,738
6 Claims. (Cl. 72—94)

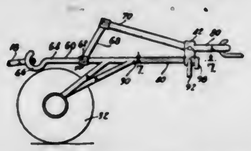


1. In chimney construction, a chimney, a fitting therein, a liner within said chimney opening at its lower end into said fitting, the latter and said chimney having clean out means giving access to the interior of said fitting through a side wall of said chimney, and condensate drainage means exterior of said chimney alongside said wall thereof with its upper end accessible through said clean out means and communicating with said fitting for receiving condensate therefrom.

2,438,412
CONDUIT COUPLING
Charles O. Morris, Van Nuys, Calif., assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif., a corporation of California
Application December 13, 1944, Serial No. 568,013
3 Claims. (Cl. 174—153)

1. In a connector for coupling conduit or conductor elements through a bulkhead having an aperture therein, the combination of: an elongate tubular member adapted to be positioned in said aperture with its ends disposed on opposite sides of the bulkhead; means carried by each end of said tubular member for connection with an end of a coupled element; a pair of clamping elements carried by said member arranged to be respectively positioned on opposite sides of said bulkhead and be actuated into clamping relation with respect to the bulkhead; and an annular insulating member between the tubular member and the periphery of said aperture having associated end portions of insulating material extending outwardly between the clamping members and the bulkhead, said aperture and members being so formed as to prevent by their interengagement relative rotation between said members and the bulkhead.

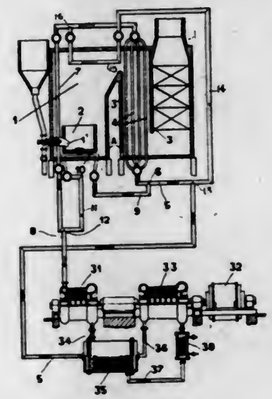
2,438,413
LOW-PRESSURE TIRE SIGNAL
Harold G. Renner, Detroit, Mich.
Application May 15, 1944, Serial No. 535,679
22 Claims. (Cl. 116—34)



1. In a low pressure tire signal, the combination with a tire valve stem and its valve, of an expansible chamber carried by said valve and extending toward the inner end of the stem, said chamber confining a compressed gas and, when non-expanded, maintaining such gas at a pressure equal to that desired in the tire, said chamber being exteriorly subject to the pressure prevailing in the tire, and a signal element movable by said chamber upon its expansion due to a depletion of the tire pressure.

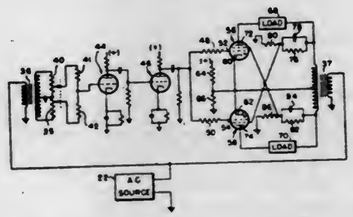
2,438,414
TRACTION REDUCER
Jacques M. J. Riboud, Mount Washington, Md., assignor to Specialty Equipment and Machinery Corp., New York, N. Y., a corporation of Maryland
Application March 1, 1944, Serial No. 524,834
In Canada March 22, 1943
3 Claims. (Cl. 280—3)

2. A device of the character described to be secured to a wheeled object, said device comprising a shaft, a drum mounted about the shaft, a driving wheel fixed to the shaft for rotation therewith, a direct connection between the driving wheel and a wheel of the wheeled object, rotation of the drum causing rotation of the shaft and of the driving wheel and rotation of the wheel of the wheeled object, the drum being hollow and having spring means therewithin to cause return rotation of the drum, the drum having means independent of the spring to limit the extent of return rotation of the drum, said last named means functioning when the drum has substantially reached the limit of return movement.



2,438,415
LIFTING DEVICE
Jacques M. J. Riboud, Mount Washington, Md., assignor to Specialty Equipment and Machinery Corp., New York, N. Y., a corporation of Maryland
Application March 1, 1944, Serial No. 524,835
1 Claim. (Cl. 254—8)

A lifting device comprising a shaft and an obtusely angulated lever having two arms and pivotally secured to the end of the shaft at the point of angulation of the lever, a collar on the shaft and slidable therealong, a link connecting the collar and lever, the shaft having a rack, and the collar having means therewithin normally engaging the rack permitting free movement of the collar in the direction along the shaft away from the point of angulation of the lever.

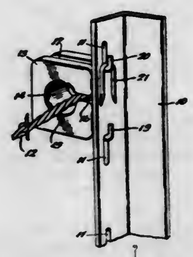


2,438,416
PULVERIZED FUEL BURNING GAS HEATER
Rudolf Ruegg, Zurich, Switzerland, assignor to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland, a corporation of Switzerland
Application July 3, 1944, Serial No. 543,229
In Switzerland July 21, 1943
1 Claim. (Cl. 126—109)

A once-through heater for gases comprising in combination means enclosing a combustion chamber and an offtake for products of combustion; a burner for burning pulverized fuel in said chamber at temperatures above the fusing point of non-combustible components of the fuel burned; a slag collecting receptacle associated with said chamber enclosing means; a heating system arranged in said offtake; a pipe connected to said heating system for supplying aqueous medium to be heated; a second heating system arranged in said combustion chamber; means connecting said two heating systems in series as to the flow of the medium to be heated; a pipe connected to said second heating system for carrying off the medium heated in said two heating systems; a heat exchanger connected to said supply pipe at a point upstream as to said first

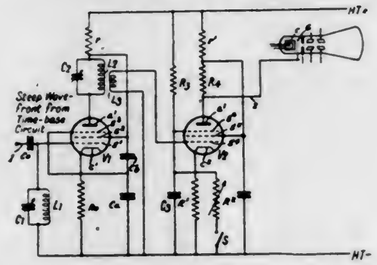
mentioned heating system and to said pipe for carrying off the heating medium at a point which is, when considered with reference to flow of said medium, beyond said second heating system and located to derive heat chiefly from and exercising a protective cooling effect upon the slag collecting receptacle; and a second surface heat exchanger located to derive heat directly from the ceiling of said combustion chamber and connected both to said supply pipe at a point upstream as to said first mentioned heating system and to said means connecting in series said two heating systems.

2,438,417
AMPLITUDE CONTROLLED CURRENT REGULATOR
Frederick A. Russell, Summit, N. J., assignor to the United States of America as represented by the Secretary of War
Application March 1, 1946, Serial No. 651,307
1 Claim. (Cl. 171—119)



An electrical circuit for controlling the D.-C. currents which flow through first and second loads in a push-pull manner, said circuit comprising an A.-C. source, means associated with said A.-C. source for providing a control voltage which may be varied in amplitude from a maximum in the positive direction through zero to a maximum in the negative direction, first and second gas type electron tubes each having at least plate, cathode, screen grid and control grid elements, transformer means having a center tap on the secondary winding thereof connected to said cathode elements, and being associated with said A.-C. source for applying a portion of the output thereof through said first and second loads to said plate elements in 180 degree phase opposition, first and second phase shifter means associated with said transformer means and connected to said screen grid elements, said first and second phase shifter means being adapted to excite said screen grids of said first and second gas tubes substantially in 180 degree phase opposition, and means for applying said control voltage to both said control grids in phase, whereby the average current flowing through said first and second loads may be controlled in a push-pull manner by variation of the amplitude of said control voltage.

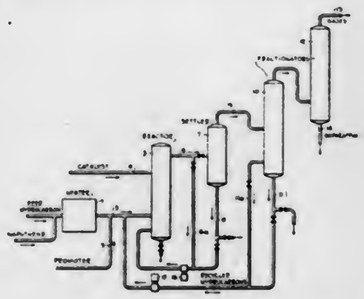
2,438,418
PROCESS FOR THE ISOLATION OF OLEANDRIN
August I. Ryer and Marie Frisch, New York, N. Y., assignors to Schering Corporation, Bloomfield, N. J., a corporation of New Jersey
No Drawing. Application June 22, 1945, Serial No. 601,084
9 Claims. (Cl. 260—210)



1. In a process for the isolation of oleandrin, the steps which comprise subjecting the impure solution of oleandrin to the action of lead acetate, separating the solution from the precipitate, and subjecting the solution to the action of an adsorbent for the remaining impurities and selected from the group consisting of fuller's earth, diatomaceous earth, alumina, and activated bauxite, and separating the purified solution from the adsorbent.

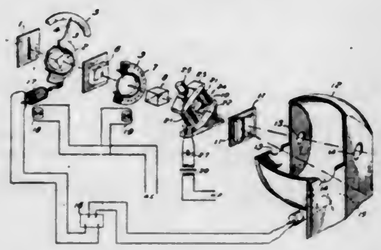
2,438,419
INSULATOR
Paul A. Schmidt, near Earlville, Ill.
Application October 22, 1945, Serial No. 623,678
6 Claims. (Cl. 174—163)

1. An insulator comprising a block of insulating material having an opening therein through which a wire may pass and formed with a slot in one side communicating with the opening, and a wire extending around the block with its end projecting beyond one side of the block and terminating in hooks bent at right angles to the wire ends to lie parallel to the adjacent block surface and facing in the same direction.



2,438,420
CALIBRATION OF CATHODE-RAY OSCILLOGRAPHS
Graham John Scoles, East Sheen, London, and Charles Walter Miller, Sale, England, assignors to Metropolitan-Vickers Electrical Company Limited, London, England, a company of Great Britain
Application October 9, 1943, Serial No. 505,710
In Great Britain September 18, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 18, 1961
1 Claim. (Cl. 315—22)

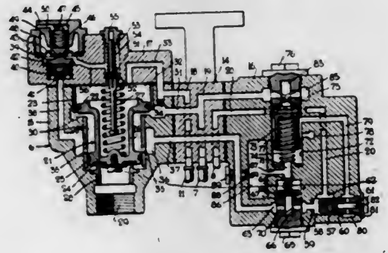
An electric circuit arrangement for calibrating the time base of a cathode ray tube having cathode and grid electrodes, and beam deflecting members to receive respectively pulses to obtain the time base sweep, and a voltage representative of the phenomena to be observed, comprising in combination, a first valve having an input grid circuit of low decrement, means for applying to said input grid circuit equally spaced steep wave-front voltage pulses in synchronism with said time base sweep pulses, and an anode circuit for said valve having a high reactance-resistance ratio and adapted to provide an output of effectively undamped sine wave calibrating voltage of higher frequency than said time base sweep pulses, and means for connecting said anode circuit to one of said electrodes of the cathode ray tube for suppressing the beam thereof including a second valve having an input circuit connected to said anode circuit and an output circuit connected to said electrode of the cathode ray tube and providing, from its substantially sine wave input, voltage pulses of short duration which are applied to said electrode of the cathode ray tube, and a high cathode resistance and a variable resistance in parallel therewith for normally biasing said second valve beyond cut-off.



2,438,421
ISOMERIZATION OF PARAFFINIC HYDROCARBONS
Eugene E. Sensel, William R. Smith, and Arthur R. Goldsby, Beacon, N. Y., assignors, by mesne assignments, to The Texas Company, a corporation of Delaware
Application June 18, 1941, Serial No. 398,530
9 Claims. (Cl. 260—683.5)

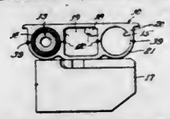
2. A continuous method for isomerizing normal paraffin hydrocarbons which are normally free from naphthene hydrocarbons comprising maintaining an isomerization reaction zone containing an aluminum halide isomerization catalyst under isomerizing conditions at an elevated temperature not in excess of about 300° F. such that the isomerization reaction is normally accompanied by substantial hydrocarbon cracking, continuously passing to said reaction zone feed hydrocarbons consisting essentially of normal paraffins, effecting contact between said normal paraffins and the catalyst in the presence of an amount of added naphthene hydrocarbon relatively small compared to the paraffin hydrocarbons undergoing conversion in the reaction zone, introducing the added naphthene hydrocarbon to the reaction zone in an amount sufficient to

inhibit substantially said hydrocarbon cracking but insufficient to prevent isomerization of said normal paraffin hydrocarbons to a substantial extent, effecting substantial isomerization of normal paraffins during passage through the reaction zone, and continuously withdrawing from the reaction zone isomerized paraffin hydrocarbons.



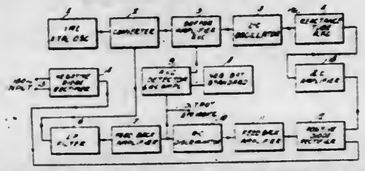
2,438,422
PHOTOMETRIC APPARATUS GIVING READINGS INVARIANT WITH AZIMUTH ON POLARIZING SAMPLES
Edwin I. Stearns, Jr., North Plainfield, and George L. Buc, Orange, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application June 1, 1944, Serial No. 538,309
25 Claims. (Cl. 88—14)

1. A photometric apparatus comprising in optical alignment means for illuminating a sample support, a photoreceptor system which responds to light fluctuations only up to a predetermined maximum, photometering means operatively connected with the photoreceptor system, an essential element of the apparatus being inherently capable of polarizing light to a material extent sufficient to give different responses from a polarizing sample at various orientations, alternating current actuated means coaxial with the light path through the apparatus and intermediate the sample support and polarizing element for rotating the plane of polarized light in varying amounts as a recurrent function of time, and means for supplying alternating current thereto



of a frequency greatly in excess of the maximum frequency of light fluctuation to which the photoreceptor system is capable of responding, whereby the plane of polarized light is rotated at a frequency corresponding to that of the alternating current supply means and the photoreceptor system receives an average illumination from polarized light of various orientations so that a polarizing sample gives reproducible responses regardless of its orientation on the sample support.

2,438,423
CONTROL VALVE DEVICE
Adelbert A. Steinmiller, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application August 30, 1945, Serial No. 613,673
9 Claims. (Cl. 303—21)

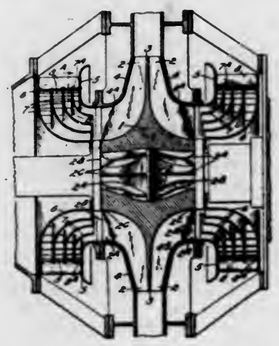


1. The combination of a fluid pressure differential operated valve device having a normal position in which it establishes a communication through which fluid under pressure may be supplied to a fluid pressure receiving device and operative to a different position in which said communication is cut off and an exhaust communication is established through which fluid under pressure is released from the fluid pressure receiving device at a rapid rate, means controlling the fluid pressure differential active on said valve device in such a manner that the said valve device is operated out of its normal position to its different position and back to its normal position within a certain length of time under normal circumstances, auxiliary valve means normally in a position preventing the supply of fluid under pressure therepast to the fluid pressure receiving device and operative to a different position establishing a communication through which fluid under pressure may be supplied to the fluid pressure receiving device, a volume chamber chargeable concurrently with the charging of the fluid pressure receiving device and having fluid under pressure released therefrom while the said valve device is out of its normal position, means for preventing reduction of pressure in said volume chamber except at a certain rate less than the said rapid rate of reduction of the pressure in the receiving device simultaneously effected under the control of the said valve device, and fluid pressure responsive means subject in opposing relation to the pressure of fluid supplied to the said valve device and to the pressure in said volume chamber and being effective to operate said auxiliary valve means to a position establishing the communication through which fluid under pressure is supplied therepast to the receiving device only upon a predetermined reduction of the pressure in the volume chamber relative to the pressure of the fluid supplied to the said valve device.

2,438,424
METHOD OF FABRICATING TRACK LAYING VEHICLE SHOES
Carl E. Swenson, Rockford, Ill., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of the Navy
Application May 18, 1944, Serial No. 536,102
3 Claims. (Cl. 29—148.3)

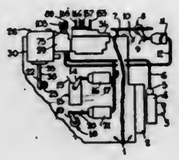
1. The method of fabricating a track laying vehicle shoe having a pair of spaced parallel transversely extending pintle bores therein, comprising the method steps of rolling masses of metal to form elongated strips each of which in cross-section is uniform and corresponds to the side elevation of a half of the shoe divided on a plane bisecting the pintle bores and each of which has a pair of spaced longitudinally extending channels each corresponding to half the pintle bore, severing the rolled strips transversely to form complementary halves of the shoe, machining the matching edges of each shoe to form a close fitting edge, and securing the shoe halves together on those edges to form a finished shoe with the channels in the shoe halves extending transversely of the shoe and cooperating to form the bores of the shoe.

2,438,425
COMPUTING DEVICE
Arthur W. Vance, Cranbury, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 26, 1942, Serial No. 467,026
5 Claims. (Cl. 250—36)



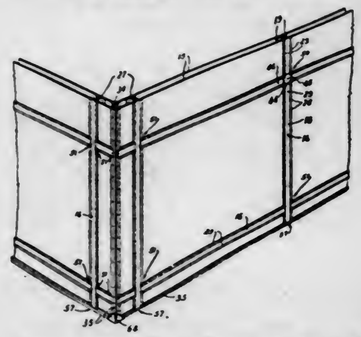
2. In the production of a potential having a frequency which is proportional to the amplitude of an alternating control voltage, the method which includes combining a substantially constant frequency signal with a variable frequency signal to produce a beat frequency signal, deriving from said beat frequency signal a first unidirectional potential which is proportional to said beat frequency, deriving a second unidirectional potential which is proportional to the amplitude of said alternating control voltage, and combining said first and second unidirectional potentials in opposed relationship to derive a resultant potential for controlling the frequency of said variable frequency signal.

2,438,426
CENTRIFUGAL COMPRESSOR
Frank Whittle, Rugby, England, assignor to Power Jets (Research and Development) Limited, London, England
Application November 24, 1942, Serial No. 466,804
In Great Britain December 19, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires December 19, 1959
5 Claims. (Cl. 230—128)



1. A centrifugal compressor comprising an impeller with vanes defining substantially radial

channels, said vanes each having bends in their leading edges at the entry to the impeller with the angle between said leading edge and the compressor axis increasing with the radius, a casing containing said impeller, walls defining an entry passage to said casing which is initially radial for inward flow of air and finally axial for flow into the impeller, and entry guide vanes supported by said walls and of uniform section and incidence, said entry vanes being disposed axially

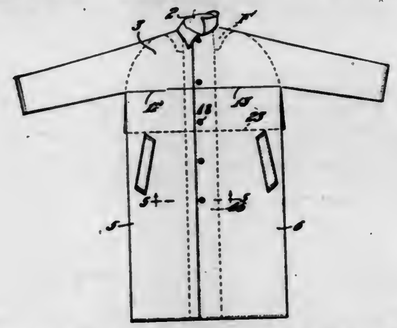


across the radial region of the entry passage and imparting whirl to the entering air flow to reduce the air velocity relative to the impeller vanes, said entry vanes and impeller bends being constructed and arranged relative to each other so that under design conditions of operation in which the whirl velocity in the plane of entry to the impeller varies inversely with the radius, the leading edges of the impeller vanes engage the relative air flow at substantially no angle of attack at all radii.

2,438,427
CONTROL APPARATUS
Ralph T. Whitney, Irwin, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application December 19, 1945, Serial No. 636,011
10 Claims. (Cl. 121—38)

1. A control apparatus comprising a reversing means having an ahead position and an astern position, operator's control means movable to a first position, a second position, and a third position, astern means for effecting movement of said reversing means to said astern position in response to movement of said operator's control means to said second position, ahead means for effecting movement of said reversing means to said ahead position in response to movement of said operator's control means to said first position, delay means for delaying operation of said astern means for a chosen interval of time after movement of said operator's control means from said first position to said second position and for delaying operation of said ahead means for a chosen interval of time after movement of said operator's control means from said second position to said first position, and means for automatically rendering said delay means ineffective upon movement of said operator's control means from said third position to either said first position or to said second position.

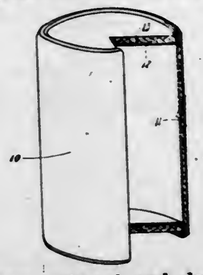
2,438,428
WALL CONSTRUCTION
Robert E. Birdsall, Detroit, Mich., assignor of twenty-four per cent to George R. Hotton, Williams Bay, and one-eighth to J. Arthur Moran, Delavan, Wis.
Application May 13, 1943, Serial No. 486,796
10 Claims. (Cl. 20—4)



1. A double wall joint comprising two U-shaped channels spaced apart with their open sides facing each other, said channels having widths corresponding to a stud member of standard size, a stud member having its opposite margins snugly received in said channels, pairs of panels forming a double wall with the edges of each pair substantially in abutment with the opposite sides of one channel and with their external surfaces flush with the outer surface of the closed end of the channel, flanges on the channel legs overlapping the panel edges on the inner sides thereof, members overlapping the margins of said panels and the outer surfaces thereof and having flanges disposed between the panel edges and the adjacent channel side, and fastening elements extending through said members and said channel flanges and clamping the panel between the two.

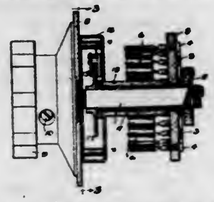
2,438,429
WATERPROOF OUTER GARMENT
John T. Callahan, West Newton, and John A. Gilbertson, Milford, Mass., assignors to Archer Rubber Company, Milford, Mass., a corporation of Massachusetts
Application March 1, 1946, Serial No. 651,078
5 Claims. (Cl. 2—87)

1. A ventilated rain garment of the kind which, except for collar and trim, consists of but four major parts, to wit, a yoke having sleeves integral therewith, a back, and two front members, the back being joined to the yoke at and adjacent to the collar line and adjacent to each arm scye respectively, but being otherwise unattached to the yoke, thereby provided ventilating openings of large area, and wherein each front member is joined to the yoke along a line extending from



the front closure to one of the arm scyes respectively, each front member being joined to the back along a substantially vertical line extending downwardly from the respective armpit, each sleeve having a single longitudinally extending underarm seam reaching from the wrist line to the armpit, and gusset means providing fullness at the armpit, characterized in that the rear edge of each sleeve terminates at a deep, substantially oval notch in the yoke material, and the forward edge of each sleeve terminates in a concavely curved portion which merges with the corresponding horizontal front lower edge of the yoke, the gusset means at each armpit comprising a segmental piece having a substantially straight edge and a curved edge, the latter having a radius of curvature substantially greater than the radius of curvature of the larger end of the notch in the yoke, the gusset means also comprising a semi-segmental part having a curved

edge, a substantially straight base and a substantially straight vertical edge, a seam uniting the curved edge of the segmental gusset part to the margin of the oval notch in the yoke, a seam uniting the curved edge of the semi-segmental gusset part to the concavely curved portion of the front edge of the sleeve, and a seam uniting the straight base edge of the latter gusset part to the upper edge of the corresponding front member of the garment, the underarm seam extending uninterruptedly across the armpit and uniting the lower portion of e straight edge of the segmental gusset part to the vertical straight edge of the semi-segmental gusset part, the underarm seam also uniting the lower portion of the straight edge of the segmental gusset part to the rear edge of the corresponding front member and then continuing on down beyond the gusset means and uniting the corresponding front member to the back.



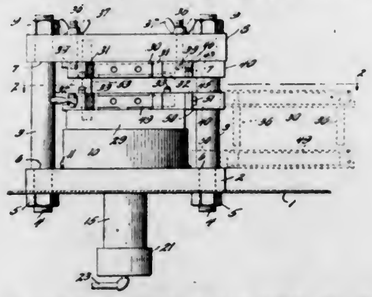
2,438,430
CANISTER
Pasquale V. Di Cosmo, Phillipsburg, and Matthew C. Ricciardi, Dover, N. J., assignors to The Canister Company, Phillipsburg, N. J., a corporation of New Jersey
Application June 19, 1942, Serial No. 447,726
1 Claim. (Cl. 93—55.1)

The method of closing the end of a cylindrical container body formed of short-fibered material having the properties of chip-board which comprises the steps of softening the end of the body, assembling a disc of stiff material having a diameter substantially equal to the internal diameter of said body with a sealing diaphragm of greater diameter than said container body, inserting the resulting assembly into the softened end of the container body with the sealing diaphragm facing inwardly, and with the marginal portions thereof extending between the edges of the disc and the inner surface of the container body, folding said marginal portions of the seal-

ing diaphragm outward and downward about the end of the container body and the adjacent outer surface thereof, turning the softened end of the body inward over the edges of said disc through an angle of approximately 90° and hardening the inturned edges of the body.

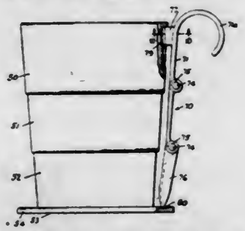
2,438,431
ATTENUATOR
Edmund Doucette, Newark, N. J., assignor to The Daven Company, Newark, N. J., a corporation of New Jersey
Application April 25, 1945, Serial No. 590,265
14 Claims. (Cl. 201—55)

1. In an electrical instrument, a panel having graduations thereon, a stationary contact-carrying head, contacts carried thereby, a switch for movement over and engagement with said contacts, means for connecting said contact-carrying head to said panel including a sleeve connected to said head, a second sleeve depending from the panel having one end engaging said contact-carrying head, said second sleeve having gripping members on its end which engages said contact-carrying head, and means for forcing said gripping members into gripping engagement with the contact-carrying head to prevent accidental disconnection or relative movement of the contact-carrying head and said connecting means.



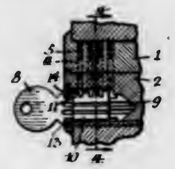
2,438,432
TORSION SPRING MOUNTING
Samuel H. Edwards, Richmond, Calif.
Application October 5, 1945, Serial No. 620,437
2 Claims. (Cl. 267—57)

1. A spring mounting for a wheel supported axle consisting of a frame, a tubular axle having an offset wheel mount on each end thereof for mounting a wheel, bearings fixed on said frame



for mounting said axle for rotation on said frame, and a rod extending through said tubular axle and secured at one end to an end of said axle and at its other end to one of said bearings on said frame to fix said rod in position as a torsion spring member.

2,438,433
HYDRAULIC PRESS
Santo J. Fazzio, Glassboro, N. J.
Application November 5, 1945, Serial No. 626,694
1 Claim. (Cl. 18—5.3)

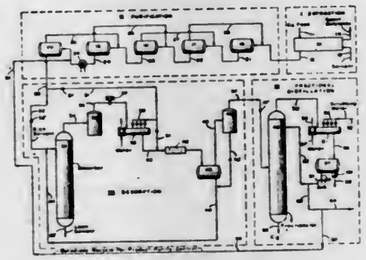


In a hydraulic press, a bed plate, an upper plate, posts extending between the same, a cylinder, a hydraulically operated piston and piston rod movable in said cylinder, a housing secured to the under surface of the bed plate and centrally beneath said cylinder in which said piston rod travels, means in the housing for accurately guiding said piston rod in said housing, means in said housing for returning the piston to its lower position, two mold shoes provided with collars swingingly and slidably mounted on one of said posts, the lower of said shoes adapted to be elevated and lowered by the said piston, means for locking the upper of said mold shoes to the under surface of the upper plate, and a pivotal connection between the upper shoe and its collar whereby the mold shoe may be revolved one hundred eighty degrees (180°) about its horizontal axis after being swung to an inoperative position.

2,438,434
COLLAPSIBLE CONTAINER
Theodore Friedman, New York, N. Y.
Application February 20, 1945, Serial No. 578,844
1 Claim. (Cl. 220—8)

A collapsible container comprising a plurality of connected substantially ring shaped members varying in size whereby one member may be contained in another member when the container is collapsed, the innermost member being provided with a closed end having a flanged extension, a collapsible handle for said container, and cooperative means on one of said members and said handle for securing said handle to said container when they are in extended position, said handle having a small bowl portion bearing against said flanged extension when said handle is extended and to rest against said closed end when collapsed.

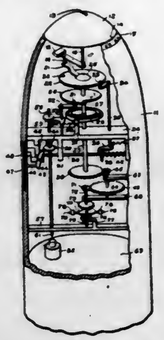
2,438,435
COMBINED LOCK AND KEY
Jules Gagnon, Verdun, Quebec, Canada
Application January 13, 1947, Serial No. 721,739
4 Claims. (Cl. 70—364)



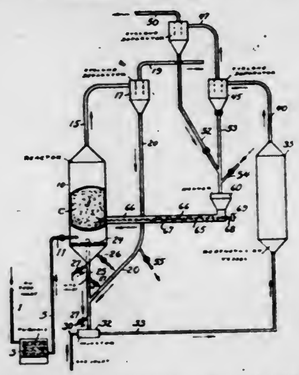
1. In a lock, a barrel, a plug rotatable therein, tumbler pins slidable radially in said plug, follower pins slidable in said barrel and engaging said tumbler pins in alinement therewith, said plug having a key slot exposed to said tumbler pins, said slot extending also laterally from said pins, a key insertable in said slot and having relatively slidable teeth adapted to register with said tumbler pins, said key being rotatable a limited angular extent in said slot, and cam surfaces formed in said plug and engageable by said teeth to move said teeth into engagement with said tumbler pins on rotation of said key.

2,438,436
PLATE HANGER
Reber Graves, Glen Ellyn, Ill.
Application August 8, 1946, Serial No. 689,219
3 Claims. (Cl. 248—30)

1. A plate hanger comprising a wire rod having a screw threaded shank and formed at one end with a loop, a pair of oppositely disposed wire fingers adapted for positioning in a vertical plane common with each other and with the rod and each formed at one end with a laterally extending loop and at its opposite end with a reverse bend to provide a plate engaging hook extending in a direction opposite its loop, the rod being adapted to traverse the loops of the fingers when the latter are assembled on the rod, and a pair of nuts threaded on to the rod shank to the outside of the finger loops each providing therefor an adjustable abutment whereby to determine the maximum spacing between the fingers as well as the longitudinal position of the rod relative to the fingers when so spaced, and the rod being also adjustable relative to both fingers without affecting the adjustment thereof whereby the loop of the rod may be concealed when the hanger supports a large or small plate.



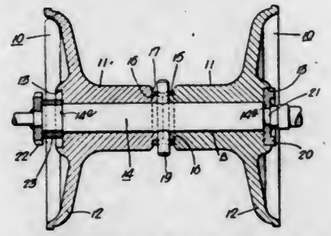
2,438,437
SEPARATION OF DIOLEFINS AND CONTAMINATING HYDROCARBONS FROM RICH AMMONIACAL AQUEOUS SOLUTIONS
Ike D. Hall, Baytown, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application May 8, 1945, Serial No. 592,612
5 Claims. (Cl. 260—681.5)



1. In an absorption system wherein a rich aqueous ammoniacal solvent having dissolved therein diolefin, acetylenes and carbonyls is obtained, the steps of dividing the rich solvent into a major portion and a minor portion, subjecting the major portion to a desorption step to separate therefrom a vaporous fraction including ammonia, diolefin, acetylenes and carbonyls, increasing the pressure of said vaporous fraction, condensing the vaporous fraction, and contacting it with the minor portion of rich solvent to dissolve said ammonia and form a mixture, subjecting the mixture to gravity separation to form an aqueous layer and a hydrocarbon layer, fractionally distilling the hydrocarbon layer to separate it into an overhead fraction including diolefin and ammonia and a bottoms fraction including carbonyls, washing the vaporous fraction with water to dissolve the ammonia and form a mixture of hydrocarbons and water, separating said mixture under the influence of gravity into a hydrocarbon layer and an aqueous layer, and separately removing said layers.

2,438,438
BOMB DETONATING MECHANISM
John Hays Hammond, Jr., Gloucester, Mass.
Application December 16, 1943, Serial No. 514,439
7 Claims. (Cl. 102—73)

1. A bomb firing mechanism comprising detonating mechanism, restraining means to prevent actuation thereof, mechanism responsive to external compressional waves, means actuated by said last mechanism to release said restraining means for firing said bomb, holding means rendering said detonating mechanism inoperative, timed means to release said holding means for rendering said bomb responsive to said compression responsive mechanism, and means responsive to impact connected to start said timed means in operation.

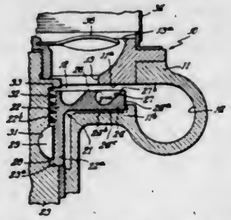


2,438,439
CHEMICAL PROCESS FOR THE CATALYTIC CONVERSION OF HYDROCARBON OILS
Charles E. Hemminger, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application September 18, 1941, Serial No. 411,280
2 Claims. (Cl. 196—52)

1. A process for the conversion of heavy residual oils into lower boiling hydrocarbons which comprises passing the oil to be converted into the bottom portion of a conversion chamber while at least partially in liquid state, dispersing said oil into a dense turbulent mass of finely divided solid material within said conversion chamber, maintaining said conversion chamber at a temperature sufficient to convert said oil totally into vapors and solid residue, withdrawing the vapors from the upper end of said conversion chamber, providing a velocity of the oil vapors and gases passing upwardly through said conversion chamber to maintain said finely divided solid material in a dense turbulent state, continuously removing finely divided solid material containing solid carbonaceous residue from a lower portion of said conversion chamber, burning the carbonaceous residue from the finely divided solid material so withdrawn, heating said finely divided solid material during the burning of said solid carbonaceous residue to a temperature materially

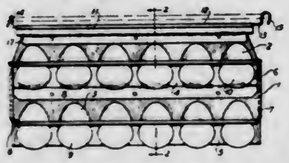
above the temperature maintained in said conversion chamber, and thereafter returning said heated finely divided solid material to said conversion chamber.

2,438,440
SPOOL FOR FISHING REELS
Stephen G. Hirsch, Philadelphia, Pa., assignor to Ocean City Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 17, 1946, Serial No. 662,829
4 Claims. (Cl. 242—118)



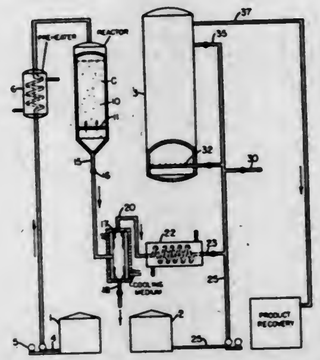
4. In a spool and shaft assembly for fishing reels, a spool shaft, a spool mounted on the shaft and comprising identical end sections each having a body portion slidably engageable with the shaft and having a flange at its outer end, the inner ends of said bodies having reduced portions, a narrow sleeve embracing the reduced portions of the bodies of the sections and concealing the junction thereof, shaft fittings fixed to the shaft and having engagement with the ends of the spool preventing axial movement thereof, a pin having engagement with said sleeve end sections and shaft preventing relative rotation thereof, and ends of said pin projecting beyond the periphery of the sleeve and forming a line attaching means.

2,438,441
MEANS FOR DETECTING LEAKS IN ELECTRIC CABLES CONTAINING FLUID UNDER PRESSURE
Douglas Taft Hollingsworth, London, England, assignor to British Insulated Callender's Cables Limited, London, England, a British company
Application October 21, 1946, Serial No. 704,582
In Great Britain November 6, 1945
1 Claim. (Cl. 177—311)



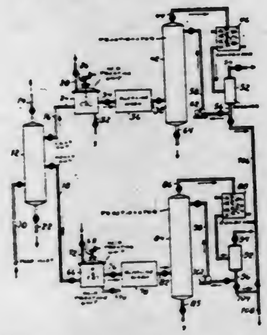
In an electric cable system in which the conductor dielectric is normally subject to a pressure above atmospheric pressure in an enclosure containing fluid under pressure, barriers dividing the fluid-containing enclosure into sections, a by-pass passage for the said fluid at each of the said barriers, a normally open valve for each of the said passages, electrically operable closing means for each of said valves, a pilot line connected with all the said closing means and energisable from a control station to close all the said valves simultaneously, an electrical resistance associated with each section, a section pilot line extending from a resistance-measuring means at the control station, and in each section a pressure-controlled switch automatically connecting the resistance associated with the section in circuit with the said second pilot line and the said resistance-measuring means when the pressure in this section falls below a preselected value.

2,438,442
PUMP WITH DIFFERENTIAL IMPELLER CONTROL
Ray G. Holt, Euclid, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application December 21, 1944, Serial No. 569,128
7 Claims. (Cl. 103—97)



1. In a centrifugal impeller pump arrangement including a housing having an impeller chamber therein, a rotatable centrifugal impeller received within said chamber, a surrounding volute discharge chamber for receiving fluid from said impeller, means for drivingly supporting said impeller providing for limited axial adjustment within said pumping chamber between a first extended position and a second retracted position, means for shifting said impeller to one of said respective positions, and means defining a motive chamber in which said impeller rotates, said chamber being adapted to receive pressure fluid generated by said impeller upon rotation thereof to shift said impeller to the other of said respective positions.

2,438,443
EGG TRAY FOR REFRIGERATORS
Arthur C. Jermyn, Brighton, N. Y.
Application June 20, 1946, Serial No. 678,051
5 Claims. (Cl. 211—143)

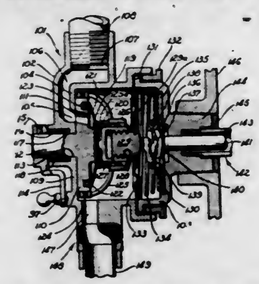


4. The combination with a support including a tubular track, of hook members at the ends of said track connected to the support, an egg tray including a vertical wall, a cylindrical shoe carried by said vertical wall and slidably engaging said track, said vertical wall having a plurality of rows of concave oval depressions, one row above the other, and lateral walls arranged in spaced relation one above the other adapted to hold two tiers of eggs against the vertical wall, each of said lateral walls being inclined to the vertical wall at an angle permitting insertion of eggs therebetween and having a row of concave oval depressions arranged opposite to the depressions in the vertical wall.

2,438,444
METHOD OF REMOVING DIOLEFINS FROM AN OLEFINIC FEED STOCK
Minor C. K. Jones, Mountainside, and Edmond R. Retailliau, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application February 2, 1945, Serial No. 575,818
2 Claims. (Cl. 260—683.4)

1. The method of removing diolefins from an olefinic feed stock containing mono-olefins and diolefins which comprises contacting the mixture with fuller's earth at a temperature of about 800° F. and under a pressure of from 25 to 50 pounds per square inch gauge in a polymerization zone for a time period in the range from about 11 to 16 seconds, withdrawing the total product from the said polymerization zone, transporting the product to a separation zone and separating the diolefins in the form of liquid polymers from the mixture whereby an olefinic material substantially free of diolefins is obtained.

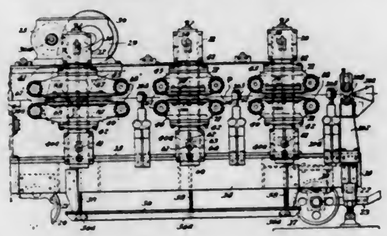
2,438,445
PROCESS FOR THE ACID-TREATING OF CATALYTICALLY CRACKED NAPHTHA
Arnold F. Kaulakis, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application September 15, 1943, Serial No. 502,440
2 Claims. (Cl. 196—40)



1. A method of improving the IMEP of catalytically cracked aviation gasolines containing olefins and aromatics which comprises separating a catalytically cracked aviation gasoline into a C$_6$–225° F. fraction containing a major portion of the olefins and a 225–350° F. fraction containing a major portion of the aromatics, separately treating each fraction with concentrated sulfuric acid having a concentration of about 85 to 98% to remove olefins and then recombining the treated fractions.

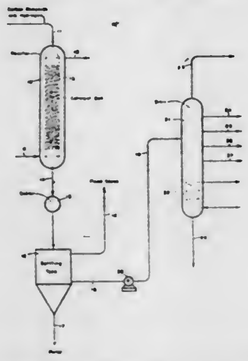
2,438,446
LUBRICANT AND HYDRAULIC FLUID COMPOSITION
Hollis L. Leland, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 25, 1945, Serial No. 595,883
6 Claims. (Cl. 252—78)

1. A composition of matter consisting essentially of nuclearly chlorinated cumenes containing an average of 2.5 to 4.0 atoms of chlorine per mol of cumene, and 2 to 20% by weight of a linear organic polymer thickener selected from the group which consists of polymerized isobutylene, acrylic acid esters, and methacrylic acid esters, said polymer thickener having a molecular weight within the range of 1,000 to 15,000.



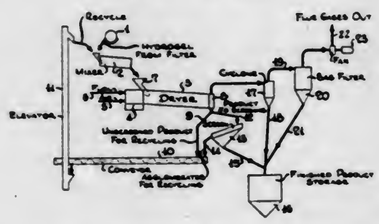
2,438,447
BURNER VALVE DEVICE
James Maynard, Hawthorne, Calif., assignor to Elgin Rowland Parker, Seal Beach, Calif.
Application April 7, 1941, Serial No. 387,241
13 Claims. (Cl. 236—48)

1. In a thermostatically controlled valve mechanism, the combination of: a housing having inlet and outlet openings therein; wall means in said housing between said openings, said wall means having a port therein; a valve member having an opening therethrough, said valve member engaging said wall means and being movable relative thereto for varying the registration of said opening therein with said port; a valve support in said housing; a valve seat in said housing; a valve disc engaging said support and adapted upon the application of a predetermined pressure for snapping from closed position in sealing engagement with said valve seat and closing communication between said openings in said housing to open position free of said valve seat and permitting communication between said openings in said housing; a control member movable in response to temperature variations; motion multiplying means transmitting the movement of said control member to said valve disc so long as the resistance to movement of said disc is less than a predetermined value; and operating means exterior of said housing adapted for simultaneously moving said valve member and said valve support whereby the registration of said opening in said valve mem-



ber with said port in said wall means is controlled and the temperature of said control member at which said valve disc is snapped to open position is varied.

2,438,448
APPARATUS FOR CONTINUOUSLY DRAWING ELONGATED PRODUCTS
William A. Morton and Theodore H. Sloan, Pittsburgh, Pa., assignors to G. M. S. Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application March 4, 1943, Serial No. 477,982
8 Claims. (Cl. 49—17.1)

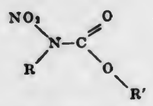


1. A tractor stand for longitudinally advancing an elongated product such as a tube or the like along a predetermined path of travel, comprising a column having vertically spaced alined guide means on one side thereof, blocks movable vertically in said guide means, brackets secured, respectively, to the lower end of the upper block and the upper end of the lower block, sprockets journaled on said brackets, tracks extending between the sprockets and chains so disposed on the sprockets and tracks of the brackets, respectively, as to engage the top and bottom of the product traveling therebetween.

2,438,449
SYNTHESIS OF HYDROCARBONS AND OXYGENATED COMPOUNDS
Max A. Mosesman, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
Application December 20, 1946, Serial No. 717,586
11 Claims. (Cl. 260—449.6)

1. A process for producing hydrocarbons and oxygenated organic compounds comprising the steps of contacting a gaseous mixture of carbon monoxide and hydrogen at a superatmospheric temperature and pressure with a catalyst comprising a reduced mixture of a major portion of iron oxide and a minor portion of an alkali metal pyroantimoniate to form a product comprising substantial amounts of hydrocarbons and oxygenated organic compounds.

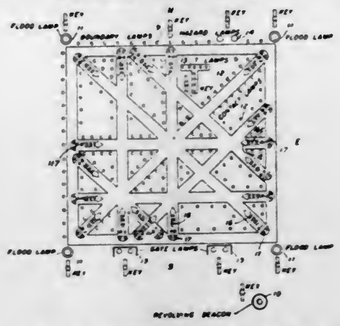
2,438,450
DRYING OF MICROSPHERICAL GELS
Karl J. Nelson, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application February 17, 1945, Serial No. 578,437
3 Claims. (Cl. 34—11)



1. A continuous process for drying microspherical inorganic oxide gel particles which comprises mixing said hydrogel microspheres with 5 to 30% by weight of dry gel microspheres while maintaining the spheroidal condition of the individual hydrogel microspheres so as to prevent the individual hydrogel microspheres from agglomerating, and drying the mixture.

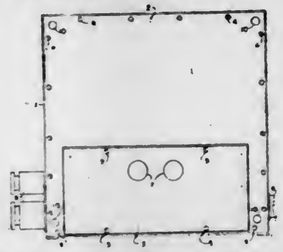
2,438,451
ACTIVATION OF CLAY
John J. Owen, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 28, 1943, Serial No. 500,381
3 Claims. (Cl. 252—254)

1. The method of activating bentonite clays which comprises treating said clays for a substantial period of time with an inorganic acid of the group consisting of sulfuric acid and hydrochloric acid and in an amount effective to activate said clays, said treatment being carried out in the presence of a reducing atmosphere of the group consisting of hydrogen and carbon monoxide.



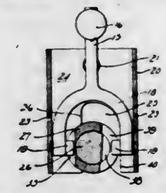
2,438,452
DIESEL ENGINE FUELS
Robert T. Pollock, New York, N. Y.
No Drawing. Application January 20, 1945, Serial No. 573,812
2 Claims. (Cl. 44—57)

1. A fuel for compression ignition engines comprising a hydrocarbon Diesel oil containing a small quantity, at least sufficient to increase the cetane rating of said oil, of a material having the formula



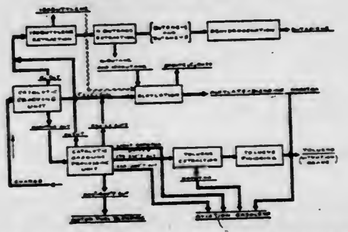
wherein R and R' are alkyl radicals.

2,438,453
AIRPORT LIGHTING CONTROL AND INDICATION SYSTEM
Winfred T. Powell, Rochester, N. Y., assignor to Stromberg-Carlson Company, Rochester, N. Y., a corporation of New York
Application October 2, 1944, Serial No. 556,800
7 Claims. (Cl. 177—353)



7. A control system for an airport comprising a plurality of runways certain of said runways conflicting with other runways, a control relay for each runway, means for operating a plurality of said relays, and means including contacts on one of said operated relays and contacts on any other operated relay representing a runway conflicting with that of said one relay for releasing said one relay.

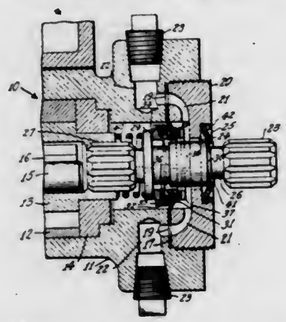
2,438,454
MOUNTING ARRANGEMENT FOR ELECTRICAL EQUIPMENT
Theodore C. Riebe, Chicago, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application November 23, 1944, Serial No. 564,860
4 Claims. (Cl. 175—298)



1. In a mounting arrangement, the combination of a cabinet, a unitary assembly holding electrical instrumentalities wired to terminals mounted on said assembly, said assembly removably disposed in said cabinet thereby to position the terminals of said assembly in said cabinet, a second unitary assembly holding other electrical instrumentalities wired to terminals mounted on said second assembly, said second assembly removably disposed in said cabinet thereby to cause the terminals of said second assembly to connect with the positioned terminals of said first disposed assembly and thus interconnect the instrumentalities of said two disposed assemblies, said cabinet and said disposed assemblies completely protecting said instrumentalities and connected terminals from accidental contact or unauthorized tampering, the withdrawal of one of said disposed assemblies from said cabinet automatically breaking said connections between the two assemblies before any of said instrumentalities or terminals become exposed.

2,438,455
TRANSMISSION OPERATING DEVICE AND INTERLOCK
Dale Roeder and Harold L. Brock, Detroit, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application July 26, 1945, Serial No. 607,209
10 Claims. (Cl. 74—477)

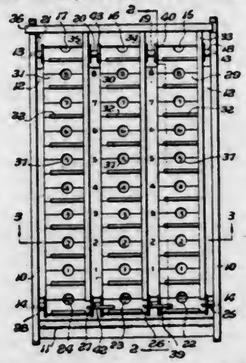
1. In a sliding gear transmission operating device for use with internal-combustion engines in automotive vehicles, comprising, a housing, a pair of spaced aligned shifting forks in said housing, a shift lever mounted externally of said housing movable in an H pattern to reciprocate selectively either of said shifting forks, a shaft supported at each end in said housing for reciprocation with respect thereto, a sleeve concentric with and reciprocally mounted on said shaft, one of said shifting forks being fixed for reciprocation with said shaft and the other of said shifting forks being fixed for reciprocation with said sleeve, a locking yoke pivotally mounted on said housing, and an operating fork operatively connected to said shift lever and selectively engaging for reciprocation said shaft or said sleeve and said yoke for pivotal movement, locking said sleeve or shaft, respectively, against reciprocation.



2,438,456
HYDROCARBON CONVERSION
Robert P. Russell, Short Hills, Eger V. Murphree, Summit, and Charles E. Hemminger, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application August 21, 1942, Serial No. 455,574
6 Claims. (Cl. 260—683.4)

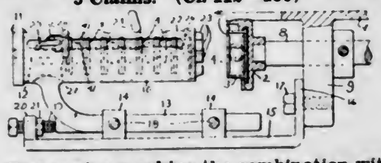
1. In a process for the catalytic conversion of relatively heavier hydrocarbon oils to relatively more volatile motor fuels and gaseous products, an improved method of utilizing said products comprising separating therefrom a fraction comprising mainly olefin and paraffin hydrocarbons of 3 to 5 carbon atoms per molecule, separating a mixture of hydrocarbons of 4 carbon atoms per molecule from said fraction, then removing isobutene from this mixture by selective extraction

with sulfuric acid of a strength insufficient to react with the normal butene present, heating the acid extract and separating therefrom a mixture of isobutene polymers comprising mainly diisobutene, removing normal butenes from the remainder of said mixture, then subjecting a mixture of the remainder of said first mentioned fraction, the remainder of said fraction of 4 carbon atoms per molecule comprising n-butane and isobutane and the said isobutene polymers to alkylation conditions adapted to cause reaction of olefins with the isobutane present therein to form saturated isoparaffin alkylation products boiling in the motor fuel range and of high antiknocking characteristics.



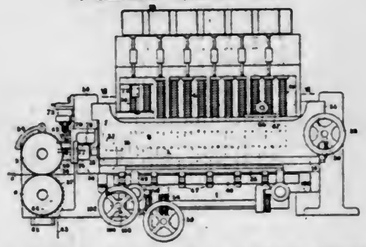
2,438,457
SHAFT SEAL
Arthur G. Schlosser, Detroit, Mich., assignor to Candler-Hill Corporation, Detroit, Mich., a corporation of Michigan
Application September 11, 1945, Serial No. 615,640
3 Claims. (Cl. 286—11)

1. In a seal of the character described, the combination comprising a housing, a flexible diaphragm disposed across the interior of the housing, a rigid ring sealed to and defining an opening through the diaphragm, a shaft extending through the housing and the opening, a flange on the shaft to one side of the diaphragm, a bushing surrounding the shaft on the side of the flange adjacent the ring, means permitting relative axial movement but positively preventing relative rotational movement between the bushing and the ring, a flexible distortable ring surrounding the shaft intermediate the bushing and the rigid ring, and means for maintaining pressure contact simultaneously between the flange and the bushing, between the bushing and the distortable ring, and between the distortable ring and the rigid ring.



2,438,458
CALCULATOR
Albert J. R. Schumaker, Harpers Ferry, W. Va.
Application February 10, 1944, Serial No. 521,765
6 Claims. (Cl. 235—71)

1. A calculator comprising a plurality of digit-bearing belts, rollers on which the respective belts are looped, and means for effecting a proportional movement of one of said belts upon a predetermined movement of another of said belts in one direction only and including a one-way pawl and ratchet mechanism having an actuator carried by said last named belt and a member complementary to said actuator and carried by a roller on which said first named belt is looped, said actuator being slidable over said member

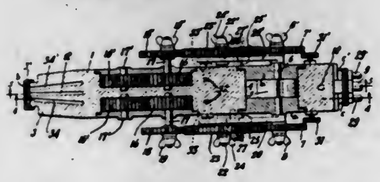


upon reverse movement of the second named belt without operating the first named belt.

2,438,459
SEWING MACHINE
Harry Sebell, Marblehead, Mass., assignor of one-half to Richard Walsh McGann, Lexington, Mass., and one-half to Bell Products Corporation, Boston, Mass., a corporation of Massachusetts
Application June 16, 1945, Serial No. 599,878
5 Claims. (Cl. 112—186)

1. In a sewing machine the combination with a rotary hook and a bobbin case operatively associated therewith and having an open side, of bobbin-replenishing mechanism comprising a magazine to contain filled bobbins, means to extract an empty bobbin from the bobbin case through said open side while said case is still operatively associated with the hook, and means to load a filled bobbin from the magazine into the bobbin case through the same open side thereof.

2,438,460
SAW BLADE PLANISHING MACHINE
Pierre Senard, Bapeaume-les-Rouen, France
Application August 16, 1946, Serial No. 691,106
In France May 15, 1946
7 Claims. (Cl. 76—26)

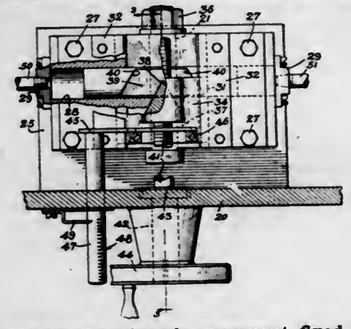


1. A saw-blade planishing machine comprising a block for supporting the saw blade, means to move the blade forwards thereon intermittently

in the longitudinal direction of the same, a set of feelers to be applied upon the blade, a set of compressed air hammers to be struck upon the blade at the points of the same which are engaged by the feelers and a set of electric control means to be energized or not depending on whether the related feelers are in engagement with swelled out or even portions of the blade, whereby pressure air is fed or not to the said compressed air hammers.

2,438,461
CUTTING OIL COMPOSITION
Jere C. Showalter, Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 3, 1944, Serial No. 547,972
14 Claims. (Cl. 252—33.2)

1. A composition of matter capable of forming a substantially stable aqueous emulsion comprising a major portion of a sodium hydroxide neutralized sulfonated extract of a naphthenic type petroleum oil and a metal salt of stearic acid in an amount sufficient to prevent foaming of the emulsion.

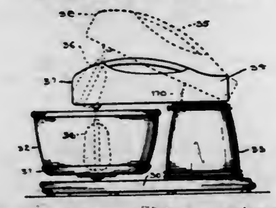


2,438,462
METERED SPRAYING DEVICE FOR MIXED LIQUIDS
Ronald B. Smith, East Orange, N. J.
Application July 1, 1944, Serial No. 543,076
4 Claims. (Cl. 299—58)

1. In a liquid dispensing device, the combination comprising a housing, a nozzle member associated therewith, a plurality of gear pumps for supplying liquid to said nozzle, each gear pump having an inlet conduit and an outlet conduit, a fluid-drive motor, including a rotor element, mounted in said housing, means for supplying motive fluid thereto, a train of variable gearing operatively connecting each gear pump to said rotor and means for simultaneously conducting liquid discharged under pressure by each pump to said nozzle member.

2,438,463
FLUID PRESSURE ACTUATED MOTOR
Ira J. Snader, Detroit, and Harold N. Seyferth, East Detroit, Mich., assignors to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Original application May 29, 1940, Serial No. 337,826, now Patent No. 2,350,372, dated June 6, 1944. Divided and this application June 9, 1943, Serial No. 490,150
11 Claims. (Cl. 121—38)

2. In a pressure fluid actuated motor, in combination, a hydraulic cylinder having a piston of fixed length slidable therein, said cylinder having means for establishing the connection of its ends with reversible pressure fluid lines, and a single adjustable stop element adjustably coacting with said piston for varying the extent of movement of said piston in opposite directions with respect



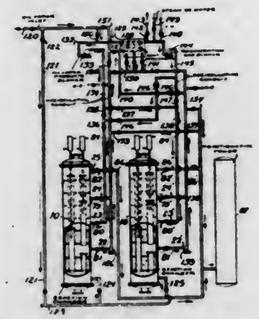
to a mid-point of such movement fixed for all variations thereof.

2,438,464
CATALYTIC PROCESS FOR PRODUCING BUTADIENE
Le Roy U. Spence, Elkins Park, and Darrel J. Butterbaugh and Donald G. Kundiger, Philadelphia, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application August 30, 1944, Serial No. 551,988
4 Claims. (Cl. 260—681)

1. A process for producing butadiene which comprises vaporizing ethanol and a member of the group consisting of acetaldehyde, crotonaldehyde, and acetaldol, passing the resulting vapors over a catalytic agent comprising an alkali-digested mixture of silica and an oxide from the group consisting of zirconium oxide and thorium oxide while maintaining said catalytic agent at a temperature of from about 375° to about 525° C., and thereafter removing butadiene from the gaseous mixture.

2,438,465
FOOD PROCESSOR GEARING
Alfred Strauss and Eric G. Feltman, Chicago, Melville M. Hunt, Park Ridge, and Watson D. Harbaugh, Evanston, Ill., assignors to A. F. Dormeyer Mfg. Co., a corporation of Illinois
Original application January 8, 1940, Serial No. 312,874. Divided and this application February 19, 1942, Serial No. 431,589
11 Claims. (Cl. 74—16)

1. A motor driven beater construction for a food mixer including a motor casing, a universal joint element carried upon a shaft journaled with respect to the casing, a gear housing for rotatably supporting a driven shaft, means detachably and pivotally mounting the housing upon the casing for movement with respect thereto about the axis of said universal joint element to permit horizontal movement of the driven shaft during driv-

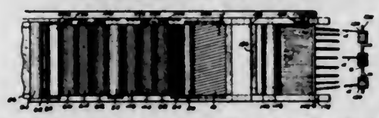


ing operation thereof, a second universal joint element carried by the housing and mating with the first universal joint element in disengageable drive relationship, and a handle on the gear housing for manipulating and removing the gear housing from the casing.

2,438,466
ICE CUBE FREEZING APPARATUS
Raymond E. Tobey, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 8, 1943, Serial No. 509,371
7 Claims. (Cl. 62—106)

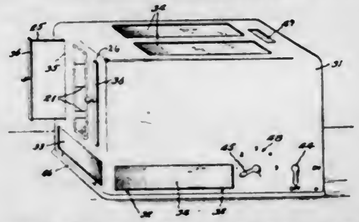
1. In liquid freezing apparatus, the combination of an open top mold having a storage space therein for the liquid to be frozen, the interior side wall surfaces of said mold diverging upwardly, a cooling unit extending downwardly through the open top of said mold into the upper portion of said liquid storage space to absorb heat directly from the upper portion of said liquid to freeze said portion, the lowest portion of said liquid being in poorer heat transfer relationship with said cooling unit than any portion of said liquid above said lowest portion.

2,438,467
CATALYTIC CONVERSION OF HYDROCARBONS
Charles W. Tyson, Summit, Herbert G. M. Fischer, Westfield, and Eger V. Murphree, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Original application October 15, 1938, Serial No. 235,232. Divided and this application January 16, 1943, Serial No. 472,550
5 Claims. (Cl. 196—49)



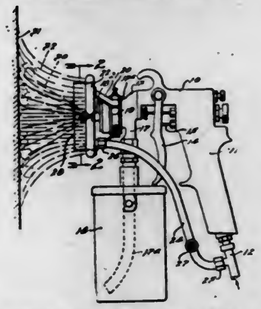
1. In a method of catalytic conversion of hydrocarbons wherein one reaction vessel having stationary catalyst is used for conversion of hydrocarbons and a second similar reaction vessel is on regeneration to regenerate fouled catalyst by burning, the steps of introducing regenerating gas into said second vessel, withdrawing hot regeneration gases from said second vessel, cooling withdrawn regeneration gases by indirect heat exchange with hot hydrocarbons withdrawn from said first vessel, additionally cooling at least part of the withdrawn cooled regeneration gases and recycling at least part of the additionally cooled regeneration gases to said second vessel to control the temperature during regeneration, and recycling the heated hydrocarbon vapors leaving said heat exchange step to said first vessel to undergo additional conversion therein.

2,438,468
OIL COMPOSITION
Jones I. Wasson, Union, and Carroll J. Wilson, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 31, 1942, Serial No. 470,841
1 Claim. (Cl. 252—52)



An oil composition having a high resistance against oxidation comprising a petroleum oil boiling in the lubricating oil range and a relatively small amount, sufficient to substantially inhibit deterioration, of tertiary butyl ether of 4-isopropyl alpha naphthol.

2,438,469
METHOD AND APPARATUS FOR CONVERTING BULK FILAMENT INTO STAPLES
Robert C. Wilkie, Andover, Mass., assignor to Pacific Mills, Lawrence, Mass., a corporation of Massachusetts
Application March 1, 1943, Serial No. 477,608
In Canada November 23, 1941
30 Claims. (Cl. 19—150)

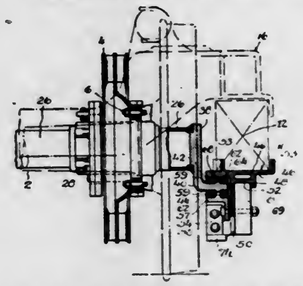


30. The method of converting filaments of textile fibers into a sliver of cut lengths, which comprises forming a plurality of filaments into a flat web of cut and drafted fibers, advancing the web and rolling said fibers as they advance into helices to form a sliver having its axis diagonally disposed to the direction of the advance of said web and advancing said sliver axially over said web.

2,438,470
RADIANT GAS TOASTER AND BROILER
Harry B. Wilson, Brooklyn, N. Y.
Application April 21, 1944, Serial No. 532,157
1 Claim. (Cl. 99—386)

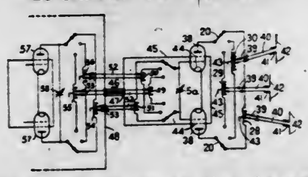
A quick acting radiant heat gas toaster or broiler comprising two sets of gas burners arranged in substantially parallel rows, spaced apart to provide a longitudinally extended radiant heat cooking zone therebetween, incandescent gas mantles mounted on said burners, low heat content light sheet metal radiant heat reflectors extending along the outer sides of said rows of incandenscent mantles and similar low heat content light sheet metal radiant heat reflectors extending across the ends of the rows and forming with said first reflectors, a heat radiating and reflecting enclosure about and in back of the mantles for concentrating the radiant heat energy of the mantles on said longitudinally extended cooking zone, said end reflectors having passages therethrough in line with said cooking zone, and a horizontally extending food conveyer operating in line with said longitudinally extended radiant heat cooking zone and said passages in the end reflectors, and means for providing a chimney effect circulation upwardly through said heat radiating and reflecting enclosure, said means including an enclosure about said reflectors, said enclosure having openings in line with the side reflectors and said side reflectors being bodily removable through said openings for purposes of cleaning or the like.

2,438,471
SPRAYING APPARATUS
Albert P. Ball, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application June 5, 1944, Serial No. 538,779
3 Claims. (Cl. 91—45)



1. In a spray device, a body having a spray nozzle, means for discharging from said nozzle under air pressure a stream of finely divided particles of coating material to be deposited on a surface to be coated, an annular air chamber surrounding said nozzle and spaced outwardly therefrom, an annular shield interposed between said nozzle and chamber and projecting outwardly a distance therebeyond, said chamber having an annular series of air outlet holes, and means for directing a stream of air under pressure through said holes in the form of a frustrum of a cone embracing and contiguous to said first stream and impinging against said surface around the region of impingement of said first stream against said surface.

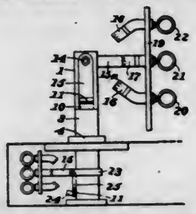
2,438,472
HOSE COUPLING
Walter C. Calcott, Maywood, Ill., assignor to Chicago Metal Hose Corporation, Maywood, Ill., a corporation of Illinois
Application April 10, 1944, Serial No. 530,328
14 Claims. (Cl. 285—130)



1. A coupling structure for hose of the metal convoluted type, said coupling comprising a split ring interlocking member adapted to embrace the hose and mechanically interlock with the convolutions thereof, an anchor member slidably embracing the hose and adapted to engage the interlocking member and be held in place thereby, and a coupling body member retained on the hose by the anchor member.

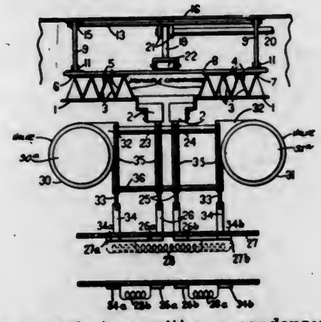
2,438,473
BRAKE ARRANGEMENT FOR RAILWAY DISC BRAKES
Robert B. Cottrell and Wesley A. Helsten, Chicago, Ill., assignors to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application June 7, 1945, Serial No. 598,084
20 Claims. (Cl. 188—59)

1. In a brake arrangement for a railway car truck, a wheel and axle assembly comprising a braking surface, an equalizer supported from said assembly, a spring seat member on said equalizer comprising a top web, spaced inboard and outboard webs embracing said equalizer, springs on said top web, a truck frame supported from said springs, a brake support member having an end portion with substantially horizontal top and bottom bearing surfaces of generally rectangular form, a resilient pad compressed between said top surface and said top web, a clamping piece secured to said spring seat member and supporting a resilient pad compressed against said bottom surface, and friction means on said support member for cooperation with said braking surface, said bearing surfaces, said top web, and said clamping piece having projections extending within openings in the associated pads, said pads resiliently supporting said support member and yieldingly resisting relative longitudinal and lateral movement of said support member with respect to said equalizers and being designed to yieldingly resist braking torque between said support member and said equalizers.



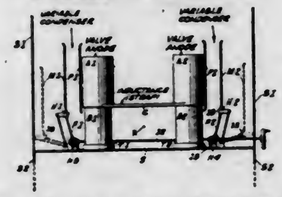
2,438,474
MULTIRANGE TUNER FOR ULTRA HIGH FREQUENCY TRANSMITTERS
John Mathieson Dodds, Timperley, and John Heywood Ludlow, Bowdon, England
Application December 29, 1943, Serial No. 516,103
In Great Britain May 13, 1938
13 Claims. (Cl. 250—40)

1. A radio transmitter of the character described, including a pair of push-pull valves, a



movable contact element, a plurality of different inductances arranged in fixed relation to the valves, a fixed contact element connected to the terminals of each of said inductances and adapted to be engaged by said movable contact element, said movable contact element being connected, by electrically integral connections, with the valve electrode terminals to which the several inductances are required to be selectively connected, said connections and contact elements having relatively large dimensions in the direction parallel with the axes of the inductance loops formed by said connections and contact elements.

2,438,475
MULTIRANGE TUNER FOR ULTRA HIGH FREQUENCY TRANSMITTERS
John Mathieson Dodds, Timperley, and John Heywood Ludlow, Bowdon, England
Application December 29, 1943, Serial No. 516,104
In Great Britain May 13, 1938
13 Claims. (Cl. 250—40)

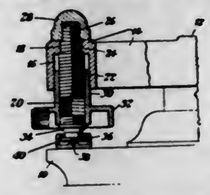


1. A short wave radio transmitter having wave changing arrangements and including a valve having an electrode terminal member, said member having a switch contact face, an inductance including a terminal member having a contact face spaced from said first face only a sufficient distance to withstand the working voltage between said faces, and a movable contact having opposed faces adapted to be brought into and out of engagement with the two first-mentioned contact faces.

2,438,476
MULTIRANGE TUNING MEANS FOR RADIO FREQUENCY GENERATORS
John Mathieson Dodds, Timperley, and John Heywood Ludlow, Bowdon, England
Application December 29, 1943, Serial No. 516,108
In Great Britain May 13, 1938
8 Claims. (Cl. 250—40)

1. In a radio transmitter, a condenser including opposed corrugated plate elements, a movable switch member connected to one of said condenser plate elements, a series of fixed contacts arranged in the path of movement of said movable switch member, a valve including a grid terminal, a second movable switch member connected to said grid terminal, a second series of fixed contacts arranged in the path of movement of said second switch member, the contacts of said two series being respectively arranged in pairs, at least one of said pairs of fixed contacts being connected only by an inductance, and other pairs being connected by an inductance and conducting means in parallel with said inductance.

2,438,477
TUNING CIRCUIT FOR RADIO TRANSMITTERS
John Mathieson Dodds, Timperley, and John Heywood Ludlow, Bowdon, England
Application December 29, 1943, Serial No. 516,110
In Great Britain July 10, 1940
2 Claims. (Cl. 250—40)



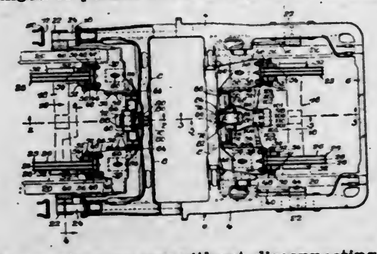
1. In a radio transmitter for ultra high frequencies; a valve including an anode, a grid terminal spaced from said anode, a screen grid associated with said anode and a metallic support for said screen grid electrically associating said screen grid with said grid terminal adapted to provide an anode inductance path of low inductance; a condenser having a fixed plate connected to the anode, a cooperating main movable plate, and means to move the main movable plate through a range of positions while maintaining it parallel to the fixed plate; said moving means including an auxiliary plate hingedly and electrically connected along one edge to the main movable plate and along its opposite edge to said grid terminal so as to electrically associate the main movable plate and the auxiliary plate with said grid terminal; said plates being so dimensioned as to maintain the impedance of the anode inductance loop at a low value.

2,438,478
METHOD OF PREPARING SILICONES AND PRODUCT THEREOF
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application February 26, 1942, Serial No. 432,529
3 Claims. (Cl. 260—448.2)

1. A polymer of dimethyl silicone having the formula $[(CH_3)_2SiO]_n$ where n represents an integer from 3 to 4 inclusive.

2,438,479
DUSTPROOF LEVELING SCREW
William Patrosio, Jersey City, and William Ferber, Hoboken, N. J., assignors to Keuffel & Esser Company, Hoboken, N. J., a corporation of New Jersey
Application December 21, 1944, Serial No. 569,146
4 Claims. (Cl. 248—180)

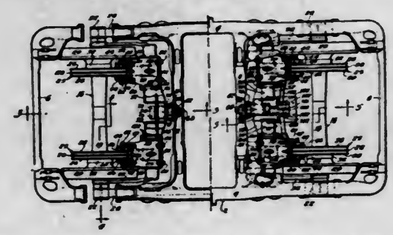
1. In a leveling screw construction for surveying instruments and the like, a substantially horizontal leveling arm, the outer end of which has a substantially vertical bore therethrough, the upper portion of said bore being threaded and the remaining lower portion of the bore being cylindrical and of substantially larger diameter and extent than the threaded portion, a shouldered threaded screw stud extending through said bore with a shoulder engaging the upper portion of said cylindrical section of the bore and being provided with a thread engaging



the thread in said arm, a portion of said stud extending above the arm and being provided with a different-handed thread from that of the arm, a locking cap threaded on the stud extension, a movable sleeve member threaded on said stud and extending into said cylindrical bore, said sleeve member having a cylindrical external surface substantially fitting the internal surface of said bore, a base plate below said arm, and means on the lower end of said sleeve engaging said plate.

2,438,480
PURIFICATION OF VINYL HALIDE AND VINYLIDENE HALIDE POLYMERS
George W. Stanton, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application April 5, 1944, Serial No. 529,695
1 Claim. (Cl. 260—88)

The method for destroying peroxide-containing catalyst residues in an alcohol-insoluble polymer containing a member of the class of the vinyl halides and the vinylidene halides polymerized therein, which comprises heating the polymeric substance in finely divided solid form with sufficient of an amyl alcohol in the liquid phase to wet the polymer, at the boiling point of the alcohol, for a period sufficient to destroy the peroxide, and separating the so-purified finely divided solid polymer from the liquid alcohol, both the polymer and the alcohol giving negative tests for peroxides when tested with an aqueous acetone solution of potassium iodide.



2,438,481
DISC BRAKE ARRANGEMENT
Carl E. Tack, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application May 25, 1942, Serial No. 444,407
11 Claims. (Cl. 188—59)

1. In a brake arrangement, a wheel and axle assembly, rotatable brake discs mounted thereon, cylinder housings antifrictionally supported from said assembly adjacent respective discs, friction means supported from said housings for engagement with said discs, openings in the adjacent sides of said housings for the insertion and removal of operating means associated with said friction means, a member connecting said housings, and means engaged with said member for restraining its rotation with respect to said assembly during engagement of said friction means and said discs, said member being formed and arranged to permit the insertion and removal of

said operating means without disconnecting said member from said housings.

2,438,482
RAILWAY DISC BRAKE ARRANGEMENT
Carl E. Tack, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application June 8, 1942, Serial No. 446,183
20 Claims. (Cl. 188—59)

1. In a brake arrangement, a wheel and axle assembly, brake discs thereon, friction means for engagement with said discs, a brake frame supported from the ends of said assembly, means preventing rotation of said brake frame about said assembly, said frame comprising a pocket adjacent each disc, cylinder housings in respective pockets, brake levers fulcrumed therein for connection to said respective friction means, and means securing each housing within the associated pocket, said last mentioned means comprising spaced bolts securing the housing to the rear wall of said pocket, and spaced pins securing the housing to the bottom wall of said pocket, said pins affording fulcrum means for respective of said levers.

2,438,483
BRAKE SHOE AND HEAD ARRANGEMENT
Carl E. Tack, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application July 8, 1944, Serial No. 544,009
12 Claims. (Cl. 188—234)

1. A segmental brake head and shoe assembly comprising a rigid head having spaced lugs with aligned openings for reception of associated pivotal securing means, and a composition brake shoe having a flat face in complementary engage-

ment with the face of said head, said flat face having a relieved portion defining a shallow, arcuate cavity between said head and shoe continuous from end to end thereof and suitable to accommodate the flow of fluid means therebetween, said cavity also serving to accommodate the expansive flow of the composition material of which said shoe is composed in a direction toward said head and away from the friction surface of said shoe whereby substantially equalized pressure is secured on said friction surface, said shoe having a plurality of intersecting slots on the friction face thereof, said cavity extending approximately halfway across the width of said shoe for the full length thereof.

2,438,484

FLUORINATED DIBASIC ACIDS AND METHOD OF PREPARING SAME

Albert L. Henne, Columbus, Ohio, assignor to The Ohio State University Research Foundation, Columbus, Ohio, a corporation of Ohio

No Drawing. Application October 13, 1944, Serial No. 558,607

5 Claims. (Cl. 260—537)

3. A new class of compounds consisting of hexafluoroglutaric acid and alkaline salts thereof.

2,438,485

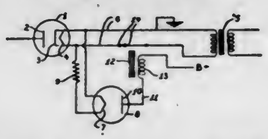
FLUORINATED DIBASIC ACIDS AND METHOD OF PREPARING SAME

Albert L. Henne, Columbus, Ohio, assignor to Ohio State University Research Foundation, Columbus, Ohio, a corporation of Ohio

No Drawing. Application October 4, 1946, Serial No. 701,083

3 Claims. (Cl. 260—537)

1. A method of preparing tetrafluorosuccinic acid which comprises the steps of breaking the ring of tetrafluorodichlorocyclobutane by oxidation in an alkaline solution for forming an alkaline salt of tetrafluorosuccinic acid, adding an acid in sufficient quantities to react with the alkaline metal of said salt whereby tetrafluorosuccinic acid is formed in solution, and then extracting the tetrafluorosuccinic acid from said solution.



2,438,486

POWER REGULATOR

Nathaniel Rochester, Milton, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts

Application June 27, 1946, Serial No. 679,841

4 Claims. (Cl. 315—97)

1. Apparatus for regulating cathode emission comprising a cathode to be regulated situated within an electronic device, a control tube having at least a plate and cathode, power supply means connected to energize both cathodes, the emission of the cathode in said control tube being more critically dependent upon its temperature and faster in thermal response than the regulated cathode, power supply means having a connection to the control tube plate and a normally closed relay switch in said plate connection having its switch contacts connected to turn the power to said cathodes on and off, whereby the controlled cathode receives successive charges of current metered by the thermal emission characteristic of the cathode in the control tube.

McKallick, Mary, Spokane, Wash. Letter box. 2,438,785, Mar. 30.

McLarn, Ernest S., Manhasset, assignor to International Standard Electric Corporation, New York, N. Y. Electrical contact brush. 2,438,510, Mar. 30.

McLeckie, Harry W., Naples, Tex. Hand dryer. 2,438,762, Mar. 30.

McMahan, Thomas E., Ojai, Calif. Well tool. 2,438,673, Mar. 30.

McMahon, William, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Copper chromium, arsenic compound for wood preserving. 2,438,511, Mar. 30.

McMillan, James O., assignor to F. J. Ablah, Wichita, Kans. Carbonator. 2,438,714, Mar. 30.

Meadow, Jacob R., Memphis, Tenn., and E. E. Reid, Baltimore, Md., assignors to Socony-Vacuum Oil Company, Incorporated. Separation of asphalt from hydrocarbons. 2,438,874, Mar. 30.

Mehut, Jean, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y. Pneumatic switch. 2,438,512, Mar. 30.

Meigs, Douglas P., Silver Spring, Md., assignor by mesne assignments, to American Instrument Co., Inc. Closure for high-pressure vessels. 2,438,513, Mar. 30.

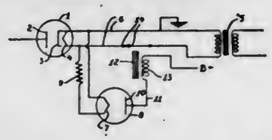
ment with the face of said head, said flat face having a relieved portion defining a shallow, arcuate cavity between said head and shoe continuous from end to end thereof and suitable to accommodate the flow of fluid means therebetween, said cavity also serving to accommodate the expansive flow of the composition material of which said shoe is composed in a direction toward said head and away from the friction surface of said shoe whereby substantially equalized pressure is secured on said friction surface, said shoe having a plurality of intersecting slots on the friction face thereof, said cavity extending approximately halfway across the width of said shoe for the full length thereof.



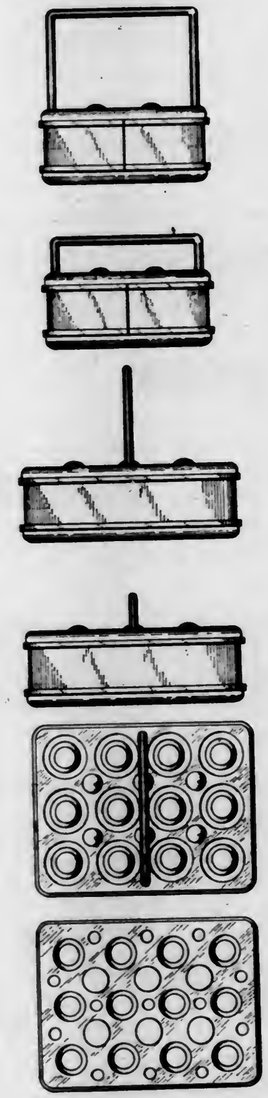
2,438,484
FLUORINATED DIBASIC ACIDS AND METHOD OF PREPARING SAME
Albert L. Henne, Columbus, Ohio, assignor to The Ohio State University Research Foundation, Columbus, Ohio, a corporation of Ohio
No Drawing. Application October 13, 1944, Serial No. 558,607
5 Claims. (Cl. 260—537)

3. A new class of compounds consisting of hexafluoroglutaric acid and alkaline salts thereof.

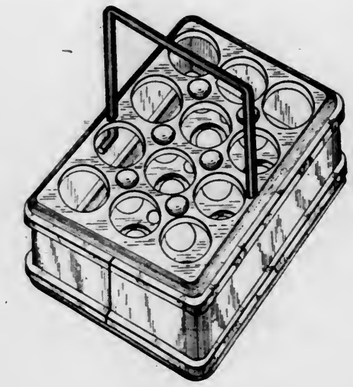
2,438,485
FLUORINATED DIBASIC ACIDS AND METHOD OF PREPARING SAME
Albert L. Henne, Columbus, Ohio, assignor to Ohio State University Research Foundation, Columbus, Ohio, a corporation of Ohio
No Drawing. Application October 4, 1946, Serial No. 701,083
3 Claims. (Cl. 260—537)

1. A method of preparing tetrafluorosuccinic acid which comprises the steps of breaking the ring of tetrafluorodichlorocyclobutane by oxidation in an alkaline solution for forming an alkaline salt of tetrafluorosuccinic acid, adding an acid in sufficient quantities to react with the alkaline metal of said salt whereby tetrafluorosuccinic acid is formed in solution, and then extracting the tetrafluorosuccinic acid from said solution.

2,438,486
POWER REGULATOR
Nathaniel Rochester, Milton, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application June 27, 1946, Serial No. 679,841
4 Claims. (Cl. 315—97)



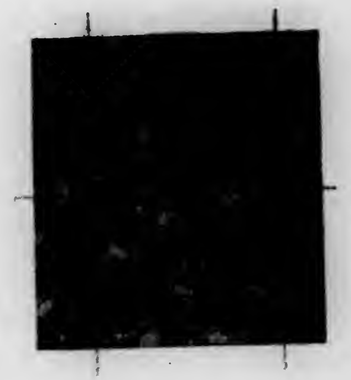
1. Apparatus for regulating cathode emission comprising a cathode to be regulated situated within an electronic device, a control tube having at least a plate and cathode, power supply means connected to energize both cathodes, the emission of the cathode in said control tube being more critically dependent upon its temperature and faster in thermal response than the regulated cathode, power supply means having a connection to the control tube plate and a normally closed relay switch in said plate connection having its switch contacts connected to turn the power to said cathodes on and off, whereby the controlled cathode receives successive charges of current metered by the thermal emission characteristic of the cathode in the control tube.



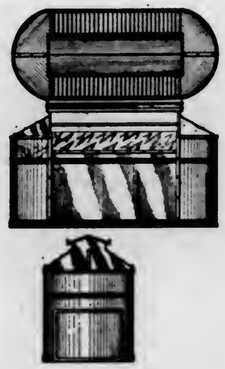
DESIGNS

MARCH 23, 1948

149,034
DESIGN FOR A BOTTLE CARRIER
Grant M. Acton, Arkansas City, Kans., assignor to Temp-Rite Manufacturing Company, Arkansas City, Kans., a partnership
Application May 6, 1946, Serial No. 129,348
Term of patent 14 years
(Cl. D58—4)

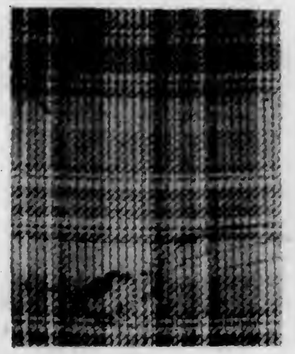


149,034—Continued



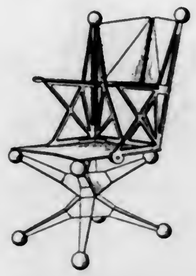
The ornamental design for a bottle carrier, as shown.

149,035
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Joseph P. Arcuni, Long Island, N. Y.
Application June 9, 1947, Serial No. 139,554
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for a textile fabric or similar article, substantially as shown.

149,036
DESIGN FOR A REFRIGERATED DISPLAY UNIT
John V. Avila, San Jose, Calif.
Application January 6, 1947, Serial No. 135,974
Term of patent 14 years
(Cl. D80—11)



The ornamental design for a refrigerated display unit, as shown.

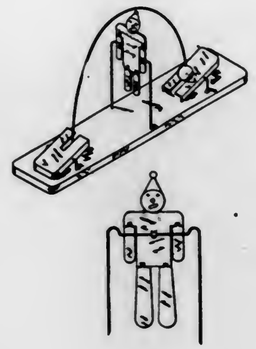
149,037
DESIGN FOR A WOVEN PLASTIC FABRIC
George Backer, New York, N. Y.
Application September 25, 1947, Serial No. 141,576
Term of patent 14 years
(Cl. D92—1)

The ornamental design for a woven plastic fabric, as shown and described.

149,038
DESIGN FOR A CHAIR
Joel D. Barber, New York, N. Y.
Application November 7, 1946, Serial No. 134,576
Term of patent 14 years
(Cl. D15—1)

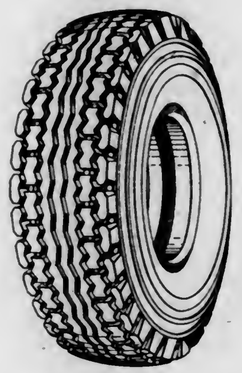
The ornamental design for a chair, as shown.

149,039
DESIGN FOR A COMBINED WATCH CASE AND WRIST BAND
Robert A. Barré, New York, N. Y.
Application August 8, 1947, Serial No. 140,779
Term of patent 7 years
(Cl. D42—8)



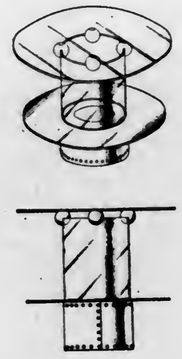
The ornamental design for a combined watch case and wrist band, substantially as shown and described.

149,040
DESIGN FOR A COMBINED WATCHCASE AND BAND
Robert A. Barré, New York, N. Y.
Application December 12, 1947, Serial No. 143,111
Term of patent 7 years
(Cl. D42—8)



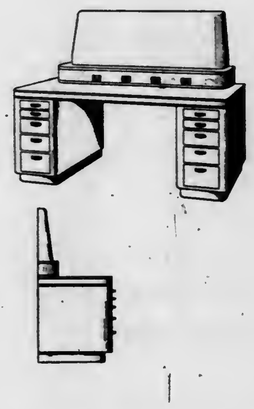
The ornamental design for a combined watch case and band, substantially as shown.

149,041
DESIGN FOR A FIGURE TOY
Samuel L. Beder, New York, N. Y.
Application November 2, 1946, Serial No. 134,487
Term of patent 7 years
(Cl. D34—15)



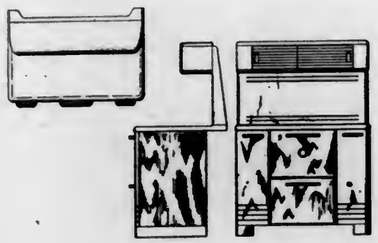
The ornamental design for a figure toy, substantially as shown.

149,042
DESIGN FOR A TIRE
William F. Billingsley, Silver Lake, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application March 21, 1947, Serial No. 137,801
Term of patent 14 years
(Cl. D90—20)



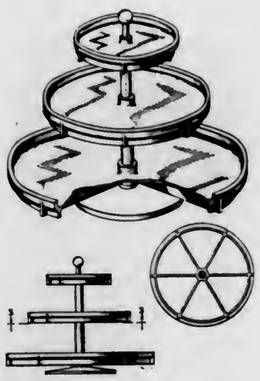
The ornamental design for a tire, as shown.

149,043
DESIGN FOR AN AQUARIUM TABLE
Lawrence A. Bouligny, Miami, Fla.
Application November 26, 1946, Serial No. 135,114
Term of patent 7 years
(Cl. D91—2)



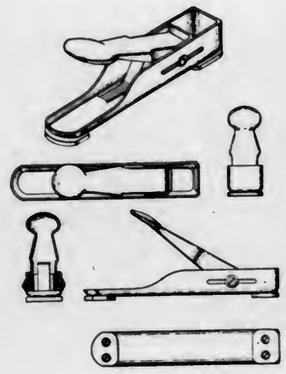
The ornamental design for an aquarium table, substantially as shown.

149,044
DESIGN FOR A RADIO SERVICE BENCH
Chester A. Brown and Henry Faber, Grand Rapids, Mich.
Application March 25, 1946, Serial No. 127,916
Term of patent 14 years
(Cl. D33—14)



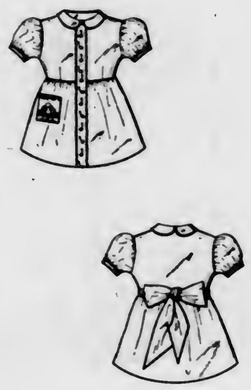
The ornamental design for a radio service bench, substantially as shown and described.

149,045
DESIGN FOR A KITCHEN RANGE
Carl G. Bjorncrants, Evanston, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application June 21, 1946, Serial No. 130,921
Term of patent 7 years
(Cl. D81—4)



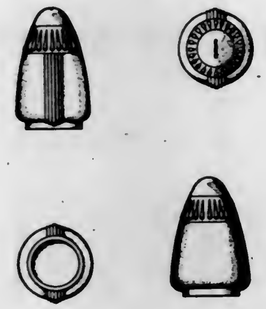
The ornamental design for a kitchen range, substantially as shown and described.

149,046
DESIGN FOR A HOSTESS TRAY
David Blumenthal and Herman L. Selden, Chicago, Ill., assignors to Phil-Mar Mfg. Corp., Chicago, Ill., a corporation of Illinois
Application June 22, 1946, Serial No. 130,934
Term of patent 14 years
(Cl. D44—10)



The ornamental design for a hostess tray, as shown.

149,047
DESIGN FOR A NUTCRACKER OR SIMILAR ARTICLE
Kendall Clark, Dayton, and William Merrill Allen, Hamilton, Ohio, assignors to The W. W. Boes Company, Dayton, Ohio, a corporation of Ohio
Application June 8, 1946, Serial No. 130,544
Term of patent 7 years
(Cl. D44—1)

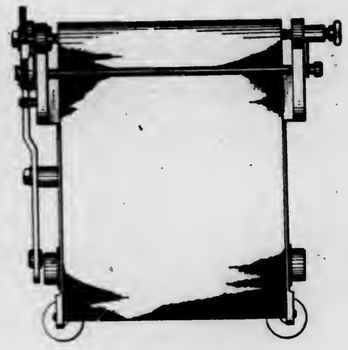


The ornamental device for a nutcracker or similar article, substantially as shown.

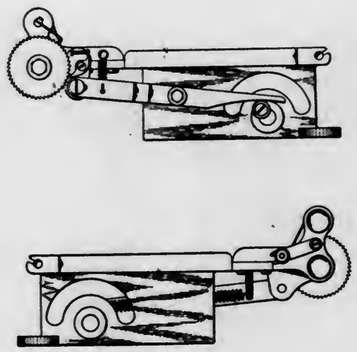
149,048
DESIGN FOR A DRESS
Benjamin Cooper and Saul S. Bickel, New York, N. Y.
Application October 9, 1947, Serial No. 141,820
Term of patent 7 years
(Cl. D3—26)

The ornamental design for a dress, as shown.

149,049
DESIGN FOR A CONDIMENT CONTAINER
John E. Davis, Sherman Oaks, Calif., assignor to Na Mac Products Corp., Los Angeles, Calif., a corporation of California
Application August 13, 1946, Serial No. 132,481
Term of patent 14 years
(Cl. D44—22)

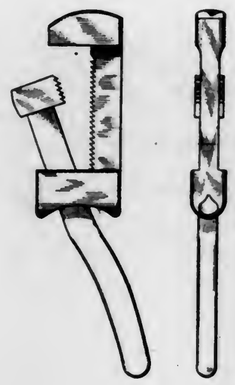


The ornamental design for a condiment container, as shown.

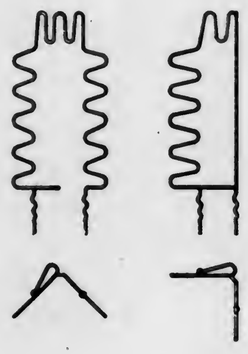


149,050
DESIGN FOR A CHRISTMAS STOCKING
Kathryn P. Donohue, Brentwood, Pa.
Application June 14, 1946, Serial No. 130,697
Term of patent 3½ years
(Cl. D47—7)

The ornamental design for a Christmas stocking, as shown.



149,051
DESIGN FOR A TRANSFER RIBBON UNIT FOR MARKING MACHINES
Herbert E. Edwards, Wellesley Hills, Mass., assignor to T. J. Edwards, Inc., Boston, Mass., a corporation of Massachusetts
Application October 10, 1946, Serial No. 133,862
Term of patent 14 years
(Cl. D64—11)



The ornamental design for a transfer ribbon unit for marking machines, substantially as shown.

149,052
DESIGN FOR A WRENCH
Arny O. Elnes, Duluth, Minn., assignor of one-half to Clarence H. Taylor, Duluth, Minn.
Application August 28, 1946, Serial No. 132,923
Term of patent 14 years
(Cl. D54—16)

The ornamental design for a wrench, as shown.

149,053
DESIGN FOR A PLANT SUPPORT
Herman Epstein, Kansas City, Mo.
Application February 18, 1946, Serial No. 126,684
Term of patent 7 years
(Cl. D35—3)

The ornamental design for a plant support, as shown.

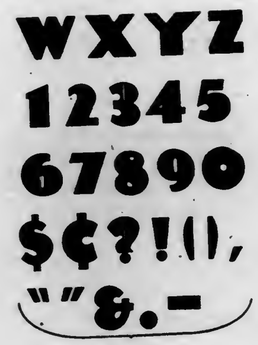
149,054
DESIGN FOR A LACE OR SIMILAR ARTICLE
Otto Frei, New York, N. Y., assignor to Otto A. Scheurmann, Bayside, N. Y.
Application July 25, 1947, Serial No. 140,498
Term of patent 7 years
(Cl. D47—6)

The ornamental design for a lace or similar article, substantially as shown and described.

149,055
DESIGN FOR A LACE OR SIMILAR ARTICLE
Otto Frei, New York, N. Y., assignor to Otto A. Scheurmann, Bayside, N. Y.
Application July 25, 1947, Serial No. 140,499
Term of patent 7 years
(Cl. D47—6)

The ornamental design for a lace or similar article, substantially as shown and described.

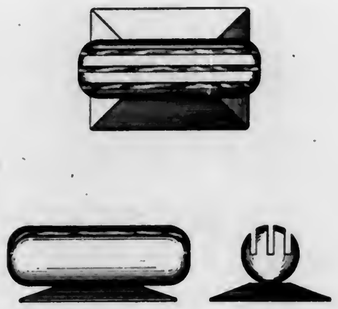
149,056
DESIGN FOR A LACE OR SIMILAR ARTICLE
Otto Frei, New York, N. Y., assignor to Otto A. Scheurmann, Bayside, N. Y.
Application July 25, 1947, Serial No. 140,500
Term of patent 7 years
(Cl. D47—6)



The ornamental design for a lace or similar article, substantially as shown and described.

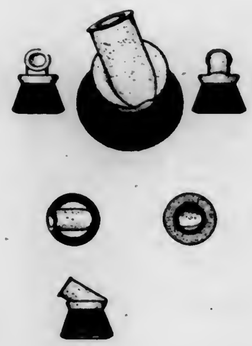
149,057
DESIGN FOR A FONT OF TYPE OR SIMILAR ARTICLE
Berthold Goldsmith, Jr., Woodmere, N. Y., assignor to Botany Mills, Inc., Passaic, N. J., a corporation of New Jersey
Application January 17, 1947, Serial No. 136,217
Term of patent 14 years
(Cl. D64—12)

149,057—Continued



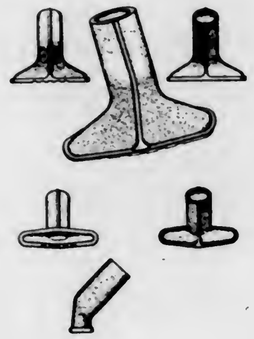
The ornamental design for a font of type or similar article, substantially as shown.

149,058
DESIGN FOR A RING BOX OR SIMILAR ARTICLE
Eleanor Groos, Mount Vernon, N. Y.
Application April 5, 1947, Serial No. 138,173
Term of patent 7 years
(Cl. D80—5)



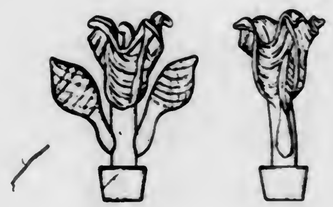
The ornamental design for a ring box or similar article, as shown.

149,059
DESIGN FOR A COMB HOLDER
Emery M. Hanrahan, Kenosha, Wis.
Application March 6, 1947, Serial No. 137,407
Term of patent 3½ years
(Cl. D86—10)



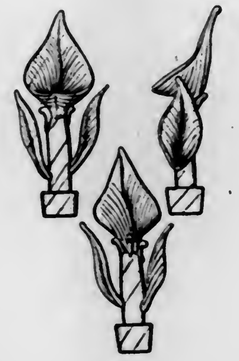
The ornamental design for a comb holder, as shown.

149,060
DESIGN FOR A BRUSH ATTACHMENT FOR VACUUM CLEANERS
Richard E. Harvuot, Inglewood, Calif., assignor to Interstate Aircraft and Engineering Corp., El Segundo, Calif., a corporation of California
Application August 26, 1946, Serial No. 132,854
Term of patent 3½ years
(Cl. D9—2)



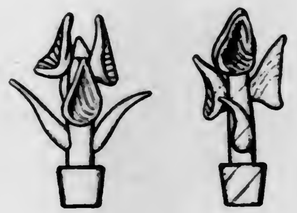
The ornamental design for a brush attachment for vacuum cleaners, substantially as shown.

149,061
DESIGN FOR A NOZZLE ATTACHMENT FOR VACUUM CLEANERS
Richard E. Harvuot, Inglewood, Calif., assignor to Interstate Aircraft and Engineering Corp., El Segundo, Calif., a corporation of California
Application August 26, 1946, Serial No. 132,857
Term of patent 3½ years
(Cl. D9—2)



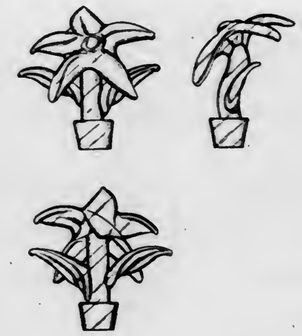
The ornamental design for a nozzle attachment for vacuum cleaners, substantially as shown.

149,062
DESIGN FOR A PERFUME BOTTLE STOPPER OR SIMILAR ARTICLE
John Herbst, New York, N. Y.
Application June 8, 1946, Serial No. 130,521
Term of patent 3½ years
(Cl. D58—10)



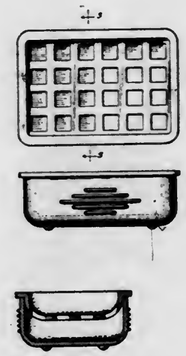
The ornamental design for a perfume bottle stopper or similar article, substantially as shown and described.

149,063
DESIGN FOR A PERFUME BOTTLE STOPPER OR SIMILAR ARTICLE
John Herbst, New York, N. Y.
Application June 8, 1946, Serial No. 130,522
Term of patent 3½ years
(Cl. D58—10)



The ornamental design for a perfume bottle stopper or similar article, substantially as shown.

149,064
DESIGN FOR A PERFUME BOTTLE STOPPER OR SIMILAR ARTICLE
John Herbst, New York, N. Y.
Application June 8, 1946, Serial No. 130,523
Term of patent 3½ years
(Cl. D58—10)



The ornamental design for a perfume bottle stopper or similar article, substantially as shown and described.

149,065
DESIGN FOR A PERFUME BOTTLE STOPPER OR SIMILAR ARTICLE
John Herbst, New York, N. Y.
Application June 8, 1946, Serial No. 130,528
Term of patent 3½ years
(Cl. D58—10)

The ornamental design for a perfume bottle stopper or similar article, substantially as shown.

149,066
DESIGN FOR A HYGIENIC SOAP DISH
Barnet D. Kaplan, New York, N. Y., assignor of one-half to Abner Weiner, Brooklyn, N. Y.
Application December 3, 1946, Serial No. 135,233
Term of patent 14 years
(Cl. D4—3)

The ornamental design for a hygienic soap dish, substantially as shown and described.

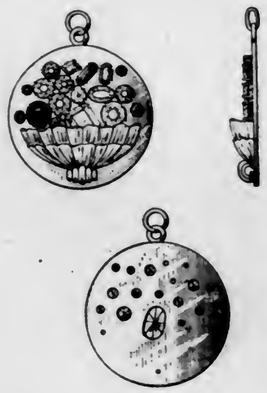
149,067
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 136,982
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

149,068
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 136,983
Term of patent 7 years
(Cl. D45—19)

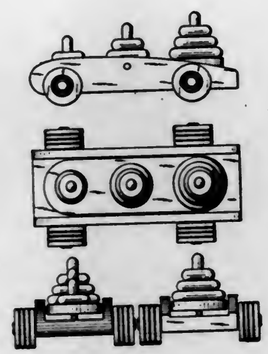
The ornamental design for a brooch or similar article, substantially as shown.

149,069
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 18, 1947, Serial No. 136,993
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a separable brooch or similar article, substantially as shown.

149,070
DESIGN FOR A FINGER RING
Felix P. Kinsley, St. Louis, Mo.
Application March 2, 1946, Serial No. 127,033
Term of patent 14 years
(Cl. D45—10)

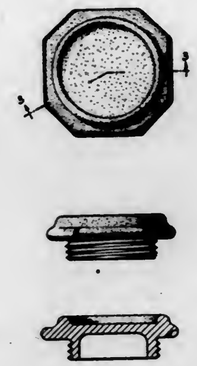


The ornamental design for a finger ring, as shown and described.

149,071
DESIGN FOR A PENDANT OR SIMILAR ARTICLE
Marc Koven, New York, N. Y.
Application December 13, 1946, Serial No. 135,467
Term of patent 3½ years
(Cl. D45—15)

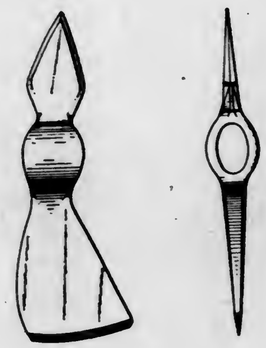
The ornamental design for a pendant or similar article, as shown.

149,072
DESIGN FOR A WHEELED PULL TOY
Olai F. Larsen, Jr., Demarest, N. J., assignor to Noma Electric Corporation, New York, N. Y., a corporation of New York
Application March 14, 1946, Serial No. 127,507
Term of patent 3½ years
(Cl. D34—15)



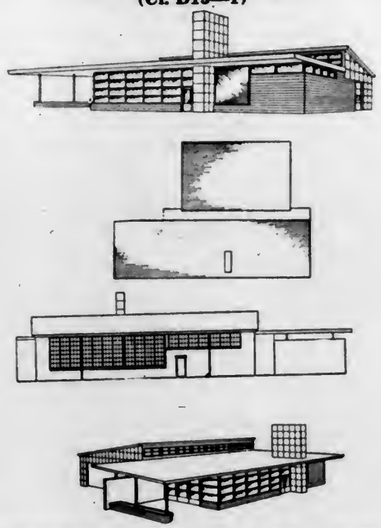
The ornamental design for a wheeled pull toy, as shown.

149,073
DESIGN FOR A LADY'S SHOE OR SIMILAR ARTICLE
David E. Levin, Brooklyn, N. Y., assignor to Evins, Inc., New York, N. Y., a corporation
Application August 22, 1947, Serial No. 141,009
Term of patent 3½ years
(Cl. D7—7)



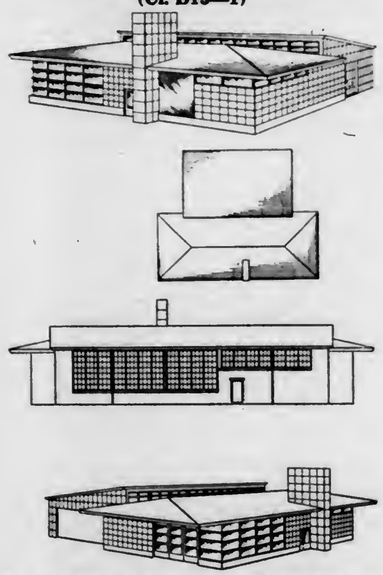
The ornamental design for a lady's shoe or similar article, substantially as shown and described.

149,074
DESIGN FOR A CLOSURE FOR BUNG HOLES OR THE LIKE
Joseph Levine, Flushing, N. Y.
Application December 29, 1945, Serial No. 125,205
Term of patent 3½ years
(Cl. D58—26)



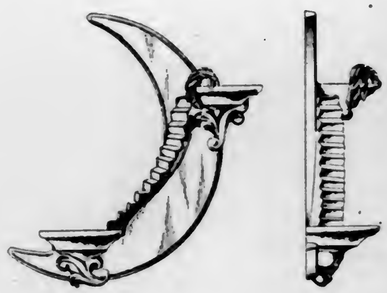
The ornamental design for a closure for bung holes or the like, substantially as shown.

149,075
DESIGN FOR A DOUBLE-HEADED HATCHET
Malcolm W. Lewis, West Clarkesville, N. Y.
Application October 7, 1946, Serial No. 133,815
Term of patent 14 years
(Cl. D93—4)



The ornamental design for a double-headed hatchet, as shown.

149,076
DESIGN FOR A BUILDING
Raymond Loewy, New York, N. Y.
Application August 30, 1946, Serial No. 132,966
Term of patent 14 years
(Cl. D13—1)

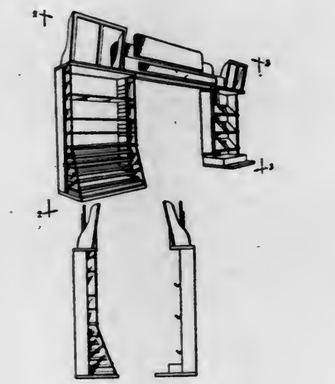


The ornamental design for a building, as shown.

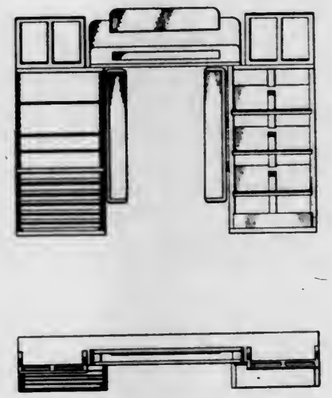
149,077
DESIGN FOR A BUILDING
Raymond Loewy, New York, N. Y.
Application August 30, 1946, Serial No. 132,967
Term of patent 14 years
(Cl. D13—1)

The ornamental design for a building, as shown.

149,078
DESIGN FOR A WALL BRACKET
Jack Lucchesi, Chicago, Ill.
Application August 21, 1946, Serial No. 132,713
Term of patent 14 years
(Cl. D33—3)

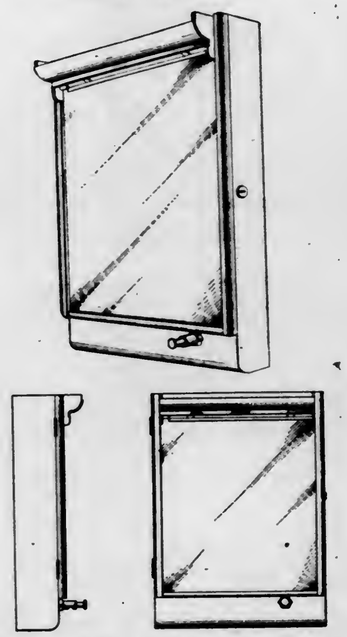


The ornamental design for a wall bracket, as shown.



149,079
DESIGN FOR A CLOCK CASING
Frederick Lux, Middlebury, Conn., assignor to The Lux Clock Mfg. Co., Waterbury, Conn., a corporation of Connecticut
Application November 4, 1947, Serial No. 142,296
Term of patent 14 years
(Cl. D42—7)

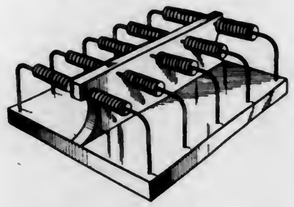
The ornamental design for a clock casing, substantially as shown.



149,080
DESIGN FOR AN OVERHEAD COUNTER DISPLAY STAND
Simon Malkin, New York, N. Y., assignor to United Cigar-Whelan Stores Corporation, a corporation of Delaware
Application November 29, 1946, Serial No. 135,181
Term of patent 14 years
(Cl. D80—9)

The ornamental design for an overhead counter display stand, as shown.

149,081
DESIGN FOR A VIOLET RAY TOWEL AND SOAP CABINET
Maurice A. Michaels, Montclair, N. J., assignor to Sterilseat Corporation of America, Philadelphia, Pa., a corporation of Delaware
Application March 27, 1946, Serial No. 127,992
Term of patent 3½ years
(Cl. D33—19)



The ornamental design for a violet ray towel and soap cabinet, substantially as shown.

149,082
DESIGN FOR A BOOK END OR SIMILAR ARTICLE
Willis H. Miller, Dallas, Tex.
Application September 19, 1946, Serial No. 133,421
Term of patent 3½ years
(Cl. D33—3)

The ornamental design for a book end or similar article, substantially as shown.

149,083
DESIGN FOR AN ABACUS
Charles Mooney, Waco, Tex.
Application January 6, 1947, Serial No. 135,971
Term of patent 14 years
(Cl. D25—1)

The ornamental design for an abacus, as shown.

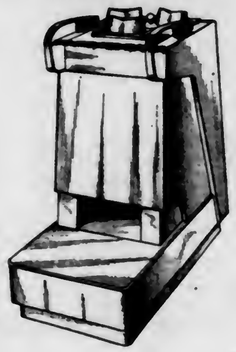
149,084
DESIGN FOR A SHRIMP KNIFE
Robert W. Nelson, Minneapolis, Minn.
Application July 31, 1946, Serial No. 132,150
Term of patent 3½ years
(Cl. D22—3)

The ornamental design for a shrimp knife, substantially as shown.

149,085
DESIGN FOR A MEAT PLATTER OR SIMILAR ARTICLE
Nathan S. Newman, Denver, Colo.
Application July 29, 1946, Serial No. 132,086
Term of patent 3½ years
(Cl. D44—15)

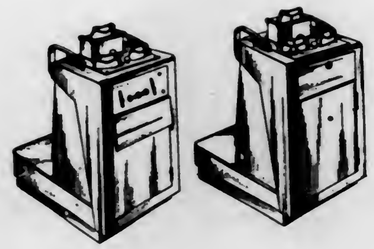
The ornamental design for a meat platter or similar article, as shown.

149,086
DESIGN FOR A CHICKEN PICKING FINGER UNIT
Bert T. Norman, Los Angeles, Calif., assignor to Selwyn B. Holley and Vernal M. Holley, Los Angeles, Calif.
Application June 5, 1946, Serial No. 130,427
Term of patent 3½ years
(Cl. D11—1)



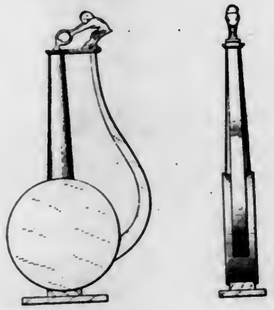
The ornamental design for a chicken picking finger unit, substantially as shown.

149,087
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 21, 1947, Serial No. 137,062
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

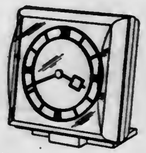
149,088
DESIGN FOR AN X-RAY SHOE FITTING CABINET
Jean Otis Reinecke, Oak Park, Ill., assignor to Primex Equipment Company, Chicago, Ill., a corporation of Illinois
Application October 5, 1946, Serial No. 133,796
Term of patent 14 years
(Cl. D83—1)



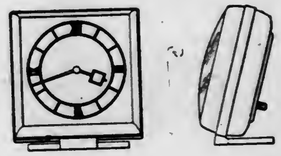
149,088—Continued

The ornamental design for an X-ray shoe fitting cabinet, as shown.

149,089
DESIGN FOR A DECANTER OR THE LIKE
Ewing S. Rixson, Greenwich, Conn., assignor to Robert H. Becker, Tuckahoe, N. Y.
Application July 24, 1946, Serial No. 131,877
Term of patent 14 years
(Cl. D36—2)

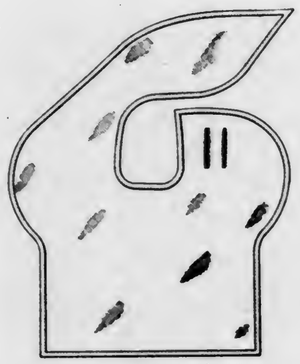


The ornamental design for a decanter or the like, as shown.



149,090
DESIGN FOR AN ORPHREY OR SIMILAR ARTICLE
Otto A. Scheurmann, Bayside, N. Y.
Application July 25, 1947, Serial No. 140,497
Term of patent 7 years
(Cl. D3—32)

The ornamental design for an orphrey or similar article, substantially as shown.



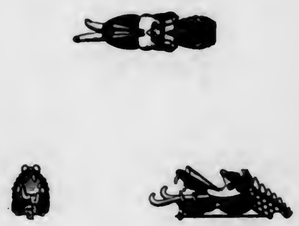
149,091
DESIGN FOR A CLOCK
Max E. Schlenker, Peru, Ill., assignor to General Time Instruments Corporation, New York, N. Y., a corporation of Delaware
Application December 26, 1947, Serial No. 143,358
Term of patent 14 years
(Cl. D42—7)

The ornamental design for a clock, substantially as shown.

149,092
DESIGN FOR A BIB
Jeannette Seidenbaum, Brooklyn, N. Y.
Application September 13, 1946, Serial No. 133,287
Term of patent 7 years
(Cl. D3—26)

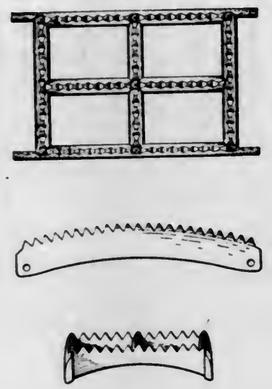
The ornamental design for a bib, as shown.

149,093
DESIGN FOR A COIN BANK OR SIMILAR ARTICLE
Sara L. Seymour, Altadena, Calif.
Application April 8, 1946, Serial No. 128,386
Term of patent 3½ years
(Cl. D34—11)



The ornamental design for a coin bank or similar article, substantially as shown.

149,094
DESIGN FOR A SLIP OR SIMILAR ARTICLE
Louis Silverman, New York, N. Y.
Application December 19, 1946, Serial No. 135,613
Term of patent 7 years
(Cl. D3—26)



The ornamental design for a slip or similar article, substantially as shown.

149,095
DESIGN FOR A BROOCH OR THE LIKE
Murray Slater, Brooklyn, N. Y.
Application October 18, 1946, Serial No. 134,032
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or the like, as shown.

149,096
DESIGN FOR AN ANTISKID CHAIN LINK
Conrad H. Sloan, Duluth, Minn.
Application November 8, 1946, Serial No. 134,615
Term of patent 14 years
(Cl. D99—20)

The ornamental design for an anti-skid chain link, as shown.

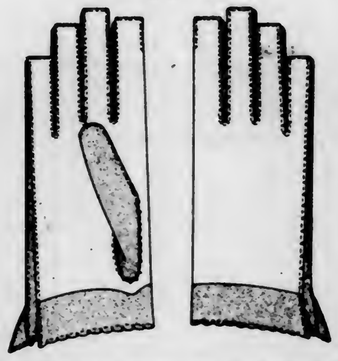
149,097
DESIGN FOR A FINGER RING OR SIMILAR ARTICLE
Vincent Sorrentino, Providence, R. I., assignor to Uncas Manufacturing Company, a corporation of Rhode Island
Application October 15, 1947, Serial No. 141,921
Term of patent 14 years
(Cl. D45—10)

The ornamental design for a finger ring or similar article, substantially as shown.

149,098
DESIGN FOR A ROCKING HORSE
Sylvia Stein, Chicago, Ill., assignor to Roxy Manufacturing Company, Chicago, Ill., a co-partnership comprised of Sylvia Stein, Emanuel T. Batko, and Al Stillman
Application April 24, 1946, Serial No. 128,921
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a rocking horse, substantially as shown and described.

149,099
DESIGN FOR A PUSH PIN
Hobert E. Sweet, Providence, R. I., assignor to H. E. Sweet Manufacturing Co., Providence, R. I., a partnership composed of Hobert E. Sweet and Hobert E. Sweet, Jr.
Application July 25, 1946, Serial No. 131,926
Term of patent 14 years
(Cl. D54—9)



The ornamental design for a push pin, substantially as shown.

149,100
DESIGN FOR A SOAP CAKE HOLDER
Raymond R. Ward, Brecksville, Ohio
Application August 13, 1946, Serial No. 132,495
Term of patent 14 years
(Cl. D4—3)

The ornamental design for a soap cake holder, substantially as shown and described.

149,101
DESIGN FOR A GLOVE
Hilda Woller-Duff, New York, N. Y.
Application August 24, 1946, Serial No. 132,835
Term of patent 3½ years
(Cl. D3—11)

The ornamental design for a glove, substantially as shown.

Derivative of atropine. Campbell Products, Inc. 437,737, Mar. 30; Serial No. 519,461, published Dec. 23, 1947.
Dyestuffs, dry, water soluble derived from coal tar and aniline, Powdered. M. F. Cushing. 437,578, Mar. 30; Serial No. 506,160, published Dec. 30, 1947.
Estrogenic substance. Hospital Liquids, Inc. 376,831, Apr. 9, 1940. Republished Mar. 30.
Extract belladonna leaves; fluid extract cottonroot bark; etc., Fluid. Schieffelin & Co. 437,833, Mar. 30; Serial No. 524,084, published Jan. 6, 1948.
Face powder, dusting powder, toilet water, etc. Yardley & Company Limited. 437,644, Mar. 30; Serial No. 514,157, published Dec. 16, 1947.
Gums and textile finishing products, Textile printing thickening. Gum Manufacturing Corp. 437,635, Mar. 30; Serial No. 513,412, published Dec. 16, 1947.
Hair preparation. L. Miller. 437,732, Mar. 30; Serial No. 519,285, published Dec. 23, 1947.
Hyaluronidase. Schering Corporation. 437,798, Mar. 30; Serial No. 522,694, published Jan. 6, 1948.
Insecticidal composition. Niagara Sprayer and Chemical Co., Inc. 437,515, Mar. 30; Serial No. 472,397, published Dec. 16, 1947.
Insecticide. Pennsylvania Salt Manufacturing Company. 437,668, Mar. 30; Serial No. 515,581, published Dec. 30, 1947.

Insecticide preparations. F. A. Hart. 437,591, Mar. 30; Serial No. 508,113, published Dec. 30, 1947.
Insecticides. California Spray-Chemical Corporation. 437,764, Mar. 30; Serial No. 520,683, published Dec. 23, 1947.
Insecticides. Chemola Manufacturing Company. 437,858, Mar. 30; Serial No. 525,195, published Dec. 23, 1947.
Iodine-adding supplement. Mallinckrodt Chemical Works. 357,787, June 14, 1938. Republished Mar. 30.
Laxative, Anti-acid. T. R. Barnes. 437,857, Mar. 30; Serial No. 525,184, published Jan. 6, 1948.
Laxative, Physiologic. Ames Company, Inc. 437,719, Mar. 30; Serial No. 518,643, published Dec. 16, 1947.
Laxative preparation. F. P. Wood. 437,806, Mar. 30; Serial No. 522,961, published Dec. 23, 1947.
Liniment. J. Bailey. 437,615, Mar. 30; Serial No. 510,051, published Jan. 6, 1948.
Liniment. P. Elle. 437,757, Mar. 30; Serial No. 520,270, published Dec. 30, 1947.
Lipstick. Gourielli, Inc. 437,745, Mar. 30; Serial No. 519,644, published Dec. 9, 1947.
Lipsticks. Lehn & Fink Products Corporation. 437,519, Mar. 30; Serial No. 484,960, published Dec. 23, 1947.
Lipsticks, lip pencils, rouge, etc. Elizabeth Arden Sales Corporation. 437,528, Mar. 30; Serial No. 491,946, published Dec. 16, 1947.
Liquid preparation. W. H. Houser. 437,551, Mar. 30; Serial No. 498,898, published Dec. 23, 1947.
Liquid preparation. Eli Lilly and Company. 224,406, renewed Jan. 5, 1948. O. G. Mar. 30.
Liquid used for preventing moth damage. F. H. Hicks. 437,587, Mar. 30; Serial No. 507,528, published June 10, 1947.
Lotion, Hand. Renée Redonnett, Inc. 437,697, Mar. 30; Serial No. 517,000, published Dec. 23, 1947.
Lotion, Hand. W. E. Rider. 437,542, Mar. 30; Serial No. 496,861, published Jan. 6, 1948.
Lotions. Campana Corporation. 376,828–9, Apr. 9, 1940. Republished Mar. 30.
Medicinal preparation. Eli Lilly and Company. 437,779, Mar. 30; Serial No. 521,585, published Dec. 30, 1947.
Medicinal preparation. Occy-Crystine Corporation. 437,775, Mar. 30; Serial No. 521,530, published Dec. 23, 1947.
Medicinal preparation for use in the treatment of Parkinson's disease. P. Nakasheff. 437,817, Mar. 30; Serial No. 523,409, published Jan. 6, 1948.
Mixture which is applied to grass. Mallinckrodt Chemical Works. 357,788, June 14, 1938. Republished Mar. 30.
Nail enamel, base and top coat. Revlon Products Corporation. 437,580, Mar. 30; Serial No. 506,549, published Jan. 6, 1948.
Nail polish. Peggy Sage, Inc. 437,665, Mar. 30; Serial No. 515,332, published Jan. 6, 1948.
Ointment. Tailby-Nason Company. 437,716, Mar. 30; Serial No. 518,374, published Dec. 16, 1947.
Ointment for poison oak and poison ivy. R. C. Martens. 437,614, Mar. 30; Serial No. 509,993, published Jan. 6, 1948.
Oleoresin pepper and turpentine ointment. Cramer Chemical Company. 437,692, Mar. 30; Serial No. 516,825, published Dec. 23, 1947.
Oxide, Cuprous. Mallinckrodt Chemical Works. 326,549, July 23, 1935. Republished Mar. 30.
Pack, Face. L. de Lescinskis. 437,571, Mar. 30; Serial No. 504,913, published Jan. 6, 1948.
Perfume, cologne and toilet water. Dermetics, Inc. 437,548, Mar. 30; Serial No. 497,706, published Mar. 18, 1947.
Perfumes. A. R. Bennett. 437,572, Mar. 30; Serial No. 505,475, published Dec. 30, 1947.
Perfumes. A. R. Bennett. 437,573–4; Mar. 30; Serial Nos. 505,478–9, published Dec. 30, 1947.
Perfumes and toilet waters. J. Crespin & M. Laurens-Frings & Cie. 437,609, Mar. 30; Serial No. 509,401, published Dec. 23, 1947.
Perfumes and toilet waters. Etablissements Rigaud, Inc. 437,663, Mar. 30; Serial No. 515,301, published Dec. 30, 1947.
Perfumes and toilet waters. Manufacturers and Importers of French Perfumes Inc. 435,105, Dec. 9, 1947. Corrected. O. G. Mar. 30.
Perfumes, cologne and toilet water. C. Caron. 437,594, Mar. 30; Serial No. 508,408, published Dec. 23, 1947.
Perfumes, cologne and toilet water. C. Caron. 437,595, Mar. 30; Serial No. 508,410, published Dec. 30, 1947.
Perfumes, cologne and toilet water. C. Caron. 437,596, Mar. 30; Serial No. 508,412, published Dec. 30, 1947.
Perfumes, toilet waters, cologne, rouge. Grenoville, Societe Anonyme. 437,678, Mar. 30; Serial No. 516,129, published Dec. 30, 1947.
Perfumes, toilet waters, colognes, etc. Les Laboratoires de la Jeunesse, S. A. R. L. 437,562, Mar. 30; Serial No. 500,673, published Dec. 23, 1947.
Perfumes, toilet waters, rouge, etc. R. J. P. Lorriaux. 437,544, Mar. 30; Serial No. 497,257, published Jan. 6, 1948.
Peroxide, Hydrogen. Mallinckrodt Chemical Works. 357,789, June 14, 1938. Republished Mar. 30.
Pharmaceutical preparation. Parke, Davis & Company. 437,565, Mar. 30; Serial No. 501,140, published Jan. 7, 1947.
Pharmaceutical preparations. M. F. C. Development Corporation. 437,686, Mar. 30; Serial No. 516,623, published Dec. 30, 1947.
Phosphate compositions. Monsanto Chemical Company. 365,395, Mar. 7, 1939. Republished Mar. 30.
Photographic developers and print straightening solutions. F. D. Fisher. 437,603, Mar. 30; Serial No. 508,841, published Dec. 30, 1947.
Poison for the extermination of ants, Liquid. F. L. Wiley. 437,632, Mar. 30; Serial No. 512,554, published Jan. 6, 1948.
Preparation and beautifier for the hair. A. Amenta. 437,865, Mar. 30; Serial No. 525,519, published Dec. 30, 1947.
Preparation containing amino acids and polypeptides, carbohydrates, vitamins, etc. Burroughs Wellcome & Co. (U. S. A.), Inc. 437,592, Mar. 30; Serial No. 508,139, published July 8, 1947.
Preparation for external application on the human skin. E. G. Mergenthaler. 437,597, Mar. 30; Serial No. 508,431, published Dec. 16, 1947.
Preparation in capsule form. G. M. Broemmel. 376,881, Apr. 9, 1940. Republished Mar. 30.
Preparation in dry powder form for the processing of textiles, etc. Wallerstein Company, Inc. 417,500, Oct. 30, 1945. Canceled Mar. 3, 1948. O. G. Mar. 30.
Preparation indicated for use in allergic conditions. Ciba Pharmaceutical Products, Inc. 437,583, Mar. 30; Serial No. 506,984, published Dec. 30, 1947.
Preparation for killing weeds. Andrew Wilson, Inc. 437,675, Mar. 30; Serial No. 515,732, published Dec. 23, 1947.
Preparation for the treatment of malaria. A. X. Beake. 437,720, Mar. 30; Serial No. 518,652, published Dec. 23, 1947.
Preparation possessing sedative and estrogenic properties. Sharp & Dohme, Incorporated. 437,855, Mar. 30; Serial No. 525,115, published Dec. 16, 1947.
Product influencing capillary fragility. Maltine Company. 437,664, Mar. 30; Serial No. 515,318, published Jan. 6, 1948.
Pteroyl tri glutamic acid. American Cyanamid Company. 437,805, Mar. 30; Serial No. 522,020, published Sept. 23, 1947.
Rosin size for sizing of paper. Hercules Powder Company. 390,238, Dec. 22, 1942. Canceled Mar. 8, 1948. O. G. Mar. 30.
Salts for electrochemical treatment of aluminum in an anodizing bath. A. R. Goodkin. 437,590, Mar. 30; Serial No. 507,900, published Jan. 6, 1948.
Sedative expectorant and tonics. Sharp & Dohme, Incorporated. 437,856, Mar. 30; Serial No. 525,117, published Dec. 16, 1947.
Shampoo. J. H. Breck. 437,883, Mar. 30.
Shampoo and hair dressing. Kay Daumit, Inc. 437,689, Mar. 30; Serial No. 516,698, published Dec. 30, 1947.
Shampoo, Liquid. Davies-Young Soap Company. 387,074, Apr. 29, 1941. Republished Mar. 30.
Shampoo, Pet. Jonay Products Inc. 437,739, Mar. 30; Serial No. 519,525, published Jan. 6, 1948.
Sodium hyposulphite. Mallinckrodt Chemical Works. 326,011, July 9, 1935. Republished Mar. 30.
Sodium ortho-iodohippurate. Mallinckrodt Chemical Works. 314,577, July 3, 1934. Republished Mar. 30.
Solution, Aqueous. Wm. S. Merrell Company. 437,651, Mar. 30; Serial No. 514,833, published Dec. 23, 1947.
Solvent liquid preparations. Petroleum Laboratories. 437,534, Mar. 30; Serial No. 494,357, published Dec. 23, 1947.
Spray for shrubs and trees. Spra-Shield Company. 437,640, Mar. 30; Serial No. 513,906, published Jan. 6, 1948.
Syrup, Cough. F. D. Naylor. 437,667, Mar. 30; Serial No. 515,578, published Dec. 23, 1947.
Tablets, Medicinal. G. D. Searle & Co. 437,660, Mar. 30; Serial No. 515,237, published Dec. 16, 1947.
Tablets, Vitamin. Lanteen Medical Laboratories, Inc. 437,625, Mar. 30; Serial No. 511,481, published Jan. 6, 1948.
Toilet preparations. Inter-Hamol S. A. 437,626, Mar. 30; Serial No. 511,559, published Dec. 16, 1947.
Toilet preparations, perfumery, and cosmetics. Les Parfums de Dana, Inc. 437,778, Mar. 30; Serial No. 521,583, published Dec. 9, 1947.
Tonic, Medicinal reconstructive and reconstituent. Aktiengesellschaft vormals B. Siegfried. 437,820, Mar. 30; Serial No. 523,502, published Jan. 6, 1948.
Vitamins and vitamin combinations. Walker Vitamin Products, Inc. 406,139, Mar. 14, 1944. Republished Mar. 30.
Wax composition. National Wax Company. 374,892, Jan. 30, 1940. Republished Mar. 30.
Wax composition. National Wax Company. 393,165–6, Jan. 27, 1942. Republished Mar. 30.
Wax composition. National Wax Company. 414,503, June 12, 1945. Republished Mar. 30.

CLASS 8

Ash receivers. Smokador Manufacturing Co., Inc. 366,910, May 2, 1939. Republished Mar. 30.
Cigarette papers cut to size. Société Anonyme d'Exploitation Des Papeteries L. Lacroix Fils. 437,593, Mar. 30; Serial No. 508,252, published Jan. 6, 1948.

Humidors. Fleming-Hall Tobacco Co., Inc. 437,606, Serial No. 509,145, published Dec. 30, 1947.
Pipes and cigar and cigarette holders, Tobacco. Ben Wade Limited. 437,601–2, Mar. 30; Serial Nos. 508,779–80, published Dec. 30, 1947.
Pipes, Smoking. M. Linkman & Company. 378,326, June 4, 1940. Republished Mar. 30.
Pipes, Tobacco. Danco Corporation. 431,153, July 8, 1947. Canceled Mar. 3, 1948. O. G. Mar. 30.

CLASS 9

Guns and parts thereof. L. C. Smith Gun Company, Incorporated. 437,751, Mar. 30; Serial No. 519,992, published Dec. 30, 1947.
Powder, Smokeless. Hercules Powder Company. 437,599, Mar. 30; Serial No. 508,655, published Nov. 18, 1947.

CLASS 10

Fertilizers and legume type seed inoculants. Illinois Agricultural Association. 437,598, Mar. 30; Serial No. 508,524, published Dec. 30, 1947.
Fertilizers, Liquid and dry. A. Oberholtz. 437,582, Mar. 30; Serial No. 506,833, published Dec. 23, 1947.
Muriate of potash. Potash Company of America. 378,313, June 4, 1940. Republished Mar. 30.
Soil conditioner. J. M. Stevenson. 437,809, Mar. 30; Serial No. 523,026, published Jan. 6, 1948.

CLASS 11

Carbon paper. Nelson-Elsmann Company. 375,576, Feb. 20, 1940. Republished Mar. 30.
Carbon papers and typewriter ribbons. Kee Lox Manufacturing Company. 388,212, June 17, 1941. Republished Mar. 30.
Inks; coatings and varnishes, etc., Rotogravure. S. T. Kantor. 437,754, Mar. 30; Serial No. 520,170, published Dec. 2, 1947.
Typewriter ribbons. Ames Supply Company. 437,731, Mar. 30; Serial No. 519,160, published Dec. 30, 1947.

CLASS 12

Boards, insulating and sound-deadening boards, composition boards, Fire-resistant building. Keasbey & Mattison Company. 380,647, Aug. 27, 1940. Republished Mar. 30.
Brick. Pacific Clay Products. 240,671, renewed Apr. 3, 1948. O. G. Mar. 30.
Fabrics, Asphalt-saturated. Minwax Company, Inc. 238,736, renewed Feb. 14, 1948. O. G. Mar. 30.
Fiberboard, Insulating. Armstrong Cork Company. 368,336, June 13, 1949. Republished Mar. 30.
Treated poles for the support of power lines and communication lines. Page & Hill Co. 392,940, Jan. 20, 1942. Republished Mar. 30.

CLASS 13

Casters, Furniture. Burns, Silver & Co. 74,433, July 13, 1909. Republished Mar. 30.
Curtains, Shower. I. B. Kleinert Rubber Company, Inc. 437,673, Mar. 30; Serial No. 515,716, published Dec. 23, 1947.
Fasteners, Separable. Talon, Inc. 394,234, Mar. 24, 1942. Republished Mar. 30.
Griddles made of magnesium. Dow Chemical Company. 437,561, Mar. 30; Serial No. 500,463, published Dec. 23, 1947.
Hardware, Builders'. Oscar C. Rixson Company. 363,297, Dec. 20, 1938. Republished Mar. 30.
Holders for foot wear. B & M Metal Products Corp. 437,616, Mar. 30; Serial No. 510,565, published Dec. 23, 1947.
Lock washers. George K. Garrett Company, Inc. 397,212, Aug. 25, 1942. Republished Mar. 30.
Pipe fittings. Northern Indiana Brass Company. 437,585, Mar. 30; Serial No. 507,271, published Dec. 23, 1947.
Screens, Fireplace. Chamberlin Company of America. 437,641, Mar. 30; Serial No. 514,008, published Dec. 23, 1947.
Screens, Fireplace. Chamberlin Company of America. 437,650, Mar. 30; Serial No. 514,744, published Dec. 23, 1947.
Utensils and containers, Kitchen. W. L. Richard. 437,517, Mar. 30; Serial No. 478,398, published Jan. 6, 1948.
Utensils, Cooking. Eastern Metal Products Co. 437,662, Mar. 30; Serial No. 515,262, published Dec. 23, 1947.
Valves and combination stop and drain valves, Stop. Hays Manufacturing Company. 437,607, Mar. 30; Serial No. 509,275, published Dec. 23, 1947.
Valves, Liquid level responsive oil control. Automatic Products Company. 378,083, May 28, 1940. Republished Mar. 30.

CLASS 14

Aluminum and aluminum alloys. Reynolds Metals Company. 437,584, Mar. 30; Serial No. 507,218, published Jan. 6, 1948.
Castings of nonferrous metal, Die. Die Casting Company. 437,653, Mar. 30; Serial No. 514,890, published Dec. 23, 1947.
Castings, Rough and semi-finished malleable iron. Eastern Malleable Iron Company. 437,701, Mar. 30; Serial No. 517,244, published Dec. 23, 1947.
Electrodes, Metallic welding. A. O. Smith Corporation. 394,190, Mar. 24, 1942. Republished Mar. 30.
Metal parts, Unfinished small molded. American Electro Metal Corporation. 437,541, Mar. 30; Serial No. 496,417, published Dec. 23, 1947.
Rolled sheets, galvanized sheets, metal sheets, etc., Hot and cold. American Rolling Mill Company. 437,605, Mar. 30; Serial No. 509,066, published Dec. 30, 1947.
Steel rods, bars, plates, etc. Crucible Steel Company of America. 437,818, Mar. 30; Serial No. 523,460, published Dec. 23, 1947.
Zinc anodes. E. I. du Pont de Nemours and Company. 437,831, Mar. 30; Serial No. 524,057, published Nov. 25, 1947.

CLASS 15

Gasoline and motor fuel oils. Pure Oil Company. 387,129, May 6, 1941. Republished Mar. 30.

CLASS 16

Floor dressing. Acme Chemical Company. 378,180, May 28, 1940. Republished Mar. 30.
Liquid preparation for surfacing, dressing, polishing and finishing floors and linoleum, etc. American Disinfecting Co., Inc. 362,154, Nov. 15, 1938. Republished Mar. 30.
Paints, varnish, lacquers, etc. F. I. Siegel & Son. 231,931, renewed Aug. 30, 1947. O. G. Mar. 30.
Paints, varnish, lacquers, etc. F. I. Siegel & Son. 232,188, renewed Sept. 6, 1947. O. G. Mar. 30.
Solvent of petroleum origin, Liquid. American Mineral Spirits Company. 388,915, July 15, 1941. Republished Mar. 30.
Waxing preparation, Combination liquid. Al A. Banks. 431,071, July 1, 1947. Canceled Mar. 3, 1948. O. G. Mar. 30.

CLASS 17

Cigarettes. Stephano Brothers. 437,774, Mar. 30; Serial No. 521,415, published Dec. 23, 1947.
Cigars. Waitt & Bond, Inc. 366,917, May 2, 1939. Republished Mar. 30.
Cigars. Waitt & Bond, Inc. 396,957, Aug. 11, 1942. Republished Mar. 30.
Smoking tobacco. Benson & Hedges. 437,803, Mar. 30; Serial No. 522,902, published Dec. 30, 1947.
Tobacco products. Tobacco Cartridge Corp. 437,824, Mar. 30; Serial No. 523,626, published Dec. 30, 1947.

CLASS 19

Braking units, Vehicle. Bendix Aviation Corporation. 394,268, Mar. 31, 1942. Republished Mar. 30.
Casters, Truck. Bassick Company. 392,398–9, Dec. 23, 1941. Republished Mar. 30.
Slip covers, Vehicle seat. Bemis Bro. Bag Company. 369,489, July 25, 1939. Republished Mar. 30.

CLASS 20

Linoleum and similar hard surface floor coverings. Armstrong Cork Company. 392,037, Dec. 2, 1941. Republished Mar. 30.
Linoleum and similar hard surface floor coverings, Ribbons or bands of. Armstrong Cork Company. 392,036, Dec. 2, 1941. Republished Mar. 30.

CLASS 21

Connectors and bonds for electrically connecting railway rails. Electric Railway Improvement Company. 375,109, Feb. 6, 1940. Republished Mar. 30.
Electrical discharge apparatus. W. N. Matthews Corporation. 386,064, Mar. 25, 1941. Republished Mar. 30.
Lighting fixtures, Electric. Benjamin Electric Manufacturing Company. 391,221, Oct. 28, 1941. Republished Mar. 30.
Lighting fixtures, Electric. Benjamin Electric Manufacturing Company. 396,083–6, June 30, 1942. Republished Mar. 30.
Lighting fixtures, Electric. Edwin F. Guth Company. 373,212, Nov. 28, 1939. Republished Mar. 30.

CLASS 22

Baseballs, croquet balls, croquet mallet tips, etc. Faultless Rubber Company. 437,886, Mar. 30.
Dolls. Hanlford Doll Products. 437,568, Mar. 30; Serial No. 503,652, published Oct. 28, 1947.
Dolls and dolls' clothes. D. Ippolito. 437,570, Mar. 30; Serial No. 504,835, published Oct. 28, 1947.
Fishing fly clips, artificial bait and spinners. Hank's Mfg. Co. 437,760, Mar. 30; Serial No. 520,390, published Oct. 28, 1947.
Fishing tackle. B. W. Bedell. 437,813, Mar. 30; Serial No. 523,135, published Oct. 28, 1947.

Golden, A. George, Brooklyn, N. Y. Picture frame. 149,121, Mar. 30.
Goodwin, Grant M., San Francisco, Calif. Automobile tailpipe extension. 149,122, Mar. 30.
Graham, Frank L.: *See*— McCann, DeWitt, Berlin, and Graham.
Grey, Ira J., New York, N. Y. Photographic film viewer. 149,123, Mar. 30.
Hewitt, Norman E., Sunbury-on-Thames, England. Spot lamp or similar article. 149,124, Mar. 30.
Imperial Pearl Co., Inc., assignee: *See*— Pearsall, Frederick J.
Johns, Juliana G., Orange, N. J. Novelty soap and wash cloth display device. 149,125, Mar. 30.
Jones, William T., assignor to Consolidated Molded Products Corporation, Scranton, Pa. Combined shrine or similar article and case therefor. 149,126, Mar. 30.
Karstadt, Clarence, Glen Ellyn, Ill., assignor to Noblitt-Sparks Industries, Incorporated, Columbus, Ind. Toaster. 149,127, Mar. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Bracelet or similar article. 149,128, Mar. 30.
Katz, Benjamin, New York, N. Y. Trundle toy or similar article. 149,129, Mar. 30.
Katzenberger, Edward F., and M. E. Gluhareff, Bridgeport, assignors to United Aircraft Corporation, East Hartford, Conn. Helicopter. 149,130, Mar. 30.
Kende, George, assignor to Universal Camera Corporation, New York, N. Y. Cabinet for sound reproducing devices. 149,131, Mar. 30.
Kende, George, assignor to Universal Camera Corporation, New York, N. Y. Cabinet for sound reproducing devices. 149,132, Mar. 30.
Kisling, Jacob W., St. Louis County, Mo. Air circulator. 149,133, Mar. 30.
Lazier, Harry, assignee: *See*— Saffron, Abraham.
Le Febvre, Alfred L., Windsor, assignor to The Fuller Brush Company, Hartford, Conn. Floor brush. 149,134, Mar. 30.
Marsh, Harold A.: *See*— Baratelli, Charles A., Chin, and Marsh.
McCann, DeWitt, I. Berlin, and F. L. Graham, Los Angeles, Calif. Garden tool rack. 149,135, Mar. 30.
Moore, Joseph R., Fort Worth, Tex. Fishing lure. 149,136, Mar. 30.
Nessen, Walter F., Prospect Heights, assignor to Free Sewing Machine Co., Rockford, Ill. Sewing machine head. 149,137, Mar. 30.
Newhall, John K., Aurora, Ill. Stock tank heater. 149,138, Mar. 30.
Nineteen Hundred Corporation, assignee: *See*— Geldhof, Peter E.
Noblitt-Sparks Industries, Incorporated, assignee: *See*— Karstadt, Clarence.
Ohio Porcelain Company: *See*— Potts, Clifford.
Parker, Ralph A., Melrose, Mass. Man's athletic shoe or similar article. 149,139. Mar. 30.
Pearsall, Frederick J., Clayville, assignor to Imperial Pearl Co., Inc., Providence, R. I. Lapel pin. 149,140, Mar. 30.
Polaroid Corporation, assignee: *See*— Baratelli, Charles A., Chin, and Marsh.
Pollock, Albert E., New York, N. Y. List finder. 149,141, Mar. 30.
Poor, Joseph F., Wenham, and C. T. Baxter, Beverly, assignors to Salem Manufacturing Company, Salem, Mass. Fluorescent desk lamp. 149,142, Mar. 30.
Potter, Bill J., Fort Worth, Tex. Ash tray. 149,143, Mar. 30.
Potts, Clifford, assignor to L. A. and A. A. Butler, doing business as Ohio Porcelain Company, Zanesville, Ohio. Wall vase or article of similar nature. 149,144, Mar. 30.
Reinecke, Jean O., Oak Park, assignor to Free Sewing Machine Co., Rockford, Ill. Sewing machine head. 149,145, Mar. 30.

Richards, Harper, assignor to Cory Corporation, Chicago, Ill. Automatic beverage producer. 149,146, Mar. 30.
Russell, Alfred R., Grosse Pointe Park, Mich. Automobile hood ornament. 149,147, Mar. 30.
Saffron, Abraham, assignor of one-half to H. Lazier, Pittsburgh, Pa. Cigarette lighter. 149,148, Mar. 30.
Salem Manufacturing Company, assignee: *See*—
Poor, Joseph F., and Baxter.
Schaeffer, Jacob H., New York, N. Y., assignor to Shiman Bros. & Co. Inc. Gem setting or similar article. 149,149, Mar. 30.
Schwartz, Ernest, New York, N. Y. Ear muff. 149,150, Mar. 30.
Shiman Bros. & Co. Inc., assignee: *See*—
Schaeffer, Jacob H.
Southworth, Pierre D., Sturgeon Bay, Wis. Animal watering pan. 149,151, Mar. 30.
Thompson, William H., Detroit, Mich. Trolling reel. 149,152, Mar. 30.
Timme, E. F., & Son, assignee: *See*—
Biva, Lucien.
Troy, Arnold, Scarsdale, assignor to Eastern Metal Products Co., Tuckahoe, N. Y. Electric iron. 149,153, Mar. 30.
United Aircraft Corporation, assignee: *See*—
Katzenberger, Edward F., and Gluhareff.
Universal Camera Corporation, assignee: *See*—
Kende, George.
Wallace Corporation, The, assignee: *See*—
Christmas, William T.
Wallace, R., & Sons Manufacturing Company, assignee: *See*—
Warren, William S.
Warren, William S., Meriden, assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn. Spoon or other article of flatware. 149,154, Mar. 30.
Warren, William S., Meriden, assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn. Spoon or other article of flatware. 149,155, Mar. 30.
Weatherington, Linn J., Los Angeles, Calif. Golf club head. 149,156, Mar. 30.
White, Al B., assignor to Al B. White Manufacturing Co., Inc., Freeport, N. Y. Sulky. 149,157, Mar. 30.
White, Al B., Manufacturing Co., Inc., assignee: *See*—
White, Al B.
Wilber, Bernard M., Berkeley, Calif. Life preserver. 149,158, Mar. 30.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 30TH DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Ablah, Frank J., assignee: *See*—
McMillan, James O.
Air Preheater Corporation, The, assignee: *See*—
Gates, Robert M.
Albertson, Victor N., Minneapolis, Minn. Auto parts washer. 2,438,654, Mar. 30.
Alexanderson, Ernst F. W., Schenectady, N. Y., assignor to General Electric Company. High-frequency wave transmitting apparatus. 2,438,735, Mar. 30.
Allen, Sidney: *See*—
Lindsey, William H., and Allen.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Harrer, Paul H.
American Chemical Paint Company, assignee: *See*—
Jones, Franklin D.
Sprunance, Frank P., Jr.
American Crucible Co., assignee: *See*—
Hubbell, George T.
American Instrument Co., Inc., assignee: *See*—
Meigs, Douglas P.
Anderson, Frank J., and D. R. Williams, assignors to Monolith Portland Midwest Company, Laramie, Wyo. Making alumina utilizing kaolin, marl, and related materials. 2,438,488, Mar. 30.
Anderson, Gordon R., Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill. Axial air gap machine. 2,438,629, Mar. 30.
Andersson, Sven W. E., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Articulated ice tray grid. 2,438,487, Mar. 30.
Andress, Harry J., Jr.: *See*—
Reiff, Orland M., and Andress.
Andrew Corporation, assignee: *See*—
Andrew, Victor J.
Andrew, Victor J., assignor, by mesne assignments, to Andrew Corporation, Chicago, Ill. Cable terminal. 2,438,489, Mar. 30.
Andrews, Douglas H., Jr., West Hartford, and D. E. Lipfert, Meriden, assignors, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn. Throttle control system. 2,438,690, Mar. 30.
Arave, Franklin M., and T. W. Nolan; said Arave and said Nolan assignors of one-third to A. A. Foote, and said Nolan assignor of one-third to M. J. Bell, Lava Hot Springs, Idaho. Refuse cart. 2,438,596, Mar. 30.
Archer, James O., Burbank and D. S. Salmi, Glendale, assignors to Lockheed Aircraft Corporation, Burbank, Calif. Tool and method for dimpling. 2,438,837, Mar. 30.
Armantrout, Kenneth M., Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill. Transmission control mechanism. 2,438,691, Mar. 30.
Armstrong Siddeley Motors Limited, assignee: *See*—
Lindsey, William H., and Allen.
Ashford, James L., and W. A. Billings, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Welding control system. 2,438,490, Mar. 30.
Ashworth, Fred, Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Thread finger for shoe sewing machines. 2,438,491, Mar. 30.
Askers, William N.: *See*—
MacDonald, Harry F., and Askers.
Atlantic Carton Corporation, assignee: *See*—
Whitehead, Earl B.
Avison, Anthony W. D., F. Bergel, and J. W. Haworth, Welwyn Garden City, England, assignors, by mesne assignments, to Hoffmann-La Roche Inc., Nutley, N. J. 2 - carbalkoxy - 3 - keto - tetrahydrothiophene process. 2,438,808, Mar. 30.
Ayers, Fred L., Waltham, Mass. Innersole and making the same. 2,438,870, Mar. 30.
Bach, Niels B.: *See*—
Jakobsen, J. G.
Bagge, Knj, Sunland, Calif. Portable small hand tool vise. 2,438,797, Mar. 30.
Baillie, Samuel, New Invention, Willenhall, England. Chuck device, particularly for coal cutting machines. 2,438,774, Mar. 30.
Baird Machine Company, The, assignee: *See*—
Lewis, Arthur J.
Ballard, Seaver A., Oakland, and D. E. Winkler, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Production of thiophenols. 2,438,838, Mar. 30.
Banta, Henry M., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Manufacture of strain-insensitive steel. 2,438,798, Mar. 30.
Barker, Norris, Johannesburg, Transvaal, Union of South Africa. Stretching or shaping socks and similar foot coverings. 2,438,531, Mar. 30.
Barks, William, assignor to Clifford C. Stone, Detroit, Mich. Toolholder. 2,438,630, Mar. 30.
Barry, Arthur J., assignor to The Dow Chemical Company, Midland, Mich. Higher alkoxy-silicon halides. 2,438,736, Mar. 30.
Barth, Theodore H., New York, N. Y., assignor to United States of America, as represented by the Secretary of the Navy. Synchronizing bomb sight. 2,438,532, Mar. 30.
Bascom, Henry M., New York, R. F. Massonneau, Scarsdale, B. Ostendorf, Jr., Jamaica, and W. T. Rea, Manhasset, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signaling system. 2,438,492, Mar. 30.
Batina, Charles C., Chicago, Ill. Door and latch for tumbler washers. 2,438,597, Mar. 30.
Batina, Charles C., Chicago, Ill. Tumbling drum for laundry machines. 2,438,737, Mar. 30.
Bauer, Harold E.: *See*—
Rodack, James, and Bauer.
Beaufrere, Albert H.: *See*—
Rockwell, Albert M., and Beaufrere.
Becker, Milton, Passaic, N. J. Secret pocket billfold. 2,438,655, Mar. 30.
Beeh, Louis, Long Meadow, Mass., assignor to Bulova Watch Company, Inc., New York, N. Y. Plunger. 2,438,839, Mar. 30.
Bell, Marian J., assignee, et al.: *See*—
Arave, Franklin M., and Nolan.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Bascom, Henry M., Massonneau, Ostendorf, and Rea.
McMahon, William.
Sharpless, William M.
Bell, Thomas J., Island Grove, Fla. Celery cutter. 2,438,598, Mar. 30.
Belmont Radio Corporation, assignee: *See*—
Marholz, Richard C.
Olesky, Anthony P.
Bendix Aviation Corporation, assignee: *See*—
Fox, Kenneth H.
Bendix-Westinghouse Automotive Air Brake Company, assignee: *See*—
Fitch, Ellery R.
Rohrer, Frederick F., Jr.
Bergel, Franz: *See*—
Avison, Anthony W. D., Bergel, and Haworth.
Berger, Emric W., San Diego, Calif. Water vehicle. 2,438,493, Mar. 30.
Bergmann, Paul F., Muskegon, assignor to Johnson Products, Inc., Muskegon Heights, Mich. Hydraulic tappet. 2,438,631, Mar. 30.
Bethlehem Steel Company, assignee: *See*—
Snadecki, Clarence W., and Richards.
Billings, William A.: *See*—
Ashford, James L., and Billings.
Blake, Edward S., Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo. Lubricating oil composition. 2,438,599, Mar. 30.
Bloser, Dwight W., West Englewood, N. J., assignor, by mesne assignments, to Kearfott Company, Inc., New York, N. Y. Synchronous repeater unit. 2,438,799, Mar. 30.
Booth, Clarence V., Lakewood, N. J. Expansion stud and keeper element combination. 2,438,533, Mar. 30.
Bordon Mfg. Co., Inc., assignee: *See*—
Camilleri, Charles.
Borg-Warner Corporation, assignee: *See*—
Armantrout, Kenneth M.
Bossard, Werner: *See*—
Krebser, Adolf, and Bossard.
Boston Wire Stitcher Company, assignee: *See*—
Lindstrom, Charles M.
Maynard, Arthur H.
Boulicault, Marcel, assignee, et al.: *See*—
Leach, Charles C.
Bouwer, Adam B., and L. Dortman, Johannesburg, Transvaal, Union of South Africa. Concentrator having sloping reciprocating table with movable deck. 2,438,775, Mar. 30.

Bower, Byron F., assignor to Pines Engineering Company, Aurora, Ill. Transfer device for tube and rod chucks. 2,438,600, Mar. 30.

Bowers, James E., Allentown, Ga. Transportation vehicle. 2,438,534, Mar. 30.

Bowles, Albert F., Naugatuck, Conn., and A. J. Keegel, Jersey City, N. J., assignors to Trinity Holding Corporation, Beacon Falls, Conn. Carroting reagents and process. 2,438,738, Mar. 30.

Bowman Gum, Inc., assignee: *See*—
Fenimore, Edward P.

Boylan, Charles H., Lakewood, assignor to The Weatherhead Company, Cleveland, Ohio. Packless back-seating valve. 2,438,776, Mar. 30.

Boylan, Francis L., New Orleans, La. Fuel oil filling system. 2,438,800, Mar. 30.

Boyle-Midway Inc., assignee: *See*—
Kamlet, Jonas.

Braden, Rene A., Princeton, N. J., assignor to Radio Corporation of America. Monitoring and measuring apparatus for frequency modulated signals. 2,438,801, Mar. 30.

Brandt Automatic Cashier Company, assignee: *See*—
Quirk, Earl W., and Buchholz.

Bridgeport Brass Company, assignee: *See*—
Broecker, Lewis C.

Briggs & Stratton Corporation, assignee: *See*—
Stuckert, Felix J.

Brock, John B., assignee: *See*—
Holt, Marcus L.

Broecker, Lewis C., Nichols, assignor to Bridgeport Brass Company, Bridgeport, Conn. Pneumatic torque machine. 2,438,692, Mar. 30.

Brown Instrument Company, The, assignee: *See*—
Ertzman, William F.

Brown, Lawrence S.: *See*—
Newell, William H., and Brown.

Brown and Sharpe Manufacturing Company, assignee: *See*—
Weimar, Hans C.

Bruns, William H., Lincolndale, assignor to Otis Elevator Company, New York, N. Y. Electric circuit. 2,438,535, Mar. 30.

Buchholz, Arnold R.: *See*—
Quirk, Earl W., and Buchholz.

Bullock, Earle C., assignor to Metal Office Furniture Company, Grand Rapids, Mich. Drawer pull. 2,438,871, Mar. 30.

Bullock, Percy Wynne, South Pasadena, Calif. Photographic process for producing line images. 2,438,494, Mar. 30.

Bulova Watch Company, Inc., assignee: *See*—
Beeh, Louis.

Burruss, Walter H., assignor to Columbia River Packers Association, Inc., Astoria, Oreg. Bait tank. 2,438,739, Mar. 30.

Bushman, Frederick P., Vallejo, Calif. Automatic lighter. 2,438,632, Mar. 30.

Cairns, Thomas W., National City, assignor to Solar Aircraft Company, San Diego, Calif. Bubble cap structure. 2,438,536, Mar. 30.

Camilleri, Charles, assignor to Bordon Mfg. Co., Inc., Detroit, Mich. Electrode holder. 2,438,840, Mar. 30.

Campbell, Robert G., Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Ice removing covering for airfoils. 2,438,693, Mar. 30.

Canadian Copper Refiners Limited, assignee: *See*—
Clark, Charles W. and Scheaffer.

Carborundum Company, The, assignee: *See*—
Robie, Norman P., and Shelbley.

Carlson, Axel S., New York, N. Y. Ground vase. 2,438,802, Mar. 30.

Carter, Arthur D., Gastonia, N. C. Knot. 2,438,537, Mar. 30.

Carter, Arthur D., Gastonia, N. C. Knot. 2,438,538, Mar. 30.

Casalino, Joseph, Forest Hills Gardens, N. Y., assignor to Nuvopias Corporation, New York, N. Y. Compact. 2,438,841, Mar. 30.

Celanese Corporation of America, assignee: *See*—
Elvin, William J., Shaffer, and Stahl.

Chance, A. B., Company, assignee: *See*—
Hubbard, David C.

Chatterjea, Prafulla K., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Thermistor circuit interrupter control system responsive to load circuit conditions. 2,438,495, Mar. 30.

Christensen, Edwin V., Hollywood, assignor to Lockheed Aircraft Corporation, Burbank, Calif. Automatic dimpler. 2,438,842, Mar. 30.

Claesson, Per H. E.: *See*—
Rost, Helge F., Thunell, Vigren, and Claesson.

Clark, Charles W., Westmount, and W. A. Sheaffer, Montreal, assignors to Canadian Copper Refiners Limited, Montreal East, Quebec, Canada. Method of protecting the surface of articles formed from a magnesium alloy. 2,438,740, Mar. 30.

Cole, Gilmoure N., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Support for engine cooling fans. 2,438,540, Mar. 30.

College of Electronic Medicine, assignee: *See*—
Hart, Fred J.

Columbia River Packers Association, Inc., assignee: *See*—
Burruss, Walter H.

Condor, John, Philadelphia, Pa. Extensible tool shank. 2,438,633, Mar. 30.

Cook, Charles A., Oshkosh, Wis., assignor to Fuller Manufacturing Co., Kalamazoo, Mich. Combined auxiliary transmission and power take-off. 2,438,539, Mar. 30.

Corhart Refractories Company, assignee: *See*—
Field, Theodore E.

Corn Products Refining Company: *See*—
Kerr, Ralph W. and Schink.

Corrêa, Alpoim, Rio de Janeiro, Brazil. Floor paste wax spreader. 2,438,843, Mar. 30.

Cortland Line Company, Inc., assignee: *See*—
Hoyle, Egbert P.

Coulson, Walter, assignor to Ex-Cell-O Corporation, Detroit, Mich. Retractable boring tool assembly. 2,438,741, Mar. 30.

Crompton & Knowles Loom Works, assignee: *See*—
Flynn, Maurice J.

Crook, Lloyd M., Long Beach, Calif. Clamp. 2,438,541, Mar. 30.

Cross, Charles A., Northwich, England, assignor to Imperial Chemical Industries Limited. Manufacture of phenols. 2,438,694, Mar. 30.

Crumrine, Sol M., Des Moines, Iowa. Traction device. 2,438,656, Mar. 30.

Curtiss-Wright Corporation, assignee: *See*—
Cushman, Maurice E.
Walker, Elwood C.
Wright, Ben W.

Cushman, Maurice E., Verona, N. J., assignor to Curtiss-Wright Corporation. Propeller blade, bearing and seal assembly. 2,438,542, Mar. 30.

Custin, Thomas G., and R. G. Stoneman, assignors of one-third to J. Shaw, Milwaukee, Wis. Abrading machine. 2,438,543, Mar. 30.

Cutler-Hammer, Inc., assignee: *See*—
Ranson, Richard R.

Dakoski, Stanley, Chicago, Ill. Electric switch operable by alarm clocks. 2,438,544, Mar. 30.

Dale, Wallace W., Barre Center, N. Y. Basket. 2,438,844, Mar. 30.

Davidson, Charles D., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Geared motor linearly actuated. 2,438,545, Mar. 30.

Davis, George F., assignor to The High Standard Manufacturing Corporation, New Haven, Conn. Adjustable sight for firearms. 2,438,601, Mar. 30.

Davis, Joseph, South Orange, assignor to Joseph Davis Plastics Co., Arlington, N. J. Utensil. 2,438,546, Mar. 30.

Davis, Joseph, Plastics Co., assignee: *See*—
Davis, Joseph.

Davis, Norman R.: *See*—
Geist, Sidney R., Sr., and Davis.

Deakin, Gerald, assignor to International Standard Electric Corporation, New York, N. Y. Telephone system employing key type call transmitter. 2,438,496, Mar. 30.

Dean, William H., Darlington, England. Percussive tool. 2,438,777, Mar. 30.

Decca Record Company, Limited, The, assignee: *See*—
O'Brien, William J.

De Cesaris, Frederick, Johnston, assignor to James Manufacturing Company, Inc., Providence, R. I. Dispenser. 2,438,602, Mar. 30.

Deegan, John G., Bronxville, N. Y. Rolling hatch beam assembly. 2,438,846, Mar. 30.

Deere & Company, assignee: *See*—
Strandlund, Carl G.
Walz, Claude W., Rasmussen, and Griff.

De Laval Steam Turbine Company, assignee: *See*—
Harverstick, John S.

Dennison Manufacturing Company, assignee: *See*—
McGovern, Henry P.

Do All Company, The, assignee: *See*—
Southerwick, Harold I.

Dodds, John M., Timperley, and G. J. Scoles, East Sheen, London, assignors to Metropolitan-Vickers Electrical Company Limited, London, England. Relaxation circuits for producing electrical impulses at regular recurrence frequencies. 2,438,845, Mar. 30.

Doebert, Martin H., Buffalo, N. Y. Tool for applying traction devices on wheels. 2,438,547, Mar. 30.

Dorfman, Leslie: *See*—
Bouwer, Adam B., and Dorfman.

Dow Chemical Company, The, assignee: *See*—
Barry, Arthur J.

Drake, Alden M., assignor to Niles-Bement-Pond Company, West Hartford, Conn. Hole lapping machine. 2,438,695, Mar. 30.

Dreese, Delbert B., Larned, Kans. Door lock light. 2,438,847, Mar. 30.

Dufaux, Marie-Marguerite, Geneva, Switzerland. Bicycle handle. 2,438,657, Mar. 30.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Knoop, Walter A., Jr.
Koch, Stanley J., and Rutherford.
Puckette, Charles, Jr.

Dunn, James A., assignee: *See*—
Thomas, Asa E.

Dyson, William J.: *See*—
Williams, Arthur J., and Dyson.

Eagle-Picher Company, The, assignee: *See*—
Turbett, Forrest L., and Stephenson.

Eakins, John F., Evanston, assignor to J. P. Seeburg Corporation, Chicago, Ill. Multiselective phonograph. 2,438,848, Mar. 30.

Eaton Manufacturing Company, assignee: *See*—
Russell, Robert C.

Ehmann, Leslie G., assignor to Electric Steel Foundry, Portland, Oreg. Swivel connection. 2,438,548, Mar. 30.

Eitel-McCullough, Inc., assignee: *See*—
Williams, Paul D.

Electric & Musical Industries Limited, assignee: *See*—
Landmann, Alexander.

Electric Steel Foundry, assignee: *See*—
Ehmann, Leslie G.

Electronic Laboratories, Inc., assignee: *See*—
Hings, Donald L.

Ellis-Foster Company, assignee, et al.: *See*—
MacKenzie, Charles A., and Rust.

Elvin, William J., Frostburg, M. A. Shaffer, Cumberland, Md., and E. R. Stahl, Meyersdale, Pa., assignors to Celanese Corporation of America. Apparatus for treatment of travelling materials with fluid media. 2,438,549, Mar. 30.

Erhardt, Oscar P., West Haven, assignor to The A. C. Gilbert Company, New Haven, Conn. Toy loading station. 2,438,603, Mar. 30.

Ertzman, William F., Pittsburgh, assignor to The Brown Instrument Company, Philadelphia, Pa. Method of and apparatus for indicating the condition of an atmosphere. 2,438,550, Mar. 30.

Ex-Cell-O Corporation, assignee: *See*—
Coulson, Walter.

Fablá, Manuel A. G., assignor to Tecnica Industrial Y Comercial Sociedad Anonima Tecosa, Buenos Aires, Argentina. Progressive variable-speed device. 2,438,778, Mar. 30.

Fairbanks, Morse & Co., assignee: *See*—
Anderson, Gordon R.

Farrow, Cecil, Bainbridge Township, Geauga County, Ohio. Remote-control generator circuit. 2,438,634, Mar. 30.

Farrow, Cecil, Bainbridge Township, Geauga County, assignor to Republic Steel Corporation, Cleveland, Ohio. Ignitron welding control. 2,438,742, Mar. 30.

Feinbloom, William, New York, N. Y. Tangent cone contact lens. 2,438,743, Mar. 30.

Fenimore, Edward P., Drexel Hill, assignor to Bowman Gum, Inc., Philadelphia, Pa. Chewing gum. 2,438,551, Mar. 30.

Field, Theodore E., assignor to Corhart Refractories Company, Louisville, Ky. Cast refractory product. 2,438,552, Mar. 30.

Fish, Leonard A., assignee: *See*—
Skolnik, Max.

Fitch, Ellery R., assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio. Control mechanism. 2,438,658, Mar. 30.

Flexser, Leo A., Elizabeth, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Making ribonolactone. 2,438,883, Mar. 30.

Flynn, Maurice J., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Tool for setting bushings or inserts. 2,438,744, Mar. 30.

Focke, Theodore B.: *See*—
Resek, Marc, Focke, and Kirkpatrick.

Foote, A. A., assignee, et al.: *See*—
Arave, Franklin M., and Nolan.

Ford Instrument Company, Inc., assignee: *See*—
Newell, William H., and Brown.

Ford, John L., assignor to The Ford Meter Box Company, Inc., Wabash, Ind. Meter mounting. 2,438,497, Mar. 30.

Ford Meter Box Company, Inc., The, assignee: *See*—
Ford, John L.

Forster, Henry, Broadview, Ill. Piston wrist pin carrier. 2,438,849, Mar. 30.

Foster Machine Company, assignee: *See*—
Stange, Ferdinand F.

Fot, Chin J., assignor to Guyan Machinery Company, Logan, W. Va. Terminal clips. 2,438,850, Mar. 30.

Fowler, Raymond F., Colorado Springs, Colo. Device for holding articles in roofs of automobiles. 2,438,659, Mar. 30.

Fox, Kenneth H., Red Bank, assignor to Bendix Aviation Corporation, Teterboro, N. J. Electromagnetic apparatus. 2,438,745, Mar. 30.

Fox, Raymond S., and C. A. Whitney, assignors to Niles-Bement-Pond Company, West Hartford, Conn. Continuous air gage. 2,438,696, Mar. 30.

Fraga, Frank M., Fresno, Calif. Implement hitch. 2,438,553, Mar. 30.

Free Sewing Machine Co., assignee: *See*—
Ivandick, Matthew G.

Freedman, Louis, Mount Vernon, N. Y. Preparation of fat soluble vitamins. 2,438,554, Mar. 30.

Fregeolle, Oscar, assignor to Hemphill Company, Central Falls, R. I. Knitting machine. 2,438,697, Mar. 30.

Fuge, Harry B., Somerville, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Dynamoelectric machine. 2,438,872, Mar. 30.

Fuller Manufacturing Co., assignee: *See*—
Cook, Charles A.

Furter, Max F., Upper Montclair, and M. Hoffer, assignors to Hoffmann-La Roche Inc., Nutley, N. J. Riboflavin solution. 2,438,880, Mar. 30.

Garner, Fay, Longmont, Colo. Excavating and loading apparatus. 2,438,660, Mar. 30.

Garrison, John W., Oceanside, Calif. Hot line jumper stick. 2,438,746, Mar. 30.

Gates, Robert M., Scarsdale, assignor to The Air Preheater Corporation, New York, N. Y. Plate arrangement for preheaters. 2,438,851, Mar. 30.

Geigy, J. R., A. G., assignee: *See*—
Krebser, Adolf, and Bossard.

Geist, Sidney R., Sr., New York, and N. R. Davis, assignors to Gemloid Corporation, Elmhurst, Long Island, N. Y. Tube forming apparatus. 2,438,498, Mar. 30.

Gemloid Corporation, assignee: *See*—
Geist, Sidney R., Sr., and Davis.

General Aniline & Film Corporation, assignee: *See*—
Mueller, Fritz W. H.

General Controls Co., assignee: *See*—
Ray, William A.

General Electric Company, assignee: *See*—
Alexanderson, Ernst F. W.
Hehenkamp, Theodorus.
Kearsley, William K.
Kettlewell, Eric.
Lemmers, Eugene.
Schouwstra, Pieter.
Taylor, Augustus H.
Tillman, John E.

General Motors Corporation, assignee: *See*—
Davidson, Charles D.
Mann, Cecil A.
McCormack, Alex A.

Geometric Tool Company, The, assignee: *See*—
Strickland, Royce M.

Gibbs, Clifford J., Laingsburg, Mich., and J. H. Stein, Toms River, N. J., assignors to Texaco Development Corporation, New York, N. Y. Apparatus for removing random fluctuations from intensity measurements. 2,438,747, Mar. 30.

Gilbert, A. C., Company, The, assignee: *See*—
Erhardt, Oscar P.

Gilbert & Barker Manufacturing Company, assignee: *See*—
Grise, Alfred L.

Gilson Brothers Company, assignee: *See*—
Gilson, Michael V.

Gilson, Michael V., assignor to Gilson Brothers Company, Fredonia, Wis. Concrete mixer. 2,438,555, Mar. 30.

Girdler Corporation, The, assignee: *See*—
Zottu, Paul D.

Gogerty, Henry L., North Hollywood, Calif. Prefabricated and demountable house construction. 2,438,604, Mar. 30.

Goldsby, Arthur R., Beacon, and C. W. Watson, Eastchester, assignors to The Texas Company, New York, N. Y. Multistage alkylation method. 2,438,852, Mar. 30.

Goodrich, B. F., Company, The, assignee: *See*—
Campbell, Robert G.

Gordon, Herman L., Silver Spring, Md. Wire connector. 2,438,779, Mar. 30.

Grady, Jessie B., Pasadena, Calif. Propeller assembly. 2,438,661, Mar. 30.

Graham, Carl E., Canton, Ohio. Carbon clamp. 2,438,803, Mar. 30.

Greenberg, Edward H., St. Louis, Mo. Shoe tree. 2,438,748, Mar. 30.

Greenland, Leonard S., Weston-super-Mare, assignor to H. M. Hobson Limited, London, England. Fuel injection system for internal-combustion engines. 2,438,662, Mar. 30.

Greenland, Leonard S., Weston-super-Mare, assignor to H. M. Hobson Limited, London, England. Fuel injection system for internal-combustion engines. 2,438,663, Mar. 30.

Griff, Robert D.: *See*—
Walz, Claude W., Rasmussen, and Griff.

Grisé, Alfred L., assignor to Gilbert & Barker Manufacturing Company, Springfield, Mass. Liquid dispensing apparatus. 2,438,698, Mar. 30.

Groetchen, Richard, Chicago, Ill. Cooker. 2,438,699, Mar. 30.

Guyan Machinery Company, assignee: *See*—
Fot, Chin Jim.

Hammond Aircraft Company, assignee: *See*—
Stevens, Don E.

Hansberry, Lloyd E., San Francisco, Calif. Heel bone traction splint. 2,438,664, Mar. 30.

Hardie, Harry, assignor to The Nobelt Company, Baltimore, Md. Band for garments. 2,438,804, Mar. 30.

Harrer, Paul H., La Porte, Ind., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Hitch. 2,438,749, Mar. 30.

Hart, Fred J., Salinas, assignor of one-half to College of electronic Medicine, San Francisco, Calif. Electrical therapeutic device. 2,438,605, Mar. 30.

Hartford National Bank and Trust Company, assignee: *See*—
Labin, Edouard and Kobilsky.
Martin, Edward C.

Hartman, Richard A., assignor to Tinnerman Products, Inc., Cleveland, Ohio. Fastening device. 2,438,499, Mar. 30.

Haverstick, John S., assignor to De Laval Steam Turbine Company, Trenton, N. J. Turbine system utilizing hot driving gases. 2,438,635, Mar. 30.

Haworth, John W.: *See*—
Avison, Anthony W. D., Bergel, and Haworth.

Hazeltine Research, Inc., assignee: *See*—
Wheeler, Harold A.

Hebard, Hugh C., Greenford, England. Barometric fuze. 2,438,853, Mar. 30.

Hehenkamp, Theodorus, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company, Schenectady, N. Y. Circuit for electric discharge devices. 2,438,556, Mar. 30.

Hehenkamp, Theodorus, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company, Schenectady, N. Y. Electric discharge device. 2,438,557, Mar. 30.

Hemphill Company, assignee: *See*—
Fregeolle, Oscar.

Henley's, W. T., Telegraph Works Company Limited, assignee: *See*—
Hoban, Hugh C.

Hertzler, Ralph S., Elverson, Pa. Conveying mechanism for harvesting machines. 2,438,500, Mar. 30.

Hesse, Arthur T., Long Beach, Calif. Bathroom equipment. 2,438,665, Mar. 30.

High Standard Manufacturing Corporation, The, assignee: *See*—
Davis, George F.

Hings, Donald L., Ottawa, Ontario, Canada, assignor to Electronic Laboratories, Inc., Indianapolis, Ind. Radio noise rejector circuit. 2,438,501, Mar. 30.

Hoban, Hugh C., Dartford, assignor to W. T. Henley's Telegraph Works Company Limited, Dorking, England. Wiper or die for use in the coating of wires. 2,438,700, Mar. 30.

Hobson, H. M., Limited, assignee: *See*—
Greenland, Leonard S.

Hochner, Alex, New York, N. Y. Cover structure for suitcases, valises, and similar carrying cases. 2,438,780, Mar. 30.

Hodson, George F., Altus, Okla. Conveyor egg washing and drying machine. 2,438,666, Mar. 30.

Hoffer, Max: *See*—
Furter, Max F., and Hoffer.

Hoffmann-La Roche Inc., assignee: *See*—
Avison, Anthony W. D., Bergel, and Haworth.
Flexser, Leo A.
Karrer, Paul.
Sternbach, Leo H.

Hogue, James T., San Francisco, Calif., assignor, by decree of court, to L. M. Hogue. Angle calculator for structural members. 2,438,667, Mar. 30.

Hogue, Lenna M., assignee: *See*—
Hogue, James T.

Holländer, Nils B. F., St. Essingen, Sweden. Levelling tool. 2,438,558, Mar. 30.

Holt, Marcus L., Lookout Mountain, assignor of one-half to J. B. Brock, Adairsville, Ga. Vending machine. 2,438,502, Mar. 30.

Holt, Marcus L., Lookout Mountain, assignor of one-half to J. Brock, Adairsville, Ga. Vending machine. 2,438,503, Mar. 30.

Hoyle, Egbert P., assignor to Cortland Line Company, Inc., Cortland, N. Y. Combined strand display and transfer reel. 2,438,805, Mar. 30.

Hubbard, David C., assignor to A. B. Chance Company, Centralia, Mo. Storm attachment for high line tools. 2,438,504, Mar. 30.

Hubbell, George T., New Haven, assignor to American Crucible Co., Shelton, Conn. Furnace lining. 2,438,559, Mar. 30.

Hughes, John W., Dallas, Tex. Hose coupling. 2,438,750, Mar. 30.

Huguley, William C., Belleville, N. J. Adjustable-electrode arc welding torch. 2,438,701, Mar. 30.

Hulton, Charles S., assignor to The Kirk & Blum Manufacturing Company, Cincinnati, Ohio. Pneumatic canopy. 2,438,606, Mar. 30.

Hunt, Richard O., Altadena, Calif. Shelf. 2,438,505, Mar. 30.

Hunt, Scott F., Meriden, assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn. Carburetor. 2,438,702, Mar. 30.

Ilford Limited, assignee: *See*—
Kendall, John D.
Kendall, John D., Wood, and Majer.

Imperial Chemical Industries Limited, assignee: *See*—
Cross, Charles A.

International Standard Electric Corporation, assignee: *See*—
Ashford, James L., and Billings.
Chatterjea, Prafulla K.
Deakin, Gerald.
McLarn, Ernest S.
Mehut, Jean.
New, Archibald A.

Ivandick, Matthew G., assignor to Free Sewing Machine Co., Rockford, Ill. Sewing machine. 2,438,636, Mar. 30.

Jackson, Ernest W., Bellflower, Calif. Boring attachment. 2,438,607, Mar. 30.

Jacobsen, E. A., special administrator: *See*—
Krenzke, William F.

Jacobsen Manufacturing Company, assignee: *See*—
Krenzke, William F.

Jakobsen, Jens G., Copenhagen, Denmark, assignor to N. B. Bach, New York, N. Y. Method and material for the production of toy balloons. 2,438,854, Mar. 30.

James Manufacturing Company, Inc., assignee: *See*—
De Cesaris, Frederick.

Jansen, Herbert D., Shorewood, Wis. Combined conveyor and excavator. 2,438,637, Mar. 30.

Jasco, Incorporated, assignee: *See*—
Kellog, Henry B.

Johnson, Gordon, Company, assignee: *See*—
Johnson, Gordon W.

Johnson, Gordon W., Overland Park, Kans., assignor to Gordon Johnson Company, Kansas City, Mo. Poultry shackle. 2,438,608, Mar. 30.

Johnson, Jeners S., Los Angeles, Calif. Engine nacelle construction. 2,438,806, Mar. 30.

Johnson Products, Inc., assignee: *See*—
Bergmann, Paul F.

Johnson, Victor S., assignee: *See*—
White, Sidney Y.

Jones, Franklin D., Upper Darby, assignor to American Chemical Paint Company, Ambler, Pa. Tetralyl compounds. 2,438,751, Mar. 30.

Jones & Laughlin Steel Corporation, assignee: *See*—
Banta, Henry M.

Juhasz, James G., Chicago, Ill. Circuit control device. 2,438,609, Mar. 30.

Kahn, Milford L., assignor of one-half to R. N. Kinkella, Chicago, Ill. Inhaler. 2,438,752, Mar. 30.

Kamlet, Jonas, assignor to Boyle-Midway Inc., New York, N. Y. Stabilized hypochlorite solutions and process therefor. 2,438,781, Mar. 30.

Kanhofer, Elmer R., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Manufacture of catalysts. 2,438,560, Mar. 30.

Karrer, Paul, Zurich, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. 2-carbalkoxy-3-keto-tetrahydrothiophene product and process. 2,438,807, Mar. 30.

Kay, James A., assignor to Rose Brothers (Gainsborough) Limited, Gainsborough, England. Packaging machinery. 2,438,809, Mar. 30.

Kearfott Company, Inc., assignee: *See*—
Bloser, Dwight W.

Kearsley, William K., Schenectady, N. Y., assignor to General Electric Company. Electrothermal deposition apparatus. 2,438,561, Mar. 30.

Keegel, Anthony J.: *See*—
Bowles, Albert F., and Keegel.

Kellog, Henry B., Union City, N. J., assignor, by mesne assignments, to Jasco, Incorporated. Butadiene-1,3-acrylonitrile copolymer plasticized with naphthenic acid esters. 2,438,753, Mar. 30.

Kemeny, Paulo, Sao Paulo, Brazil. Speed regulator. 2,438,703, Mar. 30.

Kendall, John D., assignor to Ilford Limited, Ilford, England. Cyanine dyestuff intermediates. 2,438,705, Mar. 30.

Kendall, John D., assignor to Ilford Limited, Ilford, England. Cyanine dyestuffs. 2,438,782, Mar. 30.

Kendall, John D., H. W. Wood, and J. R. Majer, Ilford, assignors to Ilford Limited, Ilford, Essex, England. Organic compounds serving as cyanine dyestuff intermediates. 2,438,704, Mar. 30.

Kenlee Corporation, assignee: *See*—
Lee, Roger K.

Kenyon Instrument Co., Inc., assignee: *See*—
Newell, Arthur T.

Kerr, Ralph W., Riverside, and N. F. Schink, Oak Park, Ill., assignors to Corn Products Refining Company, New York, N. Y. Modifying starch. 2,438,855, Mar. 30.

Kettlewell, Eric, Kingsbury, London, England, assignor to General Electric Company. Seal for electric discharge devices and manufacture. 2,438,562, Mar. 30.

Kinkella, Roger N., assignee: *See*—
Kahn, Milford L.

Kirk & Blum Manufacturing Company, The, assignee: *See*—
Hulton, Charles S.

Kirkpatrick, Joseph R.: *See*—
Resek, Marc, Focke, and Kirkpatrick.

Knoop, Walter A., Jr., Packanack Lake, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Pulse generator. 2,438,706, Mar. 30.

Knowles, Edward R., Nashua, N. H. Injection molding machine. 2,438,856, Mar. 30.

Knowles, Edward R., Nashua, N. H. Injection unit for plastics molding. 2,438,857, Mar. 30.

Kobilsky, Manuel J.: *See*—
Labin, Edouard, and Kobilsky.

Koch, Stanley J., Clifton, and R. E. Rutherford, Rutherford, assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Cathode-ray tube screen and process. 2,438,668, Mar. 30.

Kolimeyer, Walter T., Milwaukee, Wis. Traction pad. 2,438,563, Mar. 30.

Kraft, Charles H., Kansas City, Mo. Cabinet with compartments having interconnected locking means. 2,438,783, Mar. 30.

Krebser, Adolf, Riehen, near Basel, and W. Bossard, assignors to the firm J. R. Geigy A. G., Basel, Switzerland. Copper containing disazo dyestuffs. 2,438,754, Mar. 30.

Krenzke, William F., deceased; E. A. Jacobsen, special administrator, assignor to Jacobsen Manufacturing Company, Racine, Wis. Motor fuel power induction device. 2,438,669, Mar. 30.

Kropp Forge Aviation Co., assignee: *See*—
Kropp, Roy A.

Kropp, Roy A., River Forest, assignor to Kropp Forge Company, Cicero, Ill. Rotary tiller tooth and mounting. 2,438,707, Mar. 30.

Kropp, Roy A., River Forest, assignor to Kropp Forge Aviation Co., Cicero, Ill. Forming engine mountings. 2,438,884, Mar. 30.

Kuenstler, Walter E., Cliffside Park, N. J. Crystal holder. 2,438,708, Mar. 30.

Labin, Edouard, and M. J. Kobilsky, Buenos Aires, Argentina, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Thermionic tube having secondary electron emissive electrode with surface and form variations. 2,438,709, Mar. 30.

Ladrach, Aaron G., deceased, Akron, Ohio; D. B. Ladrach, administratrix, assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn. Electromagnetic gauge. 2,438,506, Mar. 30.

Ladrach, Dorothy B., administratrix: *See*—
Ladrach, Aaron G.

Lakatos, Louis L., Bala Bynwyd, Pa., assignor to Radio Corporation of America. Pulse to rectangular wave converter. 2,438,638, Mar. 30.

Lake Manufacturing Company, Inc., The, assignee: *See*—
Wedeking, Lorenz A.

Lambert, Edmond, Danielson, Conn. Log- and carriage-locking swinging-saw sawmill. 2,438,610, Mar. 30.

Lambert, Harry L., Enfield, N. Y., assignor to The National Cash Register Company, Dayton, Ohio. Centrifugally operated switch. 2,438,810, Mar. 30.

Landmann, Alexander, London, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England. Tuner for ultra high frequencies. 2,438,784, Mar. 30.

Langdon, Jesse D., Long Beach, Calif. Plumbing fixture installation. 2,438,507, Mar. 30.

Larsen, Einer W., Elmhurst, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Vibrating apparatus. 2,438,755, Mar. 30.

Larsen, Einer W., Elmhurst, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Vibrating apparatus. 2,438,756, Mar. 30.

Larson, Robert H., Batavia, Ill. Film gate. 2,438,710, Mar. 30.

Lawrence, Ralph, Miami, Fla. Color process registration table. 2,438,639, Mar. 30.

Leach, Charles C., Clayton, assignor of one-half to M. Boulicault, St. Louis, Mo., and R. J. Miller, Webster Groves, Mo. Liquid column level. 2,438,758, Mar. 30.

Leach, Geraldine M.: *See*—
Leach, Raymond A., and Geraldine M.

Leach, Raymond A. and G. M., Los Angeles, Calif. Shoe with detachable upper. 2,438,711, Mar. 30.

Lee, Roger K., assignor to Kenlee Corporation, Detroit, Mich. Mounting element for machines or the like. 2,438,757, Mar. 30.

Lees, Edgar L., Youngstown, Ohio. Switch assembly. 2,438,640, Mar. 30.

Lemmers, Eugene, Cleveland Heights, Ohio, assignor to General Electric Company. Multiple discharge lamp circuit. 2,438,564, Mar. 30.

Le Sage, Grover N., Kansas City, Mo. Dough pressing and feeding apparatus. 2,438,811, Mar. 30.

Lewis, Arthur J., assignor to The Baird Machine Company, Stratford, Conn. Multiple spindle chucking machine. 2,438,508, Mar. 30.

Lewis Equipment and Supply Company, assignee: *See*—
Ostler, Virgil F.

Liebowitz, Benjamin, Lewisboro, N. Y. Manufacture of composite steel plates. 2,438,759, Mar. 30.

Lindfelt, Hilma E., Des Moines, Iowa. Mitten. 2,438,611, Mar. 30.

Lindsey, William H., and S. Allen, assignors to Armstrong Siddeley Motors Limited, Coventry, England. Liquid-fuel combustion chamber. 2,438,858, Mar. 30.

Lindstrom, Charles M., Westerly, R. I., assignor to Boston Wire Stitcher Company, Stonington, Conn. Fastener-applying implement. 2,438,712, Mar. 30.

Linn, Carl B., Riverside, and J. M. Mavity, Hinsdale, assignors to Universal Oil Products Company, Chicago, Ill. Method of purifying a hydrocarbon material containing a relatively small amount of an organic fluorine compound. 2,438,565, Mar. 30.

Lipfert, Donald E.: *See*—
Andrews, Douglas H., Jr., and Lipfert.

Lipfert, Donald E., Meriden, assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn. Throttle control system. 2,438,718, Mar. 30.

Lockheed Aircraft Corporation, assignee: *See*—
Archer, James O., and Salmi.
Christensen, Edwin V.
Prest, Clarence O.

Loehr, Aloysius, Wichita, Kans. Toothbrush having paste tube on handle. 2,438,641, Mar. 30.

Loftus, Fred H., Mount Lebanon, Pa. Furnace and operating same. 2,438,812, Mar. 30.

Long, Hugh, Los Angeles, Calif. Supporting structure. 2,438,566, Mar. 30.

Lundeen, Carl V., Towson, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Engraving apparatus. 2,438,813, Mar. 30.

MacDonald, H. F., assignee, et al.: *See*—
MacDonald, Harry F., and Askers.

MacDonald, Harry F., and W. N. Askers, assignors to H. F. and J. C. MacDonald, Spokane, Wash. Electric circulating heater. 2,438,670, Mar. 30.

MacDonald, J. C., assignee, et al.: *See*—
MacDonald, Harry F., and Askers.

MacDonald, James E., Latrobe, Pa. Checkerwork for furnaces. 2,438,814, Mar. 30.

Macfarlane, James W. and W. I., Glasgow, Scotland. Cross-field generator. 2,438,567, Mar. 30.

Macfarlane, William I.: *See*—
Macfarlane, James W. and W. I.

Mack, Rudolph A.: *See*—
Zapart, Bruno J., and Mack.

MacKenzie, Charles A., Upper Montclair, and J. B. Rust, Montclair, assignor of one-half to Montclair Research Corporation and one-half to Ellis-Foster Company. Copolymers of tetraallylsilane. 2,438,612, Mar. 30.

Majer, John R.: *See*—
Kendall, John D., Wood, and Majer.

Malthouse, Ernest G., Sheffield, England. Apparatus for use in erecting masonry structures. 2,438,613, Mar. 30.

Mann, Cecil A., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Method and apparatus for making composite strip material. 2,438,568, Mar. 30.

Marana, José M. B., Buesnos Aires, Argentina. Resilient sealing disc for bottle seals. 2,438,671, Mar. 30.

Marcus, Meyer M., assignee, et al.: *See*—
Weiss, Solomon.

Margrave, Wilton, assignor to The Parker Appliance Company, Cleveland, Ohio. Valve indexing means. 2,438,672, Mar. 30.

Marholz, Richard C., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill. Radio control apparatus. 2,438,760, Mar. 30.

Marinsky, Davis, assignee: *See*—
Morin, Louis H.

Marsalis, Martin E., Fort Worth, Tex. Moisture retaining pad for air cooling devices. 2,438,859, Mar. 30.

Martin, Earnest B., Redondo Beach, assignor to R. Walsh, Los Angeles, Calif. Apparatus for inserting valve elements. 2,438,642, Mar. 30.

Martin, Edward C., London, England, assignor to Hartford National Bank & Trust Company, Hartford, Conn. Manufacture of ceramic materials of high permittivity. 2,438,761, Mar. 30.

Massonneau, Robert F.: *See*—
Bascom, Henry M., Massonneau, Ostendorf, and Rea.

Mattox, William J., La Grange, assignor to Universal Oil Products Company, Chicago, Ill. Preparation of an alumina-group VI oxide catalyst. 2,438,569, Mar. 30.

Mattox, William J., La Grange, assignor to Universal Oil Products Company, Chicago, Ill. Production of toluene by catalytic cracking of monoalkyl benzenes. 2,438,570, Mar. 30.

Mavity, Julian M.: *See*—
Linn, Carl B., and Maxity.

Maxim Silencer Company, The, assignee: *See*—
Saco, Felix, Jr., and Williamson.

Maxon, Glenway, Jr., Milwaukee, Wis. Stabilizer for spring mounted vehicles. 2,438,571. Mar. 30.

Maynard, Arthur H., assignor to Boston Wire Stitcher Company, Warwick, R. I. Fastener-applying implement. 2,438,713, Mar. 30.

McCarthy, Henry J., Danvers, assignor to Sylvania Electric Products Inc., Salem, Mass. Ultra high frequency switching device. 2,438,873, Mar. 30.

McCormack, Alex A., Cleveland, assignor to General Motors Corporation, Dayton, Ohio. Terminal structure for refrigerating apparatus. 2,438,572, Mar. 30.

McGarry, John T., deceased; M. F. McGarry, executrix, assignor to Railroad Products Company, Cincinnati, Ohio. Water service apparatus. 2,438,815, Mar. 30.

McGarry, Mary F., executrix: *See*—
McGarry, John T.

McGovern, Henry P., Fayville, assignor to Dennison Manufacturing Company, Framingham, Mass. Manufacture of cardboard boxes. 2,438,509, Mar. 30.

McKallick, Mary, Spokane, Wash. Letter box. 2,438,785, Mar. 30.
McLarn, Ernest S., Manhasset, assignor to International Standard Electric Corporation, New York, N. Y. Electrical contact brush. 2,438,510, Mar. 30.
McLeckie, Harry W., Naples, Tex. Hand dryer. 2,438,762, Mar. 30.
McMahan, Thomas E., Ojai, Calif. Well tool. 2,438,673, Mar. 30.
McMahon, William, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Copper chromium, arsenic compound for wood preserving. 2,438,511, Mar. 30.
McMillan, James O., assignor to F. J. Ablah, Wichita, Kans. Carbonator. 2,438,714, Mar. 30.
Meadow, Jacob R., Memphis, Tenn., and E. E. Reid, Baltimore, Md., assignors to Socony-Vacuum Oil Company, Incorporated. Separation of asphalt from hydrocarbons. 2,438,874, Mar. 30.
Mehut, Jean, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y. Pneumatic switch. 2,438,512, Mar. 30.
Meigs, Douglas P., Silver Spring, Md., assignor by mesne assignments, to American Instrument Co., Inc. Closure for high-pressure vessels. 2,438,513, Mar. 30.
Merck & Co., Inc., assignee: *See*—
Miller, Stewart M., and Van de Kamp.
Metal Office Furniture Company, assignee: *See*—
Bullock, Earle C.
Metropolitan-Vickers Electrical Company Limited, assignee: *See*—
Dodds, John M., and Scoles.
Miller, Christopher G., Rifle, Colo. Fruit picker's sack. 2,438,860, Mar. 30.
Miller Pottery Engineering Company, assignee: *See*—
Miller, William J.
Miller, Roland J., assignee, et al: *See*—
Leach, Charles C.
Miller, Stewart M., and J. van de Kamp, Westfield, N. J., assignors to Merck & Co., Inc., Rahway, N. J. Purification of dehydrocorticosterone acetate. 2,438,715, Mar. 30.
Miller, William J., Swissvale, assignor to Miller Pottery Engineering Company, Swissvale, Pittsburgh, Pa. Method and apparatus for decorating pottery ware. 2,438,514, Mar. 30.
Minneapolis-Honeywell Regulator Company, assignee: *See*—
Schoeppel, John F.
Modine Manufacturing Company, assignee: *See*—
Spieth, Benjamin.
Mohler, Marvin F., Arlington, Va. Plug and jack box switching unit. 2,438,515, Mar. 30.
Monolith Portland Midwest Company, assignee: *See*—
Anderson, Frank J., and Williams.
Monsanto Chemical Company, assignee: *See*—
Blake, Edward S.
Montclair Research Corporation, assignee, et al.: *See*—
MacKenzie, Charles A., and Rust.
Moore, David P., Forest Hills, N. Y., assignor to Premium Merchandising Corporation. Ink paste cartridge for ball point fountain pens. 2,438,786, Mar. 30.
Moore, Edward, Newark, N. J. Lubricating means for internal-combustion engines. 2,438,816, Mar. 30.
Moore, Hazel E., Oakland, Calif. Pack for use in refrigeration anesthesia. 2,438,643, Mar. 30.
Morin, Louis H., assignor of one-half to D. Marinsky, Bronx, N. Y. Stop device for pull apart sliders for separable fasteners. 2,438,614, Mar. 30.
Morin, Louis H., assignor of one-half to D. Marinsky, Bronx, N. Y. Fastener stringer and producing the same. 2,438,615, Mar. 30.
Mosher, Jesse B., Colorado Springs, Colo. Wheeled toy. 2,438,616, Mar. 30.
Mossman, Donald P., Sr., Chicago, Ill. Wafer switch. 2,438,617, Mar. 30.
Mott, Ruthel J., Georgetown, Tex. Hair curler. 2,438,618, Mar. 30.
Mueller, Fritz W. H., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Stabilized silver halide emulsions. 2,438,716, Mar. 30.
Muncie Gear Works, Inc., assignee: *See*—
Smith, Marvin M.
Nalick, Stanley, Los Angeles, Calif. Spinner. 2,438,817, Mar. 30.
National Cash Register Company, The, assignee: *See*—
Lambert, Harry L.
Navy, United States of America, as represented by the Secretary of the, assignee: *See*—
Barth, Theodore H.
Schuck, Oscar H.
Neiser, Joseph, Miami, Fla. Electric heater. 2,438,861, Mar. 30.
New, Archibald A., London, W. C. 2, England, assignor to International Standard Electric Corporation, New York, N. Y. Polystyrene electric insulating materials. 2,438,516, Mar. 30.
Newell, Arthur T., Huntington, assignor to Kenyon Instrument Co., Inc., Huntington Station, N. Y. Anemometer. 2,438,674, Mar. 30.
Newell, William H., New York, and L. S. Brown, assignors to Ford Instrument Company, Inc., Long Island City, N. Y. Triangle solver. 2,438,818, Mar. 30.
Nicholas, George K., La Porte, Ind. Warp tension attachment. 2,438,675, Mar. 30.
Nicholas, John, assignor to H. S. & A. Robinson, Limited, Bristol, England. Paper bag making machinery. 2,438,787, Mar. 30.
Nickle, Arthur G.: *See*—
Nickle, Frank H. and A. G.
Nickle, Frank H. and A. G., Saginaw, Mich. Safety shearpin drive. 2,438,676, Mar. 30.
Niederl, Joseph B., Brooklyn, N. Y. Nitrated estrogenic hormones. 2,438,819, Mar. 30.
Niles-Bement-Pond Company, assignee: *See*—
Andrews, Douglas H., Jr., and Lipfert.
Drake, Alden M.
Fox, Raymond, and Whitney.
Hunt, Scott F.
Ladrach, Aaron G.
Lipfert, Donald E.
Nobelt Company, The, assignee: *See*—
Hardie, Harry.
Nolan, Thomas W.: *See*—
Arave, Franklin M., and Nolan.
Nuvoplas Corporation, assignee: *See*—
Casalino, Joseph.
Oberwegner, Alfred R., Los Angeles, Calif. Turret tool post. 2,438,644, Mar. 30.
O'Brien, William J., assignor to The Decca Record Company, Limited, London, England. Equisignal radio beacon system. 2,438,573, Mar. 30.
Obuchowski, Jan, Stamford, Conn. Musical automatic finger exercising machine. 2,438,820, Mar. 30.
Offner, Franklin, Chicago, Ill. Electrical treatment apparatus and control. 2,438,875, Mar. 30.
Olesky, Anthony P., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill. Push-button tuning control. 2,438,763, Mar. 30.
O'Loughlin, Charles E. A., St. Paul, Minn. Gauge knife. 2,438,517, Mar. 30.
O'Neill, Edward M., assignor to Union Machine Company, San Francisco, Calif. Mixing apparatus. 2,438,574, Mar. 30.
Ostendorf, Bernard, Jr.: *See*—
Bascom, Henry M., Massonneau, Ostendorf, and Rea.
Ostler, Virgil F., assignor to Lewis Equipment and Supply Company, Denver, Colo. Tire casing vulcanizer. 2,438,677, Mar. 30.
Otis Elevator Company, assignee: *See*—
Bruns, William H.
Palagonia, Joseph R., Brooklyn, N. Y. Collar clip. 2,438,645, Mar. 30.
Palmer, Donald A., Sheffield, England. Tobacco-pipe scraping tool. 2,438,678, Mar. 30.
Palmer, F. D., Inc., assignee: *See*—
Palmer, Frank D.
Palmer, Frank D., assignor to F. D. Palmer, Inc., Chicago, Ill. Paper box forming apparatus. 2,438,788, Mar. 30.
Parker Appliance Company, assignee: *See*—
Margrave, Wilton.
Parker Appliance Company, The, assignee: *See*—
Parker, Arthur L., and Vandervoort.
Parker, Arthur L., deceased, Cleveland, by H. M. Parker, executrix, Shaker Heights, and L. N. Vandervoort, assignors to The Parker Appliance Company, Cleveland, Ohio. Manifold tube coupling. 2,438,679, Mar. 30.
Parker, Helen M., executrix: *See*—
Parker, Arthur L., and Vandervoort.
Pearl, Irwin A., Appleton, Wis., assignor, by mesne assignments, to Sulphite Products Corporation. Production of organic acids. 2,438,789, Mar. 30.
Pedigo, Benjamin H., Jackson, Tenn. Spark arrester frame for locomotives. 2,438,862, Mar. 30.
Perfection Stove Company, assignee: *See*—
Resek, Marc, Focke, and Kirkpatrick.
Philco Corporation, assignee: *See*—
Stewart, William A.
Phillips Petroleum Company, assignee: *See*—
Piety, Raymond G.
Phillips, Walter A., Salinas, Calif. Highway and street traffic marking and method and apparatus for making. 2,438,764, Mar. 30.
Piety, Raymond G., Yonkers, N. Y., assignor to Phillips Petroleum Company. Circuit for measuring voltage of an alternating source. 2,438,518, Mar. 30.
Pines Engineering Company, assignee: *See*—
Bower, Byron F.
Plymouth Cordage Company, assignee: *See*—
Reed, Stephen A.
Pollitt, Harold, Waukegan, Ill. Adjustable anvil for micrometer calipers. 2,438,765, Mar. 30.
Polydoroff, Wladimir J., Glencoe, Ill. Loop antenna apparatus. 2,438,680, Mar. 30.
Postlethwaite, Sarah D., New York, N. Y. Removable sanitary belt tab. 2,438,790, Mar. 30.
Powers, Stephen J., assignor to Standard Telephones and Cables Limited, London, England. Tubular electrode assembly support for vacuum tubes. 2,438,519, Mar. 30.
Premium Merchandising Corporation, assignee: *See*—
Moore, David P.
Prest, Clarence O., assignor of one-half to Lockheed Aircraft Corporation, Burbank, Calif. Nonferrous alloy. 2,438,863, Mar. 30.

Puckette, Charles, Jr., Ridgewood, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Beam switch for single trace observance. 2,438,717, Mar. 30.
Pulliam, Seeley T., Houston, Tex. Eye speculum. 2,438,646, Mar. 30.
Quinn, Arthur H., Dorchester, Mass., assignor to Universal Shoe Corporation, Sanford, Maine. Platform type shoe and making same. 2,438,821, Mar. 30.
Quirk, Earl W., and A. R. Buchholz, assignors to Brandt Automatic Cashier Company, Watertown, Wis. Starting control for coin counting machines. 2,438,822, Mar. 30.
Radio Corporation of America, assignee: *See*—
Braden, Rene A.
Lakatos, Louis L.
Sziklai, George C.
Tolson, William A.
Turner, Alfred H.
Wolff, Irving.
Railroad Products Company, assignee: *See*—
McGarry, John T.
Ranson, Richard R., Whitefish Bay, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Controller for electric motors. 2,438,647, Mar. 30.
Rasmussen, Clarence T.: *See*—
Walz, Claude W., Rasmussen, and Griff.
Rattay, Stephen, New York, N. Y. Gas distributing safety device. 2,438,619, Mar. 30.
Ray, William A., Glendale, Calif., assignor to General Controls Co. Thermocouple for pilot burners. 2,438,575, Mar. 30.
Raymond Concrete Pile Company, assignee: *See*—
Upson, Maxwell M., and Watt.
Raytheon Manufacturing Company, assignee: *See*—
Spencer, Percy L.
Rea, Wilton T.: *See*—
Bascom, Henry M., Massonneau, Ostendorf, and Rea.
Reed, Stephen A., Duxbury, assignor to Plymouth Cordage Company, North Plymouth, Mass. Rope. 2,438,864, Mar. 30.
Reese, Jay R., Hamburg, Iowa. Knife sharpener. 2,438,681, Mar. 30.
Rehard, Leonard A., Kansas City, Mo. Rapid electric fluid heater. 2,438,865, Mar. 30.
Reid, Ebenezer E.: *See*—
Meadow, Jacob R., and Reid.
Reiff, Orland M., and H. J. Andress, Jr., Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition. 2,438,876, Mar. 30.
Republic Steel Corporation, assignee: *See*—
Farrow, Cecil.
Resek, Marc, and T. B. Focke, Cleveland Heights, and J. R. Kirkpatrick, South Euclid, assignors to Perfection Stove Company, Cleveland, Ohio. Electrical igniter for pot-type liquid fuel burners. 2,438,823, Mar. 30.
Rich, George R., assignor to Rich Manufacturing Corporation, Battle Creek, Mich. Alloyed steel. 2,438,824, Mar. 30.
Rich Manufacturing Corporation, assignee: *See*—
Rich, George R.
Richards, Ward F.: *See*—
Snadecki, Clarence W., and Richards.
Rifenberg, Milo, Constantine, Mich. Siding tool. 2,438,766, Mar. 30.
Roberts, Pearlie B., Tyler, Tex. Method and materials for cleaning oil wells and equipment. 2,438,682, Mar. 30.
Robie, Norman P., and F. E. Sheibley, Lewiston, assignors to The Carborundum Company, Niagara Falls, N. Y. Polymers of unsaturated oxy silicols. 2,438,520, Mar. 30.
Robinson, E. S. & A., Limited, assignee: *See*—
Nicholas, John.
Rockwell, Albert M., Glastonbury, and A. H. Beaufrere, Manchester, assignors to United Aircraft Corporation, East Hartford, Conn. Impeller mounting. 2,438,866, Mar. 30.
Rockwell, Albert M., Glastonbury, and A. H. Beaufrere, Manchester, assignors to United Aircraft Corporation, East Hartford, Conn. Assembling shrouds on impellers. 2,438,867, Mar. 30.
Rodack, James, and H. E. Bauer, Detroit, Mich. Photoprint washer. 2,438,648, Mar. 30.
Rohrer, Frederick F., Jr., Philadelphia, Pa., assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio. Fluid pressure control mechanism. 2,438,683, Mar. 30.
Rose Brothers (Gainsborough) Limited, assignee: *See*—
Kay, James A.
Rost, Helge F., Djursholm, K. H. Thunell, Nockeby, S. D. Vigren, Stockholm, and P. H. E. Claesson, Jakobsberg, Sweden. Device for locating and following of objects. 2,438,576, Mar. 30.
Roth, Bert W., Riverdale, assignor to Trans-Lux Corporation, New York, N. Y. Selector. 2,438,825, Mar. 30.
Rothman, Alex, Bronx, N. Y. Medicine dropper. 2,438,577, Mar. 30.
Roy, Albert E., Los Angeles, Calif. Compound master cylinder. 2,438,649, Mar. 30.
Runyan, Jefferson T., Downey, Calif. Bumper. 2,438,578, Mar. 30.
Russell, Albert A., Phoenix, Ariz. Sliding ladder jack. 2,438,791, Mar. 30.
Russell, Robert C., Cleveland Heights, assignor to Eaton Manufacturing Company, Cleveland, Ohio. Clutch and brake device for a two-speed axle construction. 2,438,620, Mar. 30.
Rust, John B.: *See*—
MacKenzie, Charles A., and Rust.
Rutherford, Robert E.: *See*—
Koch, Stanley J., and Rutherford.
Sabaneeff, Sophie, New York, N. Y. Woman's protective hosiery and shoe covering. 2,438,826, Mar. 30.
Saco, Felix, Jr., West Hartford, and W. R. Williamson, assignors to The Maxim Silencer Company, Hartford, Conn. Automatic control for waste heat utilizers. 2,438,719, Mar. 30.
Salmi, Douglas S.: *See*—
Archer, James O., and Salmi.
Sandrik, John J., Chicago, Ill. Hand guard for welding apparatus. 2,438,792, Mar. 30.
Saulnier, Raymond, Paris, France. Construction of retractable landing gear. 2,438,650, Mar. 30.
Schink, Norbert F.: *See*—
Kerr, Ralph W., and Schink.
Schlegel, Charles P., assignor to The Schlegel Manufacturing Company, Rochester, N. Y. Pull clasp. 2,438,651, Mar. 30.
Schlegel Manufacturing Company, The, assignee: *See*—
Schlegel, Charles P.
Schock, Gusmer & Co., Inc., assignee: *See*—
Weiss, Hans H., and Tabacchi.
Schoeppel, John F., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Electric motor structure for gyroscopes. 2,438,621, Mar. 30.
Schouwstra, Pieter, Eindohaven, Netherlands, assignor to General Electric Company, Schenectady, N. Y. Electric gas discharge tube. 2,438,579, Mar. 30.
Schuck, Oscar H., Belmont, Mass., assignor to the United States of America as represented by the Secretary of the Navy. Compensator for doppler effect. 2,438,580, Mar. 30.
Schwarzkopf, Emil, Los Angeles, Calif. Joint for artificial limbs. 2,438,581, Mar. 30.
Scoles, Graham J.: *See*—
Dodds, John M., and Scoles.
Seeburg, J. P., Corporation, assignee: *See*—
Eakins, John F.
Seely Instrument Co., Inc., assignee: *See*—
Sutherland, Eugene B.
Servel, Inc., assignee: *See*—
Andersson, Sven W. E.
Shaffer, Max A.: *See*—
Elvin, William J., Shaffer, and Stahl.
Sharpless, William M., Fair Haven, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Crystal frequency converter. 2,438,521, Mar. 30.
Shaw, Jack, assignee: *See*—
Custin, Thomas G., and Stoneman.
Sheaffer, Warren A.: *See*—
Clark, Charles W., and Sheaffer.
Sheibley, Fred E.: *See*—
Roble, Norman P., and Sheibley.
Shell Development Company, assignee: *See*—
Ballard, Seaver A., and Winkler.
Shoffner, John R., Kittanning, Pa. Dust collector vibrator. 2,438,827, Mar. 30.
Sims, Clair W., Pasadena, Calif. Stencil assembly with removable backing and facing sheets. 2,438,828, Mar. 30.
Singer, Grover C., Brownsville, Tex. Electric lamp. 2,438,684, Mar. 30.
Singer Manufacturing Company, The, assignee: *See*—
Fuge, Harry B.
Wood, Alfred R.
Skolnik, Max, assignor to L. A. Fish, Chicago, Ill. Wheeled carriage. 2,438,829, Mar. 30.
Smith, Edward W., Melrose, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Geometrical computing device. 2,438,522, Mar. 30.
Smith, Marvin M., assignor to Muncie Gear Works, Inc., Muncie, Ind. Deep well circuit for heat pumps. 2,438,720, Mar. 30.
Smith, Roland L., Belmont, Mass. Utility device for signalling waiters in hotel dining rooms, etc. 2,438,652, Mar. 30.
Snadecki, Clarence W., and W. F. Richards, Bethlehem, Pa., assignors to Bethlehem Steel Company. Radiation pyrometer housing for furnaces. 2,438,830, Mar. 30.
Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Meadow, Jacob R., and Reid.
Reiff, Orland M., and Andress.
Solar Aircraft Company, assignee: *See*—
Cairns, Thomas W.
Southerwick, Harold I., assignor to The Do All Company, Des Plaines, Ill. Continuous flow pasteurizer. 2,438,582, Mar. 30.
Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Method of sealing electrical discharge tubes. 2,438,721, Mar. 30.
Spersel, Robert H., assignor to The Whitney Blake Company, Hamden, Conn. Reducing the surface-adhesiveness of articles. 2,438,622, Mar. 30.

Spleth, Benjamin, assignor to Modine Manufacturing Company, Racine, Wis. Heating element and support therefor. 2,438,767, Mar. 30.

Sprunce, Frank P., Jr., assignor to American Chemical Paint Company, Ambler, Pa. Composition for and coating aluminum. 2,438,877, Mar. 30.

Stahl, Elmer R.: *See*—
Elvin, William J., Shaffer, and Stahl.

Standard Oil Development Company, assignee: *See*—
Tyson, Charles W.

Standard Telephones and Cables Limited, assignee: *See*—
Power, Stephen J.

Stange, Ferdinand F., assignor to Foster Machine Company, Westfield, Mass. Yarn winding machine. 2,438,722, Mar. 30.

Stanimir, William, assignor to Victoria Precision Works Company Limited, Montreal, Quebec, Canada. Ski attachment. 2,438,623, Mar. 30.

Steghart, Fritz L., and D. C. Gall, South Norwood, London, S. E. 25, assignors to Tinsley (Industrial Instruments) Limited, London, England. Equipment for carrying out polarographic analysis. 2,438,583, Mar. 30.

Stein, James H.: *See*—
Gibbs, Clifford J., and Stein.

Stelzer, William, Summit, N. J. Hydraulic brake mechanism. 2,438,723, Mar. 30.

Stenglein, Karl, Saginaw, Mich. Apparatus with rotatable head and belt for supporting containers and with means for closing containers. 2,438,624, Mar. 30.

Stephenson, Harry B., Jr.: *See*—
Turbett, Forrest L., and Stephenson.

Sternbach, Leo H., Montclair, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Epimerizing calcium d-arabonate. 2,438,881, Mar. 30.

Sternbach, Leo H., Montclair, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Recovery of ribonolactone. 2,438,882, Mar. 30.

Stevens, Don E., assignor to Hammond Aircraft Company, South San Francisco, Calif. Joining thermoplastic pieces. 2,438,685, Mar. 30.

Stewart, Meredith M., Beacon, assignor to The Texas Company, New York, N. Y. Preparation of nonsintered iron catalyst. 2,438,584, Mar. 30.

Stewart, William A., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Apparatus for varying the frequency of resonant cavities. 2,438,768, Mar. 30.

Stone, Albert R., Baltimore, Md. Multiple motor. 2,438,686, Mar. 30.

Stone, Clifford C., assignee: *See*—
Barks, William.

Stone, Jay C., Clayton, Wash. Raker sharpening gauge. 2,438,687, Mar. 30.

Stoneman, Robert G.: *See*—
Custin, Thomas G., and Stoneman.

Strandlund, Carl G., assignor to Deere & Company, Moline, Ill. Laterally adjustable gang plow. 2,438,625, Mar. 30.

Strickland, Royce M., assignor to The Geometric Tool Company, New Haven, Conn. Collapsing tap. 2,438,626, Mar. 30.

Stuckert, Felix J., Wauwatosa, assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Die-cast piston. 2,438,585, Mar. 30.

Submarine Signal Company, assignee: *See*—
Smith, Edward W.
Waterman, Charles H.

Sulphite Products Corporation, assignee: *See*—
Pearl, Irwin A.

Sulzer Freres, Societe Anonyme, assignee: *See*—
Zollikofer, Otto.

Sutherland, Eugene B., assignor to Seely Instrument Co., Inc., Akron, Ohio. Time cycle controller. 2,438,724, Mar. 30.

Swanson, Earl E., assignor to R. C. Swanson, North Hollywood, Calif. Lap. 2,438,688, Mar. 30.

Swanson, Ruth C., assignee: *See*—
Swanson, Earl E.

Sylvania Electric Products Inc., assignee: *See*—
McCarthy, Henry J.

Sziklai, George C., Princeton, N. J., assignor to Radio Corporation of America. Color analyzing circuit. 2,438,586, Mar. 30.

Sziklai, George C., Princeton, N. J., assignor to Radio Corporation of America. Voltage regulating rectifying circuits. 2,438,831, Mar. 30.

Tabacchi, Steve A.: *See*—
Weiss, Hans H., and Tabacchi.

Tamarin, Abraham H., Chicago, Ill. Dental inlay. 2,438,725, Mar. 30.

Taylor, Augustus H., East Cleveland, Ohio, assignor to General Electric Company. Phototube containing means to counteract negative wall charges. 2,438,587, Mar. 30.

Tecnica Industrial Y Comercial Sociedad Anonima Tecosa, assignee: *See*—
Fabiá, Manuel A. G.

Texaco Development Corporation, assignee: *See*—
Gibbs, Clifford J., and Stein.

Texas Company, The, assignee: *See*—
Goldsby, Arthur R., and Watson.
Stewart, Meredith M.

Theg, Wilfred R., Glasgow, Scotland. Hand truck for heavy articles. 2,438,726, Mar. 30.

Thomas, Asa E., assignor of one-half to J. A. Dunn, Miami, Fla. Colostomy appliance. 2,438,769, Mar. 30.

Thomson, Alex, administrator: *See*—
White, Sidney Y.

Thunell, Karl H.: *See*—
Rost, Helge F., Thunell, Vigren, and Claesson.

Tillman, John E., Stratford, Conn., assignor to General Electric Company. Adjustable mutual coupling. 2,438,770, Mar. 30.

Tinnerman, George A., assignor to Tinnerman Products, Inc., Cleveland, Ohio. Fastening device. 2,438,523, Mar. 30.

Tinnerman Products, Inc., assignee: *See*—
Hartman, Richard A.
Tinnerman, George A.

Tinsley (Industrial Instruments) Limited, assignee: *See*—
Steghart, Fritz L., and Gall.

Tolson, William A., Princeton, N. J., assignor to Radio Corporation of America. System for comparison or analysis of information. 2,438,588, Mar. 30.

Topjian, Daniel, Watertown, Mass. Garment protector. 2,438,771, Mar. 30.

Trans-Lux Corporation, assignee: *See*—
Roth, Bert W.

Trier, Vernon A., London, England. Method and apparatus for atomizing liquids. 2,438,868, Mar. 30.

Trinity Holding Corporation, assignee: *See*—
Bowles, Albert F., and Keegel.

Troubh, Bernard, Portland, Maine. Automatic lighter. 2,438,727, Mar. 30.

Turbett, Forrest L., and H. B. Stephenson, Jr., Joplin, Mo., assignors to The Eagle-Picher Company, Cincinnati, Ohio. Raw material for ceramic glazes. 2,438,524, Mar. 30.

Turner, Alfred H., Collingswood, N. J., assignor to Radio Corporation of America. Oscillator for centimeter waves. 2,438,832, Mar. 30.

Tyson, Charles W., Summit, N. J., assignor to Standard Oil Development Company. Temperature control in fluidized catalyst systems. 2,438,728, Mar. 30.

Union Machine Company, assignee: *See*—
O'Neill, Edward M.

United Aircraft Corporation, assignee: *See*—
Cole, Gilmoure N.
Rockwell, Albert M., and Beaufrere.

United Shoe Machinery Corporation, assignee: *See*—
Ashworth, Fred.

Universal Oil Products Company, assignee: *See*—
Kanhofer, Elmer R.
Linn, Carl B., and Mavity.
Mattox, William J.

Universal Shoe Corporation, assignee: *See*—
Quinn, Arthur H.

Upson, Maxwell M., Englewood, and E. D. Watt, Plainfield, N. J., assignors to Raymond Concrete Pile Company, New York, N. Y. Concrete pile with bulb at lower end. 2,438,729, Mar. 30.

Van de Kamp, Jacob: *See*—
Miller, Stewart M., and Van de Kamp.

Stanimir, William.

Vigren, Sten D.: *See*—
Rost, Helge F., Thunell, Vigren, and Claesson.

Vitarama Corporation, The, assignee: *See*—
Waller, Fred.

Vogel, Max, Bridgeport, Conn. Nailing device and nails inserted thereby. 2,438,793, Mar. 30.

Waara, Otto M., Detroit, Mich. Cabinet with door actuated shelf. 2,438,772, Mar. 30.

Waldman, M. L., assignee, et al.: *See*—
Weiss, Solomon.

Walker, Elwood C., Caldwell, N. J., assignor to Curtiss-Wright Corporation. Electric strain gage. 2,438,589, Mar. 30.

Waller, Fred, Huntington, assignor to The Vitarama Corporation, Huntington Station, Long Island, N. Y. Method and apparatus for projecting motion pictures. 2,438,878, Mar. 30.

Wallis Tin Stamping Company Limited, The, assignee: *See*—
Williams, Arthur J., and Dyson.

Walters, Frederick E., Chicago, Ill. Soldering iron. 2,438,525, Mar. 30.

Walsh, Ralph, assignee: *See*—
Martin, Earnest E.

Walz, Claude W., Avondale, Colo., and C. T. Rasmussen, Moline, and R. D. Grift, Rock Island, assignor to Deere & Company, Moline, Ill. Beet harvester. 2,438,627, Mar. 30.

Ware, Charles M., Salt Lake City, Utah. Scales. 2,438,653, Mar. 30.

Waring, Arthur, Birmingham, England. Packing or sealing ring. 2,438,794, Mar. 30.

Warlick, Sam J., Kiowa, Kans. Ball cleaning and polishing device. 2,438,773, Mar. 30.

Wartes, Lloyd L., Opportunity, Wash. Heat storing hot-air circulating apparatus. 2,438,834, Mar. 30.

Waterman, Charles H., South Portland, Maine, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. System for determining the direction of a source of sound. 2,438,526, Mar. 30.

Watt, Elihu D.: *See*—
Upson, Maxwell M., and Watt.

Watter, Michael, Philadelphia, Pa. Computing device. 2,438,730, Mar. 30.

Weatherhead Company, The, assignee: *See*—
Boyland, Charles H.

Wedeking, Lorenz A., assignor to The Lake Manufacturing Company, Inc., Clear Lake, Iowa. Stock oiler. 2,438,731, Mar. 30.

Weimar, Hans C., assignor to Brown and Sharpe Manufacturing Company, Providence, R. I. Cross-feed mechanism. 2,438,835, Mar. 30.

Weiss, Hans H., and S. A. Tabacchi, Seattle, Wash., assignors to Schock, Gusmer & Co., Inc., Hoboken, N. J. Hop separator. 2,438,590, Mar. 30.

Weiss, Solomon, Cleveland Heights, Ohio, assignor to M. M. Marcus, M. L. Waldman, and S. Weiss. Refrigerated clothes vault. 2,438,869, Mar. 30.

Werner, Le Roy L., Washington, D. C. Conveyor support. 2,438,527, Mar. 30.

Western Electric Company, Incorporated, assignee: *See*—
Larsen, Einer W.
Lundeen, Carl V.

Wheary, George H., Jr., assignor to Wheary, Incorporated, Racine, Wis. Edge guard for hand luggage. 2,438,591, Mar. 30.

Wheary, Incorporated, assignee: *See*—
Wheary, George H., Jr.

Wheeler, Harold A., Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Wave-guide system. 2,438,795, Mar. 30.

White, Sidney Y., deceased, Wilmette, assignor to V. S. Johnson, Chicago, Ill.; A. Thomson, administrator. Electrical condenser. 2,438,592, Mar. 30.

Whitehead, Earl B., assignor to Atlantic Carton Corporation, Norwich, Conn. Carton for vacuum bottle fillers. 2,438,879, Mar. 30.

Whitney Blake Company, The, assignee: *See*—
Sperzel, Robert H.

Whitney, Charles A.: *See*—
Fox, Raymond S., and Whitney.

Wilhelm, Warner F. and Warren F., Chicago, Ill.; said Warner F. Wilhelm assignor to said Warren F. Wilhelm. Method and apparatus for molding and draining concrete. 2,438,528, Mar. 30.

Wilhelm, Warren F.: *See*—
Wilhelm, Warner F. and Warren F.

Williams, Arthur J., Poole, and W. J. Dyson, Bournemouth, assignors of one-third to The Wallis Tin Stamping Company Limited, Poole, England. Container and closure therefor. 2,438,689, Mar. 30.

Williams, Duncan R.: *See*—
Anderson, Frank J., and Williams.

Williams, Paul D., Palo Alto, assignor to Eitel-McCullough, Inc., San Bruno, Calif. Electron tube cathode. 2,438,732, Mar. 30.

Williamson, William R.: *See*—
Saco, Felix, Jr., and Williamson.

Winkler, De Loss E.: *See*—
Ballard, Seaver A., and Winkler.

Wolff, Irving, Merchantville, N. J., assignor to Radio Corporation of America. Pulse echo distance measuring system. 2,438,836, Mar. 30.

Wood, Alfred R., Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Thread pull-off mechanisms for sewing machines. 2,438,833, Mar. 30.

Wood, Henry W.: *See*—
Kendall, John D., Wood, and Majer.

Woodling, George V., Cleveland, Ohio. Sleeve nut coupling. 2,438,529, Mar. 30.

Woodling, George V., Cleveland, Ohio. Coupling member. 2,438,530, Mar. 30.

Wright, Ben W., Mountain Lakes, N. J., assignor to Curtiss-Wright Corporation. Welding method and apparatus. 2,438,593, Mar. 30.

Yerkes, John A., New York, N. Y. Pencil sharpener. 2,438,628, Mar. 30.

Yorke, Robert P., New Orleans, La. Automatic water level control. 2,438,733, Mar. 30.

Zapart, Bruno J., Chicago, Ill., and R. A. Mack, Phoenix, Ariz. Evaporative cooler. 2,438,594, Mar. 30.

Zimmerman, Frank A., Oak Park, Ill. Governor. 2,438,734, Mar. 30.

Zollikofer, Otto, St. Gallen, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland. Positively operating dobby. 2,438,796, Mar. 30.

Zottu, Paul D., Indian Hills, assignor to The Girdler Corporation, Louisville, Ky. High-frequency generator. 2,438,595, Mar. 30.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 30TH DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Downspout hooks and articles formed thereby, Making. M. Rachlin. Re. 22,992, Mar. 30.

LIST OF DESIGN INVENTIONS

Beverage producer, Automatic. H. Richards. 149,146, Mar. 30.
Block, Multiple clothespin. W. T. Christmas. 149,110, Mar. 30.
Bracelet or similar article. A. Katz. 149,128, Mar. 30.
Brassière. P. Amyot. 149,102, Mar. 30.
Brush, Floor. A. L. Le Febvre. 149,134, Mar. 30.
Cabinet for sound reproducing devices. G. Kende. 149,131–2, Mar. 30.
Circulator, Air. J. W. Kisling. 149,133, Mar. 30.
Clothespin. W. H. Coble. 149,111, Mar. 30.
Educational appliance. E. Berman. 149,106, Mar. 30.
Electric switch housing. P. A. Celander. 149,100, Mar. 30.
Film viewer, Photographic. I. J. Grey. 149,123, Mar. 30.
Fishing lure. J. R. Moore. 149,136, Mar. 30.
Frame, Picture. A. G. Golden. 149,120–1, Mar. 30.
Game board, Puzzle. L. D. Gallegos and H. J. Byrnes. 149,118, Mar. 30.
Head, Golf club. L. J. Weatherington. 149,156, Mar. 30.
Head, Sewing machine. W. F. Nessen. 149,137, Mar. 30.
Head, Sewing machine. J. O. Reinecke. 149,145, Mar. 30.
Heater. C. A. Fowler. 149,115, Mar. 30.
Heater, Stock tank. J. K. Newhall. 149,138, Mar. 30.
Helicopter. E. F. Katzenberger and M. E. Glubareff. 149,130, Mar. 30.
Holder, Baby bottle. L. Breslow. 149,108, Mar. 30.
Iron, Electric. A. Troy. 149,153, Mar. 30.
Lamp, Fluorescent desk. J. F. Poor and C. T. Baxter. 149,142, Mar. 30.
Lamp or similar article, Spot. N. E. Hewitt. 149,124, Mar. 30.
Life preserver. B. M. Wilber. 149,158, Mar. 30.
Lighter, Cigarette. A. Saffron. 149,148, Mar. 30.
List finder. A. E. Pollock. 149,141, Mar. 30.
Muff, Ear. E. Schwartz. 149,150, Mar. 30.
Ornament, Automobile hood A. R. Russell. 149,147, Mar. 30.
Pan, Animal watering. P. D. Southworth. 149,151, Mar. 30.
Paper weight, Transparent. J. G. Funfrock. 149,116–17, Mar. 30.
Pin, Lapel. F. J. Pearsall. 149,140, Mar. 30.
Pistol. J. F. Dilie. 149,113, Mar. 30.
Rack, Garden tool. D. McCann, I. Berlin, and F. L. Graham. 149,135, Mar. 30.
Rack, Necktie. A. L. Atkins. 149,103, Mar. 30.
Rack, Shoe. A. S. Darby. 149,112. Mar. 30.
Receptacle for cosmetics and other articles. W. A. Dion. 149,114, Mar. 30.
Reel, Trolling. W. H. Thompson. 149,152, Mar. 30.
Rug. L. Biva. 149,107, Mar. 30.
Setting or similar article, Gem. J. H. Schaeffer. 149,149, Mar. 30.
Shoe or similar article, Men's athletic. R. A. Parker. 149,139, Mar. 30.
Shrine or similar article and case therefor, Combined. W. T. Jones. 149,126, Mar. 30.
Soap and wash cloth display device, Novelty. J. G. Johns. 149,125, Mar. 30.
Spoon or other article of flatware. W. S. Warren. 149,154–5, Mar. 30.
Sulky. A. B. White. 149,157, Mar. 30.
Tailpipe extension, Automobile. G. M. Goodwin. 149,122, Mar. 30.
Toaster. C. Karstadt. 149,127, Mar. 30.
Toy or similar article, Trundle. B. Katz. 149,129, Mar. 30.
Tray, Ash. B. J. Potter. 149,143, Mar. 30.
Tray, Grooming. B. J. Barnett. 149,105, Mar. 30.
Vase or article of similar nature, Wall. C. Potts. 149,144, Mar. 30.
Visor or similar article, Automotive. C. A. Baratelli, T. W. F. Chin, and H. A. Marsh. 149,104, Mar. 30.
Washing machine or similar article. P. E. Geldhof. 149,119, Mar. 30.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 30TH DAY OF MARCH, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrading machine. T. G. Custin and R. G. Stoneman. 2,438,543, Mar. 30.
Adjustable anvil for micrometer calipers. H. Pollitt. 2,438,765, Mar. 30.
Adjustable mutual coupling. J. E. Tillman. 2,438,770, Mar. 30.
Alloy: *See*—
Nonferrous alloy.
Alumina utilizing kaolin, marl, and related materials, Making. F. J. Anderson and D. R. Williams. 2,438,488, Mar. 30.
Anemometer. A. T. Newell. 2,438,674, Mar. 30.
Angle calculator for structural members. J. T. Hogue. 2,438,667, Mar. 30.
Apparatus for inserting valve elements. E. E. Martin. 2,438,642, Mar. 30.
Apparatus for removing random fluctuation from intensity measurements. C. J. Gibbs and J. H. Stein. 2,438,747, Mar. 30.
Apparatus for treatment of travelling materials with fluid media. W. J. Elvin, M. A. Shaffer, and E. R. Stahl. 2,438,549, Mar. 30.
Apparatus for use in erecting masonry. E. G. Malthouse. 2,438,613, Mar. 30.
Apparatus for varying the frequency of resonant cavities. W. A. Stewart. 2,438,768, Mar. 30.
Apparatus with rotatable head and belt for supporting containers and with means for closing containers. K. Stenglein. 2,438,624, Mar. 30.
Articulated ice tray grid. S. W. E. Andersson. 2,438,487, Mar. 30.
Atomizing liquids, Method and apparatus for. V. A. Trier. 2,438,868, Mar. 30.
Auto parts washer. V. N. Albertson. 2,438,654, Mar. 30.
Automatic control for waste heat utilizers. F. Saco, Jr., and W. R. Williamson. 2,438,719, Mar. 30.
Automatic dimpler. E. V. Christensen. 2,438,842, Mar. 30.
Automatic lighter. F. P. Bushman. 2,438,632, Mar. 30.
Automatic lighter. B. Troubh. 2,438,727, Mar. 30.
Automatic water level control. R. P. Yorke. 2,438,733, Mar. 30.
Auxiliary transmission and power take-off, Combined. C. A. Cook. 2,438,539, Mar. 30.
Axial air gap machine. G. R. Anderson. 2,438,629, Mar. 30.
Ball cleaning and polishing device. S. J. Warlick. 2,438,773, Mar. 30.
Band for garments. H. Hardie. 2,438,804, Mar. 30.
Barometric fuze. H. C. Hebard. 2,438,853, Mar. 30.
Basket. W. W. Dale. 2,438,844, Mar. 30.
Bathroom equipment. A. T. Hesse. 2,438,665, Mar. 30.
Bicycle handle. M.-M. Dufaux. 2,438,657, Mar. 30.
Billfold, Secret pocket. M. Becker. 2,438,655, Mar. 30.
Boring attachment. E. W. Jackson. 2,438,607, Mar. 30.
Boring tool assembly, Retractable. W. Coulson. 2,438,741, Mar. 30.
Box: *See*—
Letter box.
Bubble cap structure. T. W. Cairns. 2,438,536, Mar. 30.
Bumper. J. T. Runyan. 2,438,578, Mar. 30.
Butadiene-1,3-acrylonitrile copolymer plasticized with naphthenic acid esters. H. B. Kellog. 2,438,753, Mar. 30.
Cabinet with compartments having interconnected locking means. C. H. Kraft. 2,438,783, Mar. 30.
Cabinet with door actuated shelf. O. M. Waara. 2,438,772, Mar. 30.
Carbon clamp. C. E. Graham. 2,438,803, Mar. 30.
Carbonator. J. O. McMillan. 2,438,714, Mar. 30.
Carburetor. S. F. Hunt. 2,438,702, Mar. 30.
Carriage, Wheeled. M. Skolnik. 2,438,829, Mar. 30.
Carrier: *See*—
Piston wrist pin carrier.
Carroting reagents and process. A. F. Bowles and A. J. Keegel. 2,438,738, Mar. 30.
Cart, Refuse. F. M. Arave and T. W. Nolan. 2,438,596. Mar. 30.
Carton for vacuum bottle fillers. E. B. Whitehead. 2,438,879, Mar. 30.
Cast refractory product. T. E. Field. 2,438,552, Mar. 30.
Cathode-ray tube screen and process. S. J. Koch and R. E. Rutherford. 2,438,668, Mar. 30.
Celery cutter. T. J. Bell. 2,438,598, Mar. 30.
Centrifugally operated switch. H. L. Lambert. 2,438,810, Mar. 30.
Checkerwork for furnaces. J. E. MacDonald. 2,438,814, Mar. 30.
Chuck device, particularly for coal cutting machines. S. Baillie. 2,438,774, Mar. 30.
Chucking machine, Multiple spindle. A. J. Lewis. 2,438,508, Mar. 30.
Circuit: *See*—
Color analyzing circuit.
Electric circuit.
Multiple discharge lamp circuit.
Radio noise rejector circuit.
Circuit control device. J. G. Juhasz. 2,438,609, Mar. 30.
Circuit for electric discharge devices. T. Hehenkamp. 2,438,556, Mar. 30.
Circuit for heat pumps, Deep well. M. M. Smith. 2,438,720, Mar. 30.
Circuit for measuring voltage of an alternating source. R. G. Piety. 2,438,518, Mar. 30.
Circuits for producing electrical impulses at regular recurrence frequencies, Relaxation. J. M. Dodds and G. J. Scoles. 2,438,845, Mar. 30.
Circuits, Voltage regulating rectifying. G. C. Sziklai. 2,438,831, Mar. 30.
Clamp: *See*—
Carbon clamp.
Clamp. L. M. Crook. 2,438,541, Mar. 30.
Clasp, Pull. C. P. Schlegel. 2,438,651, Mar. 30.
Cleaning oil wells and equipment, Method and materials for. P. B. Roberts. 2,438,682, Mar. 30.
Clip: *See*—
Collar clip.
Clips, Terminal. C. J. Fot. 2,438,850, Mar. 30.
Closure for high-pressure vessels. D. P. Meigs. 2,438,513, Mar. 30.
Clutch and brake device for a two-speed axle construction. R. C. Russell. 2,438,620, Mar. 30.
Collar clip. J. R. Palagonia. 2,438,645, Mar. 30.
Color analyzing circuit. G. C. Sziklai. 2,438,586, Mar. 30.
Color process registration table. R. Lawrence. 2,438,639, Mar. 30.
Colostomy appliance. A. E. Thomas. 2,438,769, Mar. 30.
Compact. J. Casalino. 2,438,841, Mar. 30.
Compensator for doppler effect. O. H. Schuck. 2,438,580, Mar. 30.
Composite strip material, Method and apparatus for making. C. A. Mann. 2,438,568, Mar. 30.
Composition for and coating aluminum. F. P. Spruance, Jr. 2,438,877, Mar. 30.
Computing device. M. Watter. 2,438,730, Mar. 30.
Computing device, Geometrical. E. W. Smith. 2,438,522, Mar. 30.
Concentrator having sloping reciprocating table with movable deck. A. B. Bouwer and L. Dorfman. 2,438,775, Mar. 30.
Concrete mixer. M. V. Gilson. 2,438,555, Mar. 30.
Concrete pile with bulb at lower end. M. M. Upson and E. D. Watt. 2,438,729, Mar. 30.
Condenser: *See*—
Electrical condenser.
Connecter: *See*—
Wire connector.
Connector: *See*—
Wire connector.
Construction of retractable landing gear. R. Saulnier. 2,438,650, Mar. 30.
Container and closure therefor. A. J. Williams and W. J. Dyson. 2,438,689, Mar. 30.
Continuous air gage. R. S. Fox and C. A. Whitney. 2,438,696, Mar. 30.
Control mechanism. E. R. Fitch. 2,438,658, Mar. 30.
Control mechanism, Fluid pressure. F. F. Rohrer, Jr. 2,438,683, Mar. 30.
Control mechanism, Transmission. K. M. Armantrout. 2,438,691, Mar. 30.
Controller for electric motors. R. R. Ranson. 2,438,647, Mar. 30.
Conveying mechanism for harvesting machines, Hertzler, Ralph S., Elverson, Pa. 2,438,500, Mar. 30.
Conveyor and excavator, Combined. H. D. Jansen. 2,438,637, Mar. 30.
Conveyor egg washing and drying machine. G. F. Hodson. 2,438,666, Mar. 30.
Conveyor support. L. R. L. Werner. 2,438,527, Mar. 30.
Cooker. R. Groetchen. 2,438,699, Mar. 30.

Cooler: *See*—
Evaporative cooler.
Copolymers of tetrallylsilane. C. A. MacKenzie and J. B. Rust. 2,438,612, Mar. 30.
Copper chromium, arsenic compound for wood preserving. W. McMahon. 2,438,511, Mar. 30.
Copper containing disazo dyestuffs. A. Krèbser and W. Bossard. 2,438,754, Mar. 30.
Coupling: *See*—
Adjustable mutual coupling.
Hose coupling.
Manifold tube coupling.
Sleeve nut coupling.
Coupling member. G. V. Woodling. 2,438,530, Mar. 30.
Cover structure for suitcases, valises, and similar carrying cases. A. Hochner. 2,438,780, Mar. 30.
Cross-feed mechanism. Weimar, Haus C., assignor to Brown and Sharpe Manufacturing Company, Providence, R. I. 2,438,835, Mar. 30.
Cross-field generator. J. W. and W. I. Macfarlane. 2,436,567, Mar. 30.
Cutter: *See*—
Celery cutter.
Crystal frequency converter. W. M. Sharpless. 2,438,521, Mar. 30.
Crystal holder. W. E. Kuenstler. 2,438,708, Mar. 30.
Cyanine dyestuff intermediates. J. D. Kendall. 2,438,705, Mar. 30.
Cyanine dyestuffs. J. D. Kendall. 2,438,782, Mar. 30.
Cylinder, Compound master. A. E. Roy. 2,438,649, Mar. 30.
Decorating pottery ware, Method and apparatus for. W. J. Miller. 2,438,514, Mar. 30.
Dental inlay. A. H. Tamarin. 2,438,725, Mar. 30.
Device for holding articles in roofs of automobiles. R. F. Fowler. 2,438,659, Mar. 30.
Device for locating and following of objects. H. F. Rost, K. H. Thunell, S. D. Vigren, and P. H. E. Claesson. 2,438,576, Mar. 30.
Die-cast piston. F. J. Stuckert. 2,438,585, Mar. 30.
Dispenser. F. De Cesaris. 2,438,602, Mar. 30.
Dispensing apparatus, Liquid. A. L. Grisé. 2,438,698, Mar. 30.
Door and latch for tumbler washers. C. C. Batina. 2,438,597, Mar. 30.
Door lock light. D. B. Dreese. 2,438,847, Mar. 30.
Dough pressing and feeding apparatus. G. N. Le Sage. 2,438,811, Mar. 30.
Drawer pull. E. C. Bullock. 2,438,871, Mar. 30.
Drier: *See*—
Hand drier.
Dropper, Medicine. A. Rothman. 2,438,577, Mar. 30.
Drum for laundry machines, Tumbling. C. C. Batina. 2,438,737, Mar. 30.
Dryer: *See*—
Hand dryer.
Dynamoelectric machine. H. B. Fuge. 2,438,872, Mar. 30.
Edge guard for hand luggage. G. H. Wheary, Jr. 2,438,591, Mar. 30.
Electric circuit. W. H. Bruns. 2,438,535, Mar. 30.
Electric circulating heater. H. F. MacDonald and W. N. Askers. 2,438,670, Mar. 30.
Electric discharge device. T. Hehenkamp. 2,438,557, Mar. 30.
Electric gas discharge tube. P. Schouwstra. 2,438,579, Mar. 30.
Electric heater. J. Neiser. 2,438,861, Mar. 30.
Electric lamp. G. C. Singer. 2,438,684, Mar. 30.
Electric motor structure for gyroscopes. J. F. Schoeppel. 2,438,621, Mar. 30.
Electric strain gage. E. C. Walker. 2,438,589, Mar. 30.
Electric switch operable by alarm clocks. S. Dakoski. 2,438,544, Mar. 30.
Electrical condenser. S. Y. White. 2,438,592, Mar. 30.
Electrical contact brush. E. S. McLarn. 2,438,510, Mar. 30.
Electrical igniter for pot-type liquid fuel burners. M. Resek, T. B. Focke, and J. R. Kirkpatrick. 2,438,823, Mar. 30.
Electrical therapeutic device. F. J. Hart. 2,438,605, Mar. 30.
Electrical treatment apparatus and control. F. Offner. 2,438,875, Mar. 30.
Electrode holder. C. Camilleri. 2,438,840, Mar. 30.
Electromagnetic apparatus. K. H. Fox. 2,438,745, Mar. 30.
Electromagnetic gauge. A. G. and D. B. Ladrach. 2,438,506, Mar. 30.
Electron tube cathode. P. D. Williams. 2,438,732, Mar. 30.
Electrothermal deposition apparatus. W. K. Kearsley. 2,438,561, Mar. 30.
Emulsions, Stabilized silver halide. F. W. H. Mueller. 2,438,716, Mar. 30.
Engine mountings, Forming. R. A. Kropp. 2,438,884, Mar. 30.
Engine nacelle construction. J. S. Johnson. 2,438,806, Mar. 30.
Engraving apparatus. C. V. Lundeen. 2,438,813, Mar. 30.
Epimerizing calcium d-arabonate. L. H. Sternbach. 2,438,881, Mar. 30.
Equipment for carrying out polarographic analysis. F. L. Steghart and D. C. Gall. 2,438,583, Mar. 30.
Evaporative cooler. B. J. Zapart and R. A. Mack. 2,438,594, Mar. 30.
Excavating and loading apparatus. F. Garner. 2,438,660, Mar. 30.
Expansion stud and keeper element. C. V. Booth. 2,438,533, Mar. 30.
Eye speculum. S. T. Pulliam. 2,438,646, Mar. 30.
Fastener stringer and producing the same. L. H. Morin. 2,438,615, Mar. 30.
Fastening device. R. A. Hartman. 2,438,499, Mar. 30.
Fastening device. G. A. Tinnerman. 2,438,523, Mar. 30.
Flim gate. R. H. Larson. 2,438,710, Mar. 30.
Finger exercising machine, Musical automatic. J. Obuchowski. 2,438,820, Mar. 30.
Fuel injection system for internal-combustion engines. L. S. Greenland. 2,438,662–3, Mar. 30.
Fuel oil filling system. F. L. Boylan. 2,438,800, Mar. 30.
Furnace and operating same. F. H. Loftus. 2,438,812, Mar. 30.
Gage: *See*—
Continuous air gage.
Electric strain gage.
Electromagnetic gauge.
Raker sharpening gauge.
Garment protector. D. Topjian. 2,438,771, Mar. 30.
Gas distributing safety device. S. Rattay. 2,438,619, Mar. 30.
Gauge: *See*—
Continuous air gage.
Electric strain gage.
Electromagnetic gauge.
Raker sharpening gauge.
Generator: *See*—
Cross-field generator.
High-frequency generator.
Pulse generator.
Governor. F. A. Zimmerman. 2,438,734, Mar. 30.
Gum, Chewing. E. P. Fenimore. 2,438,551, Mar. 30.
Hair curler. R. J. Mott. 2,438,618, Mar. 30.
Hand dryer. H. W. McLeckie. 2,438,762, Mar. 30.
Hand guard for welding apparatus. J. J. Sandrik. 2,438,792, Mar. 30.
Hand truck for heavy articles. W. R. Theg. 2,438,726, Mar. 30.
Handle: *See*—
Bicycle handle.
Harvester, Beet. C. W. Walz, C. T. Rasmussen, and R. D. Griff. 2,438,627, Mar. 30.
Heat storing hot-air circulating apparatus. L. L. Wartes. 2,438,834, Mar. 30.
Heater: *See*—
Electric circulating heater.
Electric heater.
Rapid electric fluid heater.
Heating element and support therefor. B. Spieth. 2,438,767, Mar. 30.
Higher alkoxy-silicon halides. A. J. Barry. 2,438,736, Mar. 30.
High-frequency generator. P. D. Zottu. 2,438,595, Mar. 30.
High-frequency wave transmitting apparatus. E. F. W. Alexanderson. 2,438,735, Mar. 30.
Highway and street traffic marking and method and apparatus for making same. W. A. Phillips. 2,438,764, Mar. 30.
Hitch. P. H. Harrer. 2,438,749, Mar. 30.
Hitch, Implement. F. M. Fraga. 2,438,553, Mar. 30.
Holder: *See*—
Crystal holder.
Electrode holder.
Hole lapping machine. A. M. Drake. 2,438,695, Mar. 30.
Hop separator. H. H. Weiss and S. A. Tabacchi. 2,438,590, Mar. 30.
Hose coupling. J. W. Hughes. 2,438,750, Mar. 30.
Hosiery and shoe covering, Woman's protective. S. Sabaneeff. 2,438,826, Mar. 30.
House construction, Prefabricated and demountable. H. L. Gogerty. 2,438,604, Mar. 30.
Hydraulic brake mechanism. W. Stelzer. 2,438,723, Mar. 30.
Hydraulic tappet. P. F. Bergmann. 2,438,631, Mar. 30.
Ice removing covering for airfoils. R. G. Campbell. 2,438,693, Mar. 30.
Ignitron welding control. C. Farrow. 2,438,742, Mar. 30.
Impeller mounting. A. M. Rockwell and A. H. Beaufrere. 2,438,866, Mar. 30.
Implement, Fastener-applying. C. M. Lindstrom. 2,438,712, Mar. 30.
Implement, Fastener-applying. A. H. Maynard. 2,438,713, May 30.
Indicating the condition of an atmosphere, Method of and apparatus for. W. F. Ertzman. 2,438,550, Mar. 30.
Inhaler. M. L. Kahn. 2,438,752, Mar. 30.
Injection unit for plastics molding. E. R. Knowles. 2,438,857, Mar. 30.
Ink paste cartridge for ball point fountain pens. D. P. Moore. 2,438,786, Mar. 30.
Innersole and making the same. F. L. Ayers. 2,438,870, Mar. 30.
Iron: *See*—
Soldering iron.
Jack: *See*—
Sliding ladder jack.
Joint for artificial limbs. E. Schwarzkopf. 2,438,581, Mar. 30.

Jumper stick, Hot line. J. W. Garrison. 2,438,746, Mar. 30.
Knife, Gauge. C. E. A. O'Loughlin. 2,438,517, Mar. 30.
Knitting machine. O. Fregeolle. 2,438,697, Mar. 30.
Knot. A. D. Carter. 2,438,537–8, Mar. 30.
Lamp: *See*—
Electric lamp.
Lap. E. E. Swanson. 2,438,688, Mar. 30.
Lens, Tangent cone contact. W. Feinbloom. 2,438,743, Mar. 30.
Letter box. M. McKallick. 2,438,785, Mar. 30.
Levelling tool. N. B. F. Hollander. 2,438,558, Mar. 30.
Light: *See*—
Door lock light.
Lining, Furnace. G. T. Hubbell. 2,438,559, Mar. 30.
Liquid column level. C. C. Leach. 2,438,758, Mar. 30.
Liquid-fuel combustion chamber. W. H. Lindsey and S. Allen. 2,438,858, Mar. 30.
Loop antenna apparatus. W. J. Polydoroff. 2,438,680, Mar. 30.
Lubricating internal-combustion engines. E. Moore. 2,438,816, Mar. 30.
Manifold tube coupling. A. L. Parker. 2,438,679, Mar. 30.
Manufacture of cardboard boxes. H. P. McGovern. 2,438,509, Mar. 30.
Manufacture of catalysts. E. R. Kanhofer. 2,438,560, Mar. 30.
Manufacture of composite steel plates. B. Liebowitz. 2,438,759, Mar. 30.
Manufacture of ceramic materials of high permittivity. E. C. Martin. 2,438,761, Mar. 30.
Manufacture of phenols. C. A. Cross. 2,438,694, Mar. 30.
Manufacture of strain-insensitive steel. H. M. Banta. 2,438,798, Mar. 30.
Measuring system, Pulse echo distance. I. Wolff. 2,438,836, Mar. 30.
Meter mounting. J. L. Ford. 2,438,497, Mar. 30.
Method and material for the production of toy balloons. J. G. Jakobsen. 2,438,854, Mar. 30.
Mineral oil composition. O. M. Reiff and H. J. Andress, Jr. 2,438,876, Mar. 30.
Mitten. H. E. Lindfelt. 2,438,611, Mar. 30.
Mixer: *See*—
Concrete mixer.
Mixing apparatus. E. M. O'Neill. 2,438,574, Mar. 30.
Modifying starch. R. W. Kerr and N. F. Schink. 2,438,855, Mar. 30.
Molding and draining concrete, Method and apparatus for. W. F. and W. F. Wilhelm. 2,438,528, Mar. 30.
Molding machine, Injection. E. R. Knowles. 2,438,856, Mar. 30.
Monitoring and measuring apparatus for frequency modulated signals. R. A. Braden. 2,438,801, Mar. 30.
Motor: *See*—
Multiple motor.
Motor linearly actuated, Geared. C. D. Davidson. 2,438,545, Mar. 30.
Motor fuel power induction device. W. F. Krenzke. 2,438,669, Mar. 30.
Mounting: *See*—
Impeller mounting.
Meter mounting.
Mounting element for machines or the like. R. K. Lee. 2,438,757, Mar. 30.
Multiple discharge lamp circuit. E. Lemmers. 2,438,564, Mar. 30.
Multiple motor. A. R. Stone. 2,438,686, Mar. 30.
Multistage alkylation method. A. R. Goldsby and C. W. Watson. 2,438,852, Mar. 30.
Nailing device and nails inserted thereby. M. Vogel. 2,438,793, Mar. 30.
Nitrated estrogenic hormones. J. B. Niederl. 2,438,819, Mar. 30.
Nonferrous alloy. C. O. Prest. 2,438,863, Mar. 30.
Oil composition, Lubricating. E. S. Blake. 2,438,599, Mar. 30.
Oiler, Stock. L. A. Wedeking. 2,438,731, Mar. 30.
Organic compounds serving as cyanine dyestuff intermediates. J. D. Kendall, H. W. Wood, and J. R. Majer. 2,438,704, Mar. 30.
Oscillator for centimeter waves. A. H. Turner. 2,438,832, Mar. 30.
Pack for use in refrigeration anesthesia. H. E. Moore. 2,438,643, Mar. 30.
Packaging machinery. J. A. Kay. 2,438,809, Mar. 30.
Packing or sealing ring. A. Waring. 2,438,794, Mar. 30.
Packless back-seating valve. C. H. Boylan. 2,438,776, Mar. 30.
Pad: *See*—
Traction pad.
Pad for air cooling devices, Moisture retaining. M. E. Marsalis. 2,438,859, Mar. 30.
Paper bag making machinery. J. Nicholas. 2,438,787, Mar. 30.
Paper box forming apparatus. F. D. Palmer. 2,438,788, Mar. 30.
Pasteurizer, Continuous flow. H. I. Southerwick. 2,438,582, Mar. 30.
Percussive tool. W. H. Dean. 2,438,777, Mar. 30.
Phonograph, Multiselective. J. F. Eakins. 2,438,848, Mar. 30.
Photographic process for producing line images. P. W. Bullock. 2,438,494, Mar. 30.
Photoprint washer. J. Rodack and H. E. Bauer. 2,438,648, Mar. 30.
Phototube containing means to counteract negative wall charges. A. H. Taylor. 2,438,587, Mar. 30.
Piston wrist pin carrier. H. Forster. 2,438,849, Mar. 30.
Plate arrangement for preheaters. R. M. Gates. 2,438,851, Mar. 30.
Plow, Laterally adjustable gang. C. G. Strandlund. 2,438,625, Mar. 30.
Plug and jack box switching unit. M. F. Mohler. 2,438,515, Mar. 30.
Plumbing fixture installation. J. D. Langdon. 2,437,507, Mar. 30.
Plunger. L. Beeh. 2,438,839, Mar. 30.
Pneumatic canopy. C. S. Hulton. 2,438,606, Mar. 30.
Pneumatic switch. J. Mehut. 2,438,512, Mar. 30.
Pneumatic torque machine. L. C. Broecker. 2,438,692, Mar. 30.
Polymers of unsaturated oxy silicols. N. P. Robie and F. E. Sheibley. 2,438,520, Mar. 30.
Polystyrene electric insulating materials. A. A. New. 2,438,516, Mar. 30.
Portable small hand tool vise. K. Bagge. 2,438,797, Mar. 30.
Positively operating dobby. O. Zollikofer. 2,438,796, Mar. 30.
Post, Turret tool. A. R. Oberwegner. 2,438,644, Mar. 30.
Preparation of an alumina-group VI oxide catalyst. W. J. Mattox. 2,438,569, Mar. 30.
Preparation of fat soluble vitamins. L. Freedman. 2,438,554, Mar. 30.
Preparation of nonsintered iron catalyst. M. M. Stewart. 2,438,584, Mar. 30.
Production of organic acids. I. A. Pearl. 2,438,789, Mar. 30.
Production of thiophenols. S. A. Ballard and De L. E. Winkler. 2,438,838, Mar. 30.
Production of toluene by catalytic cracking of monoalkyl benzenes. W. J. Mattox. 2,438,570, Mar. 30.
Projecting motion pictures, Method and apparatus for. F. Waller. 2,438,878, Mar. 30.
Propelier assembly. J. B. Grady. 2,438,661, Mar. 30.
Propeller blade, bearing and seal assembly. M. E. Cushman. 2,438,542, Mar. 30.
Protecting the surface of articles formed from a magnesium alloy. C. W. Clark and W. A. Sheaffer. 2,438,740, Mar. 30.
Protector: *See*—
Garment protector.
Pulse generator. W. A. Knoop, Jr. 2,438,706, Mar. 30.
Pulse to rectangular wave converter. L. L. Lakatos. 2,438,638, Mar. 30.
Purification of dehydrocorticosterone acetate. S. M. Miller and J. van de Kamp. 2,438,715, Mar. 30.
Purifying a hydrocarbon material containing a relatively small amount of an organic fluorine compound. C. B. Linn and J. M. Mavity. 2,438,565, Mar. 30.
Push-button tuning control. A. P. Olesky. 2,438,763, Mar. 30.
Radiation pyrometer housing for furnaces. C. W. Snadecki and W. F. Richards. 2,438,830, Mar. 30.
Radio beacon system, Equisignal. W. J. O'Brien. 2,438,573, Mar. 30.
Radio control apparatus. R. C. Marholz. 2,438,760, Mar. 30.
Radio noise rejector circuit. D. L. Hings. 2,438,501, Mar. 30.
Raker sharpening gauge. J. C. Stone. 2,438,687, Mar. 30.
Rapid electric fluid heater. L. A. Rehard. 2,438,865, Mar. 30.
Raw material for ceramic glazes. F. L. Turbett and H. B. Stephenson, Jr. 2,438,524, Mar. 30.
Refrigerated clothes vault. S. Weiss. 2,438,869, Mar. 30.
Regulator: *See*—
Speed regulator.
Remote-control generator circuit. C. Farrow. 2,438,634, Mar. 30.
Removable sanitary belt tab. S. D. Postlethwaite 2,438,790, Mar. 30.
Resilient sealing disc for bottle seals. J. M. B. Marana. 2,438,671, Mar. 30.
Riboflavin solution. M. F. Furter and M. Hoffer. 2,438,880, Mar. 30.
Ribonolactone, Making. L. A. Flexser. 2,438,883, Mar. 30.
Ribonolactone, Recovery of. L. H. Sternbach. 2,438,882, Mar. 30.
Rolling hatch beam assembly. J. G. Deegan. 2,438,846, Mar. 30.
Rope. S. A. Reed. 2,438,864, Mar. 30.
Rotary tiller tooth and mounting. R. A. Kropp. 2,438,707, Mar. 30.
Sack, Fruit picker's. C. G. Miller. 2,438,860, Mar. 30.
Safety shear-pin drive. F. H. and A. G. Nickle. 2,438,676, Mar. 30.
Sawmill, Log- and carriage-locking swinging-saw. E. Lambert. 2,438,610, Mar. 30.
Scales. C. M. Ware. 2,438,653, Mar. 30.
Seal for electric discharge devices and manufacture. E. Kettlewell. 2,438,562, Mar. 30.
Sealing electrical discharge tubes. P. L. Spencer. 2,438,721, Mar. 30.
Selector. B. W. Roth. 2,438,825, Mar. 30.

Separation of asphalt from hydrocarbons. J. R. Meadow and E. E. Reid. 2,438,874, Mar. 30.
Separator: *See*—
Hop separator.
Sewing machine. M. G. Ivandick. 2,438,636, Mar. 30.
Shackle, Poultry. G. W. Johnson. 2,438,608, Mar. 30.
Shank, Extensible tool. J. Condor. 2,438,633, Mar. 30.
Sharpener, Knife. J. R. Reese. 2,438,681, Mar. 30.
Sharpener, Pencil. J. A. Yerkes. 2,438,628, Mar. 30.
Shelf. R. O. Hunt. 2,438,505, Mar. 30.
Shoe and making same, Platform type. A. H. Quinn. 2,438,821, Mar. 30.
Shoe tree. E. H. Greenberg. 2,438,748, Mar. 30.
Shoe with detachable upper. R. A. and G. M. Leach. 2,438,711, Mar. 30.
Shrouds on impellers, Assembling. A. M. Rockwell and A. H. Beaufrere. 2,438,867, Mar. 30.
Siding tool. M. Rifenberg. 2,438,766, Mar. 30.
Sight for firearms, Adjustable. G. F. Davis. 2,438,601, Mar. 30.
Signaling system. H. M. Bascom, R. F. Massonneau, B. Ostendorf, Jr., and W. T. Rea. 2,438,492, Mar. 30.
Ski attachment. W. Stanimir. 2,438,623, Mar. 30.
Sleeve nut coupling. G. V. Woodling. 2,438,529, Mar. 30.
Sliding ladder jack. A. A. Russell. 2,438,791, Mar. 30.
Soldering iron. F. E. Walters. 2,438,525, Mar. 30.
Spark arrester frame for locomotives. B. H. Pedigo. 2,438,862, Mar. 30.
Speed regulator. P. Kemeny. 2,438,703, Mar. 30.
Spinner. S. Nalick. 2,438,817, Mar. 30.
Splint, Heel bone traction. L. E. Hansberry. 2,438,664, Mar. 30.
Spreader, Floor paste wax. A. Corrêa. 2,438,843, Mar. 30.
Stabilized hypochlorite solutions and process therefor. J. Kamlet. 2,438,781, Mar. 30.
Stabilizer for spring mounted vehicles. G. Maxon, Jr. 2,438,571, Mar. 30.
Starting control for coin counting machines. E. W. Quirk and A. R. Buchholz. 2,438,822, Mar. 30.
Steel, Alloyed. G. R. Rich. 2,438,824, Mar. 30.
Stencil assembly with removable backing and facing sheets. C. W. Sims. 2,438,828, Mar. 30.
Stop device for pull apart sliders for separable fasteners. L. H. Morin. 2,438,614, Mar. 30.
Storm attachment for high line tools. D. C. Hubbard. 2,438,504, Mar. 30.
Strand display and transfer reel, Combined. E. P. Hoyle. 2,438,505, Mar. 30.
Stretching or shaping socks and similar foot coverings. N. Barker. 2,438,531, Mar. 30.
Support: *See*—
Conveyor support.
Support for engine cooling fans. G. N. Cole. 2,438,540, Mar. 30.
Supporting structure. H. Long. 2,438,566, Mar. 30.
Surface-adhesiveness of articles, Reducing the. R. H. Sperzel. 2,438,622, Mar. 30.
Switch: *See*—
Centrifugally operated switch.
Pneumatic switch.
Wafer switch.
Switch assembly. E. L. Lees. 2,438,640, Mar. 30.
Switch for single trace observance, Beam. C. Puckette, Jr. 2,438,717, Mar. 30.
Swivel connection. L. G. Ehmann. 2,438,548, Mar. 30.
Synchronizing bomb sight. T. H. Barth. 2,438,532, Mar. 30.
Synchronous repeater unit. D. W. Bloser. 2,438,799, Mar. 30.
System for comparison or analysis of information. W. A. Tolson. 2,438,588, Mar. 30.
System for determining the direction of a source of sound. C. H. Waterman. 2,438,520, Mar. 30.
Table: *See*—
Color process registration table.
Tank, Bait. W. H. Burruss. 2,438,739, Mar. 30.
Tap, Collapsing. R. M. Strickland. 2,438,626, Mar. 30.
Telephone system employing key type call transmitter. G. Deakin. 2,438,496, Mar. 30.
Temperature control in fluidized catalyst systems. C. W. Tyson. 2,438,728, Mar. 30.
Terminal, Cable. V. J. Andrew. 2,438,489, Mar. 30.
Terminal structure for refrigerating apparatus. A. A. McCormack. 2,438,572, Mar. 30.
Tetralyl compounds. F. D. Jones. 2,438,751, Mar. 30.
Thermionic tube having secondary electron emissive electrode with surface and form variations. E. Labin and M. J. Kobilsky. 2,438,709, Mar. 30.
Thermistor circuit interrupter control system responsive to load circuit conditions. P. K. Chatterjea. 2,438,495, Mar. 30.
Thermocouple for pilot burners. W. A. Ray. 2,438,575, Mar. 30.
Thermoplastic pieces, Joining. D. E. Stevens. 2,438,685, Mar. 30.
Thread finger for shoe sewing machines. F. Ashworth. 2,438,491, Mar. 30.
Thread pull-off mechanisms for sewing machines. A. R. Wood. 2,438,833, Mar. 30.
Throttle control system. D. H. Andrews, Jr., and D. E. Lipfert. 2,438,690, Mar. 30.
Throttle control system. D. E. Lipfert. 2,438,718, Mar. 30.
Time cycle controller. E. B. Sutherland. 2,438,724, Mar. 30.

Wave-guide system. H. A. Wheeler. 2,438,795, Mar. 30.
Welding control system. J. L. Ashford and W. A. Billings. 2,438,490, Mar. 30.
Welding method and apparatus. B. W. Wright. 2,438,593, Mar. 30.
Well tool. T. E. McMahan. 2,438,673, Mar. 30.
Wiper or die for use in the coating of wires. H. C. Hoban. 2,438,700, Mar. 30.
Wire connector. H. L. Gordon. 2,438,779, Mar. 30.
Yarn winding machine. F. F. Stange. 2,438,722, Mar. 30.

CLASSIFICATION OF PATENTS

ISSUED MARCH 30, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1— 3: 2,438,713
46: 2,438,793

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

WEST DISINFECTING COMPANY
v.
CLIFF C. OWEN

No. 5367. Decided January 6, 1948

[165 F.2d 450; 76 USPQ 315]

1. TRADE-MARKS—CANCELLATION—MEDICINES—GOODS OF THE SAME DESCRIPTIVE PROPERTIES.
Where the goods of the parties are used as a medicine, though one is used externally and the other internally, they are drugs within the meaning of that term as defined by the lexicographers, *Held* that the goods of the parties possess the same descriptive properties.

2. SAME—SAME—SAME—"O-N" AND "CN" CONFUSINGLY SIMILAR.
Since the goods of the parties possess the same descriptive properties, *Held* that the marks "O-N" and "CN" on a black background are so similar as to cause confusion in the mind of the public as to the origin of the goods of the respective parties.

3. SAME—SAME—SEC. 19 OF TRADE-MARK ACT OF 1946—LACHES OR ESTOPPEL.
Where it affirmatively appears from the record that appellee had no knowledge, actual or implied, of the use of appellant's trade-mark on its goods until substantially four years after appellee's trade-mark was registered, and many years subsequent to the registrations of appellant's trade-mark, at which time appellee received a letter notifying him of appellant's trade-mark for use on its goods, *Held* that the elements of estoppel whereby appellee may have been injured or caused to believe that he had a right to use his registered mark, are not present.

4. SAME—SAME—SAME—SAME.
It is well settled that before the doctrine of laches may be applied, something more than a mere lapse of time must exist.

5. SAME—SAME—SEC. 15 OF THE TRADE-MARK ACT OF 1946—INCONTESTABILITY.
Though appellee's mark has been used for more than five years, it had not been registered under the act of 1946, and, therefore, the provisions of that act as to incontestability is not a proper issue in this case.

6. SAME—SAME—"O-N" FOR COLD PREPARATION.
Held that "O-N" on a black background for use on preparations for colds is confusingly similar to "CN" on a black background for use on drugs and chemicals, and that the decision of the Commissioner of Patents is reversed.

APPEAL from the Patent Office. Cancellation No. 4382.

REVERSED.

Harvy B. Jacobson (*J. Edward Burch* of counsel) for West.

Lestler L. Sargent (*Charles R. Allen* of counsel) for Owen.

HATFIELD, *J.*:

This is an appeal in a trade-mark cancellation proceeding from the decision of the Commissioner of Patents, 69 USPQ 439, reversing the decision of the Examiner of Interferences sustaining appellant's petition for the cancellation of appellee's registered mark "O-N," on a black background, for use on preparations for colds.

Appellee's mark, registration No. 377,500, was registered May 7, 1940, under the Trade-Mark Act of February 20, 1905, on an application filed November 4, 1939.

Appellant's petition for cancellation was filed April 13, 1944, pursuant to section 13 of the Trade-Mark Act of February 20, 1905, and involves the confusion-in-trade clause of section 5 of that act.

In its petition for cancellation, appellant alleged that it had used the trade-mark "CN," on a black background, since about July 15, 1899; that its mark was registered July 21, 1903, registration No. 40,795, on an application filed June 10, 1903, for use on drugs and chemicals, which registration was renewed August 8, 1905, registration No. 45,143, on an application filed April 26, 1905, for use on similar goods; and that its trade-mark was also registered August 2, 1932, on an application filed March 2, 1931, registration No. 296,198, for use on

Air-purifying preparations, antiseptics, antiseptic preparations, animal dips, deodorants, deodorizing preparations, disinfectants, liquid disinfectants, disinfecting preparations, germicides; insecticides in liquid, powder, and solid form; chemical preparations for use in disinfecting and cleaning bowls, pipes, etc.; chemical preparations for air-purifying purposes * * *.

It is further alleged in appellant's application for cancellation that the goods of the parties possess the same descriptive properties; that the marks of the parties are confusingly similar; and that appellant deems itself injured by the registration of appellee's trade-mark.

In answer to appellant's petition for cancellation, appellee stated that he was not informed as to many of the allegations contained in appellant's petition for cancellation, and denied that appellant was entitled to the exclusive use of its mark "CN" for use on drugs and chemical preparations and goods of like character.

It may be stated at this point that the only issue raised in the Patent Office and in the briefs of counsel for appellee, prior to the oral arguments in this court, was whether the trade-marks of the parties were confusingly similar when used on their respec-

Vol. 608 • No. 5 Tuesday, March 30, 1948 Price $16 per year

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

tive goods. At the time of the oral arguments in this court, the question was raised from the bench as to whether the Trade-Mark Act of July 5, 1946 (effective July 5, 1947), was applicable to the issues here involved, and specifically whether section 47(b) and section 19 of that act should be considered by this court, in view of the record here presented. Counsel for appellee were in disagreement as to the application of that act to the issues here involved. A supplemental brief was filed by counsel for appellee in which it was stated by Mr. Lester L. Sargent, one of counsel for appellee, that the new trade-mark act had application to the issues here involved, particularly section 19 of that act relating to laches; whereas Mr. Charles R. Allen, according to the supplemental brief of counsel for appellee, disagreed with Mr. Sargent as to the application of the provisions of that section.

The first question for our consideration is whether the marks of the parties are confusingly similar as used on their respective goods.

It appears from the record that at the time appellee filed his application for registration he, in accordance with Rule 31 of the Rules of Practice in the United States Patent Office, filed a specimen, or facsimile, of the mark as actually used on his goods. It appears, therefrom, that appellee's mark "O-N" was used on a medicinal preparation for coughs due to colds, which preparation included a variety of ingredients, such as beachwood creosote, an oily antiseptic liquid used both externally and internally as an antiseptic. See Webster's New International Dictionary, 2nd edition, 1939, and United States Dispensatory, 23rd edition, 1943, page 352. It also appears from the specimen that appellee's cold preparation is "MENTHOLATED-CREOSOTED."

It further appears from the record that appellant's mark "CN" has been continuously used by appellant since about July 15, 1899, on drugs and chemicals and, as hereinbefore stated, its mark was registered July 21, 1903, which registration was renewed August 8, 1905, for use on drugs and chemicals, and that appellant's trade-mark was also registered August 2, 1932, for use on various preparations hereinbefore set forth.

The term "drugs" is defined by lexicographers as "Any substance used as a medicine, or in the composition of medicine (Webster's New International Dictionary, 1932), or in making medicines (Webster's New International Dictionary, 2nd edition, 1939), *for internal or external use:* * * *" [Italics ours.]

The Examiner of Interferences was of opinion that the goods of the parties belonged to the "class of medicinal or pharmaceutical preparations which would be reasonably likely to have a common source of personal origin," and that the goods possessed the same descriptive properties. In support of that conclusion, the Examiner cited the case of *Campbell Products, Inc.* v. *John Wyeth & Bro., Inc.*, 31 CCPA (Patents) 1217, 143 F.2d 977, 62 USPQ 302, 568 O. G. 376, where it was held that a non-poisonous colloidal aluminum-hydroxide fortified with "Novatropine" (homatropinemethylbromide), used internally for the treatment of peptic ulcers and gastric hyperacidity on the one hand, and poisonous externally-applied lotion for treatment of skin-disease impetigo on the other hand, possessed the same descriptive properties. The Examiner further held that the trade-marks were confusingly similar, and, accordingly, sustained appellant's petition for cancellation of appellee's trade-mark.

The Commissioner of Patents, on appeal, stated that in view of our decision in the case of *Mulhens & Kropff, Inc.* v. *Adolph C. Onnen*, 17 CCPA (Patents) 831, 37 F.2d 435, 4 USPQ 150, 394 O. G. 9, it might be properly held that the goods of the parties did not possess the same descriptive properties. He further stated, however, that in the decision in the case of *Vick Chemical Co.* v. *Central City Chemical Co.*, 22 CCPA (Patents) 996, 75 F.2d 517, 24 USPQ 386, 456 O. G. 505, it was held that medicated salve, nose and throat drops, and medicated cough drops on which appellant there used the trade-mark "Vicks" possessed the same descriptive properties as insecticides on which appellee used the trade-mark "Lix," but that as the court in that case held that considering the difference in the goods and the difference in the marks, the marks were not confusingly similar, he was of opinion that considering the difference in the goods of the respective parties in the instant case, and the difference in the involved marks, there was no likelihood of confusion by the concurrent use of the parties of their respective marks on their goods. The Commissioner further stated that appellee had used his mark on his goods for "nearly twenty years," that there was no evidence of actual confusion between the marks of the parties; that appellee's mark is a "valuable business asset" and that his registration should not be lightly canceled and, accordingly, reversed the decision of the Examiner of Interferences.

It is true, as argued by counsel for appellee, and as held by the Commissioner, that there is a difference in the goods of the parties and that there is also a difference, although slight, in the marks of the parties. However, we are of opinion, as was the court in the case of *Vick Chemical Co.* v. *Central City Chemical Co.*, supra, that the goods of the parties possesses the same descriptive properties.

[1] Drugs are substances used as a medicine, although appellee's goods are used internally, whereas appellant's goods are used externally. Each, however, as hereinbefore observed, has antiseptic properties.

It appears from the record that appellant's product was advertised for use as a gargle and mouthwash (see Exhibit 14) for at least ten years prior to the taking of the testimony in this case—August 1944. It further appears from the evidence that the goods of the parties are advertised in various magazines and over the radio, although apparently their advertisements over the radio are somewhat limited in scope; that appellant's sales in 1943 amounted to $368,354; that appellant's goods were sold throughout the United States; that from 1939 to the time of the taking of the testimony, appellant expended approximately $356,422 in advertising its goods and its trade-mark, and that during the same period its sales amounted to approximately $1,774,000; that appellee sold his goods, including his antiseptic, throughout the southeastern part of the United States only; that his sales amounted to $82,000 during the year 1943; and that his sales during 1944 increased about fifteen per centum over his sales in 1943.

[2] It is evident that the goods of the parties are used as a medicine and that they are drugs within the meaning of that term, as defined by the lexicographers. Furthermore, it appears from the record that appellee, in the natural course of his business, extended the use of his trade-mark "O-N" to an antiseptic for external use and, as is stated in the record, his antiseptic will usually relieve "discomfort due to athlete's foot, poison oak, mosquito bites * * * and other simple skin irritation in a few minutes." Accordingly, appellee was of opinion that an antiseptic for external use possessed the same descriptive properties as a preparation for colds, upon which he used his trade-mark "O-N." Furthermore, as we interpret appellee's testimony, it would be a natural thing for one engaged in the manufacture of antiseptics to produce a medicinal preparation for coughs due to colds.

It further appears from the record that for twenty-eight years prior to appellee's adoption and use of the trade-mark "O-N" on his product, appellant had used its mark "CN" on drugs and chemicals, including antiseptics for external use, and had registered its mark twenty-four years prior to appellee's adoption and use of his mark, and thirty-seven years prior to the date of appellee's registration. We are of opinion, therefore, for the reasons hereinbefore stated, that the goods of the parties possess the same descriptive properties, and that the marks "O-N" and "CN" are so similar as, in our opinion, to cause confusion in the mind of the public as to the origin of the goods of the respective parties.

We come now to a consideration of whether the application of section 19 of the Trade-Mark Act of July 5, 1946 (effective July 5, 1947), Chap. 540, 60 Stat. L. 427 et seq., is applicable to the issues here involved. It is argued in the supplemental brief filed by counsel for appellee, Lester L. Sargent, in which his associate counsel, Charles R. Allen disagrees, that as appellee's trade-mark was used for more than five years prior to the petition for cancellation, the registration was incontestable under that act, and that laches on the part of appellant should be taken into consideration.

[3] It affirmatively appears from the record that appellee had no knowledge, actual or implied, of the use of appellant's trade-mark on its goods until April 1944, substantially four years after appellee's trade-mark was registered, and many years subsequent to the registrations, as hereinbefore noted, of appellant's trade-mark, at which time appellee received a letter notifying him of appellant's trade-mark for use on its goods, although appellee's trade-mark was registered May 7, 1940. It is obvious, therefore, that the element of estoppel whereby appellee might have been injured or caused to believe that he had a right to use his registered mark because of the delay on the part of appellant in filing its cancellation proceeding or otherwise objecting to the use of appelleee's mark, is not present in the instant case. Furthermore, the elements of estoppel whereby appellee may have been injured through the delay by the proceedings here involved, are wholly absent in this case. [4] It is well settled that before the doctrine of laches may be applied, something more than a mere lapse of time must exist. See *Menendez* v. *Holt*, 128 U. S. 514, 523; *Johnston* v. *Standard Mining Co.*, 148 U. S. 360, 370; and *Standard Oil Co.* v. *Michie*, 34 F.2d 802, 804. It should be recalled that the cancellation proceeding here involved was filed under the provisions of section 13 of the Trade-Mark Act of February 20, 1905.

[5] One of counsel for appellee, as hereinbefore noted, argues that as appellee's mark has been used for more than five years, it is incontestable under section 15 of the Trade-Mark Act of July 5, 1946 (effective July 5, 1947). It may be observed in this connection that appellee's trade-mark has not been registered under that act and, therefore, the provisions as to the incontestability of appellee's mark is not a proper issue in this case.

The issues in the instant case are clearly distinguishable from our decision in the case of *Edward A. Willson (Grafo Colloids Corp., Joined)* v. *Graphol Products Co., Inc.*, Patent Appeal No. 5363, decided concurrently herewith, where it was held that, owing to the state of the record there presented, the question of laches, as provided in section 19 of the Trade-Mark Act of July 5, 1946 (effective July 5, 1947), was a proper issue in the case and, for that reason, the case was reversed and remanded.

Although counsel for appellee suggest that section 19, supra, relating to laches, has application to the issues here involved, they do not suggest that should the case be remanded to the Patent Office they might introduce evidence relating to that issue.

[6] For the reasons stated, the decision of the Commissioner of Patents is reversed.

REVERSED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

U. S. Court of Customs and Patent Appeals

WILLSON ET AL.

v.

GRAPHOL PRODUCTS CO. INC.

No. 5363. Decided January 6, 1948

[— F.2d —; 76 USPQ 312]

1. TRADE-MARKS—CANCELLATION—APPLICABILITY OF SECTIONS 19, 46(a) AND 47(b) OF THE TRADE-MARK ACT OF 1946.

The application of section 19 of the Trade-Mark Act of 1946 is controlled by sections 46(a) and 47(b).

2. SAME—SAME—SAME.

The expression in section 46(*a*)—"except as otherwise herein specifically provided"—limits the language appearing in section 47(*b*)—"if it be of the opinion that the provisions of this act are applicable to the subject matter of the appeal"—; therefore, the appellate courts must first be convinced that the applicability of any section of the new act to a pending appeal is specifically provided for in the statute before they may properly make such application. That specific authorization is contained in section 19 providing for the consideration and applicability of equitable principles in proceedings—"heretofore begun in the Patent Office and not finally determined".

3. SAME—SAME—SECTION 19 OF THE TRADE-MARK ACT OF 1946 CONSTRUED.

In the present inter partes proceedings, it is clear that they were begun in the Patent Office prior to the effective date of the new trade-mark act, July 5, 1947, and have not been finally determined because of the appeal to this court; therefore, if, in our opinion, the provisions of the new act are applicable to the subject matter of the appeal herein, we may apply section 19 in the light of section 47(*b*).

4. SAME—SAME—SAME—LACHES.

If registrations in the Patent Office are to be considered as public records, it would appear that appellee might be deemed to have had constructive notice of them as of the dates thereon, and if knowledge is to be presumed by reason of such notice, and appellee knowingly stood idly by for about ten years during which time appellants innocently conducted, developed and advertised their business, it would seem that the doctrine of laches could apply. Appellants alleged such delay and damage to them as constituting a bar to the prosecution of the cancellation proceedings, and that allegation was not denied by appellee. Ordinarily, affirmative allegations in a pleading not traversed by the adverse party are considered as admitted.

5. SAME—SAME—SAME—SAME.

Prior to the effective date of the Trade-Mark Act of 1946 the defense of laches per se was not available either in the Patent Office or in this court. Probably, if that defense had been proper under the old act, the allegation of laches would have been traversed by appellee and the issue raised thereon would have been tried and decided by the tribunals of the Patent Office on a more extended record.

6. SAME—SAME—SAME—SAME.

Held that appellant's allegation of damage coupled with the alleged unreasonable delay which might constitute laches is a proper subject matter in this appeal and should invoke the application of the new act; and *Held* that because of the state of the record, we deem it proper to remand the cause to the Commissioner for the purpose of taking such additional evidence as counsel for the parties may desire.

APPEAL from the Patent Office. Cancellations Nos. 4389 and 4391.

REMANDED.

William B. Jaspert for Willson.

Cushman, Darby & Cushman (*John J. Darby* and *William M. Cushman* of counsel) for Graphol.

JACKSON, *J.*:

This appeal is from a decision of the Commissioner of Patents, 69 USPQ 18, affirming decisions of the Examiner of Interferences in two cancellation proceedings. The cases were submitted on a single record and were consolidated for appeal to the Commissioner. They are before us as a single case and will be so decided.

On September 4, 1934, registration No. 316,676 of the trade-mark "Grafo" as applied to "Lubricating Oil Compound" was granted appellant, Edward A. Willson, doing business under the trade name of Grafo Lubricating Company. Continuous use of the mark was stated to have begun August 9, 1933. Doing business under the same name, he was granted registration No. 310,077 for the mark "Grafolube" as applied to "Lubricating Oil Compounds" on February 13, 1934, stating the mark had been continuously used since August 9, 1933. Subsequently, the two marks were assigned by him to the Grafo Lubricants Corporation, the name of which was later changed to Grafo Colloids Corporation. After the taking of testimony, and prior to the decisions of the Examiner of Interferences, it was agreed by stipulation that Grafo Colloids Corporation should be considered as a party-respondent.

Appellee is the owner of registration No. 194,841 for the mark "Graphol." The mark was registered January 27, 1925, as applied to "Rust Solvent and Penetrating Lubricant." Continuous use was stated to be since January 1922.

On May 4, 1944, about ten years subsequent to the dates of appellants' registrations, appellee filed petitions to cancel them pursuant to section 13 of the Trade-Mark Act of 1905 (U. S. C., title 15, Sec. 95).

The allegations in the petitions relate to the confusion-in-trade clause of section 5 of the act as the statutory ground for negativing appellants' right to registration, and there is the further allegation that the marks had been abandoned.

In answers to the petitions, it is admitted that the goods of the parties are of the same descriptive properties, but in all other respects the allegations of appellee are denied. In one of the affirmative defenses, appearing in the answers, it is alleged that appellee is barred by laches, and, therefore, has lost the right to institute cancellation proceedings, and that appellants would be injured if deprived of the use of their marks. The affirmative defenses were not traversed by appellee who, relying upon its registration date to establish priority of use of its mark, took no testimony. Appellant took testimony.

Appellant Willson, the only witness, testified that the marks of appellants have been in continuous use since August 9, 1933, and have not been abandoned; that he knew of no actual confusion between appellants' marks and other marks applied to lubricating oils and greases; that he knew of no instance where a purchaser of lubricating oils and greases had mistaken appellants' trade-marked product for that of another manufacturer; that appellants' products, bearing their trade-marks, have never been confused with the product to which appellee's mark is applied.

It was shown that the marks of appellants have been nationally advertised in the Thomas Register of American Manufacturers, a trade journal entitled "Jobber Topics" and a magazine entitled "Purchasing," since 1935; that the products bearing its said marks are sold in 56 cities and 19 states of this country and in Spain, Australia and Canada; that the dollar volume of sales for the year 1944 was $58,000.00; that the average sales prior to the recent war amounted to approximately $30,000.00 per year;

and the witness stated that it would cost appellants many thousands of dollars and cause irreparable loss to their business if they were forced to change their marks.

The tribunals of the Patent Office held that the marks of appellants so closely resemble the mark of appellee that, when used on goods of admittedly the same descriptive properties, they would be likely to cause confusion in trade and deception of purchasers, and, therefore, concluded that appellee was entitled to have its petitions for cancellation granted.

In its appeal to the Commissioner, appellants not only predicated error in the Examiner's holding on the merits, but also on the ground that the Examiner did not hold appellee to have been barred by laches.

While neither the Examiner of Interferences nor the Commissioner gave any consideration to appellants' affirmative defense of laches, and while no allegation of error in that respect appears in the reasons of appeal to this court, appellants in their main brief citing sec. 47(*b*), Title XX of the Trade-Mark Act of 1946 (effective July 5, 1947), assert that we should apply the provisions of that act and remand the case to the Commissioner for the taking of additional evidence, or for a new trial, or for reconsideration of the decision appealed from on the present record by application of section 19 of the act.

Appellee in its main brief asserts that since there is no evidence of its knowledge of the use of appellants' marks, that laches cannot apply; and that even if such evidence were established it would be no bar to appellee's right to cancellation, citing the case of *White House Milk Products Co.* v. *Dwinell-Wright Co.*, 27 CCPA (Patents) 1194, 111 F.2d 490, 493, 45 USPQ 444, 520 O. G. 266. It contends that the Trade-Mark Act of 1946 can have no application here because the proceedings were instituted pursuant to the Trade-Mark Act of 1905, and were decided by both the Examiner and Commissioner accordingly. It pointed out that appellants' registrations were granted under the former act and admittedly had not been transferred to the principal register provided for in the act of 1946, nor had they applied for transfer to that register.

[1] At the time of argument, we granted the parties permission to file supplemental briefs on the question of whether or not section 19 of the Trade-Mark Act of 1946 is applicable. Such briefs were filed and they amplify the arguments of the parties appearing in their main briefs with respect to laches.

Section 19 reads as follows:

Sec. 19. In all inter partes proceedings equitable principles of laches, estoppel, and acquiescence, where applicable may be considered and applied. The provisions of this section shall also govern proceedings *heretofore begun in the Patent Office and not finally determined.* [Italics ours.]

The application of that section, we think, is controlled by sections 46(*a*) and 47(*b*). The part of section 46(*a*) that we deem material here reads as follows:

Sec. 46(*a*). This act shall be in force and take effect one year from its enactment, *but except as otherwise herein specifically provided shall not affect any suit, proceeding, or appeal then pending.* [Italics ours.]

Section 47(*b*) reads as follows:

Sec. 47(*b*). In any case in which an appeal is pending before the United States Court of Customs and Patent Appeals or any United States Circuit Court of Appeals or the United States Court of Appeals for the District of Columbia or the United States Supreme Court at the effective date of this act [July 5, 1947], the court, *if it be of the opinion that the provisions of this act are applicable to the subject matter of the appeal,* may apply such provision or may remand the case to the Commissioner or to the district court for the taking of additional evidence or a new trial or for reconsideration of the decision on the record as made as the appellate court may deem proper. [Italics ours.]

[2] It appears to us that the expression in section 46(*a*), supra, "* * * except as otherwise herein specifically provided * * * limits the language appearing in section 47(*b*), supra, "* * * if it be of the opinion that the provisions of this act are applicable to the subject matter of the appeal, * * *." Therefore, the appellate courts must first be convinced that the applicability of any section of the new act to a pending appeal is specifically provided for in the statute before they may properly make such application. That specific authorization is contained in section 19, supra, providing for the consideration and applicability of equitable principles in proceedings "* * * heretofore begun in the Patent Office and not finally determined."

[3] In the present inter partes proceedings, it is clear that they were begun in the Patent Office prior to the effective date of the new trade-mark act, July 5, 1947, and have not been finally determined because of the appeal to this court. Therefore, if, in our opinion, the provisions of the new act are applicable to the subject matter of the appeal herein, we may apply section 19 in the light of section 47(*b*), supra.

[4] The petitions herein were not filed until about ten years subsequent to the dates of appellants' registrations. If registrations in the Patent Office are to be considered as public records, it would appear that appellee might be deemed to have had constructive notice of them as of the dates thereon. If knowledge is to be presumed by reason of such notice, and appellee knowingly stood idly by for about ten years during which time appellants innocently conducted, developed, and advertised their business, it would seem that the doctrine of laches could apply. Appellants alleged such delay and damage to them as constituting a bar to the prosecution of the cancellation proceedings. That allegation was not denied by appellee. Ordinarily, affirmative allegations in a pleading not traversed by the adverse party are considered as admitted.

Under the Rules of Practice in Trade-Mark Cases adopted and promulgated under the authority of the Trade-Mark Act of 1946, rule 23 specifically states that the petition to cancel and the answer thereto correspond to the complaint and answer such as under the Federal Rules of Civil Procedure apply to the district courts of the United States. The petition constitutes a complaint, and the answer to the petition may not only traverse the averments

therein, but also set up affirmative defenses. We see no reason why, even before the promulgation of the said Rules of Practice in Trade-Mark Cases, the same analogy does not obtain. Here appellants intended to avail themselves of the equitable defense of laches and pleaded such defense in the answers. Such affirmative pleading would seem to be necessary to secure relief thereunder. See Rule 8(c), Federal Rules of Civil Procedure.

[5] Prior to the effective date of the Trade-Mark Act of 1946, the defense of laches per se was not available either in the Patent Office or in this court. See *White House Milk Products Co.*, v. *Dwinell-Wright Co.*, supra.

The present proceedings were initiated and completed, as far as the Patent Office was concerned, before the effective date of the new act. Therefore, it is clear why the equitable defense pleaded by appellants was not determined by either the Examiner or the Commissioner, and perhaps was the reason why appellee did not traverse such defense. Probably if that defense had been proper under the old act, the allegation of laches would have been traversed by appellee and the issue raised thereon would have been tried and decided by the tribunals of the Patent Office on a more extended record.

Appellants' allegation of damage coupled with the alleged unreasonable delay which might constitute laches is, in our opinion, a proper subject matter in this appeal and should, for reasons heretofore given, invoke the application of the new act. We think that, given the opportunity, the parties may by evidence support their contentions for and against the alleged laches.

Accordingly, because of the state of the record, we deem it proper to remand the causes to the Commissioner for the purpose of taking such additional evidence as counsel for the parties may desire.

The causes remanded with directions as hereinbefore indicated.

REMANDED.

BLAND, *J.*, sat during the argument of this case, but resigned before the opinion was prepared.

PATENT SUITS

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

International Convention for the Protection of Industrial Property

Adherence of Austria, Lebanon, Syria, Union of South Africa and Spanish Colonies

The Secretary of State has been notified by the Legation of Switzerland of the following adherences to the International Convention for the Protection of Industrial Property as last revised at London on June 2, 1934:

Austria, going into effect August 19, 1947. (In this connection the Austrian Government stated:

"Those rights which, by virtue of the Convention and the Arrangement mentioned above and by the application of the German laws, were in force in Austria on the day of its liberation (April 27, 1945) shall continue to be protected without any interruption. Those rights which came into existence after April 27, 1945, and before the adherence of Austria had been put into effect, shall also enjoy such protection. However, the Austrian Government reserves the right to exclude from that protection such German protective rights as were based upon application for registry at the Reich Patent Office and the priority period of which had already expired on March 13, 1938.

"The present statement has been made on condition that Austrian nationals shall, for their part, benefit in the country in question from the protection of the rights which they have claimed or will claim, until the coming into force of the adherence of Austria to the Convention of Union of Paris and to the Madrid Agreement by virtue of those instruments, in all countries bound thereby.")

Lebanon, going into effect on September 30, 1947.

Syria, going into effect on September 30, 1947.

Union of South Africa, going into effect on December 1, 1947.

Spanish Colonies (Hague revision of November 6, 1925), going into effect December 15, 1947.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

March 8, 1948.

Weekly Issue Subscription Service

Printed copies of patents, design patents, and trade-marks comprising any official class or sub-class may be obtained promptly following each weekly issue on a subscription basis. The annual fee for this service is at the rate of $1.00 for the entry of an order for one sub-class and 10¢ for each additional sub-class. This charge is in addition to the price of printed copies which is 25¢ for each patent and 10¢ for each design patent and trade-mark. Subscription to this service is available to those who maintain a deposit account with the Patent Office. An account may be opened by depositing a minimum of $25 with the Patent Office. All charges for printed copies will be made in such accounts. Those who might be interested in this service may obtain an estimate of the cost for maintaining a subscription for any class or sub-class by addressing an inquiry to the Commissioner of Patents, Washington 25, D. C.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

2,228,768.—*Ralph E. Jones*, Grand Rapids, Mich. HAIR CLIPPING AND SHAVING DEVICE. Patent dated Jan. 14, 1941. Disclaimer filed Feb. 21, 1948, by the inventor.

Hereby disclaims claims 17, 18, 19, 20, 24, and 25 of said patent.

2,276,796.—*George L. Rogers*, Schenectady, N. Y. ENERGY STORAGE WELDING SYSTEM. Patent dated Mar. 17, 1942. Disclaimer filed Feb. 27, 1948, by the assignee, *General Electric Company.*

Hereby enters this disclaimer to claims 10 and 11 of said patent.

2,401,184.—*Ouglijesa Jules Poupitch*, Chicago, Ill. FASTENING DEVICE. Patent dated May 28, 1946. Disclaimer filed Feb. 28, 1948, by the assignee, *Illinois Tool Works.*

Hereby disclaims any fastening device specified in claims 1 to 4, 6 and 7, except wherein the retainer post means includes post structures securing the retainer base section to the part to be fastened.

2,405,611.—*Arthur L. Samuel*, Summit, N. J. ELECTRON BEAM AMPLIFIER. Patent dated Aug. 13, 1946. Disclaimer filed Feb. 21, 1948, by the assignee, *Bell Telephone Laboratories, Incorporated.*

Hereby enters disclaimer to claims 1, 2, 3, 4, and 8 of said patent.

Classification Order No. 23

January 23, 1948

Note.—The definitions for class 323, ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, have been completed and may be seen in the Search Room and Classification Group pending publication.

The following changes are hereby directed to take effect immediately:

IN THE MANUAL OF CLASSIFICATION:

ABOLISH SUBCLASSES

In *class 120, Stationery* (Division 53)

Pen and pencil cases
21 Clutch
22 Automatic
14 Polypointed
Fountain pens
43 Special use
43.5 Perforating
49 Retractile pen section

In *class 172, Electricity, Motive Power* (Division 26)

Transmission of power
239 Direct
284 Magnetic clutches

In *class 225, Dispensing Beverages* (Division 35)

Soda water apparatus
28 Fountains
29 Casings
30 Pressure reducers
31 Pump
32 Sirup cocks
34 Rotary
35 Sirup tanks
36 Removable
37 Sliding
38 Swinging
39 Valves

ESTABLISH SUBCLASSES

In *class 58, Horology* (Division 61)

Clocks
Trains
Alarm
21.1 Combined alarm and time motor (to follow sub. 21)
21.11 Plural
21.12 Variable sound
21.13 Short interval
21.14 Incorporated in clock
21.15 Shut-off
21.16 Spring wind release
21.17 Main spring rundown
22.5 Set (to follow sub. 22)
22.7 Condition indicator
Watches
57.5 Alarm

In *class 120, Stationery* (Division 53)

Combination devices
7.5 With fountain pen point protector
Pen and pencil cases
14.1 Polypointed and/or magazine containing (to follow sub. 13)
14.2 Pen point type
14.3 Selective
14.5 Plural chucks
14.7 Successive feed
14.8 Single tube
14.9 Storage magazine
21 Clutch (to follow subclass 19)
22 Spring closed
Fountain pens
42.01 Point protectors and caps
42.02 Pen point retracting
42.03 Sheath type
42.04 Pen operating
42.05 With seal, vent, ink trap, point cushion or point moistener
42.06 Recording
42.07 Perforating
42.08 With ink supply indicator
42.1 Plural pens
42.12 Side by side
42.13 Slidable
42.15 Concentrated ink type
42.16 Plural reservoir
42.17 Selective feed
42.18 Plural point
45.4 Ink cartridge type
45.6 Special use

In *class 172, Electricity, Motive Power* (Division 26)

Transmission of power
284 Magnetic clutches

In *class 206, Special Receptacles and Packages* (Division 40)

Receptacles
Display
44.11 Stock and sample (to follow subclass 44)
44.12 Dispensing
45.11 Sectional or multiple movable compartment type (to follow subclass 45)
45.12 With rupturable wall portion
45.13 Cover controlled or cover operated display
45.14 With contents supporting and/or positioning means
45.15 Slidable or pivotally mounted
45.16 Follower or adjustable bottom
45.17 Located on or formed by outwardly swingable side walls
45.18 Movable to inclined supported position
45.19 Supporting bed or platform on receptacle bottom
45.2 With cover convertible to easel or receptacle support
45.21 Folded blank box
45.22 Multiple blank
45.23 Pivoted cover
45.24 With folding easel or receptacle support
45.25 Folded blank box
45.26 Support cut from receptacle walls
45.27 Multiple blank
45.28 With cover convertible to display card
45.29 Folded blank box
45.3 Multiple blank
45.31 With window or transparent wall
45.32 Pie
45.33 Transparent wrapper
45.34 Covers one or more walls

In *class 286, Packed Shaft or Rod Joints* (Division 52)

Rotary rod
11.11 Centrifugal
11.12 Axially pressed shaft
11.13 Radial contact sealing surface
11.14 Longitudinally pressed
11.15 Rotatable with shaft
11.16 Radially resiliently pressed

MISCELLANEOUS CHANGES

On page 23—2, correct the spelling of the class title "Chemistry".

On page 24—2, in the first unnumbered subclass title after "loops" insert a comma.

On page 51—1, the subclass title "Traveling band" between subclasses 134.5 and 136 should be numbered *135*.

On page 74—1, move subclasses 208 through 213 one indentation to the left, so that they will read as follows:

Gearing
Frictional
Frictional adjustment
208 Automatic
209 Spring or weight
210 Magnetic
211 Eccentric
212 Screw
213 Lever

On page 105—2, in subclass 366, change "unis" to *units*.

On page 164—1, in subclass 66, change "tranvserse" to *transverse*.

On page 206–1, subclass 1 should be moved one space to the left to be coordinate with subclass 8.

On page 226—1, in the second column, the first title "With articles" should be changed to *With fluent materials*.

On page 229, the unnumbered title between subclasses 36 and 38 should be numbered *37*.

On page 273—1, in subclass 65, change "Foorball" to *Football*.

On page 318—3, in subclass 346, change "braking" to *breaking*.

PRINCIPAL DISPOSITION OF ART FROM ABOLISHED SUBCLASSES

Abolished Class	Abolished Subclass	Disposition Class	Disposition Subclass

206	44.11, 44.12	206	44, 46
206	45.11 to 45.34	229	16
286	11.11 to 11.16	286	7

IN THE DEFINITIONS:

7, Compound Tools

in the class definition under "(2) Search Classes" in the reference to class 120, after "writing" insert:

subclass 14.1+ for cases having plural pen points and/or leads, and subclasses 42.1+, 42.16+ and 42.18 for plural fountain pen combinations

13, Electric Furnaces

in subclass 12, under "Search Class" add in numerical order:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the current and/or voltage magnitude in a single circuit

in subclass 13, under "Search Class" add in numerical order:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS subclass 1+, for miscellaneous systems for controlling the current or the load in a single circuit to maintain the current constant.

in subclass 24, under "Search Class" add in numerical order:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the current and/or voltage magnitude in a single circuit, see indented subclass 94+ and the subclasses specified in notes to the definition of those subclasses for miscellaneous resistance systems and for miscellaneous systems for controlling the current and/or voltage magnitude in a single circuit by means of resistors.

in subclass 26, under "Search Class" cancel the reference to class 219, Electric Heating, and add in numerical order:

219—ELECTRIC HEATING, subclass 13, for miscellaneous metal induction heating systems and subclass 47, for induction heating apparatus.

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+ and the subclasses specified in the notes to the definition of those subclasses, for miscellaneous transformer systems.

15, Brushing, Scrubbing, and General Cleaning

in subclass 139, under "Search Class" insert

120—STATIONERY, subclasses 44 and 48, for fountain pens having similar structure.

33, Geometrical Instruments

in subclass 41, under "(2) Search Classes" in the reference to class 120, change "subclass" to *subclasses*, and insert thereafter *42.12, 42.18 and.*

Cancel "for producing shaded lines." and substitute *and see (2) Note under subclass 42.12 in class 120 for the line.*

58, Horology

in subclass 16, insert:

Search this class, subclass—
57.5—for alarm watches

and under "Search Class" change the reference to class 161 to read:

161—TIME CONTROLLING MECHANISM, subclass 23, for time controlled alarms other than alarm-clocks.

establish the following subclass definitions:

21.1. Alarm-clocks under subclass 16 in which the clock's motor is also the alarm motor.

21.11. Alarm-clocks under subclass 16 having a plurality of sound devices.

Search this class, subclass—
21.12—for variable sound effects produced by one alarm.

21.12. Alarm-clocks under subclass 16 in which variations in sound are produced by a short interval between a preliminary sound and the principal or final sound, or by a continuous variation in the single interval sound.

Search this class, subclass—
18—for alarms which repeat several times with short intervals between.

21.13. Alarm-clocks under subclass 16 of the culinary or photographic type which operate over short periods of several minutes, the periods being generally not more than an hour.

21.14. Devices under subclass 21.13 incorporated in a regular clock.

21.15. Alarm-clocks under subclass 16 relating particularly to mechanism for shutting-off or silencing the alarm.

21.16. Devices under subclass 21.15 which are released on winding the time or alarm spring of the clock.

Search this class, subclass—
17—for automatic shut-off release in eight-day clocks.

21.17. Alarm-clocks under subclass 16 which sound upon the time spring approaching a run-down condition.

22.5. Alarm-clocks under subclass 16 relating particularly to means for setting the let-off mechanism.

22.7. Alarm-clocks under subclass 16 relating particularly to means for indicating the condition of the let-off or set mechanism, as "on—off", "A. M. —P. M.".

57.5. Watches under subclass 16 having alarm features.

Search this class, subclass—
16+—for alarm clocks.

74, Machine Elements

in subclass 208, cancel "Mechanism . . . 207," and substitute *Friction Gearing*

in subclass 210, cancel "Mechanism . . . 207," and substitute *Friction Gearing*

in subclass 211, cancel "Mechanism . . . 207," and substitute *Friction Gearing*

in subclass 212, cancel "Mechanism . . . 207," and substitute *Friction Gearing*

in subclass 213, cancel "Mechanism . . . 207," and substitute *Friction Gearing*

88, Optics

in subclass 14 add:

Search Class—
35—EDUCATION, subclasses 28.3 and 28.5, for color comparison charts not specialized to testing an unknown color by comparing it directly with a color on the chart.

95, Photography

in subclass 101, under "(1) Search Classes" in the reference to class 120 change "43.5" to 42.07.

101, Printing

in subclass 26, add the following:

Search Class—
120—STATIONERY, subclass 42.07, for fountain pens provided with perforating means.

119, Animal Husbandry

in the class definition, under "Search Classes", in the reference to class 120, change "43.5" to 42.07.

120, Stationery

in the class definition, under "Search Class", after "guide" insert the following:

and see particularly (2) Note under subclass 42.12 below for the line between this class (120) and class 33 with reference to pens.

establish the following subclass definition:

7.5. Point protectors for fountain pens, usually caps, combined with other articles of stationery not directly connected with fountain pen operation.

(1) Note.—Where the fountain pen is recited as an element of the combination, the patent is also included in this subclass.

Search this class, subclass—
42.01+—for general fountain pen cap structure.
42.04—for fountain pen caps provided with pen operating implements.
38 and 84—for pencil caps provided with attachments.

in subclass 9, insert:

Search this class, subclass—
42.02+ and 42.13—for fountain pens provided with point projecting mechanism.

abolish subclass 14

establish the following subclass definitions:

14.1. Subject matter under subclass 9 in which the pen or pencil has a plurality of writing points and/or the case comprises one or more storage chambers or magazines for said writing points.

(1) Note.—The writing points need not be fed directly from the magazine to the chuck in order to classify in this and indented subclasses.

Search this class, subclass—
1—for fountain pens combined with non-fountain type pens and/or pencils.
15—for pencils combined with sharpening devices.
42.1+, 42.16+ and 42.18—for plural fountain pen combinations.

Search Class—
7—COMPOUND TOOLS, appropriate subclasses, for one or more marking devices for this class (120) combined with one or more tools not classified in this class.
16—MISCELLANEOUS HARDWARE, subclass 110.5 (and see the notes thereto), for handles which contain receptacles.
145—WOODWORKING TOOLS, subclass 62+, for woodworking tools of the magazine type.

14.2. Subject matter under subclass 14.1 in which one or more of the points is a pen point.

Search this class, subclass—
1—for fountain pens combined with non-fountain type pens and/or pencils.
42.1+, 42.16+ and 42.18—for plural fountain pen combinations.

14.3. Subject matter under subclass 14.1 in which a point in marking position can be withdrawn into the case and another point (usually having a different characteristic) may be projected in its place.

Search this class, subclass—
42.13—for plural fountain pens with similar structure.
42.18—for fountain pens with plural points having similar structure.

Search Class—
7—COMPOUND TOOLS, subclass 16, for bits pivoted to holders so that any one of them can be pivoted for use.

14.5. Subject matter under subclass 14.3 in which the points each have separate chucks which are projected and retracted to position and withdraw the points.

14.7. Subject matter under subclass 14.1 in which the sequence in which the points leave the magazine is determined by the loading of the magazine.

14.8. Subject matter under subclass 14.7 in which the magazine is a single lead-containing chamber so dimensioned that the leads are aligned in single file, end to end.

14.9. Subject matter under subclass 14.1 in which the case contains a separate magazine or storage chamber from which the points must be manually removed for insertion at the point of use.

Search this class, subclass—
7.5—for such storage means combined in a fountain pen cap.
42—for storage means for ink pellets combined in a fountain pen body.
42.01+—for storage means for ink pellets combined with a fountain pen cap.

Search Class—
16—MISCELLANEOUS HARDWARE, subclass 110.5 (and see the notes thereto), for handles which contain receptacles.

in subclass 38, add the following:

Search this class, subclass—
7.5—for fountain pen caps with erasers attached.
14.1+—and especially 14.9 for magazine pencils having erasers. The eraser usually acts as a closure for the magazine.

in subclass 42, insert:

(2) Note.—The definition of this subclass is to be understood as providing for the subject matter of 42.01+ hereunder even though the pen point and reservoir are not included in the combination.

and under "Search Class" add:

41—ORNAMENTATION, subclass 17+, and particularly subclass 34+, for ornamentation arrangements suitable for fountain pen use.

establish the following subclass definitions:

42.01. Fountain pens under subclass 42 having a guard, shield or cap for protecting the pen point when not in use.

(1) Note.—This subclass includes patents directed to the point protector or cap per se when not otherwise classifiable.

Search this class, subclass—
7.5—for fountain pen caps in combination with other articles of stationery.
84 and 87—for pencil point protectors.

Search Class—
16—MISCELLANEOUS HARDWARE, subclass 108+, for ferrules.
215—BOTTLES AND JARS, subclass 38+, for bottle caps.
220—METALLIC RECEPTACLES, subclass 24+, and especially subclasses 39+ and 55+, for receptacle closures and retaining means therefor.
279—CHUCKS OR SOCKETS, appropriate subclasses, for sockets with rod retaining means.
285—PIPE JOINTS OR COUPLINGS, subclass 161+, for pipe sockets and retaining means.
287—ROD JOINTS OR COUPLINGS, subclass 119+, for rod joints including a socket connection.

42.02. Fountain pens under subclass 42.01 having parts which are relatively movable along the axis of the assembly between a point protecting position and a writing position.

(1) Note.—Pens which are provided merely with a removable cap for protecting the point are excluded from this subclass.

(2) Note.—Plural pens or pens with plural points which also have retractile portions are excluded from this subclass as being primarily so designed for preventing interference rather than for point protection.

Search this class, subclass—
9+—for pencils, and pens other than fountain pens, provided with point projecting or retracting mechanism.
42.13—for plural fountain pens having point projecting or retracting mechanism.

42.03. Fountain pens under subclass 42.02 in which the relatively movable parts are a point-reservoir combination and a guard member mounted thereon for movement therealong between a point protecting position and a point exposing position.

42.04. Fountain pens under subclass 42.01 in which either: (1) the point protector or cap carries or acts as an implement for operating the fountain pen mechanism, or (2) the arrangement is such that operation of the pen mechanism is required to permit movement of the point protector from or to protecting position.

Search this class, subclass—
42.02—for fountain pens of the point retracting type having caps adapted to act as implements for retracting the point.

42.05. Fountain pens under subclass 42.01 wherein the point protector has one of the following or any combination thereof:

(1) an ink sealing means, other than mere attaching structure.
(2) means to ventilate at least a portion of the interior thereof.
(3) means for retaining escaped ink.
(4) means for moistening the pen point.
(5) means comprising soft or resilient material for engaging the point as a protection against abrasion or shock.

Search this class, subclass—
42.02—for fountain pens of the point retracting type in which the cap is provided with a seal for closing the reservoir opening after retraction of the point.

42.06. Fountain pens under subclass 42 having special features adapting or confining the structure to use with recorders.

(1) Note.—Some of the features which distinguish the pen as for recording, when so disclosed are as follows:
(1) Having an open-topped reservoir.
(2) Designed for operation on a vertical surface.
(3) Means for conducting writing fluid from a reservoir to a pen which is movable with respect thereto.
(4) Means for conducting writing fluid from a low level reservoir to an elevated pen.

Search Class—
346—RECORDERS, subclass 140, for fountain pens of the recorder type wherein the pen acts as the recording arm, or is provided with mechanism for attachment thereto.

42.07. Fountain pens under subclass 42 having means for perforating and permitting ink to penetrate the perforated outlines.

Search Class—
101—PRINTING, subclass 26, for printing machines provided with piercing means.
164—CUTTING AND PUNCHING SHEETS AND BARS, subclass 89.5, for similar perforating devices without inking means.

42.08. Fountain pens under subclass 42 provided with means, other than mere failure of a primary supply, for indicating (1) the amount of writing fluid in the reservoir or (2) that a sufficient amount is present.

Search this class, subclass—
42.16—for fountain pens having an auxiliary reservoir the contents of which may be employed upon failure of the primary ink supply.

Search Class—
73—MEASURING AND TESTING, subclass 290+, for liquid level gauges of general application.
222—DISPENSING, subclass 154+, for dispensers provided with supply inspection devices.

42.1. Fountain pens under subclass 42 having more than one distinct point-reservoir combination which combinations are connected to form a single implement.

Search this class, subclass—
1—for combination fountain pens and pencils.
14.1+—for polypointed pencils and dip type pens, and especially 14.2, for devices wherein at least one point is a pen.

42.12. Fountain pens under subclass 42.1 in which the point-reservoir combinations are mounted adjacent each other with points extending in substantially the same direction.

(1) Note.—Patents for pens which are adapted for simultaneous operation of the points as well as those which are adapted for selective use wherein the desired point may be brought into operating position by rotation of the pen about its axis are collected in this subclass.
(2) Note.—The line between this class (120), subclasses 42.12, 42.18 and 111, and class 33, GEOMETRICAL INSTRUMENTS, subclass 41 is as follows: Class 120 takes pens with plural points wherein (1) the construction is such that the pen is convertible from simultaneous operation to selective operation, or (2) if designed for simultaneous operation, the disclosed characteristics of the points are such that the mark produced by one complements the marks simultaneously produced by others to provide a unitary design (e. g., "shading pens"). When the pen is adapted solely for the simultaneous drawing of a plurality of independent lines, the patent is in class 33.

Search Class—
33—GEOMETRICAL INSTRUMENTS, subclass 41, for pens having plural simultaneously operable points and see (2) Note above for the line.

42.13. Fountain pens under subclass 42.12 in which either (1) the one pen point or point-reservoir combination is mounted for reciprocation on the other, or (2) one or both points or point reservoir combinations are reciprocably mounted on a casing.

42.15. Fountain pens under subclass 42 provided with means for holding a supply of ink (1) in solid form or (2) in thick liquid form, and for mixing therewith a pigment vehicle or diluent to provide ink of normal writing fluidity to the point.

Search Class—
23—CHEMISTRY, subclass 267+, for extracting or leaching apparatus of general utility.

42.16. Fountain pens under subclass 42 having (1) more than one supply chamber for writing fluid, or (2) a single chamber element which is completely or partially subdivided so as to provide an auxiliary supply.

(1) Note.—Pens having both plural reservoirs and plural points, but not in distinct point-reservoir combination are classified in subclass 42.16+ and cross-referenced in subclass 42.18.

Search this class, subclass—
42.1+—for fountain pens with plural reservoirs and plural points in distinct point-reservoir combination.

Search Class—
222—DISPENSING, subclass 129+, particularly subclass 145 and subclass 424.5, for dispensers with plural supply reservoirs.

42.17. Fountain pens under subclass 42.16 wherein any one of the writing fluid supply chambers may be connected in feeding relationship to a point under manual control of the operator.

Search this class, subclass—
48—for fountain pen valve structure.

42.18. Fountain pens under subclass 42 having more than one writing point.

Search this class, subclass—
14.1—for polypointed pencils and dip type pens, and especially 14.2 for devices wherein at least one point is a pen.
42.1+—for fountain pens with plural points and plural reservoirs in distinct point-reservoir combination.

Search Class—
33—GEOMETRICAL INSTRUMENTS, subclass 41, for pens having a plural simultaneously operable points and see (2) Note under class 120, subclass 42.12 for the line.
222—DISPENSING, subclass 478+ and particularly subclass 482+, for dispensers provided with plural discharge guides.

abolish subclasses 43 and 43.5,

in subclass 44, cancel the definition and substitute:

44. Fountain pens under subclass 42 wherein the applicator element is a hollow cone penetrated by a slender rod or spindle, one of which forms the writing point.

in subclass 45, cancel the definition and substitute:

45. Fountain pens under subclass 44 in which a spring element normally acts to protrude the spindle from the cone tip.

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclass 139, for fountain applicators of general utility having similar structure.

establish the following subclass definitions:

45.4. Fountain pens under subclass 42 provided with means for holding a readily removable and replaceable ink container.

(1) Note.—This subclass also takes the combination of the fountain pen and ink container.
(2) Note.—Pens having replaceable portions which include a writing point in addition to the ink container are excluded from this subclass, being placed according to the other features of the pen structure (e. g. 42.4).

Search Class—
206—SPECIAL RECEPTACLES AND PACKAGES, subclass 56, for packages of material which include a cartridge as the container.
215—BOTTLES AND JARS, subclasses 32 and 42, for glass containers and cartridges.
220—METALLIC RECEPTACLES, subclass 27, for metal containers and cartridges.
222—DISPENSING, subclasses 80+ and 567+, for dispensers provided with container engaging means.

45.6. Fountain pens under subclass 42 which include an applicator element of unconventional configuration designed to fit the pen for a special purpose.

Search this class, subclass—
109+—for dip pens having applicators of special utility.

in subclass 48, add:

Search this class, subclass—
42.17—for plural reservoir fountain pens having selector valves.

Search Class—
15—BRUSHING, SCRUBBING, AND GENERAL CLEANING, subclasses 138 and 139, for fountain applicators of general utility having valves.
222—DISPENSING, subclass 501, for dispensers provided with valved outlets having an actuating element projecting through the discharge guide, and see appropriate subclasses, especially 544+, for dispensers having valved outlets in general.

abolish subclass 49.

in subclass 50, add:

Search this class, subclass—
48—and see search notes appended thereto for fountain pens, applicators, and dispensers provided with flow controlling means in the form of a valve.

in subclass 84, add:

Search this class, subclass—
7.5 and **42.04**—for fountain pen caps provided with attachments.

in subclass 109, under "Search this class, subclass" change "43+" to *45.6*.

in subclass 111, add:

Search Class—
33—GEOMETRICAL INSTRUMENTS, subclass 41, for pens having plural simultaneously operable points, and see (2) Note under class 120, subclass 42.12 for the line.

126, Surgery

in subclass 1.3, cancel the note and add:

Search Class—
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 21, for electromagnets; subclass 335, for miscellaneous systems for supplying electric current to an electromagnet, and subclass 356+, for transformer and reactor structure.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+ and the subclasses specified in the notes to the definition of those subclasses for miscellaneous transformer systems and subclass 82+ and the subclasses specified in the notes to the definition of those subclasses for miscellaneous reactor systems.

136, Batteries

in the class definition, under "Search Classes" add in numerical order:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 15, for systems for controlling the current and/or voltage magnitude in a single circuit, the control means including a battery or a counter-electro-motive cell.

145, Woodworking Tools

in subclass 62, under "Search Class" add:

120—STATIONERY, subclass 14.1+ and particularly subclass 14.9, for pen and pencil cases having storage magazines.

164, Cutting and Punching Sheets and Bars

in subclass 89.5, under "Search Class", change "43.5" to *42.07*.

in subclass 123.3, under "Search Class", cancel the reference to 30, Cutlery, and substitute:

30—CUTLERY, subclass 16, for can punches; subclass 164.5, for ice picks; and subclass 164.9, for hand manipulable devices for marking by means of a point or cutting edge.

in subclass 124, under "Search Class", in the reference to class 30, after "picks", insert:

; subclass 164.9, for hand manipulable devices for marking by means of a point or cutting edge; and

169, Fire Extinguishers

in the class definition, first paragraph, change "subclasses" to *classes*.

178, Telegraphy

in subclass 44, under "(2) Search Class" add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100 for current and/or voltage magnitude control systems; indented subclass 44+, for miscellaneous transformer systems; indented subclass 63+, for miscellaneous impedance systems; and subclasses 101 to 129 for miscellaneous phase control systems. Some of the systems in subclass 44 of class 178 are closely analogous to the systems classified in class 323. For the line between this subclass and class 323, see sections VII D and IX B of the class definition of class 323.

201, Resistances and Rheostats

in the class definition, cancel the note and add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 94+ and the subclasses specified in the notes to the definition of those subclasses for current and/or voltage magnitude control systems using one or more resistors as the control means and for miscellaneous resistance systems, and 101 to 129 for phase control systems including a resistor for controlling the phase, see 125 where the control means includes a reactor, condenser and resistor, and subclass 126 where the control means includes a reactor and a resistor.

in subclass 50, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 95, for miscellaneous resistor systems and for current and/or voltage magnitude control systems having a resistor as the control means, the resistor being a pressure variable compressible resistance.

in subclass 57, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 99+, for miscellaneous resistor systems and for current and/or voltage magnitude control systems having a resistor as the control means, the resistor being a liquid resistor.

in subclass 65, cancel the note and add:

Search Class—
219—ELECTRIC HEATING, subclass 38+, for fluid heaters having an electric heater for the fluid, see indented subclass 41 for such heaters where the heating element is immersed in the fluid.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 99, for miscellaneous resistor systems and for current and/or voltage magnitude control systems having a resistor as the control means, the resistor being provided with liquid contact means for making connection to the resistance.

204, Chemistry, Electrical and Wave Energy

in subclass 223, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the current and/or voltage in a single circuit.

in subclass 228, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the current and/or voltage in a single circuit.

in subclass 305, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the current and/or voltage in a single circuit.

in subclass 316, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the current and/or voltage in a single circuit.

in subclass 317, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+, and the subclasses specified in the notes to the definition of those subclasses, for miscellaneous transformer systems and for systems for controlling the current and/or voltage magnitude having a transformer as the control means

in subclass 326, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the current and/or voltage in a single circuit.

in subclass 327, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the current and/or voltage in a single circuit.

206, Special Receptacles and Packages

in subclass 44, add:

Search this class, subclass—
78+—for packages of the display card type.

Search Class—
211—SUPPORTS, RACKS, for display devices which comprise racks.
217—WOODEN RECEPTACLES, subclasses 79, 11, 58 and 63, for wooden display boxes and display closures.
229—PAPER RECEPTACLES, subclass 71, for display envelopes.
312—SUPPORTS, CABINET STRUCTURES, subclass 114+, for display cabinets of the show case type.

in subclass 45, add:

Search Class—
190—BAGGAGE, subclass 16+, for sample cases with terraced trays.
211—SUPPORTS, RACKS, subclass 128+, for racks including terraced trays and subclass 137+, for racks with terraced shelves.

establish the following subclass definitions:

44.11. Display devices under subclass 44 provided with a main stock compartment and a compartment or other means for holding and displaying a sample.

Search this class, subclass—
77—for stock and sample trays.

Search Class—
312—SUPPORTS, CABINET STRUCTURES, subclass 118+, for cabinets of the show case type provided with stock and sample compartments.

44.12. Display devices under subclass 44 having means to facilitate dispensing of the contents of the display receptacle.

Search this class, subclass—
56+—for dispensing packages not having display features claimed.

Search Class—
222—DISPENSING, for dispensers in general.
229—PAPER RECEPTACLES, subclasses 7 and 17, for dispensing paper boxes.
312—SUPPORTS, CABINET STRUCTURES, subclass 35+, for article dispensing cabinets.

45.11. Shipping and storage receptacles and packages under subclass 44 of the sectional or multiple compartment type in which the receptacle comprises either (1) a plurality of substantially complete compartments or units pivotally or otherwise interconnected so as to be movable from a generally compact shipping and/or storage arrangement to a multiple compartment display arrangement or (2) a single compartment shipping or storage receptacle having separable wall portions so that sections of the receptacle may be pivoted about each other to form a multiple compartment display.

Search this class, subclass—
45—for display containers having terraced or stepped shelves or trays.

Search Class—
220—METALLIC RECEPTACLES, subclass 4, for sectional metallic containers and subclass 20+, for compartmented containers.

45.12. Devices under subclass 45.11 in which the receptacle sections are integrally connected by scored or weakened wall portions to permit separation of said sections at said weakened portion.

45.13. Devices under subclass 44 in which the receptacle contents is tilted or projected to display position upon opening the cover.

Search this class, subclass—
42.2+—for devices wherein the receptacle itself may be moved to display position by opening the cover.
45.14+—for covers having means for mounting thereto the displayed contents.

Search Class—
190—BAGGAGE, subclass 17, for sample cases with link supported trays.
312—SUPPORTS, CABINET STRUCTURES, subclass 174, for cabinets having interconnected closure and rack and subclass 186, for cabinets with combined closure and tray or shelf.

45.14. Devices under subclass 44 having specific means for supporting or positioning the contents of the receptacle in display position.

45.15. Devices under subclass 45.14 in which the contents supporting means compresses a slidable or pivotally mounted compartment or support.

45.16. Devices under subclass 45.14 in which the contents supporting means is a follower or adjustable container bottom.

Search this class, subclass—
56+—for dispensing packages which include followers.

Search Class—
217—WOODEN RECEPTACLES, subclass 64, for followers for wooden boxes and subclass 86, for followers for wooden barrels.
220—METALLIC RECEPTACLES, subclass 93, for followers for metallic receptacles.
222—DISPENSING, subclass 386+, for dispensing containers with followers.
312—SUPPORTS, CABINET STRUCTURES, subclasses 54, 56, 57, 61, 62, 68, 69 and 71, for article dispensing cabinets with followers.

45.17. Devices under subclass 45.14 in which one or more of the side walls are pivoted adjacent their lower edges and arranged to swing outwardly to a generally horizontal position to form a display panel or supporting means for displaying the contents.

45.18. Devices under subclass 45.14 movable to and adapted to be supported in an inclined display position.

45.19. Devices under subclass 45.14 located on the receptacle bottom and comprising a supporting bed to hold the contents or a portion thereof in spaced relation to the receptacle bottom wall.

45.2. Receptacles under subclass 44 provided with a cover which is convertible to or includes or carries means to form a support or easel for holding the receptacle in inclined or elevated display position.

45.21. Devices under subclass 45.2 of the folded blank type.

Search Class—
229—PAPER RECEPTACLES, subclass 16+, for folded blank box structure.

45.22. Devices under subclass 45.21 comprising multiple blanks.

Search Class—
229—PAPER RECEPTACLES, subclass 23, for multiple blank paper boxes.

45.23. Devices under subclass 45.2 in which the cover is hinged to the receptacle or is connected thereto by pivoted links.

45.24. Receptacles under subclass 44 provided with a support or easel for supporting the entire receptacle in display position, the support being foldable or movable to an inoperative position to provide with the receptacle a compact shipping or storage unit.

Search this class, subclass—
45.2+—for covers which are convertible to easels.

Search Class—
248—SUPPORTS, appropriate subclass, for supports per se.

45.25. Devices under subclass 45.24 of the folded blank type.

Search Class—
248—SUPPORTS, subclass 152, for supports per se of sheet material and subclass 198, for easels formed of sheet material.

45.26. Devices under subclass 45.25 in which the support is cut from one or more of the box walls.

45.27. Devices under subclass 45.25 comprising multiple blanks.

45.28. Receptacles under subclass 44 provided with a cover which when opened functions as an upstanding display card.

Search this class, subclass—
44.11—for covers convertible to display cards having means thereon to hold and display a sample of the container contents.

Search Class—
217—WOODEN RECEPTACLES, subclass 60+, for hinged closures having support means to hold them in open position.

45.29. Devices under subclass 45.28 of the folded blank type.

45.3. Devices under subclass 45.29 comprising multiple blanks.

45.31. Receptacles or packages under subclass 44 constructed to enable inspection of the contents without opening the receptacle.

Search Class—
220—METALLIC RECEPTACLES, subclass 82, for metallic receptacles having transparent wall portions.

45.32. Devices under subclass 45.31 for displaying pies.

Search this class, subclass—
46—for pie packages not having any display functions.

Search Class—
99—FOODS AND BEVERAGES, subclass 150+, for food packages in which the food is claimed as part of the combination or where the package lining coacts with the food in some special way to modify or enhance its properties.

45.33. Devices under subclass 45.31 which include an inner supporting means, which may be the contents or a substantially rigid box, and a flexible transparent wrapper substantially covering the supporting means.

Search Class—
229—PAPER RECEPTACLES, subclass 87+, for paper wrappers per se.

45.34. Devices under subclass 45.31 in which transparent means covers one or more walls of the receptacle.

Search this class, subclass—
45.33—for transparent wrappers which cover substantially the entire package.

217, Wooden Receptacles

in subclass 11, add:

Search Class—
206—SPECIAL RECEPTACLES AND PACKAGES, subclass 44 and the search notes thereunder, for other display receptacles.

219, Electric Heating

in subclass 4, under "Search Class", add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100 for miscellaneous systems for controlling the current and/or voltage magnitude in a single circuit, see especially subclass 16+, for such systems having electronic tube means as the current and/or voltage magnitude control means. Many of the systems in subclass 16+, especially those in indented subclasses 18 and 30+ are disclosed as being useful in controlling the current in welding circuits.

in subclass 13, add:

Search Class—
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 356+, for the structure of transformers.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+, and the subclasses referred to in the notes to the definitions of those subclasses for current and/or voltage magnitude control systems having a transformer as the control means and for miscellaneous transformer systems.

in subclass 20, under "Search Class", add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for systems for controlling the magnitude of the current or voltage in a single circuit. See subclass 94+ and the subclasses referred to in the notes to the definitions of those subclasses for such systems when the control means is a resistor and for miscellaneous resistor systems.

in subclass 40, under "Search Class", add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 99, for systems for controlling the current and/or voltage in a single circuit where the control means is a liquid resistor and for miscellaneous resistor systems having a liquid resistor.

in subclass 47, under "Search Class", add:
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 356+, for miscellaneous transformer structure.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+ and the subclasses specified in the notes to the definition of those subclasses for miscellaneous transformer systems.

220, Metallic Receptacles

in subclass 82, under "Search Class", insert:
206—SPECIAL RECEPTACLES AND PACKAGES, subclass 45.3+, for display receptacles and packages with windows or transparent wall portions.

222, Dispensing

in subclass 325, in (1) Note, cancel "compressing" and substitute *comprising*,

in subclass 372, under "Search Class", in the reference to class 225, change "subclasses 19 and 31" to *subclass 19*.

229, Paper Receptacles

in subclass 16, add:

Search Class—
206—SPECIAL RECEPTACLES AND PACKAGES, subclass 44+, for shipping and storage display vessels including folded blank boxes having modifications to provide for display.

236, Automatic Temperature and Humidity Regulation

in the class definition, add:

Search Class—
322—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the current and/or voltage magnitude in a single circuit. See especially subclasses 19+ and 64+ for such systems which are automatically controlled. See subclass 68 for such systems having an impedance which is controlled in response to thermal conditions.

in subclass 69, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 68+ and subclass 75 for systems for controlling the magnitude of the current and/or potential in a single circuit where the control means is a bridge arrangement of impedances or is a plurality of impedances. See subclass 68+ where the impedances are automatically controlled in response to thermal conditions.

238, Railways, Surface Track

change the number of subclass 14.1 to read *14.05*,

change the number of subclass 14.10 to read *14.1*.

241, Solid Material Comminution or Disintegration

in the class definition, under 4, Coating or Shaping of Material, in B, under "Search Class", in the reference to class 144, add:

A machine for wood chipping or shaving will be considered as imparting a desired shape only if there exists some means for so shaping as, e. g., the operation of the machine moves the wood holder with respect to the cutter, or the cross section of the cutter or chipper is so designed as to produce the desired contour.

250, Radiant Energy

in subclass 27, (1) Note, cancel the second sentence and substitute:

Such systems where the load device is specified as being a particular load device are classified with the art to which the system relates, other such systems where the load device is recited merely as a load device are classified in class 323, provided the system operates only to control the current and/or voltage magnitude in a single circuit or operates only to control the phase in a single circuit. Other such systems which are not otherwise provided for are classified in this subclass. See the reference to class 323 below.

under "Search Class" cancel the reference to class 171, and substitute:

171—ELECTRICITY—GENERATION, subclass 95, for electric space discharge device voltmeter circuits and cathode ray oscilloscope circuits; subclass 97, for miscellaneous electric systems not otherwise classified and electric distribution systems which have an electric space discharge device as a part thereof; the subclasses indented under the title "Regulators"; and subclasses 312 and 313 for systems of distribution, that is, systems having either a plurality of source circuits or a plurality of output circuits and having an electric space discharge device for controlling the magnitude of the current and/or voltage in the system. See the reference to class 323 below.

cancel the reference to class 172, and substitute:

172—ELECTRICITY, MOTIVE POWER, subclass 245, for electric space discharge device systems used with phase indication apparatus; and subclass 281, for electric space discharge device systems for controlling frequency changers.

and insert in numerical order:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+, and the subclasses specified in the notes to the definition of those subclasses for systems for controlling the current and/or voltage magnitude in a single circuit by means of an electric space discharge device; subclass 86, for current and/or magnitude voltage controlled systems having a reactor controlled by an electric space discharge device and subclass 119, for systems for controlling the phase in a single circuit by means of an electric space discharge device. For the line between the systems in this subclass and in class 323, see section VII B of the class definition of class 323.

in subclass 40, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+, for miscellaneous transformer systems and subclass 63+, for miscellaneous impedance systems including those having reactors and condensers. Where the system is for the purpose of tuning to control the resonant characteristics of the system with respect to a particular frequency, it is in this subclass. See sections VII D and IX B of the class definition of class 323 for the line between this subclass and class 323.

in subclass 41.5 under "Search Class" add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 21, for systems for controlling the current and/or voltage in a single circuit by means of an electronic tube which is automatically controlled by photosensitive means.

in subclass 103, under "(2) Search Class" cancel the reference to class 171, and add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the magnitude of the current and/or voltage in a single circuit.

264, Speed Responsive Devices

in the class definition, in the note, add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 71, for current and/or voltage magnitude control systems having a speed or centrifugal force controlled impedance for controlling the circuit.

280, Land Vehicles

change the number of subclass 33.10 to read *33.1*.

286, Packed Shaft or Rod Joints

establish the following subclass definitions:

11.11. Centrifugal devices under subclass 7, wherein the contact is controlled by the action of centrifugal force.

11.12. Devices under subclass 7, wherein the contact between sealing surfaces is maintained by means pressing or urging the shaft axially.

11.13. Devices under subclass 7, wherein the sealing surfaces are relatively movable and are normal to or at an oblique angle to the axis of rotation.

11.14. Devices under subclass 11.13 wherein one of the sealing surfaces is movable longitudinally of the shaft.

Search this class, subclass—
22, 23 and 30—for longitudinally pressed packing for non-rotatable shafts.

11.15. Devices under subclass 11.14 which rotate with the shaft.

11.16. Devices under subclass 7 wherein the packing is resiliently urged radially into a sealing engagement with the rod.

Search this class, subclass—
24—for radially pressed packings for non-rotary rods.

292, Closure Fasteners

in subclass 262, add:

Search Class—
20—WOODEN BUILDINGS, subclass 55, for extension links connecting storm windows to principal windows.

314, Electric Lamp and Discharge Devices, Consumable Electrodes

in the class definition under "(8) Search Classes" add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for systems for controlling the current and/or voltage magnitude in a single circuit. See especially subclass 1+, for such systems having means for regulating either the load or the circuit to maintain the load current constant.

in subclass 32, under "Search Class" add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+, and the subclasses specified in the notes to the definitions of those subclasses, for miscellaneous transformer systems and for systems for controlling the current and/or voltage in a single circuit by means including a transformer.

in subclass 115, under "Search Class" cancel the reference to class 171, and substitute:
171—ELECTRICITY, GENERATION, those subclasses indented under the title "Regulators", especially 119, 229, and 242, for the structure of electric current and/or voltage regulators.
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 335, for miscellaneous systems for supplying electric current to an electromagnet.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for systems for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 132, under "(3) Search Classes" cancel the reference to classes 171 and 175, and substitute:
171—ELECTRICITY, GENERATION, those subclasses indented under the title "Regulators", especially 119, 229, and 242, for the structure of electric current and/or voltage regulators.
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 41+, for condensers, subclass 335, for miscellaneous systems for supplying electric current to an electromagnet, and subclass 356+ for inductances.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for systems for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 135, under "Search Class" cancel the reference to 171, and substitute:
171—ELECTRICITY, GENERATION, those subclasses indented under the title "Regulators", especially 119, 229, and 242, for the structure of electric current and/or voltage regulators.
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 335, for miscellaneous systems for supplying electric current to an electromagnet.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for systems for controlling the magnitude of the current and/or voltage in a single circuit.

315, Electric Lamp and Discharge Devices, Systems

in the class definition, (3) Note, add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+ and the subclasses specified in the notes to the definitions of those subclasses for systems for controlling the magnitude of the current and/or voltage in a single circuit having a discharge device as the control means. The discharge device may be either a vacuum tube or a gas or vapor tube. The systems in class 323 include more than the mere circuit for supplying electric current or potential to the discharge device for merely causing a discharge to take place within the tube or for regulating the discharge within the tube. Many of the systems in class 323 are closely analogous to the systems in this class. See section VII B of the class definition of class 323 for the line between this class and class 323.

under "Search Class", add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, see (3) Note above. See subclass 119, for systems for controlling the phase of a single circuit by means of a discharge device.

in subclass 102, under "Search Class", add:
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 41, for systems for controlling the current and/or voltage magnitude in a single circuit by means of a discharge device to systems including means to delay the application of the discharge potential to the discharge device until the cathode has reached its operating temperature. The systems in class 323, subclass 41 are closely analogous to the systems in this and the indented subclasses. See VII B for the line between class 323 and this class.

in subclass 106, add:

Search Class—
322—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the magnitude of the current and/or potential in a single circuit.

in subclass 107, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1 to 100, for miscellaneous systems for controlling the magnitude of the current and/or potential in a single circuit.

in subclass 141, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+, for miscellaneous polyphase transformer systems.

in subclass 149, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 21, for systems for controlling the current and/or voltage magnitude in a single circuit where the control means is a discharge device which is automatically controlled by photosensitive means. The systems in class 323 are closely analogous to the systems in this and the indented subclasses. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 177, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+, for miscellaneous transformer systems.

in subclass 194, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 18 and 34+, for systems for controlling the magnitude of the current or voltage in a single circuit by means of a discharge device having a discharge control device (e. g., grid), the discharge device circuit including means for shifting the phase of the potential in the discharge control device circuit with respect to the potential in the output circuit. See subclass 18 where the system includes means to cause the discharge device to operate intermittently, that is, for a limited number of cycles and then to cut off. The systems in class 323 are very closely analogous to the systems in this and the indented subclasses. For the line between class 323 and class 315, see section VII B of the class definition of class 323.

in subclass 196, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 24, for miscellaneous systems having a plurality of discharge devices connected in inverse parallel relationship and having means for shifting the phase of the current and/or voltage in the discharge control device circuit with respect to the output current and/or voltage for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 24 of class 323 are closely analogous to the systems in this and the indented subclasses. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 200, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+, for miscellaneous systems having one or more discharge devices for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 205, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 23+, for miscellaneous systems having a plurality of discharge devices for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 206, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+, for miscellaneous systems having one or more discharge devices in the primary circuit of a transformer for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 208, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 26+ and the subclasses specified in the notes to the definition of those subclasses, for miscellaneous systems having a discharge device which is provided with a discharge control device for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 227, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 93 and the subclasses specified in the notes to the definition of that subclass, for miscellaneous condenser systems and for miscellaneous systems having a condenser for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 251, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 24, for miscellaneous systems having a plurality of discharge devices connected in inverse parallel relationship for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 24 of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 252, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 23+, for miscellaneous systems having a plurality of discharge control discharge devices for controlling the magnitude of the current and/or voltage in a single alternating current circuit. Some of the systems in subclass 23+ of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 254, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 119, for the structure of transformers provided with regulating means (taps, saturable cores, etc.).
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 356+, for the structure of transformers.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+ and the subclasses specified in the notes to the definitions of those subclasses, for miscellaneous transformer systems and for systems having a transformer for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 257, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 119, for the structure of plural secondary or tapped secondary coil transformers which are provided with regulating means (taps, saturable cores, etc.).
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 356+, for the structure of plural secondary coil transformers.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 48+, for miscellaneous systems having a plural primary or secondary winding transformer for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 258, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 242, for the structure of inductances provided with regulating means (saturable core, variable inductance, etc.).
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 356+, for the structure of inductances.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 82+ and the subclasses specified in the notes to the definition of those subclasses for miscellaneous reactor systems and for systems having an inductance for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 259, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 242, for the structure of variable inductances.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 82+ and the subclasses specified in the notes to the definition of these subclasses, for systems having a variable inductance for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 261, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 28, for alternating current systems having a discharge device with an auxiliary starting electrode for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 28 of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 262, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 119, for the structure of transformers having regulatory means (taps, saturable cores, etc.).
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 242, for the structure of transformers.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44 and the subclasses specified in the notes to the definition of these subclasses for miscellaneous transformer systems.

in subclass 263, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 242, for the structure of inductances having regulatory means (taps, variable inductances, etc.).
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 356+, for the structure of inductances.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 82+ and the subclasses specified in the notes to the definitions of these subclasses for miscellaneous reactor systems.

in subclass 264, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 63+ and the subclasses specified in the notes to the definition of these subclasses for miscellaneous impedance systems.

in subclass 267, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 29, for systems having an electromagnetically controlled discharge device for controlling the magnitude of the current and/or voltage in a single alternating current circuit. Some of the systems in subclass 29 of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 268, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 30+ and the subclasses specified in the notes to the definitions of these subclasses for systems having a discharge control discharge device for controlling the magnitude of the current and/or voltage in a single alternating current circuit. Some of the systems in subclass 30+ of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 269, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 26+, for systems having a discharge device with a plurality of discharge control devices for controlling the magnitude of the current and/or voltage in a single alternating current circuit. Some of the systems in subclass 26+ of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 270, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 31+, for miscellaneous systems having a discharge control discharge device which has its discharge control device circuit supplied with a plurality of different currents and/or potentials for controlling the magnitude of the current and/or voltage in a single alternating current circuit. Some of the systems in subclass 31+ of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 271, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 33, for miscellaneous systems having a discharge control discharge device which has its discharge control device circuit supplied with a plurality of alternating currents and/or potentials for controlling the magnitude of the current and/or potential in a single alternating current circuit. Some of the systems in subclass 33 of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 272, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 38, for miscellaneous systems having a discharge control discharge device which has a discharge device in the control circuit for controlling the magnitude of the current and/or voltage in a single alternating current circuit. Some of the systems in subclass 38 of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 273, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 93, for miscellaneous condenser systems.

in subclass 274, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+, for miscellaneous transformer systems.

in subclass 275, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 93, for miscellaneous condenser systems.

in subclass 276, under "Search Class", add:

171—ELECTRICITY, GENERATION, subclass 119, for the structure of transformers having regulatory means (e. g., taps, saturable cores, etc.).
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 356+, for the structure of transformers.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+ and the subclasses specified in the notes to the definitions of those subclasses for miscellaneous transformer systems and for miscellaneous systems having a transformer for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 278, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 119, for the structure of transformers having three or more windings and having regulatory features (e. g., taps, saturating winding, etc.).
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 356+, for the structure of transformers having plural primary or secondary windings.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 48+, for miscellaneous transformer systems and for transformer systems for controlling the magnitude of the current and/or voltage in a single circuit where the transformer has a plurality of primary or secondary windings, and subclass 56, for miscellaneous transformer systems and for transformer systems for controlling the magnitude of the current and/or voltage in a single circuit where the transformer has an auxiliary saturating winding.

in subclass 279, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 57+, for miscellaneous transformer systems and for systems having a transformer for controlling the magnitude of the current and/or voltage in a single circuit, the transformer being provided with current regulating means in its primary circuit.

in subclass 281, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 51+, for miscellaneous transformer systems and for systems having a transformer for controlling the magnitude of the current and/or voltage in a single circuit, the transformer having an adjustable or movable magnetic structure, and subclass 53+, for miscellaneous transformer systems and for systems having a transformer for controlling the magnitude of the current and/or voltage in a single circuit, the transformer having an adjustable or movable winding or coil.

in subclass 282, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 119, for the structure of transformers having regulatory means (taps, saturable cores, etc.).
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+ and the subclasses specified in the notes to the definition of those subclasses for miscellaneous transformer systems and for transformer systems for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 283, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 242, for the structure of inductances provided with regulating means (saturable core, variable inductance, etc.).
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 356+, for the structure of inductances.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 82+, and the subclasses specified in the notes to the definition of those subclasses for miscellaneous reactor systems and for systems having an inductance for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 284, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 242, for the structure of variable inductances.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 82+ and the subclasses specified in the notes to the definition of those subclasses for systems having a variable inductance for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 285, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 90, for miscellaneous reactor systems and systems for controlling the magnitude of the current and/or voltage in a single circuit by means of a reactor, the reactor having a movable coil and/or core.

in subclass 289, add:

Search Class—
171—ELECTRICITY, GENERATION, subclass 242, for the structure of inductances provided with regulating means (saturable core, variable inductance, etc.).
175—ELECTRICITY, GENERAL APPLICATIONS, subclass 356+, for the structure of inductances.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 82+, and the subclasses specified in the notes to the definition of those subclasses for miscellaneous reactor systems and for systems having an inductance for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 291, under "Search Class", cancel the reference to class 171, and add in numerical order:

171—ELECTRICITY, GENERATION, the subclasses listed under the title "Regulators" for the structure of variable inductances, variable transformers, and other regulating devices not otherwise classified. Subclass 97 and the indented subclasses for miscellaneous distribution systems which include regulators.
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 1–100, for miscellaneous systems for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 299, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 17, for systems for controlling the current and/or voltage magnitude in a single circuit having a discharge device and an impedance as the control means, subclass 57+, for systems for controlling the magnitude of the current and/or potential in a single circuit by means of a transformer having control means in its input and/or output circuit, subclass 74+, for systems for controlling the magnitude of the current and/or potential in a single circuit having plural impedances as the control means.

in subclass 306, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 81, for systems for controlling the magnitude of the current and/or voltage in a single circuit by means of an impedance connected in shunt with the circuit.

in subclass 307, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 19+, for automatically controlled systems for controlling the magnitude of the current and/or voltage in a single circuit by means of a discharge device; and subclass 64+, for systems for controlling the magnitude of the current and/or voltage in a single circuit by means of an automatically controlled impedance.

in subclass 308, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 20, for automatically controlled systems for controlling the magnitude of the current and/or potential in a single circuit by means of a discharge device which is responsive to plural conditions; and subclass 67+, for automatically controlled systems for controlling the magnitude of the current and/or voltage in a single circuit by means of an impedance which is controlled in response to a plurality of conditions.

in subclass 309, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 68+, for automatically controlled systems for controlling the magnitude of the current and/or voltage in a single circuit by means of an impedance which is responsive to a thermal condition.

in subclass 310, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 96+, for systems having a resistor which may be short circuited for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 311, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 64+, for systems having an automatically controlled impedance for controlling the magnitude of the current and/or voltage in a single circuit.

in subclass 326, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+, for systems having a discharge device for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 16+ of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 330, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 28, for systems having a discharge device with an auxiliary starting electrode for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 28 of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 335, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 28, for systems having a discharge device with an auxiliary starting electrode for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 28 of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 341, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 26+, for systems having a discharge device with a plurality of discharge control devices for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 26+ of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 344, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 29, for systems having an electromagnetically controlled discharge device for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 29 of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 349, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 30+ and the subclasses specified in the notes to the definitions of those subclasses for systems having a discharge control discharge device for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 30+ of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 350, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 31+, for miscellaneous systems having a discharge control discharge device which has its discharge control device circuit supplied with a plurality of different currents and/or potentials for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 31+ of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 351, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 32, for miscellaneous systems having a discharge control discharge device which has its discharge control device circuit supplied with a plurality of alternating currents and/or potentials for controlling the magnitude of the current and/or potential in a single circuit. Some of the systems in subclass 32 of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 352, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 38 and the subclasses specified in the notes to the definition of that subclass, for miscellaneous systems having a discharge control discharge device which has a discharge device in the control circuit for controlling the magnitude of the current and/or voltage in a single circuit. Some of the systems in subclass 38 of class 323 are closely analogous to the systems in this subclass. See section VII B of the class definition of class 323 for the line between class 315 and class 323.

in subclass 353, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 93, for miscellaneous condenser systems.

in subclass 354, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+, for miscellaneous transformer systems.

in subclass 355, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 93, for miscellaneous condenser systems.

in subclass 356, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 76+, for miscellaneous impedance systems having a reactor and condenser therein.

318, Electricity, Motive Power Systems

In the class definition, Section I, subsection C, cancel only:

"C. Motor Recited by Name Only"

and substitute:

C. 1. Generic Motor System With Disclosed But Not Claimed Electric Motor.

Motor systems where the disclosure states that any one of a plurality of motors may be used in the system, one of which is an electric motor and another is a non-electric motor, and there is no claim limiting the system to having a non-electric motor, are classified in class 318.

Where the system includes two or more motors, see section I, G below.

2. Motor Recited by Name Only.

and under "Search Class", in the reference to class 171, cancel the reference to subclass 229.

and in the reference to class 172, cancel the reference to subclass 246 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 55, for electric motor systems for controlling transformer tap changing; subclass 63+, for electric motor systems controlled impedance systems; subclasses indented under "Phase Control" for electric motor actuated and/or controlled phase control systems.

in subclass 14 under "Search Class", in the reference to class 74, change "Mechanical", first occurrence, to *Machine*.

in subclass 29, under "Search Class", in the reference to class 171, cancel "subclasses 229 and 242, for bridge networks and" and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 75, for bridge networks.

in subclass 45, under "Search this class, subclass", in the reference to 137 change "auxilliary" to *auxiliary*.

in subclasses 111 and 112, under "Search Class", in the reference to 315, cancel "Electricity,".

in subclass 136, under "Search Class", in the reference to 74, change "engined" to *engines*.

in subclass 142, (1) Note, cancel "of the operation".

in subclass 147, change "responsive" to *response*.

in subclass 165, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses 104, 107 and 117, for phase control systems including synchronous dynamo-electric machines.

in subclass 179, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 102+, for power factor responsive phase control systems.

in subclass 185, under "Search Class", in the reference to class 171, change "for gener" to *of general*.

in subclass 200, under "Search Class", cancel the reference to class 172 and substitute:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses indented under "Phase Control", for miscellaneous power factor control systems, particularly subclass 118, for power factor control by means of induction dynamo-electric machines.

in subclass 218, under "Search Class", cancel "; subclasses 238 . . . in general".

and add in numerical order:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses indented under "Phase Control", for phase control means in general.

in subclass 227, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+, for electric space discharge systems used for voltage magnitude control.

in subclass 228, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 63+, for impedance voltage magnitude controlled systems.

in subclass 237, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+, for electric space discharge devices voltage magnitude control systems.

in subclass 238, add:

Search Class—
323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 63+, for impedance voltage magnitude controlled systems.

in subclass 294, under "Search Class", cancel the reference to class 171 and substitute:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 75, for miscellaneous wheatstone bridge arrangements.

in subclass 307, under "Search Class", cancel the reference to class 171 and substitute:

322—ELECTRICITY, SINGLE GENERATOR SYSTEMS, subclass 19, for electric generator systems having "anti-hunting" means.

in subclass 384, under "Search this class, subclass", in the reference to 161, singularize "motors" and "flywheels".

in subclass 392, cancel "is", first occurrence.

in subclass 414, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 44+, for transformer systems as variable voltage sources.

in subclass 416, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+, for space discharge device voltage magnitude controlled systems.

in subclass 417, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 63+, for impedance voltage magnitude controlled systems.

in subclass 418, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 74+, for plural impedance type impedance systems for voltage magnitude control.

in subclass 419, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 82+, for reactor voltage control systems.

in subclass 420, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 94+, for resistor systems for voltage magnitude control.

in subclass 421, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 96+, for short circuited resistor impedance systems for voltage magnitude control.

in subclass 422, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 97, for step by step type short circuited resistor impedance systems for voltage magnitude control.

in subclass 432, under "Search Class", cancel the reference to class 171 and substitute:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 1+, for constant current systems in general.

in subclass 434, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 9, for current limition systems.

in subclass 438, under "Search Class", cancel the reference to class 172 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses indented under "Phase Control", for power factor control of general application.

in subclass 477, under "Search this class, subclass", cancel "means for", first occurrence.

in subclass 480, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 21, for photo-sensitive electric space discharge device voltage magnitude control systems.

in subclass 504, under "Search Class", cancel the reference to class 171, and substitute:

171—ELECTRICITY, GENERATION, subclass 123, for variable voltage rotary converters per se.

in the reference to class 322, change "Electricity, Generation Systems" to *Electricity, Single Generator Systems.*

and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses indented under "Voltage Magnitude Control", for variable voltage supply systems per se.

in subclass 505, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+, for electric space discharge device systems for voltage magnitude control.

in subclass 506, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 23+, for electric space discharge device systems for voltage magnitude control involving plural space discharge devices.

in subclass 507, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 30+, for electric space discharge device systems for voltage magnitude control having discharge controlled device (e. g., grid) control.

in subclass 508, under "Search Class", cancel the reference to class 171 and substitute:

171—ELECTRICITY, GENERATION, subclass 242, for the structure of variable reactors.

and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 63+, for circuit control in general by means of impedances.

in subclass 509, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 74+, for plural impedance networks per se.

in subclass 510, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 76+, for circuit impedance systems including both a reactor and a capacitor.

in subclass 511, under "Search Class", cancel the reference to class 171 and substitute:

171—ELECTRICITY, GENERATION, subclass 242, for the structure of inherently variable reactors per se.

and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 68+, for resistance networks and systems including temperature varied resistors (for example, having positive and negative temperature-resistance coefficients); and subclass 94+, for current varied resistors (for example, carbon-ceramic resistors having exponential current-resistance characteristics such as RI^n=a constant).

in subclass 512, under "Search Class", cancel the reference to class 171 and substitute:

171—ELECTRICITY, GENERATION, subclass 242, for variable reactor structure.

and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 82+, for impedance networks including reactors.

in subclass 513, under "Search Class", cancel the reference to Class 171 and substitute:

171—ELECTRICITY, GENERATION, subclass 242, for the structure of saturable reactors.

and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 89, for systems wherein saturable reactors are used for control purposes.

in subclass 514, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 94+, for control systems in general which include resistors as the controlling element.

in subclass 515, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 96+, for control systems in general which include short circuited resistors as the controlling element.

in subclass 516, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 97, for control systems in general which include resistors which are short circuited step by step as the controlling element.

in subclass 518, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 95, for control systems in general which include pressure variable resistors as the controlling element.

in subclass 532, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+, for electric space discharge device systems for voltage magnitude control.

in subclass 533, under "Search Class" cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 63+, for miscellaneous circuit control by means of impedances.

in subclass 534, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 74+, for miscellaneous load control by means of impedance devices including plural impedances.

in subclass 535, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 75, for Wheatstone bridge arrangements of impedances in general.

320, Electricity, Battery and Condenser Charging and Discharging

in the class definition, under "Searches in other classes", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, this is the generic place for voltage magnitude control systems.

in subclass 31, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 1+, for automatic current regulation systems; subclass 19+, for automatic electric space discharge device regulation systems; subclass 64+, for automatic impedance systems.

in subclass 32, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 1+, for automatic current regulation systems; subclass 22, for electric space discharge device voltage magnitude control systems responsive to an electrical condition; subclass 65+, for automatic impedance systems responsive to an electrical condition.

in subclass 39, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 1+, for current responsive current regulation systems, subclass 22, for current or voltage responsive space discharge device control systems, subclass 66, for current or voltage responsive impedance systems, subclass 102+, for voltage responsive phase control systems.

in subclass 51, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 63+, for voltage magnitude control systems involving impedance control.

in subclass 52, under "Search Class", cancel the reference to class 171, and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 95, for pressure variable resistance impedance systems.

in subclass 68, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 63+, for impedance voltage magnitude control systems in general.

in subclass 69, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 96+, for voltage magnitude control systems controlled by short circuiting a resistance.

in subclass 70, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 95, for impedance systems having a pressure variable resistor control.

322, Electricity, Single Generator Systems

in the class definition, under section I, D, 3, a, "Generator with Transformer or Inductance Only in the Load Circuit", cancel second paragraph beginning with "Likewise" and substitute:

Likewise systems having a significant structure of an inductance or inductance circuit are classified according to the type of system formed by the inductance. A recitation that the inductance is variable is a recitation of significant inductance structure. For the systems which provide for systems having transformers and/or inductances therein, see class 323 referred to under "Search Class" below.

under section I, D, 3, b, "Generator with Condenser Only in Load Circuit," cancel sections (b) and (c) and substitute:

(b) where the condenser is provided solely to control the characteristics of the load circuit (power factor control regulators) such a system being classified in class 323 listed under "Search Class" below.

(c) or where the condenser is defined by significant condenser structure, such a system being classified in class 323, ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 128.

under "Search Class", in the section headed "In class 171, search subclass", cancel the reference to 119+ and substitute:

119+—for the structure of variable transformers or variable reactors.

and cancel the reference to subclass 312, and substitute:

312—for miscellaneous direct current systems in class 171.

in the reference to class 240, change "7,6" to 7.6 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, for miscellaneous voltage magnitude controlled systems and miscellaneous phase controlled systems.

in subclass 17, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 19+, for automatic control of electric space discharge voltage magnitude controlled systems; subclass 64+, for automatic control of impedance voltage magnitude controlled systems; and subclass 101+, for automatic control of phase controlled systems.

in subclass 20, under "Search Class", cancel the reference to class 172 and substitute:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses indented under "Phase Control" for power factor and phase control systems.

in subclass 22, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 20, for automatic control of electric discharge voltage magnitude control systems in response to plural conditions; subclasses 65, 66 and 67, for automatic control of impedance systems in response to plural conditions.

in subclass 23, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 20, for space discharge device control systems responsive to plural conditions including an electrical condition; and subclasses 65, 66 and 67, for automatic impedance control systems responsive to plural conditions including an electrical condition.

in subclass 24, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 20, for automatic electric discharge device systems responsive to plural electrical conditions; and subclasses 65 and 66, for impedance systems responsive to plural electrical conditions.

in subclass 25, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 20, for automatic space discharge device systems automatic in response to voltage and current; and subclass 66, for automatic impedance systems responsive to voltage and current.

in subclass 26, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 21, for light responsive electric space discharge device voltage magnitude control systems.

in subclass 27, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 1+, for constant current systems.

in subclass 28, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclasses indented under "Voltage Magnitude Control", for constant voltage systems.

in subclass 33, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 68+, for thermal responsive impedance systems in general.

in subclass 57, add:

Search Class—

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 89, for saturable reactors.

in subclass 72, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16+, for space discharge device regulating systems.

in subclass 73, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 80+, for space discharge regulating systems wherein the space discharge device is provided with a discharge control element.

in subclass 74, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 16, for space discharge device regulating systems of the electric arc type.

in subclass 75, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 63+, for impedance systems in general.

in subclass 76, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 74+, for impedance systems involving plural impedances.

in subclass 77, under "Search Class", cancel the reference to class 171 and substitute:

171—ELECTRICITY, GENERATION, subclass 95, for measuring bridge networks.

and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 75, for bridge networks.

in subclass 78, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 76+, for tuned or resonant circuits.

in subclass 79, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 94, for circuits using rectifiers as impedance elements.

in subclass 80, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 94+, for miscellaneous resistance systems.

in subclass 81, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 68+, for thermally varied resistance systems.

in subclass 82, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 95, for resistance systems including pressure varied resistors.

in subclass 83, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 96+, for resistance systems including short circuited resistors.

in subclass 85, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 97, for resistance systems wherein a resistor is short circuited step by step.

in subclass 96, under "Search Class", cancel the reference to class 171 and add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 74+, for impedance systems including a plurality of impedances.

in subclass 97, under "Search Class", add:

323—ELECTRICITY, VOLTAGE MAGNITUDE AND PHASE CONTROL SYSTEMS, subclass 94+, for resistance systems.

MARK TAYLOR,
Acting Executive Primary Examiner.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

International Harvester Company, in accordance with its usual policy, is now placing on the Register, as available for license on reasonable terms, 45 patents, in addition to the 1,240 patents listed on the Register in former months. Persons interested in licenses for any of these patents should communicate with the Patent Department, International Harvester Company, 180 North Michigan Ave., Chicago 1, Ill.

Pat. 2,287,407. FUEL PUMP. Patented June 23, 1942. Relates to improvements in a Diesel engine fuel injection pump. Group 35—12—61. Reg. No. 9,387.

Pat. 2,287,478. FUEL PUMP FOR ENGINES. Patented June 23, 1942. Relates to fuel injection pumps for internal combustion engines of the Diesel type, particularly a fuel pump in which a single injection plunger is utilized for injecting the fuel to a plurality of cylinders. Group 35—12—61. Reg. No. 9,388.

Pat. 2,290,222. METHOD OF MAKING COTTON PICKER SPINDLES. Patented July 21, 1942. A method of making a cotton picker spindle having an improved barb or tooth formation which has the desired aggressive features and which can be doffed readily and completely. Group 35—22. Reg. No. 9,389.

Pat. 2,292,945. APPARATUS FOR MAKING PICKER SPINDLES. Patented Aug. 11, 1942. A machine for forming barbs or teeth on picker spindles in which the picking teeth are arranged on the spindle in a manner providing efficient picking and doffing characteristics. Group 35—22. Reg. No. 9,390.

Pat. 2,292,958. HARVESTER THRESHER. Patented Aug. 11, 1942. Relates to a harvester thresher of the self-propelled type in which a motor is provided to drive the various parts of the harvester thresher and to propel the machine over the ground. Also consists of a framework for the machine so constructed as to support the separator, platform, grain tank, and motor of the harvester. Group 35—22. Reg. No. 9,391.

Pat. 2,414,600. BEARING SEAL. Patented Jan. 21, 1947. A bearing seal for track rollers of crawler tractors having bearing elements with opposed complemental bearing and sealing faces, combined with a universally articulate mounting of impervious elastic material for at least one of the bearing elements to support the same in floating relation to the other elements of the seal as well as to the parts between which the seal is installed. Group 35—21—66. Reg. No. 9,392.

Pat. 2,414,602. AUXILIARY ELECTRIC POWER APPARATUS FOR TRACTORS. Patented Jan. 21, 1947. Relates to an inexpensive electrically energized auxiliary power device for adjusting tools associated with a tractor. Electrically energizing the device from a storage battery on the tractor makes it possible for operation irrespective of whether the tractor engine is running. Groups 35—21—22; 36—41. Reg. No. 9,393.

Pat. 2,416,153. AIR CIRCULATION SYSTEM FOR REFRIGERATING APPARATUS. Patented Feb. 18, 1947. Relates to a simple unitary fan structure which simultaneously cools the engine and the condenser of a refrigerating apparatus. Group 35—84. Reg. No. 9,394.

Pat. 2,416,189. PLANTER RUNNER. Patented Feb. 18, 1947. A seed planter having a furrow opener, a coverer, and a flexibly mounted runner permitting the runner to ride over obstructions independently of the furrow opener and the coverer. Group 35—22. Reg. No. 9,395.

Pat. 2,416,194. TRACTOR PLOW AND HITCH. Patented Feb. 18, 1947. A tractor-attached agricultural implement such as a laterally swingable disk plow having a steerable rear wheel and a unitary hitch for attachment to the tractor, plus means for steering the rear wheel from the tractor steering mechanism and means on the hitch for stabilizing the steering means. Group 35—21—22. Reg. No. 9,396.

Pat. 2,416,207. SHIFTING HITCH FOR TRACTOR PROPELLED AGRICULTURAL IMPLEMENT. Patented Feb. 18, 1947. Relates to a direct-connected two-way plow particularly used for hillside plowing and having a shifting hitch operable at will by the tractor operator from his seat on the tractor. Group 35—21—22. Reg. No. 9,397.

Pat. 2,416,224. MANURE SPREADER. Patented Feb. 18, 1947. Relates to a liquid-tight tiltable manure spreader in which liquid portions of manure will congregate in the downwardly tilted end of the spreader box when loading, and means provided for tilting the box to a level, unloading position. Thus the spreader box is adapted for handling both liquid and solid manure. Group 35—22. Reg. No. 9,398.

Pat. 2,416,564. GUIDE FOR TRACK SHOES OR LINKS. Patented Feb. 25, 1947. Relates to track links for crawler tractors and specifically to a guide that can be easily detached from the link and replaced with less effort and expense than if the entire link and guide assembly were replaced as in the integrally formed track guide studs on the links. Group 35—21—22. Reg. No. 9,399.

Pat. 2,417,905. PEANUT HARVESTER. Patented Mar. 25, 1947. A tractor-mounted machine for harvesting peanuts wherein means is provided for loosening the plant from the soil, detaching the plant bodily, shaking it to remove adhering dirt, and depositing the detached plants in windrows. Group 35—22. Reg. No. 9,400.

Pat. 2,417,915. FUEL PUMP WITH AUTOMATIC TIMER. Patented Mar. 25, 1947. Relates to injection pumps operable to initiate injection at a time determined by the axial position of the pump cylinder, and particularly to apparatus for accommodating and incurring axial adjustment of the cylinder to regulate injection timing useful in Diesel engines. Group 35—12—61. Reg. No. 9,401.

Pat. 2,417,931. TRACTOR MOUNTED PLANTER. Patented Mar. 25, 1947. A tractor-mounted planter including a soil-working device and a material dispenser, plus means controlled by the steering of the tractor for causing the dispenser to follow in the path made by the soil-working device when planting in curving terrain. Group 35—22. Reg. No. 9,402.

Pat. 2,417,952. TIRE CARRIER. Patented Mar. 25, 1947. Pivoting a tire carrier beneath the frame of a vehicle in such a manner as to permit insertion of the tire and wheel unit into the carrier under the bumper and at the same time to support the weight of the carrier and the tire and

wheel in such a manner as to enable the operator to swing it upwardly into a position where it may be locked and where it is arranged with sufficient clearance for operation of the vehicle. Group 38—11—22. Reg. No. 9,403.

Pat. 2,419,881. SEA WATER FRACTIONATOR. Patented Apr. 29, 1947. Relates to an apparatus for the preparation of potable water through a freezing procedure. The principal feature relates to means for the preparation of drinking water from sea water by freezing out the water and subsequently melting the ice free of salt. Groups 35—84; 37—32. Reg. No. 9,404.

Pat. 2,419,898. SHELLED CORN SAVER FOR HUSKING DEVICES. Patented Apr. 29, 1947. Relates to a mechanism to thoroughly shake and agitate the husks and trash passing through the husking rolls to remove the shelled corn therefrom. Group 35—22. Reg. No. 9,405.

Pat. 2,419,908. SELECTIVE VALVE MECHANISM FOR HYDRAULIC MOTORS. Patented Apr. 29, 1947. Relates to a valve mechanism for controlling the admission and exhaust of fluid to and from fluid-energizable motors to enable an operator to expediently select and control the starting and stopping of such motors. Particularly useful in hydraulic lifts for raising and lowering of tractor-mounted agricultural implements. Groups 35—21—22—61. Reg. No. 9,406.

Pat. 2,420,530. COMBINED IMPLEMENT STABILIZING AND LIFTING STRUCTURE. Patented May 13, 1947. Relates to a novel frame for attachment of implements to a tractor, wherein a combined stabilizing and lifting structure is provided for the quick-attachment of a variety of implements. Group 35—21—22—61. Reg. No. 9,407.

Pat. 2,420,543. DUAL CORN HUSKING UNIT FOR MULTIPLE ROW CORN PICKERS. Patented May 13, 1947. Relates to a husking device adapted for receiving snapped ears of corn discharged from two gathering units at the rear of and above the rear axle of a tractor; also to a husking device having horizontal rolls with forwarding means delivering from the end to the center thereof, and a husk eliminating and shelled-grain saving device below the husking rolls. Group 35—22. Reg. No. 9,408.

Pat. 2,420,551. GAUGE WHEEL AND COULTER ASSEMBLY. Patented May 13, 1947. A combined coulter and gauge wheel unit for agricultural machines comprising a coulter and laterally spaced wheels, one on each side of the coulter and smaller in diameter than the coulter, whereby the higher rotary speed of the wheels keeps the soil from sticking either to the wheels or to the coulter. Group 35—22. Reg. No. 9,409.

Pat. 2,420,555. QUADRANT LEVER CONTROL. Patented May 13, 1947. A lever-locking device having meshed companion gears concurrently meshable with the gear teeth of a rack along which the device is adjustable, and tiltable for disrupting the driving connection between either of the gears and the rack teeth for unlocking the device from the rack pursuant to the application of an adjusting force to the device lengthwise of the rack. Group 35—22—66. Reg. No. 9,410.

Pat. 2,421,795. ARMATURE BRUSH. Patented June 10, 1947. Relates to electrical conductor brushes used in conjunction with slip rings or commutators upon the rotatable armature of dynamo-electric machines, the brush having a novel shaped armature contacting surface adapted to retain its uniformity of contact with the armature. Group 36—19. Reg. No. 9,411.

Pat. 2,421,819. DEVICE FOR REGULATING THE THICKNESS OF ICE FORMATIONS ON EVAPORATOR COILS. Patented June 10, 1947. Relates to a device for regulating the thickness of an ice bank to be formed on the coils of a refrigerator. Group 35—84. Reg. No. 9,412.

Pat. 2,424,155. PLOW. Patented July 15, 1947. A plow having replaceable parts designed to lengthen the life of the plow, the point of the share being adapted to wear sharp by usage and thus reduce the cost of resharpening. Group 35—22. Reg. No. 9,413.

Pat. 2,424,168. MATERIAL DISPENSING DEVICE HAVING A ROLLER WITH DISCHARGE CONTROLLER. Patented July 15, 1947. A fertilizer measuring and distributing mechanism provided with means for readily and accurately adjusting the amount of material discharged. Group 35—22. Reg. No. 9,414.

Pat. 2,424,171. STONE EJECTOR FOR FIELD HAY CHOPPERS. Patented July 15, 1947. Relates to field hay choppers having means for automatically ejecting stones, roots, and other foreign objects from the hay or cereal prior to the time it enters the cutting or treating chamber, thereby to save the chopper mechanism from damage. Group 35—22. Reg. No. 9,415.

Pat. 2,424,181. CORN SNAPPING AND HUSKING DEVICE. Patented July 15, 1947. A snapping and husking device for a corn harvester having means for recovering grain from stalk and husks passing through the snapping means, and conveying loose husks along with husks from a husking means over the grain receiving means. Group 35—22. Reg. No. 9,416.

Pat. 2,424,185. AGRICULTURAL IMPLEMENT. Patented July 15, 1947. A disk plow having means for connecting the disk standard to the frame and for changing the angle of the plow disks. Group 35—22. Reg. No. 9,417.

Pat. 2,427,862. FILTER ELEMENT. Patented Sept. 23, 1947. Relates to an oil filter unit having a filtering envelope with a drainage and sealing structure which is cooperable with the envelope when the latter is rolled spirally into a substantially cylindrical formation and thus contracted into a readily enclosable space. Group 38—31. Reg. No. 9,418.

Pat. 2,427,871. FLUID PRESSURE SERVOMOTOR WITH FOLLOW-UP DEVICE. Patented Sept. 23, 1947. Relates to a fluid power arrangement for tractor-mounted implements which is so sensitive to a manual control element that the movement of the working tool for the purpose of adjusting the same in its working position is substantially instantaneous in its operation even though fluid power means is used in doing the actual work in adjusting the working tool. Group 35—21—22. Reg. No. 9,419.

Pat. 2,427,876. CONVEYOR MECHANISM FOR HARVESTER THRESHER. Patented Sept. 23, 1947. A feeding device for transporting cut grain from the harvester to the thresher consisting of a longitudinal conveyor having a substantial vertical forward end which maintains a constant relationship with the transverse harvester platform conveyor regardless of the amount of cut grain being transported to the thresher unit. Group 35—22. Reg. No. 9,420.

Pat. 2,427,880. IMPLEMENT DRIVE LOCK DEVICE. Patented Sept. 23, 1947. A locking device for a manure spreader drive which is capable of maintaining a drive chain in engaged driving position and which is capable of maintaining the drive chain in non-driving position, all by means of a single lock which is operable by a single pull cord. Group 35—22. Reg. No. 9,421.

Pat. 2,430,696. POWER LIFT DEVICE FOR TRACTORS. Patented Nov. 11, 1947. Relates to a power lift device for tractor-attached implements having connections both for lifting an implement relative to a tractor and for adjusting means on the implement, all said connection being automatically releasable upon fore and aft movement of the tractor relative to the implement. Group 35—21—22. Reg. No. 9,422.

Pat. 2,430,713. OIL FILTER. Patented Nov. 11, 1947. A filter constructed of porous fibrous sheet material in a desirable economical form for filtering lubricating oil in internal combustion engines. Groups 26—25; 38—31. Reg. No. 9,423.

Pat. 2,430,728. LATCH-TYPE CONNECTING DEVICE. Patented Nov. 11, 1947. Relates to a latch type of connecting device which may be manipulated from a single side for either attaching or detaching while causing release of the latch. Group 35—21—22. Reg. No. 9,424.

Pat. 2,430,731. AGRICULTURAL IMPLEMENT. Patented Nov. 11, 1947. A disk plow having land and furrow wheels and lift means actuated by one wheel and means for transmitting lifting power therefrom at a different rate to the other wheels. Group 35—22. Reg. No. 9,425.

Pat. 2,430,732. IMPLEMENT MOUNT FOR TRACTORS. Patented Nov. 11, 1947. Relates to tractor-mounted implements having an attaching structure permitting lateral swinging movement of the implement, and pressure means for urging the implement back to its normal operating position. Group 35—21—22. Reg. No. 9,426.

Pat. 2,430,734. RAKING AND LOAD LIFTING REEL. Patented Nov. 11, 1947. A pick-up baler having a packing and feed assisting structure which is resiliently urged downwardly against the material so as to handle different crops and crops of different volume. Group 35—21—22. Reg. No. 9,427.

Pat. 2,430,741. DRIVE MECHANISM FOR PLANTERS. Patented Nov. 21, 1947. A planter drive having a gear housing which is readily attachable to and removable from a tractor, and a combined planetary gear and clutch assembly within said housing for transmitting power from a tractor brake shaft to a planter drive mechanism or the like. Group 35—21—22. Reg. No. 9,428.

Pat. 2,433,075. METHODS OF FIRING FURNACES OR SOAKING PITS. Patented Dec. 23, 1947. Relates to an improved method for firing a furnace for soaking ingots in steel manufacture. Group 33—11—12. Reg. No. 9,429.

Pat. 2,433,147. AGRICULTURAL IMPLEMENT. Patented Dec. 23, 1947. Relates to a hitch device for two-way plows and associated with forwardly projecting ends of the plow beam, the hitch device being swingable laterally and movable vertically with respect to the plow beams. Group 35—22. Reg. No. 9,430.

Pat. 2,433,148. PLOWS. Patented Dec. 23, 1947. Relates to a rear furrow wheel for plows that will hold the wheel so that it will not caster on forward or rearward movement of the plow when in operating position, but which mounting will permit the wheel to caster on forward movement of the plow when in transport position and at the same time will inhibit castering upon rearward movement thereof. Group 35—22. Reg. No. 9,431.

Pat. 2,433,245. KEY CARRIER. Patented Dec. 23, 1947. A key carrier consisting of a continuously linked chain divided by cross connections into two or more loops for segregating keys. Modifications show various types of cross connections. Cross piece may be permanently integrated with chain, requiring a fastener in each loop, or may be annular or in form of a figure 8, constricting the continuous chain within it and requiring only one fastener. (Owner) Patents Promotions Corporation. Address correspondence to Stanton and Stanton, 188 W. Randolph St., Chicago 1, Ill. Groups 33—59; 40. Reg. No. 9,432.

Pat. 2,419,501. DEBRIS ACCUMULATING AND SEPARATING TRAP FOR DRAIN PIPES. Patented Apr. 22, 1947. A debris-accumulating trap suitable for mounting in drain pipes and downspouts. A sheet metal box having a slanting bottom is fitted between sections of the downspout by two neck-like nipples, one provided with staggered inclined baffles and the other provided with a filter. A slanting screen in the box diverts leaves and other debris into an accumulating compartment of the box. This compartment has a hinged cover so that the debris may be removed and the screen cleaned. A modification is shown wherein a removable wire basket is provided for screening and collecting the debris. (Owner) Armie A. Pinto, 540 West Savannah, Detroit 3, Mich. Groups 33—61; 35—69. Reg. No. 9,433.

Pat. 2,330,736. CLAMP. Patented Sept. 28, 1943. Clamp for wire, cable, etc., is especially adapted for use in conjunction with wire pullers. The clamp includes a rectangular metal plate (of reduced width at its forward end) having a ledge formation which constitutes an elongated fixed jaw. The rear end of an elongated movable jaw is pivotally connected to the lower end of a link, and the front end of the jaw is pivotally connected to the lower end of a rocking bellcrank. Link and crank are connected to the plate by fulcrum pins. The upper end of the crank is pivotally connected to the rear end of a forwardly extending curved rod which extends through a closed slot in a lateral formation on the reduced end of the plate. When pull is exerted on the rod, the bellcrank forces the movable jaw downwardly and rearwardly into clamping position. The greater the pull on the rod, the greater the clamping action. (Owner) Lewis T. Paulson, % Paulson's Garage, Blue River, Wis. Groups 33—73; 35—69. Reg. No. 9,434.

Pat. 2,377,656. DECORATIVE HANDBAG MATERIAL. Patented June 5, 1945. Strands of cotton or yarn are woven to provide a series of adjacent spaces of identical shape between plies of strands for the reception of correspondingly shaped rigid ornamental chips to add rigidity thereto. The chips are of a size to completely fill the recesses, being securely held therein after insertion by woven strands which pass over the outer surfaces of the chips and through openings in the chips. Plies of strands are then built up around the edges of the chips to a height above their outer surface to afford protection against marring of the chips when bag is in use. The spaces between the plies may be hexagonal or any other desired shape with correspondingly shaped chips, which may be made of plastic, glass, or any other suitable material. (Owner) John Wimberly Thomas, 204 South Weldon St., Gastonia, N. C. Group 31—71. Reg. No. 9,435.

Pat. 2,433,307. ADJUSTABLE HAND WEAVING FRAME. Patented Dec. 23, 1947. A frame suitable for hand-weaving the handbag material described in Patent 2,377,656. Frame is made up of several sections detachably connected by pins in the ends of some sections engaging openings in the ends of adjacent sections. The sections may be readily disconnected and rearranged to form numerous shapes and various sizes of frames to vary the pattern. Removable spaced vertical pins rising from the upper surfaces of the sections are provided for winding of yarn or thread thereon in the formation of fancy designs. (Owner) John Wimberly Thomas, 204 South Weldon St., Gastonia, N. C. Groups 31—71; 35—52. Reg. No. 9,436.

Pat. 2,431,399. BACK WATER TRAP FOR DRAINS. Patented Nov. 25, 1947. Trap seals off basement drain in case of a rise of water from a sewer. The trap is a casing equipped with an inlet and outlet connection and having a vertically movable gate valve which, when lowered, closes off the inlet connection. A bucket, normally filled with water, pivotally connected to a lever associated with the gate valve, acts as a counterbalance and raises the valve to open position. Loss of water content, when bucket is tipped by a rise of water, closes the valve. A knife edge at the lower end of the valve clears the valve seat to produce effective sealing. When installed in a basement, the casing is flush with the floor. (Owner) George A. Hull, 15701 Lauder Ave., Detroit 27, Mich. Group 33—61—73. Reg. No. 9,437.

Pat. 2,430,107. TRUNDLE TRUCK. Patented Nov. 4, 1947. Two-wheeled hand truck for moving quarters of beef. The truck frame is provided with a pair of upwardly and forwardly extending rockers on the front end

and an adjustable removable shelf. The rear edge of the shelf may be slipped into any pair of selected slots in the top surfaces of a pair of bars disposed longitudinally between side bars of the truck frame. The cross bar of a rearwardly extending yoke which is pivoted to the shelf may be slipped into any pair of undercut notches in the side bars. Truck may be wheeled beneath a suspended side of beef and held in vertical slanting position by extending a foldable U-brace. After adjustment of the shelf, the truck is rocked forwardly and upwardly to cause the shelf to lift the beef to permit detachment from the hook. (Owner) Paul Cronrath, 310 South Pine, Spokane, Wash. Group 35—63—69. Reg. No. 9,438.

Pat. 2,433,273. COVER SECURING MEANS FOR INFANTS. Patented Dec. 23, 1947. This device is used in combination with an infant's sleeping garment to hold covers in place while infant is sleeping. The device consists of a pair of fabric straps of equal length provided at one end with an elastic portion and clip. In use, the straps are buttoned to the front of the waist band of the sleeping garment, passed over the shoulders of the infant, and the opposite ends clipped to the blanket covering. A cross piece is buttoned to the straps a short distance from their ends to prevent the straps from passing over the head of the infant. The device is designed to permit changes of position under the covers. (Owner) Daniel Halperin, % Stephen J. Cox, 11 Park Place, New York 7, N. Y. Groups 23—84; 40. Reg. No. 9,439.

The following four patents, all dealing with the general subject of wine purification, are owned by W. D. Ramage, 2314 Marin Ave., Berkeley 8, Calif. Groups 20—84; 28—89.

Pat. 2,105,700. PROCESS FOR PURIFICATION OF BEVERAGES. Patented Jan. 18, 1938. This patent deals with the application of an insoluble ferrocyanide as an adsorbing and base exchange agent for removal of heavy metals from wine. Reg. No. 9,440.

Pat. 2,105,701. PROCESS FOR PURIFICATION OF BEVERAGES. Patented Jan. 18, 1938. Deals with the application of an acid resistant zeolite or other acid resistant base exchange materials in the removal of heavy metals from wine or other alcoholic beverages. Reg. No. 9,441.

Pat. 2,128,432. PROCESS FOR CLARIFICATION AND REMOVAL OF IRON FROM BEVERAGES. Patented Aug. 30, 1938. Deals with the application of alkali treated alpha-cellulose as an adsorbing agent for the removal of colloidal impurities. Reg. No. 9,442.

Pat. 2,258,216. PROCESS FOR REMOVAL OF METALLIC IMPURITIES FROM WINES AND OTHER ACID BEVERAGES. Patented Oct. 7, 1941. Deals with special procedures for improving the effectiveness of base exchange materials, especially acid resistant base exchange materials, in the removal of heavy metals from alcoholic beverages. Reg. No. 9,443.

Pat. 2,413,485. RECIPROCATING-SAW MACHINE. Patented Dec. 31, 1946. Groups 24—11—21; 35—41—66. Reg. No. 9,443.

Pat. 2,431,107. SAFETY RELEASE CLUTCH. Patented Nov. 18, 1947. Groups 24—11—21; 35—41—66. Reg. No. 9,444.

These two patents show a reciprocating saw machine and a safety clutch therefor which will automatically disconnect saw drive shaft when reciprocation of saw is unduly resisted. Machine may be mounted on front end of tractor and driven thereby to fell and cut trees into desired lengths. The saw may be readily positioned for vertical, horizontal, or angular cutting. The machine, devoid of a crosshead and guide rods for saw, imparts longitudinal rocking motion to saw while reciprocating it. A hollow driving pulley forms the drum of the safety clutch, which includes a disc (carrying brake shoes) yieldingly connected by springs to radiating arms of a spider, the hub of which is splined to saw drive shaft. A cone-shaped sleeve (notched to straddle spider arms) is slidable on hub of spider. Friction rollers on the ends of shoe actuating levers bear against opposite sides of cone. When cone is slid toward disc, levers are actuated and shoes applied. Overload causes relative turning movement between disc and spider so that a cam arrangement on disc and cone will move cone away from disc. This shifts the tapered end of cone into plane of the rollers permitting swinging movement of the levers to disengage shoes. The clutch is well adapted for other types of mechanisms. (Owner) Rush G. Brown, Riverton, Wyo.

Pat. 2,180,795. PACKING. Patented Nov. 21, 1939. An "O" packing ring construction effects a seal between two relatively movable members, one of which is provided with a groove into which the packing ring is inserted. The ring and groove are so dimensioned that when the ring is in operative position, it is compressed into somewhat ellipsoidal cross-section. The groove has a width slightly greater than the axial dimension of the compressed ring so that the ring will be kneaded during movement of one member with respect to the other. License terms are on file with the Register. (Owner) Niels A. Christensen, 1719 Sheridan Road, South Euclid, Ohio. Groups 30—31; 32—93. Reg. No. 9,445.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING FEBRUARY, 1948

VITA-VAR CORPORATION *v.* THE WHITE COMPANY, Opposition No. 22,731.

In a decision rendered February 3, 1948 (169 Ms. Dec. 604, 76 USPQ 267), *Assistant Commissioner Murphy* reversed the action of the Examiner of Interferences, who had dismissed the opposition of Vita-Var Corporation of Newark, N. J., against registration to The White Company, of Baltimore, Md., of the mark "HYDROLITE" for casein wall paint, opposer being the owner of registration No. 160,195 covering the mark "HYDROLITE" distinctly printed upon a design which registration was properly renewed in 1942 for waterproofing compound for concrete, plaster and stucco.

After noting that the substantial identity of the two marks and opposer's priority are not an issue in this case, it was held that the only question now to be decided is whether the opposer's waterproofing compound and applicant's wall paint are goods of the same descriptive properties or are so closely related as to be likely to cause confusion in trade to the damage of the opposer.

It was held that an admission by the present applicant in an earlier cancellation proceeding brought by the applicant against the present opposer cannot result in an estoppel on the part of the present opposer to argue that a wall paint and its own waterproofing compound should be held to be of the same descriptive properties.

It was held that the Examiner of Interferences applied too narrow a test in determining the issue of same descriptive properties in the present case, for even though opposer's compound and applicant's paints may be traded through different channels of trade and may be specifically different in their properties, it still remains true that they are closely related, and a nationally known paint manufacturer who has been using a well established trade-mark not on paint but on a product as closely related as a water-proofing compound in powder form should be held entitled to protection and registration of the word for all articles coming within this general class even though one material may, for the purposes of Patent Office classification, be classified as construction material, while the other falls within the category of paints or paint materials.

It was held that this is not a case which may call for application of section 19 of the new Trade-Mark Act of 1946 which makes equitable principles of laches, acquiescence and estoppel applicable even in pending appeals, for, contrary to applicant's contention, there are no elements of laches or estoppel present in this record which might have justified further consideration or remanding of the case to the Examiner; on the contrary, the present opposer immediately objected to applicant's use of the mark on paint and the ensuing cancellation proceeding was terminated in opposer's favor, so that it follows that for at least ten years applicant has been chargeable with notice that its use of the mark "HYDROLITE" was considered by opposer as an encroachment on its rights.

VITA-VAR CORPORATION *v.* ALUMATONE CORPORATION, Opposition No. 23,987.

In a decision rendered February 3, 1948 (169 Ms. Dec. 607, 76 USPQ 266), *Assistant Commissioner Murphy* affirmed the action of the Examiner of Interferences sustaining the opposition of Vita-Var Corporation, of Newark, N. J., based upon its ownership of trade-mark registration No. 252,109 showing the notation "ALUMIKOTE" for use upon ready mixed aluminum paint as against the attempted registration by Alumatone Corporation, of Los Angeles, Calif., of the word "ALUMATONE" for a ready mixed aluminum paint and similar products.

It was held that the Examiner was right in ruling that the difference in the manner of use of the two marks and their application to the two products, and more particularly the fact that applicant's product is sold in a single container ready for use while opposer's product is sold in separate containers requiring mixing by the consumer himself, are not sufficient to characterize the goods of the parties as having different descriptive properties, for they are clearly competitive in nature.

It was further held that the Examiner was correct in his ruling that these two terms are confusingly similar for, although the syllables "alumi" and "aluma" have little, if any, trade-mark significance in connection with an aluminum paint product, agreement cannot be expressed with applicant's contention that the syllable "kote" as compared with "tone" is sufficiently dissimilar to prevent confusion; on the contrary, the two word combinations here involved fall within the statutory ban of section 5 of the act of 1905.

AMERICAN SAFETY RAZOR CORPORATION *v.* PAL BLADE COMPANY (PAL BLADE CO., INC., ASSIGNEE, SUBSTITUTED), Opposition No. 24,509.

In a decision rendered February 5, 1948 (169 Ms. Dec. 615, 76 USPQ 272), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences dismissing the opposition of American Safety Razor Corporation, of Brooklyn, N. Y., to the application of Pal Blade Company (Pal Blade

Co., Inc., Assignee, Substituted) of New York, N. Y., for registration under the act of February 20, 1905, of a trade-mark for safety razor blades, the mark consisting of the word "PAL," displayed within a circular design, the lower portion of the circular design being crossed by a narrow rectangular panel which extends beyond the edges of the circular design, and upon which appear the words "HOLLOW GROUND," which words were disclaimed in the application as filed. Opposer based its opposition on the descriptiveness clause of section 5 of the act of 1905, its objections being directed solely to the disclaimed words "HOLLOW GROUND."

In response to opposer's contention that the words "HOLLOW GROUND" constitute the dominant feature of the mark sought to be registered and that under the circumstances of the case opposer's good will as a manufacturer of hollow-ground blades will be diminished and its sales affected adversely through confusion of purchasers if the mark is registered, it was held that the descriptive words are closely associated with and subordinate to applicant's arbitrary mark "PAL," and examination of the mark as used indicates that its connotation would necessarily be that the package contains applicant's "PAL" blades which are hollow ground, so that the Examiner of Interferences was right in ruling that opposer has shown no basis for believing that it could be damaged by the registration of applicant's mark; refusal of registration would not in any event prevent continued use of the mark by applicant.

In response to opposer's reference to a temporary use of an improper patent notice on applicant's blades as indicating the probability of confusion, it was held that while use of an improper notice of registration is ground for refusal to register as an ex parte matter, this notice is not used in connection with the mark involved and applicant has explained its occurrence to the satisfaction of the Examiner of Interferences, so that the notice referred to does not indicate any possibility of confusion and the Examiner of Interferences has properly found it to be no basis for ex parte action as to the application involved.

FRESH 'ND AIRE COMPANY, NOT INC., *v.* BELMONT LABORATORIES (SIDNEY E. BELMONT, ASSIGNEE, SUBSTITUTED) Cancellation No. 4684.

In a decision rendered February 5, 1948 (169 Ms. Dec. 609, 76 USPQ 268), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the petition of Fresh 'nd Aire Company, Not Inc., of Chicago, Ill., pursuant to section 2 of the Trade-Mark Act of March 19, 1920, to cancel registration No. 416,037, registered August 21, 1945, under that act to Belmont Laboratories (Sidney E. Belmont, Assignee, Substituted), of Chicago, Ill., the mark sought to be canceled comprising the words "FRESH 'n AIRE," with which is associated a representation of a bottle and wick and the words "Pull the wick—Kill it quick" for a household deodorant. Petitioner for cancellation relied upon prior use of the mark "Fresh 'nd Aire" and sets up ownership of registration No. 338,102, registered August 25, 1936, under the Trade-Mark Act of March 19, 1920, which discloses the words "Fresh'nd Aire" for air conditioning and circulating fan.

In response to registrant's contention that the goods of the parties are not merchandise of the same descriptive properties and that they are substantially different in appearance, construction, materials, costs, and purposes of use, it was held, after noting that registrant states that its deodorant acts by evaporation, while in petitioner's device the deodorant is heated and dispersed throughout the room by the action of the fan, it was held that the goods are identical in purpose, and operate on the same principle, the only difference being in the means of diffusion of the substance, so that they must be considered to be goods of the same descriptive properties.

In response to registrant's contention that the petition should have been dismissed because petitioner's testimony shows that it was not using the trade-mark at about the time of filing the petition, it was held that although the testimony does show that the manufacture and sale of such products was restricted a considerable extent due to inability to produce them during the war, nevertheless the testimony shows that fragrance and the deodorizer and purifier were sold as long as stock was one hand, including proof of specific sales of the fragrance and deodorizer during 1943 and 1944, the period during which the registrant claimed to have exclusive use of the mark, with the mark appearing on these goods as shipped, so that these alone would be sufficient to negative registrant's right to the registration under section 1(*b*) and section 2 of the Trade-Mark Act of 1920.

TUNG-SOL LAMP WORKS, INC., *v.* KING-SOL RESEARCH CORPORATION, Opposition No. 24,408.

In a decision rendered February 5, 1948 (169 Ms. Dec. 611, 76 USPQ 269), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the opposition of Tung-Sol Lamp Works, Inc., of Newark, N. J., to the registration under the Trade-Mark Act of February 20, 1905, of the mark for flash synchronizers, consisting of a battery case, battery reflector and magnetic tripper shown in the application of King-Sol Research Corporation, of New York, N. Y., the mark consisting of the words "KING-SOL" associated with a fanciful representation of the sun, the word "KING" appearing in a crown placed at the top of the sun, and the word "SOL" below it. The opposition was based on the confusion-in-trade clause of section 5 of the Trade-Mark Act of 1905, opposer having alleged prior ownership and use of "TUNG SOL" as a trade-mark for a long line of electrical products, and opposer being the owner of three prior registrations under the act of 1905, each covering "TUNG SOL" for various electrical products, and one comprising those words together with a fanciful representation of the sun, for incandescent electric lamps.

In response to applicant's contention that the Examiner was clearly in error in holding that the goods of the respective parties are confusingly similar, within the meaning of the confusion-in-trade clause of the act of 1905, it was held that the Examiner of Interferences was right in ruling that the goods are confusingly similar within the meaning of the act.

It was further held that as to the similarity of the marks mere comparison of either their appearance or sound is sufficient to demonstrate confusing similarity, so that the marks are so similar that their use on goods of the same descriptive properties would be likely to cause confusion or mistake in the mind of the public or to deceive purchasers.

After noting that opposer questions the holding of the Examiner of Interferences that no grounds of opposition under the "name clause" exist, it was held that in view of the foregoing it is perhaps unnecessary to consider opposer's appeal from the ruling that the opposition could not be maintained under the "name clause" of section 5 of the Trade-Mark Act of 1905, so that it therefore seems sufficient to note that agreement is expressed with the conclusion of the Examiner of Interferences as to that phase of the proceeding.

RITE-RITE MFG. CO. *v.* RITE-CRAFT COMPANY, Opposition No. 24,520.

In a decision rendered February 6, 1948 (169 Ms. Dec. 619, 76 USPQ 274), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences dismissing the opposition of Rite-Rite Mfg. Co., of Downers Grove, Ill., to the registration of the mark "Rite-Craft" of Rite-Craft Company, of Chicago, Ill., for pencils, both wood cased and mechanical, and pens, under the Trade-Mark Act of 1905. The "confusion-in-trade" and "name clauses" of section 5 of the Trade-Mark Act of 1905, are alleged as statutory grounds for opposition, opposer relying upon prior use and ownership of the trademark "Rite-Rite" for pencils and other similar products. The notice of opposition also sets up ownership of registration of that mark under the act of 1905, registration No. 166,892, registered April 17, 1923, which had, however, expired prior to institution of this opposition proceeding, and for which an application to reregister was pending during the pendency of the opposition proceeding. That mark has now been reregistered by applicant under the act of 1905.

After noting that a stipulation of facts was entered into, it was held that from this it appears that opposer and its predecessor have used the mark "Rite-Rite" and applied the same to fountain pens, mechanical pencils, pencil leads, pencil clips and erasers for many years prior to any use claimed by applicant for its mark, so that the only question for decision is the similarity of the marks of the parties.

It was held that whether the marks are analyzed as to components or considered as a whole, the Examiner of Interferences was right in ruling that they are not sufficiently similar that there is likelihood of confusion or mistake in the minds of the public as a result of their concurrent use.

In response to opposer's contention that the Examiner of Interferences should have taken into consideration its trade-mark registration No. 425,515 reregistering "Rite-Rite" for these products which was granted after the decision of the Examiner of Interferences, it was held that since priority and continued use were conceded by the stipulation of facts, it is not apparent how this registration could affect the decision and that since the marks are regarded as dissimilar, the existence or nonexistence of the registration would not render them similar.

It was held that the Examiner of Interferences has correctly held ex parte that applicant must disclaim the descriptive word "Rite" from its mark in the event registration is finally granted in this matter.

TOM HUSTON PEANUT COMPANY *v.* GEORGE ZIEGLER COMPANY, Opposition No. 24,641.

In a decision rendered February 9, 1948 (169 Ms. Dec. 621, 76 USPQ 332), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the opposition of Tom Huston Peanut Company, of Columbus, Ga., to the application of George Ziegler Company, of Milwaukee, Wis., for registration of the word "GIANT" as a trade-mark for a candy confection under the Trade-Mark Act of 1905. In the notice of opposition opposer set out that the mark sought to be registered is merely descriptive of the goods and that opposer has used the notation on its own candy for a number of years prior to the filing of the application for registration.

After noting that the only question for decision is whether "GIANT" as applied to candy bars is descriptive, it was held that the Examiner of Interferences was right in holding that this word as applied to a candy bar indicates to the purchaser that he is receiving a very large candy bar for his money, and is merely descriptive within the meaning of section 5 of the Trade-Mark Act of 1905.

Notwithstanding that certain witnesses stated that the mark was not descriptive, it was held that even these statements are not entirely clear, and their testimony does not negative the obviously descriptive meaning of the word even in this field.

As to the references to registrations of the word "GIANT" by others for various products, it was held that these are immaterial, but it is noted that such a word might be nondescriptive as to other products while remaining descriptive as to candy bars, although if it were shown that the word had descriptive significance as used in some or all of

such registrations it would furnish no precedent justifying another improper registration.

In response to applicant's insistence that the word cannot be descriptive since its bar is not actually large, it was held that this would merely show it to be misdescriptive, although actually, however, it is the meaning which the purchasers would understand from the mark as used on the goods which should control, and the fact that the bars are not actually large would not change this.

SEARS, ROEBUCK AND CO. *v.* CRAFTMASTER PRODUCTS CORPORATION, Cancellation No. 4980.

In a decision rendered February 13, 1948 (169 Ms. Dec. 624, 76 USPQ 356), *Commissioner Kingsland* denied a petition by respondent, Craftmaster Products Corporation, of New York, N. Y., asking the Commissioner to instruct the Examiner of Interferences to decide respondent's motion for summary judgment on the merits, the motion having been filed after respondent in its answer had generally denied all material allegations of the petition of Sears, Roebuck and Co., of Chicago, Ill., for cancellation.

It was held that the Examiner of Interferences was clearly correct in denying the motion on the ground that the case presented material issues of fact which could not be disposed of by summary judgment under Rule 56 of the Rules of Civil Procedure, since it is clear beyond doubt that the case presents genuine issues as to all material facts.

BROWN SHOE COMPANY, INC., *v.* A. WERMAN & SONS, INC., Opposition No. 23,730.

In a decision rendered February 17, 1948 (169 Ms. Dec. 627, 76 USPQ 357), in the opposition of Brown Shoe Company, Inc., of St. Louis, Mo., to the application of A. Werman & Sons, Inc., of Brooklyn, N. Y., for registration of the trade-mark "Round Robin" for shoes, *Assistant Commissioner Murphy* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition, further adjudging applicant not entitled to the registration for which it applied and dismissing the counter-claim of applicant by which it was sought to cancel opposer's registration of its trade-mark "Robin Hood" for shoes made of leather, cloth, canvas or combinations thereof, on the ground that the registered mark is invalid under both the "name" and "geographical" clauses of section 5 of the Trade-Mark Act of 1905.

It was held that according to the evidence opposer has had extensive use of its mark "Robin Hood" for shoes made of leather, cloth, canvas or combinations thereof for some twenty years prior to the date of use claimed by applicant for its mark "Round Robin," so there can be no dispute as to priority of use.

It was held that the Examiner was right in ruling that insofar as opposer's objections to the registration of applicant's mark are concerned, since there can be no doubt that the notation "Robin Hood" has long been known to the purchasing public as a symbol of origin of opposer's goods, it is immaterial whether the mark "Robin Hood" is of such a character entitling it to registration as a technical trade-mark.

After conceding that there are differences between the two marks "Robin Hood" and "Round Robin," especially as to meaning, it was held that the more important similarities are those of sound and appearance, so that there is not enough distinction between the marks to avoid the likelihood of confusion in trade and deception of purchasers.

As to the merits of the counterclaim, after noting that the evidence shows that "Robin Hood" is used as the sole and distinguishing element of the names of certain individuals and business concerns and is the name of three obscure geographical places, it was held, since the record also shows that the notation "Robin Hood" is widely known as the name of a legendary figure, it cannot be said to be merely the name of an individual and merely a geographical name or term to thus be barred registration under section 5 of the act of 1905.

It was further held that the Examiner was right in ruling that applicant has no proper interest in the question of whether the term "consists merely in the name of a person" within the meaning of the "name" clause of the act since applicant makes no claim to having used "Robin Hood" as its name.

ANDERSEN CORPORATION *v.* THE CASKEY-DUPREE MFG. CO. (THE AIROLITE COMPANY, ASSIGNEE, SUBSTITUTED). Cancellation No. 5011.

In a decision rendered February 17, 1948 (169 Ms. Dec. 625, 76 USPQ 360), in a cancellation proceeding brought under the Trade-Mark Act of 1920 by Andersen Corporation, of Bayport, Mich., to cancel a registration which expired January 5, 1948, of The Caskey-Dupree Mfg. Co. (The Airolite Company, Assignee, Substituted), of Marietta, Ohio, *Assistant Commissioner Daniels* denied a petition of the registrant to require the Examiner of Trade-Mark Interferences to dismiss the cancellation proceeding, where the Examiner of Interferences had suspended action in the proceeding until May 1, 1948, on the theory that the registration might within three months of its expiration be renewed under sections 9 and 46(*b*) of the Trade-Mark Act of 1946.

It was held that the petition for cancellation was filed under and in accordance with the Trade-Mark Act of 1920 so that should the registration sought to be canceled be renewed, it will still be the same registration, continued in existence through renewal, and the cancellation proceeding would not be changed but would continue to be under and in accordance with the 1920 act, including the matter as to the fee, if any, paid or to be paid by petitioner for cancellation.

It was held that the Examiner was right in holding that if the registration is permitted to expire and application for renewal is not filed it would be futile to continue the cancellation proceeding against an expired mark, while if it is renewed or attempted to be renewed the cancellation proceeding would survive and petitioner for cancellation should have the continued right to prosecute it which is preserved for him by section 47(*a*) of the Trade-Mark Act of 1946.

NESTLE'S MILK PRODUCTS, INC. *v.* BAKER IMPORTING COMPANY, INC., Opposition No. 24,729.

In a decision rendered February 24, 1948 (169 Ms. Dec. 631, 76 USPQ 392), *Assistant Commissioner Daniels* reversed the action of the Examiner of Trade-Mark Interferences, who has sustained the opposition of Nestle's Milk Products, Inc., of New York, N. Y., to granting registration under the act of February 20, 1905, to Baker Importing Company, Inc., of New York, N. Y., of the word "HYCAFE" as a trade-mark for coffee extract, the statutory ground of opposition being the confusion-in-trade clause of section 5 of the Trade-Mark Act of 1905, and opposer relying on prior use and ownership of the mark "NESCAFE" for the same product.

After noting that no question is raised by applicant as to opposer's priority of use of its mark nor as to the identity of the goods on which the parties use their respective marks, it was held that viewing these marks in their entireties, they do not bear such near resemblance to each other that their concurrent use would be likely to cause confusion in the trade, since the public would regard the prefixes as the distinguishing feature and accept the balance of the words as merely designating the product, although the descriptive portions of the mark may not be disregarded in resolving this question.

It was further held that the fact that applicant has disclaimed "CAFE" in its application for registration is not important in this connection since it is the probability of confusion between the words rather than the disclaimer which appears controlling.

EX PARTE LOFT CANDY CORPORATION, Serial No. 477,277.

In a decision rendered February 25, 1948 (169 Ms. Dec. 638, 76 USPQ 395), *Assistant Commissioner Murphy* affirmed the action of the Examiner of Trade-Marks refusing, in view of three prior registrations, to register, under the act of February 20, 1905, the mark of Loft Candy Corporation, of Long Island City, N. Y., for candy, the mark consisting of the words "Little ARISTOCRATS" and the representation of an heraldic shield with helmet and crown, the word "Little" being in script and disclaimed apart from the mark as shown in the drawing, and the word "ARISTOCRATS" being printed in larger capital letters.

After noting that there can be no question as to the practical identity between applicant's goods and those of the prior registrations, it was held that there would be reasonable likelihood of confusion in trade if there were concurrent use of applicant's mark "Little ARISTOCRATS" with the pictorial representation of a shield, with the prior registered marks "Aristocratic" applied to chocolates, "Mississippi Aristocrats" applied to candy, and "Aristocrat" applied to nuts.

In response to applicant's argument that a commonplace term of self-praise, such as "aristocrats" or "aristocratic," cannot be the exclusive property of one manufacturer, it was held that it is well settled, however, that two marks may be confusingly similar even though the only word which they have in common is one which cannot, alone, be the exclusive property of one manufacturer.

EX PARTE EDWARD A. WHEELER (DOING BUSINESS AS THE WHEELER COMPANY), Serial No. 510,462.

In a decision rendered February 25, 1948 (169 Ms. Dec. 637, 76 USPQ 396), *Assistant Commissioner Daniels* denied a petition to require the Examiner of Trade-Marks to enter a proposed amendment filed on November 21, 1947, by Edward A. Wheeler (doing business as The Wheeler Company), of Chicago, Ill., purporting to convert a pending application filed under the Trade-Mark Act of 1905, to one for registration under the Trade-Mark Act of 1920.

After noting that section 46(*a*) of the Trade-Mark Act of 1946, effective July 5, 1947, specifically repealed both the Trade-Mark Act of 1905, under which the subject-application was filed, and the Trade-Mark Act of 1920, to which applicant seeks to convert the application, as of effective date of the new act, it was held that while conversion such as that sought by applicant could be made from one act to the other while both were in existence, such conversion cannot be made to obtain registration under an act which has been repealed, and the saving clause of section 47(*a*) of the Trade-Mark Act of 1946 applies only to prosecution of applications and registrations under the act "under which said applications were filed".

EX PARTE TRANS-METER CORPORATION, Application filed incomplete on June 18, 1947.

In a decision rendered February 27, 1948 (169 Ms. Dec. 640, 76 USPQ 398), *Assistant Commissioner Daniels* denied a petition by Trans-Meter Corporation, of New York, N. Y., presented after the repeal of the Trade-Mark Act of February 20, 1905, together with a drawing and a re-presentation of papers originally presented on June 18, 1947, but refused a filing date because lacking a drawing, that the application be given a filing date as of June 18, 1947.

After noting that the requirement that a drawing be filed with the balance of the papers to constitute an application under the Trade-Mark Act of 1905

is statutory, it was held that in the absence of the drawing required by statute no filing date could be given to the papers, and accepting all of the facts stated to show that it was impossible to file a drawing at that time, there is no authority for according it that filing date.

It was further held that since the Trade-Mark Act of 1905 was repealed effective July 5, 1947, the later presentation of an application for registration of a trade-mark under that act cannot be accepted.

EX PARTE A. STEIN & COMPANY, Serial No. 372,643.

In a decision rendered February 27, 1948 (169 Ms. Dec. 641, 76 USPQ 397), *Assistant Commissioner Daniels* denied a petition filed January 29, 1948, requesting reconsideration of a decision rendered by the Assistant Commissioner on March 19, 1937 (477 O. G. 771, 33 USPQ 54), affirming the refusal of the Examiner to register to A. Stein & Company, of Chicago, Ill., a trade-mark.

After noting that no appeal was taken by applicant and that the decision therefore became final, it was held that no further proceedings having been taken by the applicant, the application became abandoned, and that no further action can be taken on this application.

EX PARTE ALBER N. CORY, INC., Serial No. 519,571.

In a decision rendered February 27, 1948 (169 Ms. Dec. 642, 76 USPQ 397), *Assistant Commissioner Daniels* denied a petition in an application of Albert N. Cory, Inc., of New York, N. Y., for registration of a trade-mark under the act of 1905, refused registration because of a prior registration of the same or a similar mark for goods regarded by the Examiner as having the same descriptive properties, that an order be entered directing the Examiner to accept the consent filed herein, withdraw the reference and pass the trade-mark of applicant to publication.

It was held that the so-called letter of consent as a physical document has been accepted, entered of record and forms part of the file in this matter; the Examiner's action merely indicates that it has not been accepted as a basis for registration, in view of the citation of cases.

It was further held that the request that the reference be withdrawn and the mark passed to publication relates to a question for consideration on the merits and cannot be considered by petition under rule 62, rules of the Patent Office relating to the registration of trade-marks under the Trade-Mark Act of 1905; applicant's remedy if it feels aggrieved is by appeal pursuant to section 8 of the Trade-Mark Act of 1905 and rule 61 of the rules, supra.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 30, 1948

[VOL. 608. No. 5]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 505,269. WESTERN PRODUCTS, INC., Newark, Ohio. Filed July 8, 1946.

FOR RIGID AND SEMI-RIGID SHEETS SURFACED WITH PLASTIC MATERIALS FOR GENERAL USE IN THE INDUSTRIAL ARTS.

Claims use since Mar. 15, 1946.

Ser. No. 513,446. MONARCH LEATHER COMPANY, Chicago, Ill. Filed Nov. 29, 1946.

MONCO

FOR LEATHER.

Claims use since November 1934.

CLASS 2

RECEPTACLES

Ser. No. 499,281. RICHARDS, BOGGS & KING, INC., Chicago, Ill. Filed Mar. 29, 1946.

SEAQUEEN

FOR COMPACTS MADE OF BASE METAL AND MERCHANDISED WITHOUT FACE POWDER OR ROUGE THEREIN.

Claims use since Mar. 26, 1946.

Ser. No. 517,361. GRAND PRODUCTS CO., Chicago, Ill. Filed Feb. 12, 1947.

SCHEHERAZADE

FOR UNFILLED DRAM-SIZE PERFUME DISPENSERS AND UNFILLED VANITY CASES MADE OF BASE METAL.

Claims use since Feb. 10, 1943.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 500,292. EL CAMINO PETROLEUM CO., Los Angeles, Calif. Filed Apr. 16, 1946.

The female representation on the drawing is fanciful. No claim is made to the word "Parfum" apart from the mark as shown on the drawing.

FOR PETROLEUM SOLVENT USED AS A FRENCH DRY CLEANER AND SPOT REMOVER.

Claims use since Jan. 26, 1946.

Ser. No. 509,011. GEO. E. KEITH COMPANY, Brockton, Mass. Filed Sept. 13, 1946.

Glo-ria

FOR CLEANSER FOR WHITE FABRICS—NAMELY, KID AND CALF SHOES, AND FOR BELTS, LEGGINGS, AND THE LIKE.
Claims use since 1928.

Ser. No. 513,135. PAR BEVERAGE CORPORATION, also doing business as Par Products Company, Inc., Cincinnati, Ohio. Filed Nov. 23, 1946.

SPREE

FOR WASHING AND CLEANING SOLUTIONS.
Claims use since July 1, 1946.

Ser. No. 519,272. THE HIOLEY CHEMICAL COMPANY, Dubuque, Iowa. Filed Mar. 19, 1947.

SILVER FOAM

FOR LIQUID TOILET SOAP.
Claims use since Aug. 26, 1926.

Ser. No. 525,808. SYLVAN M. EDISON, doing business under the name of Edison Chemical Co., Chicago, Ill. Filed July 3, 1947.

EDISONITE

FOR POWDER SOLUBLE TO MAKE A CLEANING SOLUTION FOR EYE GLASSES, JEWELRY, DIAMONDS, PLASTICS AND PRECIOUS METALS.
Claims use since July 1, 1940.

CLASS 5

ADHESIVES

Ser. No. 507,571. THE CARTER'S INK COMPANY, Cambridge, Mass. Filed Aug. 17, 1946.

CARTEX

FOR LATEX ADHESIVE.
Claims use since June 1936.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 501,216. TOBACCO BY-PRODUCTS AND CHEMICAL CORPORATION, Louisville, Ky. Filed Apr. 30, 1946.

BENZO-FUME

The word "Fume" is disclaimed.
FOR FUMIGANTS.
Claims use since Mar. 18, 1946.

Ser. No. 503,676. RUTLEE CHEMICAL COMPANY, Perth Amboy, N. J., and Washington, D. C. Filed June 11, 1946.

PROTAM

FOR NUTRITIOUS ENDODERMIC OINTMENT OF PROTEIN HYDROLYSATES FOR EXTERNAL USE AS AN UNGUENTUM AND TO STIMULATE ABSORPTION OF AMINO ACIDS.
Claims use since Feb. 6, 1946.

Ser. No. 505,087. FREDERIC J. TRUMP, doing business as F. J. Trump, Stamford, Conn. Filed July 8, 1946.

TOO

FOR TOOTH PASTE.
Claims use since May 7, 1946.

Ser. No. 507,008. MORRIS LANGHAUS, doing business as Sun-Ray Hair Preparations Co., New York, N. Y. Filed Aug. 7, 1946.

SUN-RAY

FOR HAIR COLORS, HAIR TONICS, LOTIONS FOR THE TREATMENT OF HAIR AND SCALP, AFTER SHAVING LOTION, FACE AND SKIN CREAMS, HAIR POMADES, LIPSTICKS, ROUGES, HAIR DRESSINGS, AND FACE POWDERS.
Claims use since May 20, 1925.

Ser. No. 507,086. SWIFT & COMPANY, Chicago, Ill. Filed Aug. 8, 1946. Under section 5b of the act of 1905 as amended in 1920.

SWIFT'S

Applicant is the owner of registration No. 260,782, effected under the ten-year proviso.
FOR AGRICULTURAL SULPHUR CHEMICALS USED AS A SOIL FUMIGANT, INSECTICIDES AND FUNGICIDES.
Claims use since Feb. 13, 1941.

Ser. No. 512,386. CUTTER LABORATORIES, Berkeley, Calif. Filed Nov. 12, 1946.

P.O.B.

FOR CALCIUM PENICILLIN SUSPENDED IN OIL AND WAX.
Claims use since September 1945.

Ser. No. 512,387. CUTTER LABORATORIES, Berkeley, Calif. Filed Nov. 12, 1946.

PEN-TROCHE

The word "Troche" is disclaimed apart from the mark.
FOR CALCIUM PENICILLIN TABLETS.
Claims use since September 1945.

Ser. No. 514,870. YANKEE BOTTLED GAS CORP., Westville, N. H., and Lexington, Mass. Filed Dec. 26, 1946.

YANKEE BOTTLED GAS

The words "Bottled Gas" and the representation of the container are disclaimed.
FOR BOTTLED LIQUEFIED PETROLEUM GAS, USED FOR COOKING AND HEATING.
Claims use since on or about Nov. 27, 1946.

Ser. No. 516,912. ORTHO PHARMACEUTICAL CORPORATION, Linden, N. J. Filed Feb. 4, 1947.

Nidoxital

FOR PHARMACEUTICAL PREPARATION FOR THE TREATMENT OF NAUSEA AND VOMITING.
Claims use since Jan. 2, 1947.

Ser. No. 519,262. HELENE CURTIS INDUSTRIES, INC., Chicago, Ill. Filed Mar. 19, 1947.

Hi-Temp

FOR MACHINELESS CHEMICAL HAIR WAVING PADS AND SOLUTIONS USED THEREWITH.
Claims use since Mar. 7, 1947.

Ser. No. 520,256. MILTON BARTOK, doing business as Bardex Medicine Company, Sarasota, Fla., and Columbus, Ohio. Filed Apr. 7, 1947.

BARDEX

FOR TONIC, AN INTERNAL MEDICINE, MADE OF HERBS, VITAMINS, ETC., USED AS A STOMACHIC AND APPETIZER.
Claims use since Jan. 1, 1940.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 503,376. KAYWOODIE COMPANY, West New York, N. J. Filed June 6, 1946.

The mark consists of a representation of a label.

FOR SMOKERS' PIPES, CIGAR AND CIGARETTE HOLDERS.

Claims use since May 2, 1946.

Ser. No. 519,422. SMITH PAPER, INC., Lee, Mass. Filed Mar. 21, 1947.

FULL HOUSE

FOR CIGARETTE PAPER CUT TO SIZE AND CIGARETTE PAPER BOOKLETS CUT TO SIZE.

Claims use since Jan. 28, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 502,283. FORTRESS MANUFACTURING CO., Milwaukee, Wis. Filed May 17, 1946.

FORTRESS

FOR LAWN MAINTENANCE EQUIPMENT—NAMELY, LAWN SPRINKLERS.

Claims use since February 1946.

Ser. No. 506,453. KEMGAS PROCESS COMPANY, Lubbock, Tex. Filed July 29, 1946.

STATIFIER

FOR NOZZLES USED IN CONNECTION WITH AN ATOMIZING APPARATUS FOR CONTROLLING THE STATIC ELECTRICITY AND CONDITIONING THE COTTON DURING THE GINNING PROCESS.

Claims use since Dec. 5, 1940.

Ser. No. 510,190. NATIONAL ALUMINUM MANUFACTURING CO., Peoria, Ill. Filed Oct. 3, 1946.

Health

FOR PRESSURE COOKERS OF VARIOUS TYPES AND SIZES—NAMELY, SAUCE PAN COOKERS AND CANNERS; AND KITCHEN UTENSILS FORMED OF BASE METAL, PRINCIPALLY ALUMINUM—NAMELY, SAUCE PANS, KETTLES, WAFFLE IRONS, COFFEE POTS, FRYING PANS, CASSEROLES, ROASTERS, GRIDDLES, BROILERS, TRIPLICATE PAN SETS, DOUBLE FRYING PANS, TEA KETTLES, DUTCH OVENS, COVERS, COMBINATION ROASTERS AND COOKERS, URNS, JUGS, PITCHERS, STOCK POTS, AND DOUBLE BOILERS.

Claims use since Jan. 1, 1926.

Ser. No. 521,213. SEAL FASTENER CORP., New York, N. Y. Filed Apr. 23, 1947.

SEAL

FOR SEPARABLE FASTENERS OF THE SLIDER CONTROLLED TYPE.

Claims use since Dec. 9, 1946.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 502,704. MAGNESIUM COMPANY OF AMERICA, Chicago, Ill. Filed May 24, 1946.

MAGCOA

FOR MAGNESIUM SHEETS AND PLATES; FINISHED AND UNFINISHED, SAND, PERMANENT MOLD, AND DIE CASTINGS OF MAGNESIUM; MAGNESIUM INGOT; MAGNESIUM POWDER; MAGNESIUM STAMPINGS, FORGINGS, AND SPINNINGS.

Claims use since May 9, 1946.

CLASS 15

OILS AND GREASES

Ser. No. 512,832. GEORGE W. GALLAWAY, New York, N. Y. Filed Nov. 19, 1946.

AJAX

FOR FUEL OIL STABILIZER HAVING AN OIL BASE FOR THE REMOVAL OF SLUDGE AND ALL FOREIGN MATTER FROM THE TANKS IN OIL BURNER SYSTEMS.

Claims use since Oct. 1, 1940.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 497,726. LANE TOBACCO, LTD., New York, N. Y. Filed Mar. 6, 1946.

The drawing is lined for shading only. The words "Smoking Mixture" and "Mild and Slightly Aromatic" are disclaimed apart from the mark.

FOR CIGARETTES, CIGARS, SNUFF TOBACCO, PIPE TOBACCO, CHEWING TOBACCO, LEAF TOBACCO, CIGAR TOBACCO, CIGARETTE TOBACCO, AND TOBACCO WRAPPERS FOR CIGARETTES—NAMELY, TOBACCO LEAVES.

Claims use since March 1945.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 470,836. METALLIZING COMPANY OF AMERICA, Chicago, Ill. Filed June 1, 1944.

MOGUL
ELECTRIC-BONDER

No claim is made to the words "Electric" and "Bonder" apart from the mark shown.

FOR METAL DEPOSITING APPARATUS COMPRISING A TRANSFORMER AND ELECTRODE HOLDER FOR ELECTRIC CLADDING, REPAIRING, AND WELDING.

Claims use since Jan. 1, 1944.

Ser. No. 496,900. ELECTRONIC ADVERTISING, INC., New York, N. Y. Filed Feb. 19, 1946.

Ad-V-O-X

Applicant disclaims the word "Ad" apart from the mark as shown.

FOR PHOTO-ELECTRIC EYE ACTUATED ELECTRICAL APPARATUS COMPRISED OF PHONOGRAPH UNITS AND RECORDS, AND LOUDSPEAKERS FOR THE REPRODUCTION OF ORAL ADVERTISING MESSAGES.

Claims use since Feb. 1, 1946.

Ser. No. 506,743. FEDERAL TELEPHONE AND RADIO CORPORATION, New York, N. Y. Filed Aug. 2, 1946.

-MEGATHERM-

FOR INDUSTRIAL OVENS HEATED BY ELECTROSTATIC AND MAGNETIC FIELDS.

Claims use since Mar. 23, 1944.

Ser. No. 514,578. JACK B. CUNNINGHAM, doing business as Shortwave Plastic Forming Company, Burbank, Calif. Filed Dec. 19, 1946.

POLIMERATOR

FOR ELECTRONIC HIGH FREQUENCY GENERATORS SUITABLE FOR DI-ELECTRIC HEATING TO CAUSE DRYING OF ADHESIVES FOR BONDING LAYERS OF MATERIAL TOGETHER.

Claims use since Nov. 10, 1945.

Ser. No. 516,276. THE HARTFORD PRODUCTS CORPORATION, Hartford, Conn., and Chicago, Ill. Filed Jan. 24, 1947.

TORRID

FOR ELECTRIC STOVES, RANGES, COOKERS, AND SPACE HEATERS.

Claims use since Jan. 16, 1947.

Ser. No. 517,690. AUT-O-TOT COMPANY, Omaha, Neb. Filed Feb. 18, 1947.

AUT·O·TOT

No claim is made to the word "Tot" apart from the mark as shown.

FOR ELECTRICALLY HEATED BABY BOTTLE WARMER FOR USE IN AUTOMOBILES.

Claims use since Apr. 1, 1946.

Ser. No. 519,385. U. S. ELECTRICAL MOTORS, INC., Los Angeles, Calif. Filed Mar. 21, 1947.

VELVAGRIP

FOR ELECTRICAL HOLLOW SHAFT MOTORS.

Claims use since Feb. 7, 1947.

Ser. No. 519,388. U. S. ELECTRICAL MOTORS, INC., Los Angeles, Calif. Filed Mar. 21, 1947.

STREAMWAY

FOR VERTICAL HOLLOW SHAFT ELECTRICAL MOTORS.

Claims use since Feb. 7, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 497,806. MAY MACGREGOR, New York, N. Y. Filed Mar. 7, 1946.

BEAUTY BOARD

The word "Board," except in the association shown, is disclaimed.

FOR SUPPORTING BOARD ADAPTED FOR USE IN EXERCISE OF THE HUMAN BODY.

Claims use since Jan. 2, 1942.

Ser. No. 503,236. THE WON-PUTT CO., Memphis, Tenn. Filed June 3, 1946.

WON-PUTT

The descriptive word "Putt" is disclaimed apart from the mark.

FOR GOLF CLUBS.

Claims use since Mar. 1, 1946.

Ser. No. 507,360. ANIMAL TRAP COMPANY OF AMERICA, Lititz, Pa. Filed Aug. 14, 1946.

VICTOR Veri-lite

No claim is made to the compound word "Veri-lite" apart from the mark.

FOR DUCK DECOYS, AND DECOYS FOR OTHER WILD FOWL AND WATER FOWL.

Claims use since Jan. 14, 1946.

Ser. No. 509,251. THE SPEED WAY PROPELLER COMPANY, Houston, Tex. Filed Sept. 17, 1946.

Speed Way

FOR PROPELLERS FOR MINIATURE AIRPLANES.

Claims use since June 12, 1946.

Ser. No. 517,110. BAYSHORE INDUSTRIES, INC., Elkton, Md. Filed Feb. 7, 1947.

The representation of the balloons and the torso of the fanciful man are lined for shading purposes only.

FOR TOY BALLOONS.

Claims use since Jan. 3, 1947.

Ser. No. 519,744. FLORIDA FISHING LEADER COMPANY, West Palm Beach, Fla. Filed Mar. 28, 1947.

PALM

FOR FISHING TACKLE—NAMELY, FISHING LEADERS AND FISHING LINES.

Claims use since Sept. 14, 1944.

Ser. No. 521,458. NASCO DOLL, INC., Brooklyn, N. Y. Filed Apr. 28, 1947.

Nasco

FOR DOLLS.

Claims use since Apr. 10, 1945.

Ser. No. 522,526. LUMINASTIC PRODUCTS, INC., Newport, Ky. Filed May 16, 1947.

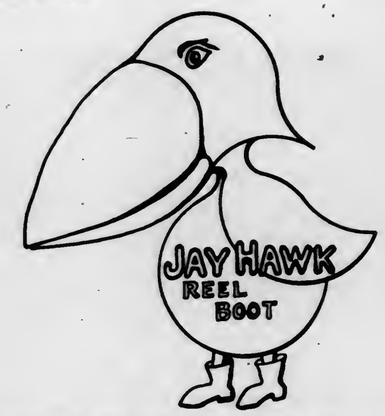
PERMA BAIT

The word "Bait" is disclaimed apart from the mark as shown.

FOR ARTIFICIAL FISH LURES.

Claims use since Feb. 24, 1947.

Ser. No. 523,155. PLASTICTRONICS, INC., New York, N. Y. Filed May 27, 1947.



the holiday line

The word "Line" is disclaimed apart from the rest of the mark.

FOR PLASTIC INFLATABLE SWIM RINGS, PLASTIC INFLATABLE BALLS.

Claims use since Mar. 25, 1947.

Ser. No. 524,857. EDWARD A. BROWN, doing business as E. A. Brown Mfg. Company, Dodge City, Kans. Filed June 26, 1947.

The words "Reel Boot" are disclaimed apart from the mark.

FOR FISHERMAN'S CASTING ROD HANDLE AND REEL COVER.

Claims use since June 16, 1947.

Ser. No. 525,769. BAYSHORE INDUSTRIES, INC., Elkton, Md. Filed July 3, 1947.

★ KIDS PIX ★

FOR TOY BALLOONS.

Claims use since May 1, 1947.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 487,337. SAV-WAY INDUSTRIES, Detroit, Mich., assignor to Sav-Way Industries, Incorporated, Detroit, Mich., a corporation of Michigan. Filed Aug. 20, 1945.

Sav-way

The drawing is lined to indicate blue color.

FOR HAND CONTROLLED INTERNAL GRINDING MACHINE, HYDRAULICALLY CONTROLLED INTERNAL GRINDING MACHINES, HEAT SEALING MACHINES FOR SEALING PACKAGES ENCASED IN PLASTIC SHEETING, SPINDLES—INCLUDING THE BEARING AND STONE CARRYING SHAFTS—FOR GRINDING MACHINES, AND MOLDING MACHINES FOR INJECTION MOLDING OF PLASTIC ARTICLES.

Claims use since about Mar. 1, 1941.

Ser. No. 494,204. SENSATION MOWER, INC., Ralston, Nebr. Filed Jan. 2, 1946.

SENSATION

FOR GASOLINE AND ELECTRICALLY POWERED LAWN MOWERS, AND POWER DRIVEN BUTTER CHURNS FOR INDUSTRIAL USE.
Claims use since May 1938.

Ser. No. 496,040. PECO MANUFACTURING CORPORATION, Philadelphia, Pa. Filed Feb. 5, 1946.

PECO

FOR EXPERIMENTAL AND SPECIAL MACHINERY AND FIXTURES FOR TURNING, GRINDING, DRILLING, TAPPING, BROACHING, PIERCING, STAMPING, CUTTING, BURRING, BENDING, TWISTING, WELDING, RIVETING, BALANCING, PLATING, SIZING, PAINTING AND LETTERING; TIRE CUTTING AND GROOVING MACHINES AND PARTS THEREFOR; HOSE CUTTERS FOR MANUALLY CUTTING RUBBER OR FABRIC WATER HOSE; AND TRACTORS.
Claims use since Mar. 5, 1918.

Ser. No. 506,678. THE MECHANICS' TOOL AND FORGE COMPANY, Sabina, Ohio. Filed Aug. 1, 1946.

MAC

FOR MECHANICS' HAND TOOLS—NAMELY, SCREWDRIVERS, COLD CHISELS, PUNCHES, WRENCHES OF VARIOUS SIZES AND DESIGNS, HAMMERS, AWLS, PLIERS, AND FILES.
Claims use since January 1939.

Ser. No. 513,302. FEDERAL LABORATORIES, INC., Pittsburgh, Pa. Filed Nov. 27, 1946.

Breeze

FOR LAWN EDGER.
Claims use since July 15, 1946.

Ser. No. 515,687. SPRAY-O-DOR COMPANY, Chicago, Ill., assignor to Spray-O-Dor Company, Chicago, Ill., a firm composed of Mike Guryn and Emily K. Guryn. Filed Jan. 13, 1947.

SPRAY-O-DOR

Applicant makes no claim to the word "Spray" alone.
FOR DOOR CHECK DEODORIZING SPRAYERS.
Claims use since Oct. 29, 1937.

Ser. No. 516,011. F. C. GEORGE MACHINE COMPANY, Orlando, Fla. Filed Jan. 20, 1947.

PRESSPAC

FOR MECHANICAL JABBER APPARATUS FOR USE AS ATTACHMENTS FOR CONCRETE BLOCK MAKING MACHINES.
Claims use since Nov. 6, 1946.

Ser. No. 517,029. CONTAINER EQUIPMENT CORPORATION, Newark, N. J. Filed Feb. 4, 1947.

CECO

FOR CARTON AND PACKAGE SEALING MACHINES.
Claims use since Mar. 1, 1934.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 488,832. PAXTON DIESEL ENGINEERING COMPANY, Omaha, Nebr. Filed Sept. 21, 1945.

BEARING WATCHDOG

No claim is made to the right to the exclusive use of the word "Bearing" except in relation shown.
FOR ELECTRO-MECHANICAL TRIP MECHANISM FOR MOUNTING IN CLOSE PROXIMITY TO A ROTATING SHAFT AND FUNCTIONING TO INDICATE UNSAFE OPERATING CONDITIONS RESULTING FROM BEARING WEAR OR SHAFT MISALIGNMENT, BY CLOSING THE CIRCUIT WHICH ACTUATES A WARNING LIGHT, A DIAL INDICATION OF NON-OPERABLE CONDITION, OR A FUEL PUMP OR POWER SHUT-OFF VALVE, ETC., THE WHOLE FUNCTIONING AS AN INDICATING SAFETY APPARATUS.
Claims use since Mar. 16, 1944.

Ser. No. 504,849. GEORGE T. KOPP, doing business as Kopp Manufacturing Co., Detroit, Mich. Filed June 29, 1946.

SERVANT

FOR ELECTRIC CONTROLS FOR GAS HOT WATER HEATERS COMPRISING AN ELECTRICALLY OPERATED GAS VALVE AND PUSH BUTTON AND THERMOSTATIC CIRCUIT CLOSERS AND BREAKERS.
Claims use since Sept. 21, 1940.

Ser. No. 505,943. TRIANGLE PUBLICATIONS, INC., Philadelphia, Pa. Filed July 18, 1946.

seventeen patterns

Applicant disclaims the word "Patterns" apart from the mark.
FOR DRESS AND OTHER CLOTHING PATTERNS.
Claims use since Aug. 15, 1944.

Ser. No. 506,580. JABEZ BURNS & SONS, INC., New York, N. Y. Filed July 31, 1946.

THERMALO

FOR ELECTRICAL INSTRUMENTS FOR DETECTING THE PRESENCE OF FLAMMABLE GASES OR VAPORS, IN ENCLOSED AND PARTIALLY ENCLOSED SPACES AND IN ROASTING, BAKING, DRYING AND CHEMICAL EQUIPMENTS, AND FOR INDICATING THE CONCENTRATION OF SAID GASES OR VAPORS AND FUNCTIONING AT PREDETERMINED CONCENTRATIONS OF THE SAME TO ACTUATE PROTECTIVE CONTROLS, SIGNALS AND ALARMS.
Claims use since July 2, 1946.

Ser. No. 514,857. TAYLOR INSTRUMENT COMPANIES, Rochester, N. Y. Filed Dec. 26, 1946.

TRANSET

FOR INSTRUMENTS FOR MEASURING AND CONTROLLING TEMPERATURE, PRESSURE, FLOW AND LIQUID LEVEL.

TRADE-MARK REGISTRATIONS RENEWED

211,843. ARROWHEAD. Registered Apr. 20, 1926. The Northwest Paper Company, Cloquet, Minn., a corporation of Minnesota. Renewed Apr. 20, 1946. ENVELOPE PAPER. Class 37.

224,406. GLUCO-CALCIUM. Registered Feb. 22, 1927. Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana. Renewed Jan. 5, 1948 (Supplemental Register). LIQUID PREPARATION INTENDED PRINCIPALLY FOR THE TREATMENT OF TUBERCULOSIS. Class 6.

225,709. KIT. Registered Mar. 22, 1927. Rowland B. Page, doing business as Page Milk Company. Renewed Mar. 22, 1947, to The Page Milk Company, Merrill, Wis., a corporation of Delaware. EVAPORATED MILK. Class 46.

227,440. PEOPLES. Registered May 3, 1927. Peoples Drug Stores, Inc. Renewed May 3, 1947, to Peoples Drug Stores, Incorporated, Washington, D. C., a corporation of Maryland. DENATURED ALCOHOL, DOBELL'S SOLUTION, ZINC OINTMENT, ZINC-OXIDE POWDER, CASCARA SAGRADA, COLD CREAM, CASTOR OIL, AND OTHER NAMED DRUG ITEMS. Class 6.

229,561. MAGNUS. Registered June 28, 1927. The Gardiner Hall Jr. Company, South Willington, Conn., and New York, N. Y., a corporation of Connecticut. Renewed June 28, 1947. THREAD. Class 43.

230,395. MEXI-PEP. Registered July 19, 1927. B. F. Trappey & Sons, Jeanerette, La. Renewed July 19, 1947, to B. F. Trappey's Sons, Inc., New Iberia, La., a corporation of Louisiana. PEPPER SAUCE. Class 46.

231,931. KRACKO-JAK. Registered Aug. 30, 1927. F. I. Siegel & Son, doing business as Fison Paint Products Company. Renewed Aug. 30, 1947, to F. I. Siegel & Son, Inc., Union City, N. J., a corporation of New Jersey. PAINTS, READY MIXED, DRY, AND PASTE; VARNISH, LACQUER, AND PAINT ENAMELS. Class 16.

232,188. "FISON" AND DIAMOND SHAPED DESIGN. Registered Sept. 6, 1927. F. I. Siegel & Son, doing business as Fison Paint Products Company. Renewed Sept. 6, 1947, to F. I. Siegel & Son, Inc., Union City, N. J., a corporation of New Jersey. PAINTS, READY-MIXED, DRY, AND PASTE, VARNISH, LACQUER, AND PAINT ENAMELS. Class 16.

237,451. BATTLE STORIES. Registered Jan. 10, 1928. Fawcett Publications, Inc., Robbinsdale, Minn. Renewed Jan. 10, 1948, to Fawcett Publications, Inc., Greenwich, Conn., a corporation of Delaware. MONTHLY PUBLICATION. Class 38.

238,736. "MINWAX" AND DESIGN. Registered Feb. 14, 1928. Minwax Company, Inc., New York, N. Y., a corporation of New York. Renewed Feb. 14, 1948. ASPHALT-SATURATED FABRICS FOR WATERPROOFING, ASPHALT AND ASPHALT PRODUCTS, AND OTHER NAMED CONSTRUCTION MATERIALS. Class 12.

240,671. PYTHON. Registered Apr. 3, 1928. Pacific Clay Products, Los Angeles, Calif., a corporation of California. Renewed Apr. 3, 1948. BRICK—NAMELY, FIRE BRICK. Class 12.

TRADE-MARK REGISTRATIONS CANCELED

293,543. JAYN JAY. Registered Apr. 26, 1932. Jacobs & Jacobs, New York, N. Y. FROCKS FOR THE USE OF CHILDREN. Class 39. Canceled Mar. 3, 1948.

399,238. MAXIZE. Registered Dec. 22, 1942. Hercules Powder Company, Wilmington, Del. ROSIN SIZE FOR USE IN THE SIZING OF PAPER. Class 6. Canceled Mar. 8, 1948.

417,500. ARIDASE. Registered Oct. 30, 1945. Wallerstein Company, Inc., New York, N. Y. PREPARATION IN DRY POWDER FORM FOR USE IN THE PROCESSING OF TEXTILES, ETC. Class 6. Canceled Mar. 3, 1948.

419,570. PHOTO-CRAFT. Registered Feb. 19, 1946. Milton M. Mendelsohn, Chicago, Ill. CAMERAS, PHOTOGRAPHIC LENSES, ETC. Class 26. Canceled Mar. 3, 1948.

431,071. CULLA-WAX. Registered July 1, 1947. Al A. Banks, doing business as Lyk-Nu Company, New York, N. Y. COMBINATION LIQUID WAXING PREPARATION FOR USE IN CLEANING AND POLISHING AUTOMOBILE BODY SURFACES. Class 16. Canceled Mar. 3, 1948.

431,153. DANCO AND DESIGN. Registered July 8, 1947. Danco Corporation, New York, N. Y. TOBACCO PIPES. Class 8. Canceled Mar. 3, 1948.

432,760. BANANA TREAT. Registered Sept. 9, 1947. Robert W. Rogers, Chicago, Ill. CANDY. Class 46. Canceled Mar. 3, 1948.

TRADE-MARK REGISTRATIONS AMENDED, SURRENDERED, DISCLAIMED, CORRECTED, ETC.

232,069. "QUAKER RUBBER CORPORATION REDSKIN" ETC. Registered Aug. 30, 1927. Quaker City Rubber Company, Wissinoming, Philadelphia, Pa. BELTING. Class 35. Corrected as follows: In the renewal certificate, line 3, state of incorporation, for "Delaware" read ~~Pennsylvania~~ *Pennsylvania*.

435,105. MAGNIFICENCE DE MOLYNEUX. Registered Dec. 9, 1947. Manufacturers and Importers of French Perfumes Inc., New York, N. Y. PERFUMES AND TOILET WATERS. Class 6. Corrected as follows: In the certificate, line 4, and in the statement, lines 3 and 4, for "State of New York" read *State of Delaware.*

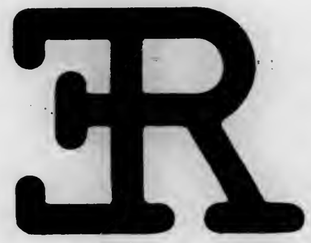
TRADE-MARK REGISTRATIONS REPUBLISHED

The following marks registered under the act of 1905, or the act of 1881, are published under the provisions of section 12(c) of the Trade-Mark Act of 1946. These registrations are not subject to opposition but are subject to cancellation under section 14 of the act of 1946.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Reg. No. 241,448. Registered May 1, 1928. THE ESSEX COAL COMPANY, Columbus, Ohio. Republished by Essex Coal Sales Company, Columbus, Ohio, a corporation of Ohio.



FOR COAL.
Claims use since August 1926.

Reg. No. 321,309. Registered Jan. 29, 1935. FOUKE FUR COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

The words "Brown," "Alaska Seal Skin" and "St. Louis Dressing Dye" are disclaimed.
FOR FURS, SKINS, HIDES, AND PELTS.
Claims use since Aug. 16, 1934.

Reg. No. 341,380. Registered Dec. 8, 1936. ERIE RESISTOR CORPORATION, Erie, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR MOLDINGS OF PLASTIC COMPOSITION MATERIAL.
Claims use since Jan. 21, 1936.

Reg. No. 358,152. Registered June 28, 1938. FOUKE FUR COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

TRANSVELDT

FOR FUR SKINS, HIDES, AND PELTS.
Claims use since Jan. 14, 1937.

Reg. No. 360,598. Registered Sept. 20, 1938. THE CONSOLIDATED COAL COMPANY, St. Louis, Mo., a corporation of Illinois. Republished by registrant.

BUCKHORN

FOR COAL.
Claims use since Feb. 15, 1938.

Reg. No. 363,406. Registered Dec. 27, 1938. GERMAIN SEED AND PLANT COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

Quintuplet

FOR FLOWER SEEDS—NAMELY, ZINNIAS AND FLOWER GARDEN MIXTURE.
Claims use since Aug. 11, 1937.

Reg. No. 380,662. Registered Aug. 27, 1940. THE AMERICAN OAK LEATHER COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

"AmOKrome"

The word "Krome" is disclaimed.
FOR LEATHER.
Claims use since Mar. 21, 1940.

Reg. No. 393,164. Registered Jan. 27, 1942. NATIONAL WAX COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

PLASTICRUDE

FOR COMPOUNDED PETROLEUM WAX.
Claims use since July 28, 1941.

Reg. No. 396,299. Registered July 7, 1942. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SANTOWAX

The word "Wax" is disclaimed.
FOR SOLID WAXY MATERIALS FOR USE AS SUBSTITUTES FOR ANIMAL, MINERAL, AND VEGETABLE WAXES SOLD TO THE TRADE FOR USE IN THE INDUSTRIAL ARTS.
Claims use since about Oct. 17, 1938.

Reg. No. 405,576. Registered Feb. 8, 1944. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

RESIMENE

FOR SYNTHETIC RESIN COMPOSITIONS IN THE FORM OF PARTICULAR SOLIDS SUITABLE FOR MOLDING.
Claims use since about Mar. 31, 1943.

CLASS 2

RECEPTACLES

Reg. No. 142,431. Registered May 17, 1921. ANDROSCOGGIN MILLS, Lewiston, Maine. Republished by Bemis Bro. Bag Company, St. Louis, Mo., a corporation of Missouri.

AMERICAN A

FOR GRAIN-BAGS.
Claims use since about 1870.

Reg. No. 290,810. Registered Jan. 19, 1932. BEMIS BRO. BAG COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

DUOTEX

FOR FABRIC BAGS MADE EITHER OF FABRIC ALONE OR A COMBINATION OF FABRIC AND PAPER.
Claims use since July 1931.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Reg. No. 362,342. Registered Nov. 15, 1938. HARTMANN TRUNK COMPANY, Racine, Wis. Republished by Hartmann Company, Racine, Wis., a corporation of Wisconsin.

DUCORD

FOR SUITCASES, TRUNKS, HAT BOXES FOR LUGGAGE PURPOSES, AND WARDROBE HAND LUGGAGE.
Claims use since May 31, 1938.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 364,529. Registered Feb. 7, 1939. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SANTOMERSE

FOR CHEMICAL COMPOUNDS FOR USE AS CLEANSING AND WASHING COMPOSITIONS IN LIQUID AND SOLID FORM FOR HOUSEHOLD AND INDUSTRIAL APPLICATION.
Claims use since Jan. 28, 1938.

Reg. No. 373,112. Registered Nov. 28, 1939. BLIND-X COMPANY, Minneapolis, Minn. Republished by The Blind-X Company, Incorporated, Minneapolis, Minn., a corporation of Minnesota.

Blind-X

The word "Blind" is disclaimed.
FOR CLEANER FOR VENETIAN BLINDS AND PAINTED AND VARNISHED SURFACES AND THE LIKE.
Claims use since Aug. 29, 1938.

Reg. No. 374,584. Registered Jan. 16, 1940. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

No. 140
LIQUID
DRY CLEANER

The words "Liquid Dry Cleaner" are disclaimed.
FOR LIQUID DRY CLEANER.
Claims use since July 25, 1939.

Reg. No. 387,038. Registered Apr. 29, 1941. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

MAINTENOL

FOR CLEANING COMPOUND FOR CLEANING AND WASHING FLOORS, WALLS, AND WOODWORK.
Claims use since on or about Sept. 3, 1939.

Reg. No. 407,494. Registered June 6, 1944. CAMPANA SALES COMPANY, Batavia, Ill., a corporation of Illinois. Republished by registrant.

DEVASTATING

FOR TOILET SOAPS.
Claims use since Dec. 15, 1943.

Reg. No. 408,865. Registered Aug. 29, 1944. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

DUZ

FOR SOAP.
Claims use since Nov. 3, 1919.

CLASS 5

ADHESIVES

Reg. No. 397,247. Registered Aug. 25, 1942. THE F. G. FINDLEY CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

PICK-ETS

FOR ADHESIVE CEMENT PARTICULARLY CONSTITUTED AND ADAPTED FOR USE IN AFFIXING ONE EDGE OF A LABEL TO A CAN OR SIMILAR CONTAINER IN A LABELING MACHINE.
Claims use since Feb. 6, 1942.

Reg. No. 404,472. Registered Nov. 23, 1943. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

RESIMENE

FOR THERMOSETTING SYNTHETIC RESIN ADHESIVES FOR LAMINATING PURPOSES.
Claims use since about May 14, 1943.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 129,685. Registered Mar. 9, 1920. E. I. DU PONT DE NEMOURS & COMPANY, Wilmington, Del. Republished by Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri.

PARLODION

FOR COLLODION.
Claims use since Aug. 30, 1917.

Reg. No. 255,266. Registered Apr. 16, 1929. WATSON-PARK COMPANY, Boston, Mass., a corporation of Maine. Republished by registrant.

PENOTEX

FOR CHEMICAL PREPARATION FOR USE AS A WETTING-OUT AND PENETRATING AGENT IN THE PROCESS OF DYEING WOOL, COTTON, FLAX, HEMP, SILK, JUTE, RAMIE, RAYON, AND OTHER TEXTILE MATERIALS, WHETHER IN A RAW, TWISTED, OR FABRICATED STATE.
Claims use since Sept. 19, 1927.

Reg. No. 314,577. Registered July 3, 1934. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

HIPPURAN

FOR SODIUM ORTHO-IODOHIPPURATE, A PHARMACEUTICAL PRODUCT COMPRISING AN OPAQUE MEDIUM EMPLOYED FOR X-RAY DIAGNOSIS AND VARIOUS OTHER THERAPEUTIC AND LABORATORY PURPOSES.
Claims use since Feb. 6, 1934.

Reg. No. 326,011. Registered July 9, 1935. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

HYPORICE

FOR SODIUM HYPOSULPHITE IN CRYSTAL FORM.
Claims use since Feb. 19, 1935.

Reg. No. 326,549. Registered July 23, 1935. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

CURE-DAMP

The letters "R," "E," and "D," and the hyphen are lined to indicate the color red. The words "Cure," "Damp," and "Red" are disclaimed.

FOR CUPROUS OXIDE (RED OXIDE OF COPPER).

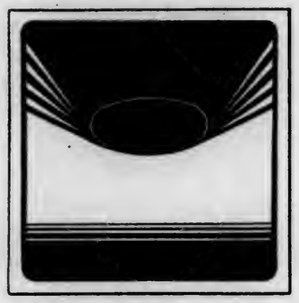
Claims use since Nov. 22, 1933.

Reg. No. 357,787. Registered June 14, 1938. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

IOMAG

FOR IODINE-ADDING SUPPLEMENT FOR ANIMAL FEEDS.

Claims use since October 1936.



Reg. No. 357,788. Registered June 14, 1938. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

CALO-CLOR

FOR MIXTURE, WHICH IS APPLIED TO GRASS FOR THE TREATMENT OF BROWN PATCH.

Claims use since January 1928.

Reg. No. 357,789. Registered June 14, 1938. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

FOR HYDROGEN PEROXIDE.

Claims use since October 1935.

Reg. No. 365,395. Registered Mar. 7, 1939. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

PHOSPHOTEX

FOR PHOSPHATE COMPOSITIONS CHARACTERIZED BY THEIR EMULSIFYING, DISPERSING, DEFLOCCULATING, WATER SOFTENING, AND EITHER ALONE OR IN COMBINATION WITH SOAP, BY THEIR DETERGENT PROPERTIES.

Claims use since Sept. 7, 1938.

Reg. No. 373,810. Registered Dec. 26, 1939. ACME CHEMICAL COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

AJAX

FOR POWDERED CHEMICAL FOR THE TREATMENT OF WATER USED AS A STERILIZER, DISINFECTANT, AND SOLVENT.

Claims use since January 1926.

Reg. No. 374,892. Registered Jan. 30, 1940. NATIONAL WAX COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FETHERZIP

FOR WAX COMPOSITION SUITABLE FOR USE FOR DEFEATHERING FOWL OR DEHAIRING ANIMALS.

Claims use since Oct. 28, 1938.

Reg. No. 376,828. Registered Apr. 9, 1940. CAMPANA CORPORATION, Batavia, Ill., a corporation of Delaware. Republished by registrant.

Campana Italían Balm

FOR LOTIONS FOR THE SKIN.

Claims use since June 28, 1939.

Reg. No. 376,829. Registered Apr. 9, 1940. CAMPANA CORPORATION, Batavia, Ill., a corporation of Delaware. Republished by registrant.

Campana Balm

The word "Balm" is disclaimed.

FOR LOTIONS FOR THE SKIN.

Claims use since June 28, 1939.

Reg. No. 376,831. Registered Apr. 9, 1940. HOSPITAL LIQUIDS, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

OVA-ESTRIN

FOR ESTROGENIC SUBSTANCE IN VEGETABLE OIL FOR INTRAMUSCULAR INJECTION FOR TREATMENT DURING THE MENOPAUSE, FOR TREATMENT OF INVOLUTIONAL MELANCHOLIA, GONORRHEAL AND SENILE VAGINITIS, FUNCTIONAL DYSMENORRHEA AND HYPERPLASIA OF THE BREASTS.

Claims use since Oct. 8, 1937.

Reg. No. 376,881. Registered Apr. 9, 1940. GEORGE MARTIN BROEMMEL, doing business as Broemmel's Pharmaceuticals, San Francisco, Calif. Republished by Broemmel's Pharmaceuticals, San Francisco, Calif., a firm.

RINOFEDS

FOR PREPARATION, IN CAPSULE FORM, FOR THE TREATMENT OF HEAD COLDS AND CERTAIN ALLERGIC CONDITIONS ARISING FROM VARIOUS POLLENS.

Claims use since on or about Jan. 1, 1932.

Reg. No. 376,883. Registered Apr. 9, 1940. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

SANTOPOID

FOR CHEMICAL ADJUVANTS FOR PETROLEUM OILS ADAPTED TO IMPROVE THE LUBRICATING CHARACTERISTICS OF SUCH PETROLEUM OILS.

Claims use since about Oct. 19, 1939.

Reg. No. 381,083. Registered Sept. 10, 1940. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

PERMASAN

FOR CHEMICAL PRESERVATIVES FOR WOOD, LUMBER, AND OTHER CELLULOSIC MATERIALS.

Claims use since about Mar. 28, 1940.

Reg. No. 387,074. Registered Apr. 29, 1941. THE DAVIES-YOUNG SOAP COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

CORTILLA

FOR LIQUID SHAMPOO.

Claims use since on or about Mar. 14, 1938.

Reg. No. 393,165. Registered Jan. 27, 1942. NATIONAL WAX COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

TREATREET

FOR WAX COMPOSITION SUITABLE FOR USE IN THE PRESERVATION OF LOGS AND OTHER FORESTRY PRODUCTS.

Claims use since Oct. 28, 1940.

Reg. No. 393,166. Registered Jan. 27, 1942. NATIONAL WAX COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

WACSOLENE

FOR WAX COMPOSITION SUITABLE FOR USE IN PRESERVING PLANT LIFE OR IN PLANT GRAFTING.

Claims use since Mar. 17, 1941.

Reg. No. 394,119. Registered Mar. 17, 1942. GENERAL ANILINE & FILM CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

LIQUADOL

FOR CHEMICALS AND PREPARATIONS AND COMPOUNDS THEREOF, USED IN PHOTOGRAPHIC PROCESSES.

Claims use since Sept. 15, 1941.

Reg. No. 394,120. Registered Mar. 17, 1942. GENERAL ANILINE & FILM CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

LIQUAFIX

FOR CHEMICALS AND PREPARATIONS AND COMPOUNDS THEREOF, USED IN PHOTOGRAPHIC PROCESSES.

Claims use since Sept. 15, 1941.

Reg. No. 395,983. Registered June 23, 1942. GENERAL ANILINE & FILM CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

FINEX

FOR CHEMICALS AND PREPARATIONS AND COMPOUNDS THEREOF USED IN PHOTOGRAPHIC PROCESSES, PARTICULARLY PHOTOGRAPHIC DEVELOPERS.

Claims use since May 29, 1941.

Reg. No. 399,228. Registered Dec. 22, 1942. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

THIURAD

FOR COMPOUNDS USED AS VULCANIZATION ACCELERATORS IN THE CURING OF RUBBER ARTICLES.

Claims use since on or about Aug. 24, 1934.

Reg. No. 405,045. Registered Jan. 4, 1944. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

MERSIZE

FOR CHEMICAL PRODUCTS IN SOLID OR LIQUID FORM FOR USE IN THE SIZING OF PAPER OR TEXTILE PRODUCTS FOR THE PARTIAL OR COMPLETE REPLACEMENT OF OTHER SIZING MATERIALS.
Claims use since about June 11, 1943.

Reg. No. 406,139. Registered Mar. 14, 1944. WALKER VITAMIN PRODUCTS, INC., Mount Vernon, N. Y., a corporation of New York. Republished by registrant.

BIACEN

FOR VITAMINS AND VITAMIN COMBINATIONS.
Claims use since January 1940.

Reg. No. 407,495. Registered June 6, 1944. CAMPANA SALES COMPANY, Batavia, Ill., a corporation of Delaware. Republished by registrant.

DEVASTATING

FOR COLOGNES AND PERFUMERY.
Claims use since Dec. 15, 1943.

Reg. No. 414,503. Registered June 12, 1945. NATIONAL WAX COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DUXWAX

FOR WAX COMPOSITION SUITABLE FOR USE FOR DE-FEATHERING FOWL OR DE-HAIRING ANIMALS.
Claims use since Nov. 18, 1944.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 366,910. Registered May 2, 1939. SMOKADOR MANUFACTURING CO., INC., Bloomfield, N. J., a corporation of Delaware. Republished by registrant.

TRAP-ADOR

FOR ASH RECEIVERS.
Claims use since on or about Nov. 1, 1938.

Reg. No. 378,326. Registered June 4, 1940. M. LINKMAN & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Hollycourt

FOR SMOKING PIPES.
Claims use since Sept. 1, 1939.

CLASS 10

FERTILIZERS

Reg. No. 378,313. Registered June 4, 1940. POTASH COMPANY OF AMERICA, Baltimore, Md., Atlanta, Ga., and Carlsbad, N. Mex., a corporation of of Colorado. Republished by registrant, present location New York, N. Y.

The words "Red Muriate" are disclaimed.
FOR MURIATE OF POTASH.
Claims use since about Oct. 15, 1937.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 375,576. Registered Feb. 20, 1940. THE NELSON-EISMANN COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Finger Tip

FOR CARBON PAPER.
Claims use since Aug. 25, 1939.

Reg. No. 388,212. Registered June 17, 1941. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

SILKEE-LOX

The word "Silk" is disclaimed.
FOR CARBON PAPERS AND TYPEWRITER RIBBONS.
Claims use since Apr. 7, 1937.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 368,336. Registered June 13, 1939. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant, present location Manheim Township, Lancaster County, Pa.

TEMSEAL

FOR INSULATING FIBERBOARD.
Claims use since on or about Apr. 17, 1938.

Reg. No. 380,647. Registered Aug. 27, 1940. KEASBEY & MATTISON COMPANY, Ambler, Pa., a corporation of Pennsylvania. Republished by registrant.

BOARD

The word "Board" is disclaimed.
FOR FIRE RESISTANT BUILDING BOARDS, INSULATING AND SOUND DEADENING BOARDS, COMPOSITION BOARDS, AND PARTICULARLY ADAPTED FOR USE AS A BUILDING MATERIAL, PARTITIONS, STEAMSHIP INTERIOR CONSTRUCTION MATERIALS AND FOR OTHER BUILDING AND CONSTRUCTION PURPOSES.
Claims use since about Mar. 1, 1940.

Reg. No. 392,940. Registered Jan. 20, 1942. PAGE & HILL CO., Minneapolis, Minn., a corporation of Delaware. Republished by registrant.

Life Span

FOR TREATED POLES FOR THE SUPPORT OF POWER LINES AND COMMUNICATION LINES.
Claims use since June 20, 1941.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 74,433. Registered July 13, 1909. THE BURNS, SILVER & CO., Bridgeport, Conn., now by change of name The Burns & Bassick Company. Republished by The Bassick Company, Bridgeport, Conn., a corporation of Connecticut.

FELTOID

FOR FURNITURE CASTERS.
Claims use since July 1, 1907.

Reg. No. 363,297. Registered Dec. 20, 1938. THE OSCAR C. RIXSON COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

UNI-CHECK

The word "Check" is disclaimed.
FOR BUILDERS' HARDWARE—NAMELY, DOOR CHECKS.
Claims use since May 24, 1938.

Reg. No. 378,083. Registered May 28, 1940. AUTOMATIC PRODUCTS COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

AP

FOR LIQUID LEVEL RESPONSIVE OIL CONTROL VALVES FOR EITHER MANUAL OR THERMO ELECTRICAL AUTOMATIC CONTROL, AND METERING VALVES AND EXPANSION VALVES FOR REFRIGERATION SERVICE.
Claims use since Oct. 6, 1931.

Reg. No. 394,234. Registered Mar. 24, 1942. TALON, INC., Meadville, Pa., a corporation of Pennsylvania. Republished by registrant.

V

FOR SEPARABLE FASTENERS OF THE SLIDER-CONTROLLED TYPE.
Claims use since Nov. 26, 1941.

Reg. No. 397,212. Registered Aug. 25, 1942. GEORGE K. GARRETT COMPANY, INC., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

The representation of the lock washers is disclaimed.
FOR LOCK WASHERS.
Claims use since December 1933.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

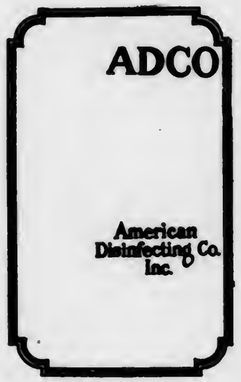
Reg. No. 394,190. Registered Mar. 24, 1942. A. O. SMITH CORPORATION, Milwaukee, Wis., a corporation of New York. Republished by registrant.

FOR METALLIC WELDING ELECTRODES.
Claims use since May 5, 1941.

CLASS 15

OILS AND GREASES

Reg. No. 387,129. Registered May 6, 1941. THE PURE OIL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.



The words "Pure Motor Fuel" are disclaimed.
FOR GASOLINE AND MOTOR FUEL OILS.
Claims use since on or about July 1, 1939.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 362,154. Registered Nov. 15, 1938. AMERICAN DISINFECTING CO., INC., Sedalia, Mo. Republished by Adco, Inc., Sedalia, Mo., a corporation of Missouri.

FOR LIQUID PREPARATION FOR SURFACING, DRESSING, POLISHING, AND FINISHING FLOORS AND LINOLEUM, LIQUID WAX FOR USE ON FLOORS, AND PAINT REMOVER.

Reg. No. 399,343. Registered Dec. 29, 1942. NATIONAL DIE CASTING COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR FRUIT JUICE EXTRACTORS FOR EXTRACTING JUICES FROM FRUITS SUCH AS ORANGES, LEMONS, GRAPEFRUIT, AND THE LIKE.
Claims use since Oct. 5, 1939.

Reg. No. 404,814. Registered Dec. 21, 1943. INTERNATIONAL HARVESTER COMPANY, Chicago, Ill., a corporation of New Jersey. Republished by registrant.

FARMALL

FOR TRACTORS AND ATTACHMENTS AND PARTS THEREOF.
Claims use since on or about May 9, 1922.

CLASS 25

LOCKS AND SAFES

Reg. No. 399,088. Registered Dec. 15, 1942. SIGNODE STEEL STRAPPING COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

The word "System" is disclaimed.
FOR METALLIC FASTENING SEALS FOR STRAPPING USED TO BIND BALES, BOXES, AND OTHER PACKAGES AND THE LIKE.
Claims use since on or about Aug. 15, 1916.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 109,710. Registered Apr. 18, 1916. S. F. BOWSER & COMPANY, INC., Fort Wayne, Ind., a corporation of Indiana. Republished by Bowser, Inc., Fort Wayne, Ind.

The words "Established 1885," "Self Measuring Oil Tanks," "Patd. by," "S. F. Bowser & Co. Inc.," "Pump No." and "Ft. Wayne, Ind., U. S. A.," and the center circle and the solid rectangle at the bottom are disclaimed.
FOR FLUID-MEASURING PUMPS AND METERS.
Claims use since Nov. 13, 1913.

Reg. No. 370,728. Registered Sept. 5, 1939. AGFA ANSCO CORPORATION, Binghamton, N. Y., assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of Delaware. Republished by General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware.

CYKON

FOR SENSITIZED PHOTOGRAPHIC PAPER.
Claims use since Mar. 3, 1939.

Reg. No. 370,729. Registered Sept. 5, 1939. AGFA ANSCO CORPORATION, Binghamton, N. Y., assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of Delaware. Republished by General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware.

CYKORA

FOR SENSITIZED PHOTOGRAPHIC PAPER.
Claims use since Mar. 3, 1939.

Reg. No. 392,194. Registered Dec. 16, 1941. SPAULDING-MOSS COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

LATITUDE

FOR SENSITIZED BLUE PRINT PAPER AND CLOTH, SENSITIZED DIRECT POSITIVE PAPER AND CLOTH, SENSITIZED VAN DYKE PAPER AND CLOTH AND PHOTOGRAPHICALLY SENSITIZED PAPER AND CLOTH.
Claims use since Dec. 13, 1940, on sensitized blue print paper; since Feb. 7, 1941, upon direct positive paper; since Dec. 13, 1940, upon blue print cloth; since Apr. 26, 1941, on direct positive cloth; since Apr. 26, 1941, on Van Dyke paper and cloth; since Apr. 26, 1941, on photographically sensitized paper and cloth.

Reg. No. 393,828. Registered Mar. 3, 1942. GENERAL ANILINE & FILM CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

Ozalid

FOR LIGHT-SENSITIVE DIAZOTYPE PAPERS, CLOTHS, FILM, MACHINES FOR DEVELOPING THE PHOTOPRINTS THUS PRODUCED AND PARTS OF SUCH MACHINES.
Claims use since Mar. 19, 1923, for light-sensitive diazotype materials; and since May 1, 1936, for printing and developing machines.

Reg. No. 405,334. Registered Jan. 25, 1944. GREENFIELD TAP AND DIE CORPORATION, Greenfield, Mass., a corporation of Massachusetts. Republished by registrant.

MEASURE-MASTER

The word "Measure" is disclaimed.
FOR INSTRUMENTS AND APPARATUS FOR MEASURING THE SIZES AND SURFACE CHARACTERISTICS OF ARTICLES, DEVICES AND PARTS OF MACHINES AND COMPRISING GAUGES COMPARATORS, GAUGE MEASURING MACHINES, AND APPARATUS FOR MEASURING PITCH DIAMETERS OF SCREW THREADS.
Claims use since June 30, 1942.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 378,954. Registered June 25, 1940. THE WATSON COMPANY, Attleboro, Mass., a corporation of Massachusetts. Republished by registrant.

Windsor Rose

The word "Windsor" is disclaimed.
FOR FLATWARE AND HOLLOWWARE COMPOSED WHOLLY OR IN PART OF PRECIOUS METAL.
Claims use since Jan. 19, 1940.

Reg. No. 405,356. Registered Jan. 25, 1944. THE BALL COMPANY, Chicago, Ill., a corporation of Ohio. Republished by registrant.

Garland

FOR FINGER RINGS, EARRINGS, BROOCHES, BRACELETS, CLASPS, NECKLACES, PENDANTS, AND OTHER JEWELRY DESIGNED FOR PERSONAL ADORNMENT, NOT INCLUDING WATCHES.
Claims use since Feb. 10, 1924.

REGAL

FOR SHOE HORNS MADE OF BASE METAL AND COMPOSITION MATERIALS, AND SHOE LACES.
Claims use since on or about Jan. 1, 1900.

Reg. No. 394,226. Registered Mar. 24, 1942. THOMAS TAYLOR & SONS, INC., Hudson, Mass., a corporation of Massachusetts. Republished by registrant.

DAWHIDE

FOR SHOE LACES.
Claims use since July 1936.

CLASS 42

KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR

Reg. No. 65,947. Registered Oct. 29, 1907. MOUNT VERNON-WOODBERRY COTTON DUCK COMPANY, Baltimore, Md. Republished by Mt. Vernon-Woodberry Mills, Inc., Baltimore, Md., a corporation of Maryland.

GREENWOODS

FOR COTTON DUCK.
Claims use since about 1844.

Reg. No. 66,026. Registered Nov. 5, 1907. MOUNT VERNON-WOODBERRY COTTON DUCK COMPANY, Baltimore, Md. Republished by Mt. Vernon-Woodberry Mills, Inc., Baltimore, Md., a corporation of Maryland.

DRUID MILLS

FOR COTTON DUCK.
Claims use since about 1867.

Reg. No. 66,051. Registered Nov. 5, 1907. MOUNT VERNON-WOODBERRY COTTON DUCK COMPANY, Baltimore, Md. Republished by Mt. Vernon-Woodberry Mills, Inc., Baltimore, Md., a corporation of Maryland.

RICHLAND

FOR COTTON-DUCK.
Claims use since about 1894.

Reg. No. 66,471. Registered Dec. 3, 1907. MOUNT VERNON-WOODBERRY COTTON DUCK COMPANY, Baltimore, Md. Republished by Mt. Vernon-Woodberry Mills, Inc., Baltimore, Md., a corporation of Maryland.

GREENWOODS

MONTANA

FOR COTTON DUCK.
Claims use since about 1872.

Reg. No. 214,002. Registered June 8, 1926. THE ADLER UNDERWEAR & HOSIERY MFG. CO., Cincinnati, Ohio. Republished by The Adler Company, Cincinnati, Ohio, a corporation of Ohio.

Nubrite

FOR KNITTED CLOTH—NAMELY, COTTON FABRIC SOLD AS PIECE GOODS.
Claims use since Jan. 18, 1926.

Reg. No. 366,894. Registered May 2, 1939. MARSHALL FIELD & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DURACALE

FOR SHEETS AND PILLOWCASES.
Claims use since about May 1938.

Reg. No. 373,711. Registered Dec. 19, 1939. M. & W. THOMAS CORP., New York, N. Y. Republished by M. & W. Thomas Co., New York, N. Y., a firm.

SPRINGER

FOR PIECE GOODS OF SILK, RAYON, COTTON, WOOL AND MIXTURES THEREOF.
Claims use since Mar. 31, 1939.

Reg. No. 393,190. Registered Jan. 27, 1942. MARSHALL FIELD & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

GAYETTE

FOR LACE CURTAINS.
Claims use since February 1941.

Reg. No. 405,680. Registered Feb. 15, 1944. AMERICAN WOOLEN COMPANY, New York, N. Y., a corporation of Massachusetts. Republished by registrant.

DUV-BLOOM

The word "Bloom" is disclaimed.
FOR WOOLEN PIECE GOODS.
Claims use since November 1936.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Reg. No. 361,388. Registered Oct. 18, 1938. LELAND A. WATSON, doing business as Medical Acoustic Instrument Co., Minneapolis, Minn. Republished by The Maico Company, Incorporated, Minneapolis, Minn., a corporation of Minnesota.

MAICO

FOR MEDICAL ACOUSTIC INSTRUMENTS.
Claims use since July 8, 1936.

Reg. No. 379,042. Registered June 25, 1940. HOSPITAL LIQUIDS, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

HAEMOVAC

FOR BLOOD TRANSFUSION SETS, INCLUDING SEALED CONTAINERS HAVING A PARTIAL VACUUM AND CONTAINING SOLUTION OF SODIUM CITRATE 2½ PERCENT IN PHYSIOLOGICAL SOLUTION OF SODIUM CHLORIDE, NEEDLES, VALVE CONNECTIONS AND TUBING.
Claims use since Jan. 10, 1939.

Reg. No. 404,945. Registered Dec. 28, 1943. ARMSTRONG CORK COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant, present location Manheim Township, Lancaster County, Pa.

BRONZE LEAF

FOR WATER BOTTLES, FOUNTAIN SYRINGES, AND COMBINATION WATER BOTTLES AND FOUNTAIN SYRINGES, ALL OF WHICH ARE MADE OF RUBBER OR SIMILAR FLEXIBLE MATERIAL.
Claims use since on or about Apr. 21, 1943.

CLASS 45

SOFT DRINKS AND CARBONATED WATERS

Reg. No. 339,718. Registered Oct. 20, 1936. CHOCOLATE PRODUCTS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Vi-Co

FOR CHOCOLATE SYRUPS, EXTRACTS, AND CONCENTRATES FOR COMPOUNDING NON-ALCOHOLIC BEVERAGES.
Claims use since Dec. 6, 1932.

Reg. No. 363,736. Registered Jan. 3, 1939. LEE C. WARD, Los Angeles, Calif. Republished by Tru-Ade, Inc., Los Angeles, Calif., a corporation of California.

TRU-ADE

FOR NONALCOHOLIC, MALTLESS BEVERAGE USED AS A SOFT DRINK AND CONCENTRATES AND EXTRACTS FOR PREPARING THE SAME.
Claims use since Aug. 25, 1938.

Reg. No. 392,962. Registered Jan. 20, 1942. I. B. C. ROOT BEER COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

I.B.C.

FOR NON-INTOXICATING, NON-ALCOHOLIC, NON-CEREAL, MALTLESS BEVERAGES, SOLD AS SOFT DRINKS, AND SIRUPS USED IN THE PREPARATION OF SAME.
Claims use since Apr. 28, 1922.

Reg. No. 393,518. Registered Feb. 17, 1942. BLANKE-BAER EXTRACT & PRESERVING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

WIN-YOU

FOR FOUNTAIN SYRUPS FOR USE IN FLAVORING NONALCOHOLIC MALTLESS BEVERAGES SOLD AS SOFT DRINKS.
Claims use since about August 1918.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Reg. No. 259,805. Registered Aug. 6, 1929. WORKMAN PACKING COMPANY, San Francisco, Calif., a corporation of California. Republished by registrant.

I X L

FOR CHICKEN TAMALE, CHILI CON CARNE, ENCHILADAS, RAVIOLIS, MUSHROOM SAUCE, AND CHICKEN BROTH.
Claims use since on or about Apr. 1, 1895, on chicken tamale, chili con carne, and enchiladas; on or about July 1, 1915, on raviolis; on or about June 1, 1921, on mushroom sauce; and since Jan. 1, 1924, on chicken broth.

Reg. No. 308,251. Registered Nov. 28, 1933. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

SWEETEX

FOR BULK VEGETABLE SHORTENING OF SEMI-SOLID FORM.
Claims use since Mar. 30, 1933.

Reg. No. 348,891. Registered Aug. 17, 1937. AMERICAN BIRD PRODUCTS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR BIRD SEED AND SONG FOOD.
Claims use since Apr. 10, 1935.

Reg. No. 349,513. Registered Aug. 31, 1937. CHARLESTON MILLING COMPANY, Charleston, W. Va., a corporation of West Virginia. Republished by registrant.

The drawing is lined for blue, red and yellow.
FOR WHEAT FLOUR.
Claims use since November 1936.

Reg. No. 363,265. Registered Dec. 20, 1938. MODERN MAID FOOD PRODUCTS, Brooklyn, N. Y., a firm. Republished by registrant.

The words "Modern Maid Food Products" are disclaimed.

FOR PREPARED FLOURS FOR THE FOLLOWING FOODS—NAMELY, WAFFLE, WHOLE WHEAT WAFFLE, BISCUIT, PIE CRUST, DOUGHNUT, GREASELESS DOUGHNUT, CORN MUFFIN, BRAN MUFFIN, WHOLE WHEAT MUFFIN, PANCAKE, SPICE CAKE, FUDGE CAKE, GINGER CAKE, GOLDEN CAKE, DEVILS FOODCAKE; HOT CHOCOLATE POWDER; CHOCOLATE PUDDING, CONFECTIONER'S COCOA, BUTTER FLAVOR FOR FOOD PURPOSES, MAPLE FLAVOR FOR FOOD PURPOSES, VANILLA FLAVOR, AND FLAVORING EMULSIONS FOR FOOD PURPOSES, PIE FILLINGS, FUDGE ICING, ICING BASE, CREAM PUFF FILLING AND BAKER'S DEVIL FOOD.
Claims use since Nov. 15, 1932.

Reg. No. 379,779. Registered July 23, 1940. JOHN MACKINTOSH & SONS LTD., INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

Ringsway

FOR CANDY.
Claims use since 1932.

Reg. No. 389,032. Registered July 22, 1941. OELERICH & BERRY COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

BIG 9

FOR CANNED MIXED VEGETABLE JUICES.
Claims use since Feb. 19, 1941.

Reg. No. 405,666. Registered Feb. 15, 1944. MACY McONEAL, doing business as Brown Bomber Flour Merchants, Cleveland, Ohio, assignor to Standard Milling Company, New York, N. Y., a corporation of Delaware. Republished by Standard Milling Company, Chicago, Ill., a corporation of Illinois.

BROWN BOMBER

FOR WHEAT FLOUR.
Claims use since Jan. 15, 1942.

Reg. No. 407,356. Registered May 30, 1944. DAVID MICHAEL & CO., Philadelphia, Pa. Republished by David Michael and Company Incorporated, Philadelphia, Pa., a corporation of Pennsylvania.

Twixt

FOR FOOD FLAVORING EXTRACTS.
Claims use since June 1940.

CLASS 47

WINES

Reg. No. 391,080. Registered Oct. 21, 1941. VERNAT, INC., New York, N. Y., a corporation of New York. Republished by registrant.

VERNAT

FOR VERMOUTHS—NAMELY, SWEET AND DRY VERMOUTHS.
Claims use since May 10, 1941.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 366,888. Registered May 2, 1939. P. BALLANTINE & SONS, Newark, N. J., a corporation of New Jersey. Republished by registrant.

"HANDY" WAY TO ORDER

FOR BEER, ALE, PORTER, AND STOUT.
Claims use since Dec. 5, 1938.

Reg. No. 379,036. Registered June 25, 1940. MINNEAPOLIS BREWING COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

GRAIN BELT *friendly*

FOR BEER.
Claims use since Aug. 15, 1937.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 314,614. Registered July 3, 1934. BUSHMILL WINE & PRODUCTS COMPANY, INC., Scranton, Pa. Republished by Brookside Distilling Products Corporation, Scranton, Pa., a corporation of Delaware.

Brookside

FOR WHISKEY.
Claims use since Jan. 6, 1934.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 365,396. Registered Mar. 7, 1939. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

VUEPAK

FOR PLASTIC COMPOSITIONS IN THE FORM OF SHEETS OR FILMS SUITED FOR TRANSPARENT WRAPPING, CONTAINERS, ETC.
Claims use since about Aug. 23, 1938.

Reg. No. 393,517. Registered Feb. 17, 1942. SEAMAN PAPER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

RESISTO-HYDE

The word "Hyde" is disclaimed.
FOR ARTIFICIAL LEATHER UPHOLSTERY MATERIAL.
Claims use since Apr. 11, 1940.

REISSUES

MARCH 30, 1948

22,992

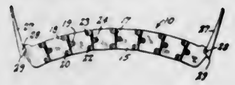
METHOD OF MAKING DOWNSPOUT HOOKS AND ARTICLES FORMED THEREBY

Maurice Rachlin, Brooklyn, N. Y., assignor to Max Rachlin, Flushing, N. Y.

Original No. 2,365,971, dated December 26, 1944, Serial No. 392,002, May 5, 1941. Application for reissue August 7, 1947, Serial No. 767,146

6 Claims. (Cl. 248—71)

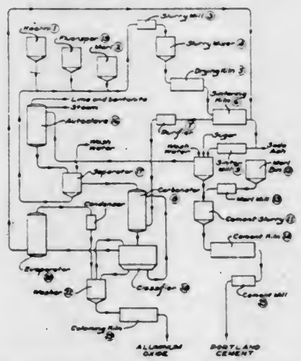
1. A method of making a downspout hook, which comprises the steps of imparting a bend to a straight piece of wire, to form a blank consisting of two spaced parts, extending in substantially parallel planes, joined by a third connecting part, extending substantially at right angles to both of said spaced parts, then flattening one of said spaced parts and said connecting part and then pressing said other spaced part in a direction



at right angles to the direction in which said first spaced part and said connecting part were flattened.

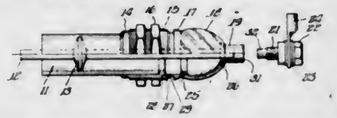
925

PATENTS



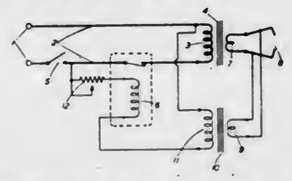
GRANTED MARCH 30, 1948

2,438,487
ARTICULATED ICE TRAY GRID
Sven W. E. Andersson, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application December 12, 1939, Serial No. 308,751
3 Claims. (Cl. 62—108.5)



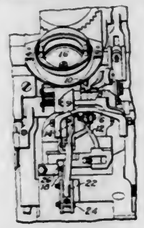
1. A grid including a cross partition and center dividing members at opposite sides of said cross partition and at right angles to the latter, said dividing members being movable in opposite directions from said cross partition, means at one elevation to limit separating movement of one of said dividing members from said cross partition, and means at another elevation to limit separating movement of said other dividing member from said cross partition.

2,438,488
PROCESS OF MAKING ALUMINA UTILIZING KAOLIN, MARL, AND RELATED MATERIALS
Frank J. Anderson and Duncan R. Williams, Laramie, Wyo., assignors to Monolith Portland Midwest Company, Laramie, Wyo., a corporation of Nevada
Application June 22, 1943, Serial No. 491,778
3 Claims. (Cl. 23—141)



3. In a process for making Portland cement low in alumina content and for recovering commercially pure alumina from raw materials one of which is predominantly aluminous silicious material and the other of which is predominantly calcium carbonate, the steps which comprise, forming a mixture of said raw materials and an amount of calcium fluoride between ½ and 3% of the weight of said raw materials to provide a mole ratio of CaO to SiO_2 between 1.9 and 2, wet grinding said mixture to form a slurry which is subsequently dried and sintered, adding sufficient sodium carbonate to the mixture before it is sintered to provide a mole ratio of Na_2O to Al_2O_3 between 1.0 and 1.3, sintering the resulting mixture to drive off carbon dioxide and provide a sinter which is predominantly sodium aluminate and calcium silicate, adding sufficient sodium carbonate to said sinter to provide a mole ratio of Na_2O to SiO_2 between 1.5 and 1.9 and wet grinding said sinter, leaching said ground sinter in the presence of soluble sugar in an amount between 0.2 and 2% of the weight of said sinter to produce a sodium aluminate solution containing said sodium carbonate and said sugar and leave a residue which is predominantly calcium silicate suitable for cement manufacture, treating said solution with lime and clay to remove residual silicates and then with carbon dioxide to precipitate aluminum hydrate, separating said precipitated aluminum hydrate from the remaining solution and converting the same to alumina.

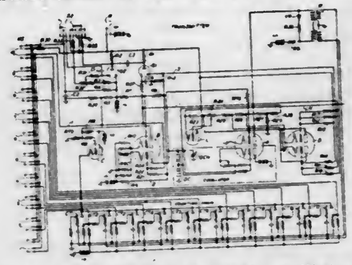
2,438,489
CABLE TERMINAL
Victor J. Andrew, Chicago, Ill., assignor, by mesne assignments, to Andrew Corporation, Chicago, Ill., a corporation of Illinois
Application February 16, 1944, Serial No. 522,573
5 Claims. (Cl. 174—19)



1. A sealed terminal unit for concentric conductors comprising two sleeves of different size adapted to be bonded to the inner and outer conductors of concentric conductors in linear spaced apart positions, a hollow insulating member interposed between said sleeves, and a plurality of metal members each having a temperature coefficient compatible with the temperature coefficient of said insulating member, said metal members each being bonded to said insulator and to one of said metal sleeves.

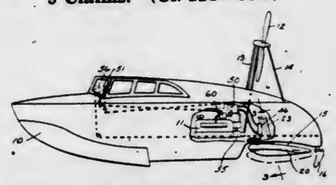
2,438,490
WELDING CONTROL SYSTEM
James Leslie Ashford and William Alfred Billings, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application June 22, 1943, Serial No. 491,752
In Great Britain July 31, 1942
2 Claims. (Cl. 219—4)

1. In an electric welding apparatus, a pair of electrodes, a source of voltage, transformer means having a primary winding connected across the source and a secondary winding connected across the electrodes to produce a voltage across the electrodes when the electrodes are open, a relay having contacts connecting source and primary winding, and an armature opening the contacts when energized, means for producing an electromagnetic field energizing said armature in response to the source voltage and means for producing another electromagnetic field opposing the energizing field in response to the electrode voltage to de-energize the armature and to open the contacts when fusion at the weld takes place, said relay having a coil for energizing the armature, and said last mentioned means including a second transformer means having a primary winding across the electrodes and a secondary winding in series with the coil, said coil and said last mentioned secondary winding being connected parallel to the source.



2,438,491
THREAD FINGER FOR SHOE SEWING MACHINES
Fred Ashworth, Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application October 25, 1946, Serial No. 705,595
3 Claims. (Cl. 112—38)

1. A lockstitch outsole shoe sewing machine having a curved hook needle, a loop taker, a needle looper, a thread finger movable close to the needle path and arranged to cooperate with the looper in laying the thread in the hook of the needle, and a slotted guide block at one side of the plane of the needle within the slot of which block the thread finger is pivoted, in combination with a lateral motion reducing shim adjustably secured to one side of the thread finger between the finger and the inner wall of the slotted block.

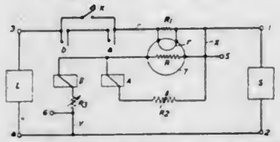


2,438,492
SIGNALING SYSTEM
Henry M. Bascom, New York, Robert F. Massonneau, Scarsdale, Bernard Ostendorf, Jr., Jamaica, and Wilton T. Rea, Manhasset, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 17, 1944, Serial No. 549,842
5 Claims. (Cl. 177—380)

1. In a signaling system in combination, a line, an oscillator connected to said line, electronic means normally effective to short-circuit said line, and controllable means for operating said oscillator and said electronic means whereby the former produces a predetermined number of half cycles for application to said line and the latter removes the short-circuit from said line to cause said predetermined number of half cycles to be transmitted thereover, said controllable means being thereafter effective to quench said oscillator and to cause said electronic means to reestablish the short-circuit of said line to prevent spurious

oscillations produced by said oscillator after quenching from being transmitted over said line.

2,438,493
WATER VEHICLE
Emric W. Berger, San Diego, Calif.
Application January 5, 1944, Serial No. 517,000
9 Claims. (Cl. 114—66.5)



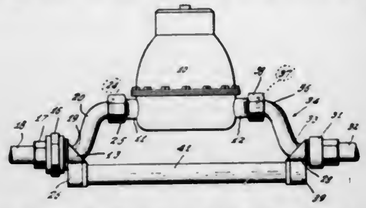
1. A water vehicle having in combination, a hull, propelling means therefor, a buoyant float disposed on each side of the longitudinal center of the hull adjacent the stern thereof, a member connecting the floats for movement in unison with respect to the hull, means for mounting the member beneath the hull and means for swivelly connecting the member to each float.

2,438,494
PHOTOGRAPHIC PROCESS FOR PRODUCING LINE IMAGES
Percy Wynne Bullock, South Pasadena, Calif.
Application July 13, 1942, Serial No. 450,705
3 Claims. (Cl. 95—5)

1. A partial reversal line process, which consists in providing a background element and an object element, illuminating one of said elements with a light so as to create a strong even light contrast between said element and its background element; photographing said object element on film, developing and fixing said film, printing the image on said film on a second film, partially developing the second film to a point that a strong contrast is obtained between the density of the object element and the density of the background element; exposing said second film to a weak light; developing said second film until opposing densities of the two elements are approximately even; whereby contrast between the two elements is destroyed but an even clear line around the object element is obtained; fixing the second film at the moment the opposition densities of the two elements match, then washing and drying said film.

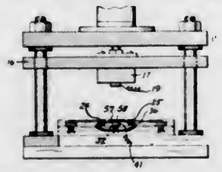
2,438,495
THERMISTOR CIRCUIT INTERRUPTER CONTROL SYSTEM RESPONSIVE TO LOAD CIRCUIT CONDITIONS
Prafulla Kumar Chatterjea, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 2, 1944, Serial No. 524,760
In Great Britain April 9, 1943
5 Claims. (Cl. 175—294)

1. Circuit control means, comprising a source of electrical energy, a load circuit, a thermistor having a heater and a resistance element and connected to have its heater responsive to the value of current in the load circuit, and a control circuit operative to open the load circuit when the current value therein varies outside of a predetermined range of material extent, the control circuit including two control relays each of said relays having a movable contact controlled by each relay respectively, said contacts connected in series in the load circuit.



2,438,496
TELEPHONE SYSTEM EMPLOYING KEY TYPE CALL TRANSMITTER
Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application June 19, 1944, Serial No. 540,946
57 Claims. (Cl. 179—90)

1. In a telecommunication system, a plurality of lines, each having a multi-digit number, means including a plurality of stages of numerical selector switches for establishing a connection between a calling and a called line, a central exchange register for variably operating the selectors in accordance with the different digits of the called number, a plurality of keys associated with each line, an electric discharge tube in the register, means for connecting the keys of the calling line with said tube, means responsive to the operation of the connected keys for applying various potentials to said tube, and means controlled by the tube for variably operating the register.

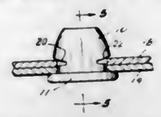


2,438,497
METER MOUNTING
John L. Ford, Wabash, Ind., assignor to The Ford Meter Box Company, Inc., Wabash, Ind., a corporation of Indiana
Application April 30, 1945, Serial No. 591,140
6 Claims. (Cl. 285—3)

1. A meter mounting comprising a pair of fittings arranged to provide oppositely-facing aligned open ends designed for connection to supply line conduits, a ductile tube for each of said fittings, each of said tubes extending through its fitting to constitute the fluid conduit through said fitting and being curved in one direction out of the line of said open ends and further being curved into parallelism with said line, the free ends of said tubes being designed for connection with the spuds of a meter, each of said fittings further being formed to provide a socket

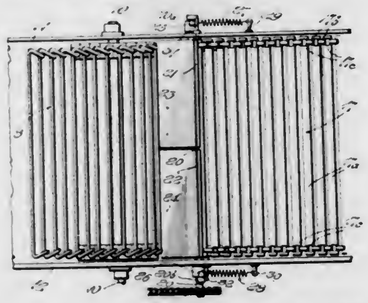
opening in a direction away from said open fitting ends, the sockets of said two fittings being disposed upon a common axis substantially parallel with the common axis of said open ends and spaced therefrom in a direction diametrically opposite said one direction, and an element having its opposite ends received in said fitting sockets and securing said fittings together.

2,438,498
TUBE FORMING APPARATUS
Sidney R. Geist, Sr., New York, and Norman R. Davis, Elmhurst, Long Island, N. Y., assignors to Gemloid Corporation, Elmhurst, Long Island, N. Y., a corporation of New York
Application April 14, 1945, Serial No. 588,320
13 Claims. (Cl. 154—42)



1. Means for heat sealing plastic material comprising a pressure element, an electrode mounted on said pressure element, means for applying high frequency current to said electrode, means for insulating said electrode, means for applying pressure to said pressure element, in combination with a rack and a cooperating rack element, said rack element being shaped to receive plastic material wrapped thereabout and having portions extending beyond the ends of the wrapped plastic material adapted to be received by said rack, means mounted on said rack for holding plastic material in wrapped position, means for positioning said rack with said cooperating rack element under said pressure element.

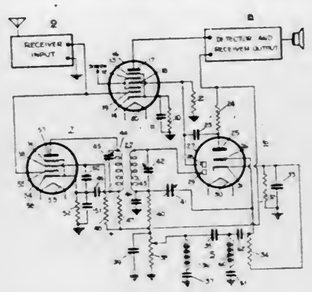
2,438,499
FASTENING DEVICE
Richard A. Hartman, Cleveland, Ohio, assignor to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application July 13, 1944, Serial No. 544,674
7 Claims. (Cl. 85—40)



1. A fastening device comprising a hollow body of sheet material having a slot extending generally longitudinally thereof for permitting contractability during the insertion thereof through an opening in a support, said body having tongues

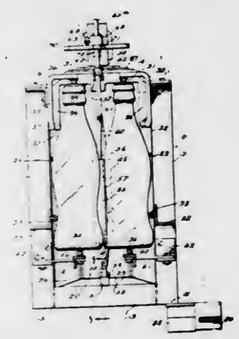
disposed adjacent said slot and having other outwardly acting tongues spaced peripherally therefrom and cooperating therewith to engage one

side of said support, said body having means thereon spaced from the tongues and extending outwardly therefrom for cooperating with the tongues to hold an article on said support.



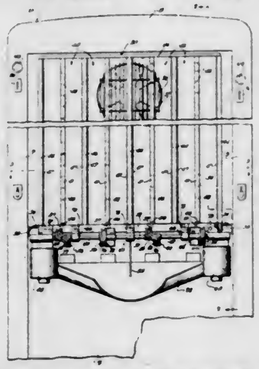
2,438,500
CONVEYING MECHANISM FOR HARVESTING MACHINES
Ralph S. Hertzler, Elverson, Pa.
Application December 11, 1945, Serial No. 634,382
7 Claims. (Cl. 198—45)

3. In a harvesting machine, an elevating chain-like conveyor, a picker table conveyor adjacent the end of said elevating chain-like conveyor, and a plurality of coplanar pivotally mounted chutes interposed between said elevating conveyor and the picker table conveyor for normally directing delivery of material from said chain-like elevating conveyor to said picker table conveyor and each displaceable under pressure from obstructions caught and carried by said chain-like conveyor, a lever arm connected with each of said pivotally mounted chutes, separate spring means for continuously subjecting each of said lever arms to tension for normally maintaining said chutes in a coplanar position for directing material from said chain-like conveyor to said picker table conveyor, said chutes and lever arms being angularly displaceable under pressure developed by the movement of obstructions caught in and carried by said chain-like conveyor, and said chutes being returnable to normal delivery position under control of the spring tensioned lever arms.



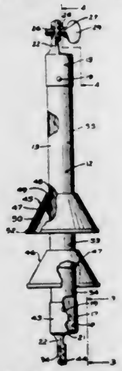
2,438,501
RADIO NOISE REJECTOR CIRCUIT
Donald L. Hings, Ottawa, Ontario, Canada, assignor to Electronic Laboratories, Inc., Indianapolis, Ind., a corporation of Indiana
Application August 21, 1942, Serial No. 455,629
In Canada August 20, 1942
9 Claims. (Cl. 250—20)

1. In a radio receiver subjected to incoming energy waves, the improvement of circuit means for amplifying the said energy waves comprising, in combination, a first amplifier tube arranged to supply a load circuit and having at least a control grid and a second grid, a second amplifier tube having at least a control grid, the control grids of said tubes receiving said incoming energy waves, said second tube amplifying said incoming energy waves, connection means between the second tube and the second grid for impressing the amplified incoming energy waves upon the



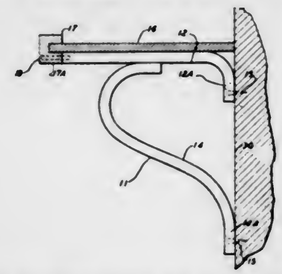
second grid in substantially an in-phase relationship to the incoming waves to increase the sensitivity and the gain of the first amplifier tube, and biasing means for the second grid responsive to the amplitude of the amplified energy waves impressed upon the second grid to shift the bias of the second grid for governing the action thereof.

2,438,502
VENDING MACHINE
Marcus L. Holt, Lookout Mountain, Ga., assignor of one-half to John B. Brock, Adairsville, Ga.
Application October 5, 1944, Serial No. 557,281
13 Claims. (Cl. 312—48)



1. In a vending machine for bottled merchandise, the combination of means for guiding and maintaining the alignment of two stacks of bottles by engagement on three of the sides of said bottles, spacing means located between the bottles of adjacent stacks, the bottles in the two stacks being offset vertically from each other, supporting means for the lowermost bottle in one stack or the other, depending upon the position of said supporting means, coin controlled means for controlling the position of said supporting means, whereby the supporting means may be released to move laterally into position to hold the lowermost bottle in one stack while releasing the lowermost bottle in the other stack.

2,438,503
VENDING MACHINE
Marcus L. Holt, Lookout Mountain, Ga., assignor of one-half to John B. Brock, Adairsville, Ga.
Application May 8, 1946, Serial No. 668,188
14 Claims. (Cl. 312—88)

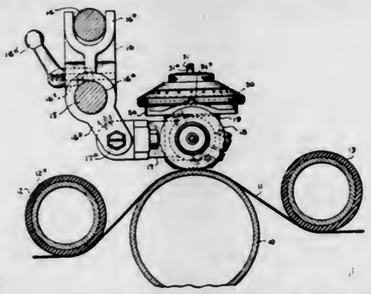


12. In an article vending machine, the combination comprising guides defining adjacently disposed sections through which said articles normally gravitate from top to bottom, each of said sections being of a width to hold a plurality of laterally displaced rows of articles, a series of laterally movable elements in each section for retaining the articles of said rows in staggered relationship, laterally shiftable means for each of said sections for normally retaining said articles in the sections by engagement with the lowermost one of the articles in the section, power driven means for laterally shifting the laterally shiftable means in sequence to effect sequential release of said lowermost articles, means for energizing the power driven means, and control means dependent upon the release of one of said articles for deenergizing the power driven means.

2,438,504
STORM ATTACHMENT FOR HIGH LINE TOOLS
David C. Hubbard, Centralia, Mo., assignor to A. B. Chance Company, Centralia, Mo., a corporation of Missouri
Application November 23, 1944, Serial No. 564,845
3 Claims. (Cl. 174—138)

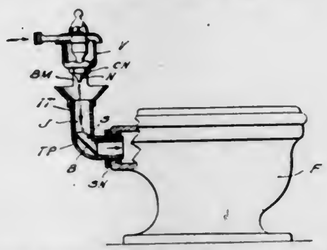
1. In a storm attachment for high line tools, the combination of a wooden insulating pole of substantially cylindrical shape having a metal fitting at one end adapted to be used for attaching any of a plurality of different tools, said fitting comprising a ferrule fixedly secured on the pole and an axially extending partially circular flange having a threaded bore provided with a clamping screw bolt, a complementary fitting carried by the other end of the pole, including a metallic ferrule and an axially extending slotted flange of partially circular shape adapted to receive the clamping screw bolt of a tool supporting pole having a fitting similar to the first-mentioned fitting, the said wooden pole being provided with a plurality of self-draining insulating skirts of resilient bendable material, each skirt having a substantially frusto-conical depending portion and an integral tubular collar having a tight frictional grip on said pole, that portion of the pole above said skirts being provided with an insulating covering whereby the said attachment may be utilized on line poles to hold tools in wet weather without substantial danger of leakage of electricity along the pole due to the dry gaps provided beneath said skirts.

2,438,505
SHELF
Richard O. Hunt, Altadena, Calif.
Application January 19, 1946, Serial No. 642,153
5 Claims. (Cl. 211—90)



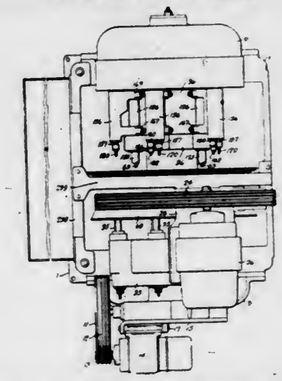
1. In a shelf structure, the combination which comprises a plurality of brackets spaced from each other and adapted to be fastened to a wall, a plate resting on the brackets with its rear edge against the wall and its front edge projecting slightly beyond the brackets, a strip provided with a groove into which the front edge of the plate is fitted and having transverse projections at both ends likewise grooved, the side edges of the plate being fitted in the grooves in the projections, the strip abutting the fronts of the brackets, and means securing the brackets to the strip at the places of abutment.

2,438,506
ELECTROMAGNETIC GAUGE
Aaron G. Ladrach, Akron, Ohio; Dorothy B. Ladrach, administratrix of said Aaron G. Ladrach, deceased, assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application November 25, 1943, Serial No. 511,696
12 Claims. (Cl. 175—183)



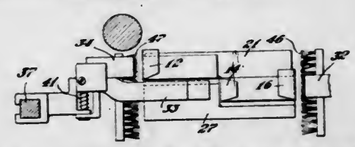
1. A continuous electromagnetic gauging device for sheet or strip magnetic material comprising a work-supporting member of magnetic material over a portion of which sheet or strip magnetic material is engageable to move along a path, supporting means extending transversely

of the path of said magnetic material above and in advance of said work-supporting member, a support adjustable along said transversely extending supporting means, means for securing said support on said transversely extending supporting means in various positions transversely or width-wise of the path of the sheet or strip magnetic material, a carriage shiftable upon said support toward and from said work-supporting member and extending in said path of movement of said sheet or strip magnetic material, a supporting element on said carriage for direct en-



gagement with the surface of said work-supporting member adjacent said material-engaging portion thereof, an electromagnet mounted on said carriage so as to overlie said material-engaging portion of said work-supporting member, and means on said carriage for adjusting said electromagnet thereon relatively of said work-supporting member, said adjusting means including a micrometer having a screw for adjusting said electromagnet and a dial member releasably connected to said screw for indicating the adjustment thereof, and means for releasably locking said dial member to said screw.

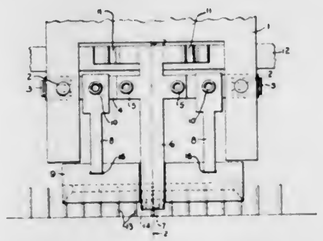
2,438,507
PLUMBING FIXTURE INSTALLATION
Jesse D. Langdon, Long Beach, Calif.
Application November 27, 1944, Serial No. 565,353
5 Claims. (Cl. 4—70)



1. The combination with a flushing valve having an inlet for attachment to a source of pressure fluid supply and having an outlet formed by a nozzle spaced away from and in alignment with the open end of an elbow constituting a tailpiece forming the inlet to a fixture capable of containing contaminated liquid, said combination comprising tubular baffle means extended across the bend formed by said elbow within said tailpiece, the opening through the baffle in alignment with said nozzle whereby liquid projected from said nozzle is permitted to entrain atmospheric air, means retaining the baffle in operative position within said tailpiece, bypass means between said tubular baffle and the wall of said tailpiece whereby air is permitted to bypass said tubular baffle and be entrained with fluid projected beyond the baffle into said fixture, said baffle adapted to change the plane of the direction of fluid flow projected from said nozzle.

2,438,508
MULTIPLE SPINDLE CHUCKING MACHINE
Arthur J. Lewis, Stratford, Conn., assignor to The Baird Machine Company, Stratford, Conn., a corporation of Connecticut
Application November 18, 1942, Serial No. 466,011
51 Claims. (Cl. 29—38)

1. In a machine of the character described, a central shaft, spaced housings carrying bearings adjacent the opposite ends of the shaft for supporting the shaft, a turret mounted on and secured to the shaft to rotate therewith, a plurality of work spindles mounted in the turret, work holding means in each spindle opening through opposite sides of the turret, a support mounted on and secured to the shaft at each side of the turret to rotate therewith, tool carriers mounted on said supports and movable toward and from work pieces mounted in the spindles, said turret and supports being mounted on the shaft between the shaft bearings so that the shaft is supported at spaced points at opposite sides of the turret and supports, and means for rotating the shaft to rotate the turret and said supports.

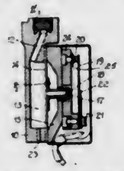


2,438,509
MANUFACTURE OF CARDBOARD BOXES
Henry P. McGovern, Fayville, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a corporation of Massachusetts
Application January 5, 1945, Serial No. 571,450
8 Claims. (Cl. 93—54.2)

1. For making cardboard boxes of the type comprising a bottom, front, back and two sides fast together at all four corners of the box, a cover comprising a top, front and sides fast together at the corners, and a sheet of material covering the outer surfaces of both the box and

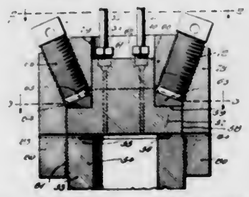
the cover with tabs to cover the corners, the sheet hinging the box and cover together with the upper edge of said back juxtaposed to the rear edge of said top so that when the cover is open 180° said bottom and the top of the cover are in parallel planes offset by the depth of the back of the box, apparatus comprising a head carrying two offset forms having their faces disposed in said offset planes to fit into the box and cover simultaneously when the cover is open 180°, means for moving the head along a predetermined path extending in a direction parallel to said sides, and means distributed along said path for wiping the margins of said sheet along said sides and fronts and thence over said edges while the box and cover are disposed in offset planes.

2,438,510
ELECTRICAL CONTACT BRUSH
Ernest S. McLarn, Manhasset, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application July 29, 1944, Serial No. 547,172
1 Claim. (Cl. 200—166)



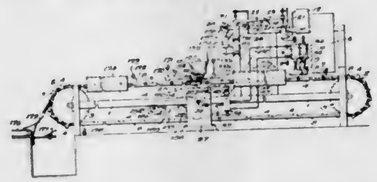
A contact brush for use in apparatus wherein contact and alignment are effected in succession between the contact brush and a plurality of linearly mounted contact pins, said contact brush comprising a first pair of substantially parallel metallic spring members having inner contact surfaces at one end of each for making electrical contact with said contact pins, supporting means for said spring members, a second pair of substantially parallel spring members mounted on said supporting means one behind each of the first pair of spring members and vibration-damping blocks of homogeneous structure mounted one between and supported solely by each two adjacent spring members of said first and second pairs of spring members.

2,438,511
COPPER, CHROMIUM, ARSENIC COMPOUND FOR WOOD PRESERVING
William McMahon, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application December 31, 1941, Serial No. 425,125
10 Claims. (Cl. 167—38.5)



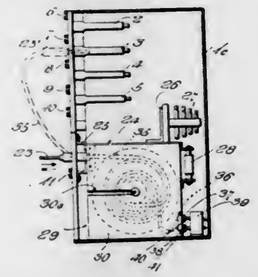
1. A preservative for wood consisting of ingredients which, when dissolved in water, are capable of reacting with certain substances in said material to form compounds which are all water-insoluble, said ingredients comprising chromium trioxide and a substantial amount of a copper compound the component of which, other than copper, is selected from the group consisting of hydroxide, carbonate, chromate, dichromate and arsenate, said chromium trioxide being present in a substantial amount at least sufficient to maintain the metal compound in solution when the ingredients are added to water.

2,438,512
PNEUMATIC SWITCH
Jean Mehut, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 1, 1943, Serial No. 477,652
In France February 21, 1942
Section 1, Public Law, 690, August 8, 1946
Patent expires February 21, 1962
2 Claims. (Cl. 200—83)



1. A pneumatic-electrical relay for the conversion of a rapid pulse of pneumatic energy to a corresponding rapid pulse of electrical energy, said relay including a body formed with a chamber open on one side thereof, a flexible diaphragm of rubber like material secured to said body so as to close the open side of said chamber, means to connect said chamber with a source of rapidly pulsing pneumatic energy, a push button having a radial enlargement providing a substantially flat surface resting on the outer face of said diaphragm, a switch base mounted on said body and carrying a fixed contact element and a movable contact element, said movable contact element including a spring blade disposed in the path of said push button and deformable by the latter to open its normally closed contact, a dome shaped cover member inserted between said body and said switch base and provided with a guide sleeve to receive the push button and said push button being provided at its outer end with a contact element engaging portion radially enlarged to engage the sleeve end to limit inward movement of the push button.

2,438,513
CLOSURE FOR HIGH-PRESSURE VESSELS
Douglas P. Meigs, Silver Spring, Md., assignor, by mesne assignments, to American Instrument Co., Inc., a corporation of Maryland
Original application August 19, 1943, Serial No. 499,284. Divided and this application May 26, 1944, Serial No. 537,492
5 Claims. (Cl. 220—39)



1. A closure for high pressure vessels comprising a receptacle enclosing a high pressure medium, a head engageable with said receptacle, a cap ring engageable with said receptacle, an annular member disposed between said cap ring and said head and a plurality of angularly disposed adjustable pressure applying members extending through said cap ring and engageable against said annular member and converging on axes in a direction toward the center of pressure within said receptacle for exerting pressure against said head for sealing said head with respect to said receptacle.

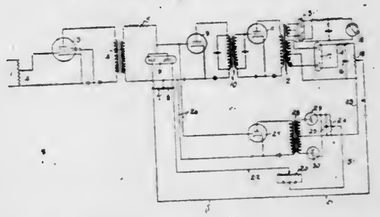
2,438,514
METHOD AND APPARATUS FOR DECORATING POTTERY WARE
William J. Miller, Swissvale, Pa., assignor to Miller Pottery Engineering Company, Swissvale, Pa., a corporation of Pennsylvania
Application August 21, 1941, Serial No. 407,733
19 Claims. (Cl. 41—1)

1. In an organized machine for decorating pottery ware, and the like, apparatus for feeding ware, size applying apparatus, means for conditioning the size preparatory to the application of decalcomania to the ware, decalcomania transfer cutting and applying apparatus and ware conveying means having ware seats adapted to receive ware from the feeding apparatus and to transfer the ware to and through sizing, size conditioning and decorating positions as represented by the apparatus named in predetermined mutual relationship, the ware being discharged from the conveying means subsequent to decorating.

2,438,515
PLUG AND JACK BOX SWITCHING UNIT
Marvin F. Mohler, Arlington, Va.
Application October 9, 1945, Serial No. 621,335
10 Claims. (Cl. 179—95)

1. A switching unit comprising a multiplicity of two circuit jacks, a multiplicity of coacting cords and two circuit plugs connected therewith and insertable into and removable from said jacks for establishing connection between said two circuit plugs and said two circuit jacks and spring actuated two section reels for storing said cords on both sections thereof, and spring means within one of the sections of said reel for tensioning said cords and reeling all surplusage of said cords onto both of the sections of said two section reels preparatory to an unreeling operation.

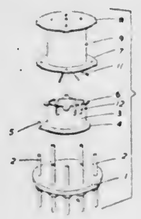
2,438,516
POLYSTYRENE ELECTRIC INSULATING MATERIALS
Archibald Alan New, London W. C. 2, England, assignor to International Standard Electric Corporation, New York, N. Y.
No Drawing. Application June 17, 1942, Serial No. 447,475. In Great Britain July 15, 1941
1 Claim. (Cl. 260—36)



A solid insulating material that comprises nine parts by weight of a styrene polymer having a molecular weight of 80,000 and homogeneously distributed therein one part by weight of 2:2'-ditolyl, said insulating material being characterized by having a power factor not greatly in excess of 0.0003 at 10^6 cycles and by having substantially permanently unvarying plasticity.

2,438,517
GAUGE KNIFE
Charles E. A. O'Loughlin, St. Paul, Minn.
Application December 23, 1944, Serial No. 569,445
4 Claims. (Cl. 30—279)

4. A gauge paring tool comprising an integral piece of sheet metal, the same having spaced blades punched therefrom, said blades having sharpened edges facing in substantially opposite directions, said piece being of angular inverted trough shape between said blades, gauge portions extending longitudinally of said blades and spaced therefrom transversely of said blades, the same extending away from said blades and having convex surfaces at the sides adjacent said blades, said piece having a handle at one end spaced a short distance from said blades.

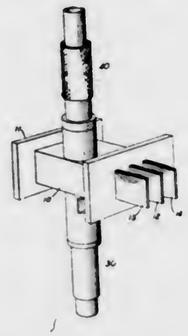


2,438,518
CIRCUIT FOR MEASURING VOLTAGE OF AN ALTERNATING SOURCE
Raymond G. Piety, Yonkers, N. Y., assignor to Phillips Petroleum Company, a corporation of Delaware
Application July 25, 1944, Serial No. 546,570
6 Claims. (Cl. 171—95)

1. In an electrical circuit for measuring the voltage of an alternating signal current having interference voltage components, comprising a source of such alternating signal current, means fed thereby for amplifying said signal current, means for producing a derived current therefrom, clipping means for suppressing the interference voltage peaks of said derived signal current, means connected thereto and tuned to the frequency of said signal current, means for rectify-

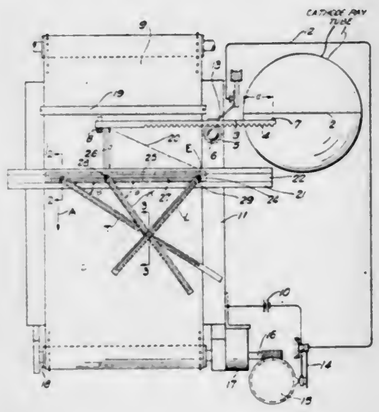
ing the output of said tuned means, means for measuring the average value of said rectified current, means for applying said rectified current to said clipping means to control the clipping level thereof, a full wave rectifier fed by said clipping means, and means for applying a portion of said last rectified current to said clipping means so that its voltage is in opposition to the voltage applied to the clipping means from said first rectifier.

2,438,519
TUBULAR ELECTRODE ASSEMBLY SUPPORT FOR VACUUM TUBES
Stephen John Powers, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application January 1, 1945, Serial No. 570,887
In Great Britain November 19, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires November 19, 1963
8 Claims. (Cl. 250—27.5)



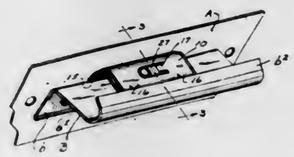
1. An electron discharge device comprising a substantially flat header, a plurality of straight terminal pins mounted in a circle and sealed perpendicularly therethrough, a tubular metal support member resting upon the said header inside the said circle and secured to one of the said terminal pins out of contact with the other pins, an assembly of electrodes insulated from and mounted on the said support member, a wire connecting each of the said electrodes with a corresponding one of the said terminal pins, and an envelope bulb sealed to the said header and enclosing the said support member and assembly.

2,438,520
POLYMERS OF UNSATURATED OXYSILICOLS
Norman P. Roble and Fred E. Sheibley, Lewiston, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Delaware
No Drawing. Application March 15, 1943, Serial No. 479,218
9 Claims. (Cl. 260—83)



9. An organic resinous silicon polymer having the monomeric formula $(RO)_nSi(OH)_{4-n}$, said polymer being the polymer of an organic oxy silicol obtained by reacting a silicon tetrahalide with an unsaturated aliphatic monohydroxy alcohol of the formula ROH, wherein R is an unsaturated residual aliphatic grouping of the unsaturated aliphatic monohydroxy alcohol after removal of the alcoholic hydroxyl group therefrom, said aliphatic grouping in the monomeric formula containing vinylidene ($CH_2{=}C{=}$) unsaturation, the residual halogen of the initial reaction product having undergone hydrolysis, n being a positive number less than 4 and within substantially the limits of 1 and 3.

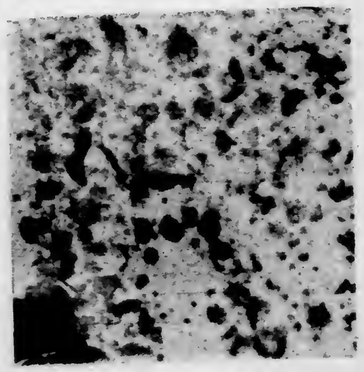
2,438,521
CRYSTAL FREQUENCY CONVERTER
William M. Sharpless, Fair Haven, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 15, 1945, Serial No. 578,030
5 Claims. (Cl. 250—31)



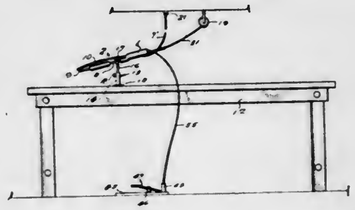
5. In a crystal cartridge holder a sleeve member having an inner seat, a spring chuck carried in said seat, a tubular clamping member threaded on the inner surface of said sleeve member for clamping said chuck in said seat, and a handle member having a spring jaw at one end for gripping the crystal cartridge and adapted to be inserted within said tubular clamping member to insert and remove the crystal cartridge from said spring chuck.

2,438,522
GEOMETRICAL COMPUTING DEVICE
Edward W. Smith, Melrose, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application June 18, 1943, Serial No. 491,419
1 Claim. (Cl. 235—61.5)

A device for determining from an attacking vessel the necessary course of a torpedo for the latter's collision with a target vessel comprising the combination of a record chart having an axis, means operable to produce thereon a series of marks defining a line which when attacking and target vessels are on collision courses at constant speeds is a straight line making an angle with said chart axis such that said angle is a measure of the rate of change of distance of the target vessel from the attacking vessel and a portion of said line represents the hypotenuse of a right triangle whose altitude is a predetermined length of said chart axis and whose base is a measure of the speed of the target vessel relative to the attacking vessel, scale means calibrated in units of speed, adjustable mounting means for mounting said scale means over said chart in a position to coincide with the base of said triangle, a plurality of scale-carrying arms calibrated in similar units of speed and adapted to represent velocity vectors and means pivoting the same to said first scale means at adjustable points along its length for establishing vector triangles representing the relative speeds and courses of the attacking vessel, the target vessel and the torpedo.



2,438,523
FASTENING DEVICE
George A. Tinnerman, Cleveland, Ohio, assignor to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application August 21, 1944, Serial No. 550,339
9 Claims. (Cl. 248—74)

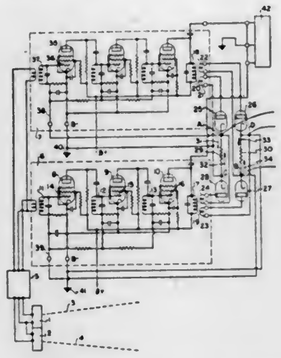


1. The combination of a wall, a longitudinal member secured thereto projecting outwardly therefrom and having a return bent free edge portion projecting toward the wall and a clip mounted between the wall and return bend and adapted to hold members in the support, said clip comprising a resilient member adapted to be sprung into position by snap action, said clip having an intermediate body portion and one extreme portion engaging the wall and another extreme portion providing a return bend from the body portion and extending beneath the free edge of the return bend of said longitudinal member.

2,438,524
RAW MATERIAL FOR CERAMIC GLAZES
Forrest L. Turbett and Harry B. Stephenson, Jr., Joplin, Mo., assignors to The Eagle-Picher Company, Cincinnati, Ohio, a corporation of Ohio
Application May 16, 1944, Serial No. 535,890
8 Claims. (Cl. 106—49)

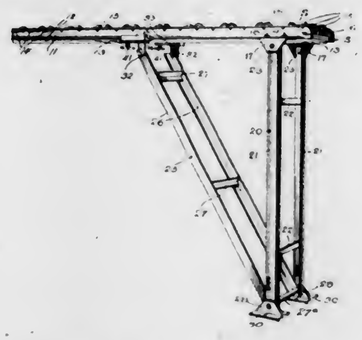
7. A yellowish white, crystalline, crushable, homogeneous substance useful in ceramic glazes and characterized by a low solubility in boiling 4% acetic acid, said composition being the product of the incipient fusion of a finely divided lead oxide, finely divided SiO_2, and a minor proportion of a finely divided member of the group consisting of alumina, aluminum hydroxide and aluminum silicate, said constituents having been mixed with each other before the mixture is heated.

2,438,525
SOLDERING IRON
Frederick Edward Walters, Chicago, Ill.
Application August 17, 1944, Serial No. 549,931
1 Claim. (Cl. 113—109)



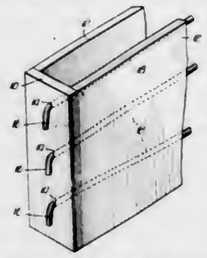
In a soldering iron, a hollow elongated handle adapted for the passage of wire solder therethrough and forming a chamber extending longitudinally in the same, a longitudinally extending guide bar in said chamber having a longitudinal slot therein intermediate the ends thereof and an axial bore through which the wire solder is adapted to be fed and passed through said slot, a U-shaped solder feeding carriage slidably fitted in the slot of said guide bar for advance and retraction therein along said guide bar, and through which said wire solder is adapted to slidably extend, coacting devices in said carriage for yieldingly clamping the wire solder to the carriage during advance of said carriage, and manipulative means for advancing the carriage comprising a yoke straddling the same and slidable on said guide bar.

2,438,526
SYSTEM FOR DETERMINING THE DIRECTION OF A SOURCE OF SOUND
Charles Hamlin Waterman, South Portland, Maine, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application April 18, 1944, Serial No. 531,681
9 Claims. (Cl. 177—352)



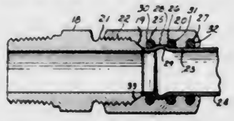
1. A method of intensifying the balance between two signal elements which comprises am-

plifying each signal element separately and impressing at least a portion of the amplified signals of each signal element back on the amplifier of both signal elements separately, the portion



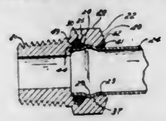
of the signal impressed upon its own original signal element being in a direction to increase that signal intensity and on the other signal element being in a direction to reduce that other signal intensity.

2,438,527
CONVEYOR SUPPORT
Le Roy L. Werner, Washington, D. C.
Application November 27, 1943, Serial No. 511,925
7 Claims. (Cl. 193—35)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



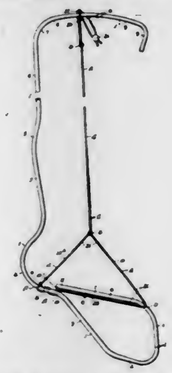
7. A portable conveyor section including side rails to support conveyor elements, adjustable leg structure supporting said conveyor section including a first member pivotally secured to an end portion of the side rails, a second member pivotally secured to the first member, ground-engaging means movably secured to one of said members, slides adjustable along the rails and pivotally secured to the second member, said slides being movable to a plurality of positions to vary the height at which the conveyor is supported or to permit said members to spread to a position substantially parallel to the rails, and means for clamping said slides to the rails in either supporting or spread positions.

2,438,528
METHOD AND APPARATUS FOR MOLDING AND DRAINING CONCRETE
Warner F. Wilhelm and Warren F. Wilhelm, Chicago, Ill.; said Warner F. Wilhelm assignor to said Warren F. Wilhelm
Application September 23, 1944, Serial No. 555,415
4 Claims. (Cl. 25—131)



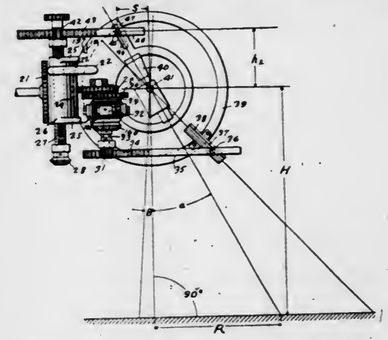
1. Apparatus for forming structural elements, comprising one or more forms providing a space within the same to receive a body of plastic concrete and at least one body of pervious material disposed within and communicating with the exterior of said one or more forms and adapted to be embedded within a body of plastic concrete disposed within said space, said body of pervious material comprising a rope-like drainage strip of cellulose, whereby water from said body of plastic concrete is disposed of exteriorly of said wall by passage through said drainage strip of pervious material, and means for supporting said drainage strip within said forms.

2,438,529
SLEEVE NUT COUPLING
George V. Woodling, Cleveland, Ohio
Application January 25, 1945, Serial No. 574,467
5 Claims. (Cl. 285—97.1)



1. A tube coupling member disposed to be turnably and sealingly connected to a tube portion inserted therein, said coupling member having a counterbore extending inwardly from an end thereof, said counterbore having a cylindrical wall to closely receive the tube and enlarged internal wall means to receive an expanded section of the tube portion and first and second sealing means, said enlarged internal wall means having first and second grooves longitudinally disposed from each other and spaced inwardly from said end to receive respectively said first and second sealing means prior to the insertion of the tube into the counterbore, said first and second grooves having respectively first and second inwardly extending wall portions meeting with the cylindrical wall to define therewith first and second junctures, said first inwardly extending wall portion and the tube being engageable by the first sealing means for effecting a sealing engagement therebetween at said first juncture, said second inwardly extending wall portion and the tube being engageable by the second sealing means for effecting a sealing engagement therebetween at said second juncture, at least said first inwardly extending wall portion being opposed to and longitudinally spaced from the expanded section of the tube to receive the first sealing means between the said first wall portion and the expanded section of the tube, said first sealing means being turnably engageable by the expanded section of the tube portion to provide for relative turning movement between the coupling member and the tube.

2,438,530
COUPLING MEMBER
George V. Woodling, Cleveland, Ohio
Application January 25, 1945, Serial No. 574,468
6 Claims. (Cl. 285—97.5)



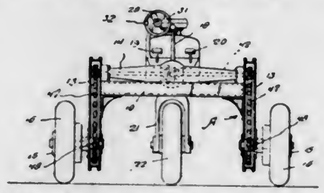
1. A tube coupling member disposed to be turnably and sealingly connected to a tube portion inserted therein, said coupling member having a counterbore extending inwardly from an end thereof, said counterbore having an annular wall to closely receive the tube and enlarged internal wall means to receive an expanded section of the tube portion and sealing means, said enlarged internal wall means having first and second inwardly extending wall portions respectively meeting with the annular wall to define therewith first and second annular junctures longitudinally spaced from each other and inwardly from said end, one of said inwardly extending wall portions being engageable by the expanded section of the tube to produce a turnable expansion fit therewith which provides for relative turning movement between the coupling member and the tube portion, the other of said inwardly extending wall portions and said tube portion being engageable by the sealing means for effecting a sealing engagement therebetween.

2,438,531
MEANS FOR STRETCHING OR SHAPING SOCKS AND SIMILAR FOOT COVERINGS
Norris Barker, Johannesburg, Transvaal, Union of South Africa
Application August 9, 1946, Serial No. 689,317
In the Union of South Africa August 28, 1945
4 Claims. (Cl. 223—77)

1. Means for stretching or shaping socks and similar foot coverings, including a frame shaped to conform substantially to the shape of the toe, sole, heel and back portions of the sock or the like when in a flat condition, and extending forwardly at the top of the back portion, and a cord adapted, when in use, to extend from the toe portion of the frame to and engage with the forwardly extending portion thereof, and to be moved into position to apply tension to the front of the sock to cause it to be stretched or shaped upon and by the frame and said cord; said cord including a portion adapted to extend from the forwardly extending portion of the frame to a point in the region of the ankle, a portion connecting the cord at such point to the toe portion of the frame and serving to stretch or shape the front of the foot of the sock, and a further portion connecting said cord at said point to the heel portion of the frame and serving to limit the movement of the cord in a forward direction at the ankle.

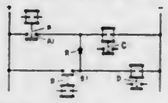
2,438,532
SYNCHRONIZING BOMB SIGHT
Theodore H. Barth, New York, N. Y., assignor to United States of America as represented by the Secretary of the Navy
Application September 28, 1932, Serial No. 635,298
35 Claims. (Cl. 33—46.5)

1. A bomb sight, comprising a casing, a cardan tiltably mounted therein, a gyro mounted in said cardan to tilt at right angles to the Cardan tilt, means to level said gyro, a cradle mounted in said cardan to tilt in the same sense as the gyro and connected to the gyro to be stabilized thereby, a sighting telescope mounted in said cradle to tilt in the same sense as the cardan, an arcuate rack secured to the telescope, a pinion engaging the said rack, a cable drum connected to the pinion, a sheave on the cardan adjacent the forward cradle axis, a second sheave thereon adjacent a Cardan axis, a third sheave exteriorly of the casing adjacent the same Cardan axis, a second cable drum, a cable having its ends respectively secured to the said drums and passing over all said sheaves and through both the said axes, an indicator ring rotatable on said casing around said telescope, said ring being provided with diametrically opposed windows through which the telescope may be directed upon a target, an arcuate rack carried by said ring, a gear engaged with said rack and operatively connected to said second cable drum whereby said cable is wound on said second cable drum and said telescope is rotated forwardly on its trunnions at the same angular rate as that of said ring, means to move said telescope backwardly upon backward movement of said ring,



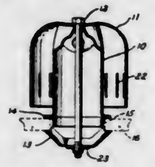
means to drive said ring, a range angle scale mounted on said casing adjacent said ring, an index on said ring extending over said scale, a range quadrant adjacent said scale and having thereon a reference line, means to set said quadrant to indicate by said line a range angle on said scale, said last mentioned means being connected to make an adjustment of the speed of the driving means for said ring simultaneously with the setting of said quadrant, means to adjust the speed of said driving means to correspond to a given altitude, means to correct the range angle indication for the trail of a bomb, means for indicating a cross-trail correction, and means to close automatically a circuit to actuate a bomb release mechanism at the instant of coincidence of said index with the said reference line on the range quadrant.

2,438,533
EXPANSION STUD AND KEEPER ELEMENT COMBINATION
Clarence V. Booth, Lakewood, N. J.
Application March 2, 1946, Serial No. 651,584
1 Claim. (Cl. 85—6)



In combination, a keeper element to be fastened to a structure, said element having therein a hole to receive an expansion stud, an expansion stud insertable through said hole, the inner end portion of said stud being slotted and thereby divided into a plurality of resilient arms, said stud having an axial bore extending from its outer end to a point near its inner end, a pin disposed in said bore, a screw threaded in the outer end portion of said bore for forcing said pin inwardly, the inner end of said pin being effective by engagement with the walls defining the inner end of said bore to spread said arms apart when said pin is forced inwardly by said screw, and exterior lugs on the inner end portion of said arms, the inner end portions of said arms being insertable through the hole in said bracket when said arms are contracted relative to each other, said lugs being effective to positively prevent withdrawal of the inner end portion of said stud from said hole when said arms are spread by said pin and screw substantially tightly into said hole, said pin and screw being disposed entirely within the end limits of said stud when the latter is fastened to said keeper element.

2,438,534
TRANSPORTATION VEHICLE
James E. Bowers, Allentown, Ga.
Application July 12, 1944, Serial No. 544,526
2 Claims. (Cl. 180—54)



1. A vehicle of the character described comprising a chassis frame, depending elongated perpendicular housings fixed to the outside of said frame adjacent its rear end with their upper ends extending above the frame, a drive shaft extending transversely of said frame having its ends extending into the upper ends of said housings and supported thereby, a power unit connected with said drive shaft, wheel axles journaled in the lower ends of said housing and projecting laterally outwardly therefrom, wheels mounted on said axles, driving connections between said drive shaft and said wheel axles confined within said housing and a pivoted arched steering frame at the forward end of said frame supporting the forward end of the frame in the same horizontal plane as the rear end.

2,438,535
ELECTRIC CIRCUIT
William Henry Bruns, Lincolndale, N. Y., assignor to Otis Elevator Company, New York, N. Y., a corporation of New Jersey
Application July 26, 1945, Serial No. 607,121
7 Claims. (Cl. 171—97)

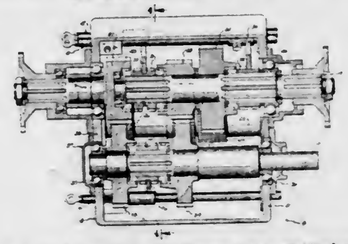
7. In combination; a source of current; a translating device; a circuit for connecting said translating device to said source; circuit controlling means operable to connect one side of said circuit to one side of said source; a second translating device; a second circuit for connecting said second translating device to said source; additional circuit controlling means operable to connect one side of said second circuit to the other side of said source; a third translating device; a third circuit for connecting one side of said third translating device to said one side of said source through the first mentioned circuit controlling means and the other side to said other side of said source through said additional circuit controlling means; and unidirectional current conducting means in said third circuit to permit the flow of current to said third translating device through said first mentioned circuit controlling means but to block the flow of current from said second circuit to said first mentioned translating device.

2,438,536
BUBBLE CAP STRUCTURE
Thomas W. Cairns, National City, Calif., assignor to Solar Aircraft Company, San Diego, Calif., a corporation of California
Application May 10, 1946, Serial No. 668,874
4 Claims. (Cl. 261—114)

1. A bubble cap assembly adapted to cover an opening in a bubble tray and including a riser adapted to seat on said tray opening, a cap adapted to rest on and be supported by said riser, a hold-down spider adapted to engage the under side of said tray, and a hold-down bolt interconnecting said cap and spider, in which said

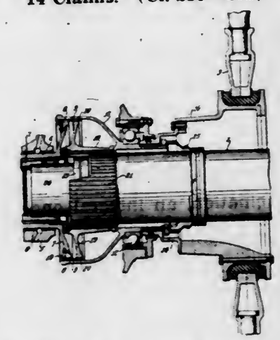
riser comprises: a tubular member open at the lower end and having a seat for engaging the tray opening, said member having a gas discharge aperture therein and having upper edge portions folded back upon themselves and extending radially to constitute a seat for supporting said cap in fixed position relative to said riser.

2,438,537
KNOT
Arthur Dewey Carter, Gastonia, N. C.
Application October 3, 1945, Serial No. 620,083
1 Claim. (Cl. 28—78)



A knot for uniting two strands of yarn together in which the first and second strands are alined with each other and with their ends pointing in opposite directions, the first strand having its end passing across and above the second strand and then crosswise beneath the second strand and being doubled back upon itself above both the second strand and the first strand and the other strand having its free end crossed above the free end of the first strand, the second strand having its free end passed beneath the free end of the first strand and the main portion of the first strand and then the second strand having its free end passed above the body portion of the first strand and above the free end portion of the first strand and beneath the body portion of the second strand to thus form a knot in which the second strand bites both the main body portion and the free end of the first strand and in which the first strand surrounds the second strand and has the body portion and the free end thereof disposed around the second strand to thus provide a non-slipping knot.

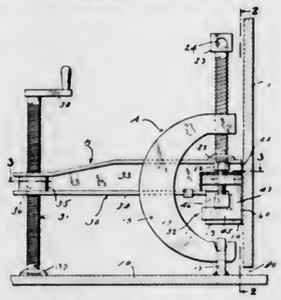
2,438,538
KNOT
Arthur Dewey Carter, Gastonia, N. C.
Application October 3, 1945, Serial No. 620,084
1 Claim. (Cl. 28—78)



A knot formed by uniting the free ends of a first strand and a second strand in which the free end of the first strand is passed across and above the second strand, the free end of the second strand being passed across and above the main portion of the first strand, the free end of the second strand being passed across and beneath the body portion of the first strand, the free end of the first strand being passed backwardly beneath the free end of the second strand and above the body portion of the first strand, the free end of the second strand being passed across and beneath the body portion of the first strand, the free end of the second strand being passed across and above the body portion of the first strand and beneath the second strand.

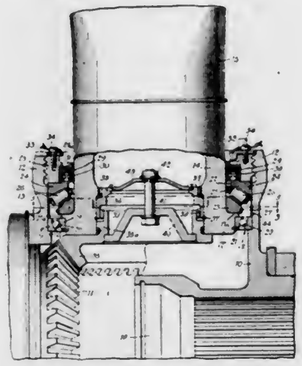
2,438,539
COMBINED AUXILIARY TRANSMISSION AND POWER TAKE-OFF
Charles A. Cook, Oshkosh, Wis., assignor to Fuller Manufacturing Co., Kalamazoo, Mich., a corporation of Delaware
Application April 19, 1945, Serial No. 589,189
6 Claims. (Cl. 74—11)

1. A combination auxiliary transmission and full torque power take-off for automotive trucks comprising: a housing having spaced end walls; a power input shaft entering the housing through one of said end walls; a main driven shaft projecting from the housing through the other end wall; change speed gearing within the housing for connecting said shafts in different driving ratios including a main gear at all times drivingly connected with the power input shaft and a countershaft, the countershaft having a plurality of gears fixed thereon, one of which is at all times in mesh with said main gear; aligned bearings carried by said end walls; a power take-off shaft journalled in said bearings and having one end projecting through one end wall of the housing to have a driving member mounted thereon; a pair of gears normally loose on said power take-off shaft, one of which is at all times in mesh with the main gear and the other of which is at all times in mesh with one of the gears fixed on the countershaft; and means for selectively clutching one or the other of said pair of gears to the power take-off shaft so that the power take-off shaft is driven either in one direction directly from the main gear or in the opposite direction through the countershaft.



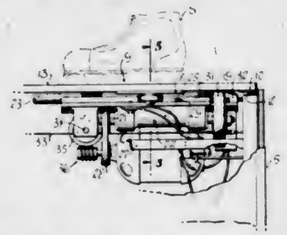
2,438,540
SUPPORT FOR ENGINE COOLING FANS
Gilmoure Nichols Cole, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application April 1, 1944, Serial No. 529,077
14 Claims. (Cl. 230—272)

1. In a device for cooling aircraft engines, a crankshaft and a longitudinally separable exten-



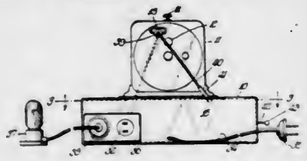
sion power shaft, a fan driven by said crankshaft, and means comprising a hollow shaft for driving said power shaft from said crankshaft independently of said fan drive.

2,438,541
CLAMP
Lloyd M. Crook, Long Beach, Calif.
Application June 10, 1944, Serial No. 539,669
7 Claims. (Cl. 29—284)



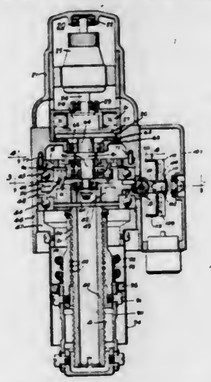
1. In combination, a C-clamp and a lever clamp, the C-clamp having a C-shaped body with spaced sections passing the lever clamp, having a hook at one end and having a clamp screw at the other end opposing the hook, the lever clamp having an inner end portion extending between the spaced sections and engaged by the screw and having a lever arm projecting from the C-clamp.

2,438,542
PROPELLER BLADE, BEARING, AND SEAL ASSEMBLY
Maurice E. Cushman, Verona, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application September 7, 1944, Serial No. 553,089
2 Claims. (Cl. 170—162)



1. In combination, an integral one-piece propeller hub having a socket, said socket comprising a cylindrical wall and including a shoulder at its inner end, a blade shank centered in said socket, the shank having an integral primary flange thereon and a secondary flange extending outwardly from said primary flange, a counter-thrust anti-friction bearing having its outer race engaged with said socket wall and with said socket shoulder and having its inner race embracing said primary flange and engaging said secondary flange to limit inward movement of said shank in said socket; a pair of substantially semi-circular complementary races embracing said shank and engaging said primary flange, a pair of semi-circular complementary races fitted to said socket wall outboard of said flange, rollers between said pairs of races to sustain outward forces on said blade; annular retaining means, slidable over said shank flange prior to assembly of said races, engaging said hub socket and that race pair engaged with the socket wall to retain the blade in said socket through said races and rollers; annular resilient sealing means between said annular retaining means and said blade shank; a blade pitch control element within said socket and engaged with the butt end of said blade shank, and means for positioning and securing said control element to said shank.

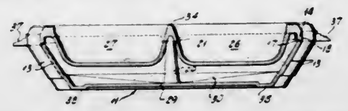
2,438,543
ABRADING MACHINE
Thomas G. Custin and Robert G. Stoneman, Milwaukee, Wis., assignors of one-third to Jack Shaw, Milwaukee, Wis.
Application January 8, 1945, Serial No. 571,732
15 Claims. (Cl. 51—34)



1. A skate sharpening machine comprising: clamp mechanism adapted to grip a skate; a grinder; means mounting the grinder for back and forth motion between defined limits along a path so related to the clamp mechanism that the grinder traverses the bottom of the blade of a skate in the clamp mechanism; means for driving the grinder back and forth along said path; and clamp releasing means connected with said grinder so as to travel in said back and forth path of travel of the grinder to be engaged with portions of the clamp mechanism upon motion of the grinder to one of its limits for effecting opening of the clamp mechanism and release of the skate.

2,438,544
ELECTRIC SWITCH OPERABLE BY ALARM CLOCKS
Stanley Dakoski, Chicago, Ill.
Application February 8, 1945, Serial No. 576,779
4 Claims. (Cl. 200—35)

3. In combination with an alarm clock, including an alarm winding stem, and a housing with which said alarm clock is rigidly connected, a time control switch comprising an actuable switch element within said housing, said housing being provided with an oblong slot, a rod connected by one of its ends with said alarm winding stem and extending by its opposite end within said housing through said slot for actuating said actuable element, said rod being adapted for angular swinging movement within said slot and longitudinally with relation thereto on operation of said alarm clock, the body portion of said housing adjacent each end of said slot constituting means for limiting the swinging movement of said rod in either direction, and means extending through said housing for rendering said actuable element inoperative.

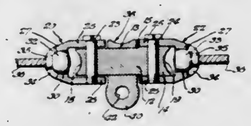


2,438,545
GEARED MOTOR LINEARLY ACTUATED
Charles D. Davidson, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 16, 1944, Serial No. 540,687
5 Claims. (Cl. 318—466)

5. In a device of the character described, the combination with a screw shaft having a traveling nut thereon; a reversible electric motor for driving said screw shaft; a plurality of switches, certain of which control the direction of rotation of the motor and others limit the operation of the motor in either direction; an actuator for the limit switches, comprising a driver disc having a radial slot, a driven cam having a spiral slot, a key slidable in the radial slot of the driver and extending into the helical slot of the driven cam; and means on the screw shaft for rotating the driver to move the key through the helical slot in the cam from one end to the other whereby the cam is actuated in either direction to operate a limit switch after a predetermined number of revolutions of the screw shaft.

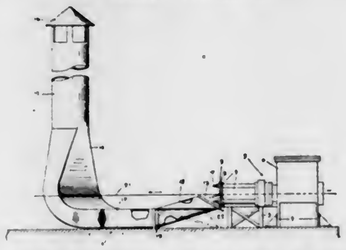
2,438,546
UTENSIL
Joseph Davis, South Orange, N. J., assignor to Joseph Davis Plastics Co., Arlington, N. J., a corporation of New Jersey
Application January 9, 1946, Serial No. 640,127
2 Claims. (Cl. 65—15)

1. A dish for maintaining food at a desired temperature comprising an upper shell having downwardly extending food receiving recesses and a depending circumferential flange and a lower shell cooperating therewith to form a compartment for a removable thermal medium, said shells being formed of a molded plastic composition subject to irregular distortion under temperature changes, the lower shell including a flared upstanding circumeferential flange, complementary steps on the meeting edges of said flanges for interlocking engagement when the shells are assembled, an inner stud medially fixed to one shell,



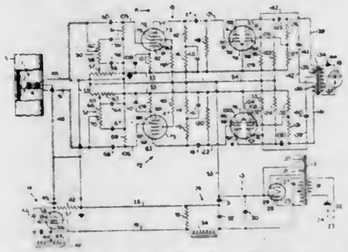
an inner socket medially fixed to the other shell and engageable with the end of the stud when the shells are assembled whereby the shells are interlocked medially for mutual support against distortion, said upper shell having an opening, and a plug for closing the same.

2,438,547
TOOL FOR APPLYING TRACTION DEVICES ON WHEELS
Martin H. Doebert, Buffalo, N. Y.
Application February 17, 1945, Serial No. 578,408
1 Claim. (Cl. 81—15.8)



A tool for applying a traction device, having a perforated strap, to the circular part of a wheel; which tool comprises a strip shaped pulling body, and means for attaching the front end of said body to said strap including two jaws adapted to receive the perforated part of said strap between them, and one of said jaws being provided with a centrally positioned stud extending toward the other one of said jaws and having a rearwardly projecting prong at the top thereof adapted to penetrate the bore or wall of the perforation in the strap.

2,438,548
SWIVEL CONNECTION
Leslie G. Ehmann, Portland, Oreg., assignor to Electric Steel Foundry, Portland, Oreg., a corporation of Oregon
Application December 29, 1944, Serial No. 570,374
11 Claims. (Cl. 287—76)



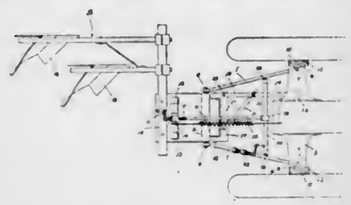
1. A swivel connection comprising, in combination, an intermediate connecting element providing an axial bearing surface intermediate its ends, secondary connecting elements connected to the ends of the intermediate connecting element for swinging movement in a plane extending longitudinally of the intermediate connecting element, end connecting elements connected to the secondary connecting elements for swinging movements in planes transverse to the planes of movement of the secondary connecting elements, and intervening connecting means mounted for rotary movement on said bearing surface.

2,438,549
APPARATUS FOR TREATMENT OF TRAVELING MATERIALS WITH FLUID MEDIA
William J. Elvin, Frostburg, and Max A. Shaffer, Cumberland, Md., and Elmer R. Stahl, Meyersdale, Pa., assignors to Celanese Corporation of America, a corporation of Delaware
Application January 26, 1944, Serial No. 519,822
2 Claims. (Cl. 68—5)

1. Apparatus for the treatment of travelling materials with fluid media comprising, in combination with a compartment for receiving treating fluid and having an end wall having an aperture therein, a jet having a bore of smaller diameter than said aperture extending axially therethrough through which the treated materials issue from said compartment into the atmosphere, said jet being arranged in said aperture so that the bore slopes away from the path of the travel of the materials therethrough so as to cause fluid issuing from said jet to flow in a direction away from the materials.

2,438,550
METHOD OF AND APPARATUS FOR INDICATING THE CONDITION OF AN ATMOSPHERE
William F. Ertzman, Pittsburgh, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 5, 1944, Serial No. 521,181
18 Claims. (Cl. 175—183)

2. The method of detecting the presence of a gas in an atmosphere which includes the steps of exposing the plates of each of two similar electrical capacitances to said atmosphere, impressing a fluctuating potential between the plates of each capacitance of amplitude greater than the ionization potential of the gas to be detected, impressing a steady potential between the plates of one capacitance of amplitude approximately equal to the ionization potential of the gas to be detected, impressing a steady potential between the plates of the other capacitance of amplitude less than the ionization potential of the gas to be detected, and comparing the amplitudes of the charges accumulated on the plates of each capacitance.



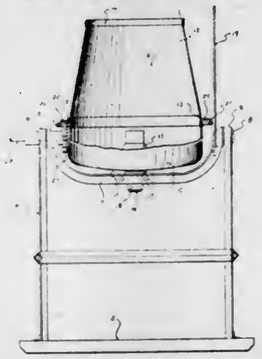
2,438,551
CHEWING GUM
Edward P. Fenimore, Drexel Hill, Pa., assignor to Bowman Gum, Inc., Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application May 13, 1940, Serial No. 334,903
9 Claims. (Cl. 99—135)

1. A chewing gum material containing a stabilized glyceryl rosin ester and an alkyl cellulose.

2,438,552
CAST REFRACTORY PRODUCT
Theodore E. Field, Louisville, Ky., assignor to Corhart Refractories Company, Louisville, Ky., a corporation of Delaware
No Drawing. Application October 14, 1940, Serial No. 361,187
1 Claim. (Cl. 106—57)

A heat cast refractory consisting essentially of baddeleyite, corundum and a siliceous glass, in which the silica lies between 9 and 12%, the iron oxide between 0.4 and 1.7%, the sodium oxide between 1.0 and 2.2% and the sum of MgO and CaO between 0.2 and 0.8% by weight by chemical analysis.

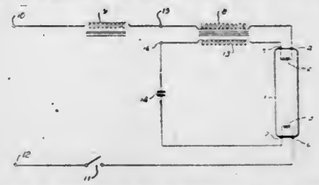
2,438,553
IMPLEMENT HITCH
Frank M. Fraga, Fresno, Calif.
Application May 28, 1945, Serial No. 596,394
11 Claims. (Cl. 280—33.44)



1. A hitch adapted for connection between a tractor and implement, including a pair of transversely spaced draft links, means to connect said links at their forward end to the tractor, and a draft member connected in draft relation to the implement and to which member said links are flexibly secured at their rear ends; one of said draft links being rigid and the other of said links being articulated intermediate its ends for angular adjustment in a vertical plane, and adjustable holding means connected between the articulated portions of said one link.

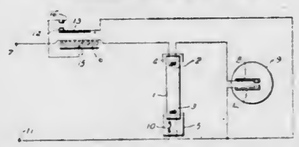
2,438,554
PREPARATION OF FAT SOLUBLE VITAMINS
Louis Freedman, Mount Vernon, N. Y.
No Drawing. Application June 7, 1944, Serial No. 539,189
2 Claims. (Cl. 167—81)

1. In the extraction of fat soluble vitamins from a material selected from the group consisting of fish liver oils and fish livers serving as the vitamin containing material by the method which includes alkali saponification of fats in the said material and then separating the vitamins from the resulting mixture, the improvement which comprises effecting the saponification of the fats by heating the material with an alcoholic solution of mixed alkali metal hydroxide and alkali metal sulfide containing a substantial proportion of both the hydroxide and sulfide, the sulfide in this process serving as a saponifying agent and providing sulfide ion in direct contact with the vitamins from the first moment of their separation from the fats to prevent oxidation of the vitamins.



2,438,555
CONCRETE MIXER
Michael V. Gilson, Fredonia, Wis., assignor to Gilson Brothers Company, Fredonia, Wis., a corporation of Wisconsin
Application August 22, 1945, Serial No. 612,000
3 Claims. (Cl. 259—177)

1. In a concrete mixer of the type having: a mixing drum provided with a relatively cup-shaped bottom section and a frusto-conical extension for the side wall of the bottom section defining the mouth of the drum, said frusto-conical section being telescoped inside the bottom section and welded thereto: an annular lip curled outwardly from the upper edge of the bottom section adjacent to the juncture of said sections; a ring gear encircling the side wall of the bottom drum section adjacent to the underside of said annular lip to be protected by said lip, said ring gear having its teeth projecting substantially radially inwardly toward the side wall of the drum from an unbroken rim portion constituting the outer peripheral section of the gear; said teeth being secured to the side wall of the drum and a connection between the outer edge portion of the annular lip and said unbroken rim portion of the gear whereby the lip carries part of the thrust imposed on the gear by meshing engagement thereof with a drive pinion at the unguarded side of the gear.

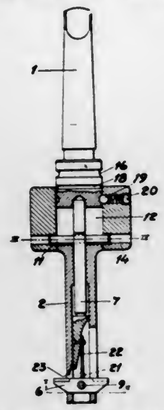


2,438,556
CIRCUIT FOR ELECTRIC DISCHARGE DEVICES
Theodorus Hehenkamp, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company, Schenectady, N. Y., a corporation of New York
Application February 17, 1943, Serial No. 476,215
In the Netherlands April 6, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires April 6, 1960
3 Claims. (Cl. 315—99)

1. In combination, an alternating current supply circuit, an electric discharge device of the type employing an ionizable medium and including a pair of filamentary electrodes each having a pair of terminals, means comprising an inductive choke having a main winding connected in series with one terminal of said source and one terminal of one of said electrodes and an inductively coupled auxiliary winding connected to the other terminal of said electrode, means for connecting

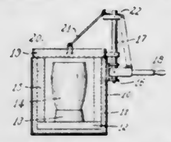
the auxiliary winding to a terminal of the other electrode, and means for connecting the other terminal of said other electrode to said supply circuit, said main and auxiliary windings being wound in such manner that upon the passage of series current therethrough opposing magnetic fields are produced.

2,438,557
ELECTRIC DISCHARGE DEVICE
Theodorus Hehenkamp, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company, Schenectady, N. Y., a corporation of New York
Application February 26, 1943, Serial No. 477,331
In the Netherlands December 10, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires December 10, 1960
1 Claim. (Cl. 315—100)



In combination, a supply circuit, an electric discharge device having a pair of filamentary electrodes, a ballast connected between one terminal of said circuit and one of said electrodes, an over-load cut-out device connected in series relation with said device between the other terminal of said circuit and the other electrode, a glow discharge switch of the bi-metal type connected across said electrodes and completing a preheating circuit for said electrodes through which said electrodes are energized from said circuit in series relation with said ballast and said cut-out device, and a bridge circuit connected between said other electrode and an intermediate tap of said ballast and including a thermal device having normally open contacts and being responsive to the current conducted by said ballast for transmitting current from said supply circuit in an amount sufficient to operate said cut-out device upon repeated attempts of said switch to initiate conduction by said discharge device.

2,438,558
LEVELLING TOOL
Nils Bertil Fredrik Hollander, St. Essingen, Sweden
Application September 24, 1945, Serial No. 618,283
In Sweden September 15, 1944
4 Claims. (Cl. 77—58)

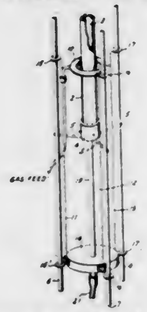


1. A cutting tool comprising a tool holder, a cutter pivotally mounted centrally thereof on

said holder and a cylindrical body in which said holder is axially adjustable, said body having parallel slots longitudinally disposed on either side of its lower end so that as said holder is lowered in said body the cutter projects out of said

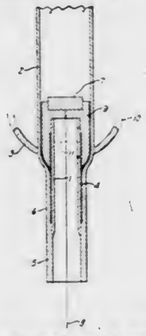
body to dispose its cutting edges on either side of the body, the top edge of one of said slots being lower than the top edge of the other of said slots so that as said holder is raised the cutter engages said lower edge to pivot and retract into said body.

2,438,559
FURNACE LINING
George T. Hubbell, New Haven, Conn., assignor to American Crucible Co., Shelton, Conn., a corporation of Delaware
Application February 18, 1942, Serial No. 431,376
1 Claim. (Cl. 266—43)



A furnace comprising an outer shell open at the top and having a base therein adapted to support a crucible, a lining member resting freely on said base, said member comprising a preformed unitary cylindrical member open at the top and bottom and extending from said base to approximately the top of said shell, said member being formed of a single piece of refractory material and having smooth and unbroken exterior and interior wall surfaces void of lateral or vertical joints and having a burner opening in the wall thereof and being insertable and removable through the open top of the shell, and the inner surface of said member being glazed continuously over its entire area.

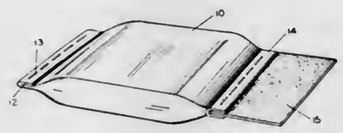
2,438,560
MANUFACTURE OF CATALYSTS
Elmer R. Kanhofer, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application July 30, 1945, Serial No. 607,904
10 Claims. (Cl. 252—250)



4. A process for producing a finely divided catalyst which comprises commingling a mineral acid with a solution containing not more than 30% by weight of an alkali metal silicate, about 7 to about 15% by weight of an alkali metal halide and about 51 to about 91% by weight of water, compositing the silica thus formed with a metal oxide to form an active composite having catalytic properties.

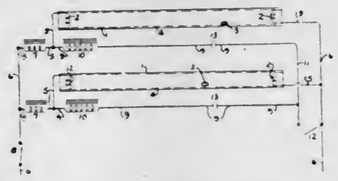
2,438,561
ELECTROTHERMAL DEPOSITION APPARATUS
William K. Kearsley, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application April 30, 1942, Serial No. 441,122
4 Claims. (Cl. 91—18)

1. An electrodeposition apparatus comprising the combination of a framework for supporting a tubular container, a heater encircling and spaced away from said container, said heater serving also as an electrode, a cooperating electrode within said container, means for supplying finely divided material to the space within said container, and means for impressing upon said electrodes a unidirectional potential of sufficiently high voltage to cause deposition of said material upon the interior wall of said container.



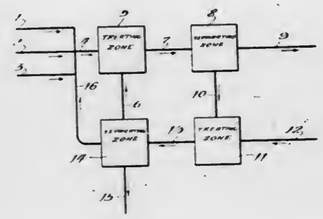
2,438,562
SEAL FOR ELECTRIC DISCHARGE DEVICES AND METHOD OF MANUFACTURE
Eric Kettlewell, Kingsbury, London, England, assignor to General Electric Company, a corporation of New York
Application March 27, 1944, Serial No. 528,182
In Great Britain March 13, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 13, 1962
12 Claims. (Cl. 176—126)

1. The method of making a seal for high intensity electric discharge devices which comprises



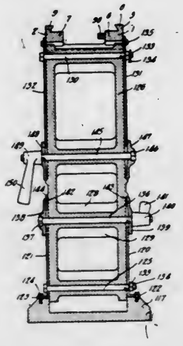
coating the outer surface of an inner quartz tube which is open at both ends with an adherent layer of refractory metal, collapsing onto the said tube part of an outer quartz tube so that part of the said layer is embedded in quartz and another part is exposed in the space between the two tubes, and filling the said space with a molten metal which has a substantially lower melting point than said refractory metal and which wets the said refractory metal and is solid at ordinary temperatures, and causing the said molten metal to cover over the adjacent open end of the inner tube, whereby to hermetically seal the said adjacent end of the inner tube by an air-tight bond between the said molten metal, the refractory metal and the wall of the said inner tube.

2,438,563
TRACTION PAD
Walter T. Kollmeyer, Milwaukee, Wis.
Application May 17, 1946, Serial No. 670,630
4 Claims. (Cl. 238—14)



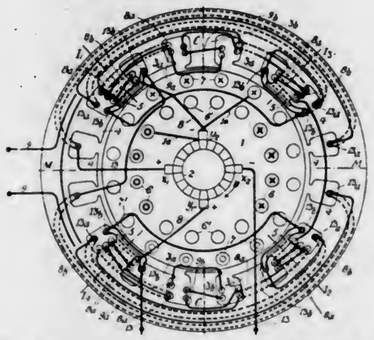
1. A traction pad comprising a bag, coarse grained material disposed within said bag, a tab abrasive coated material attached to one end of said bag, said bag constructed of material caused to disintegrate when pressure is applied thereto.

2,438,564
MULTIPLE DISCHARGE LAMP CIRCUIT
Eugene Lemmers, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application July 11, 1945, Serial No. 604,339
2 Claims. (Cl. 315—283)



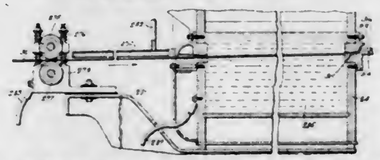
1. The combination, an alternating current supply circuit, a discharge circuit and a plurality of electrical discharge lamps connected across the same in parallel circuits each including inductance, of resonant circuits connected in parallel to one side of said discharge circuit and each including inductance and capacitance in series; and means including a switch for connecting said resonant circuits to the other side of the discharge circuit during starting, and for disconnecting these resonant circuits from said other side of the discharge circuit during subsequent lamp operation; the aggregate impedance represented by the inductance and capacitance in the connection between adjacent lamps via said means being sufficient to assure starting of said lamps and also stable operation of all the lamps by minimizing circulating currents among the starting circuits.

2,438,565
METHOD OF PURIFYING A HYDROCARBON MATERIAL CONTAINING A RELATIVELY SMALL AMOUNT OF AN ORGANIC FLUORINE COMPOUND
Carl B. Linn, Riverside, and Julian M. Mavity, Hinsdale, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application October 26, 1945, Serial No. 624,768
12 Claims. (Cl. 260—676)



1. A process for treating a hydrocarbon material containing as an impurity a relatively small percentage of organically combined fluorine to remove fluorine therefrom which comprises contacting said hydrocarbon material with sulfur trioxide at defluorinating conditions of temperature and pressure such as to maintain the sulfur trioxide in liquid phase, and recovering the treated hydrocarbon material.

2,438,566
SUPPORTING STRUCTURE
Hugh Long, Los Angeles, Calif.
Original application July 22, 1939, Serial No. 285,914. Divided and this application March 8, 1943, Serial No. 478,399
11 Claims. (Cl. 248—23)



2. In a device of the character described, a tool support having a longitudinally extending member, an arm pivotally joined at one end to the support and approximately centrally with respect to the ends of the member, and means forming a pivotal mounting for the other end of the arm, said arm comprising a pair of telescoping members and means for clamping the members in adjusted telescopic position.

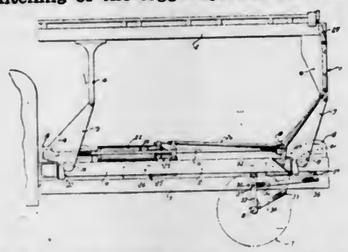
2,438,567
CROSS-FIELD GENERATOR
James Wright Macfarlane and William Ian Macfarlane, Glasgow, Scotland
Application May 13, 1944, Serial No. 535,408
In Great Britain April 14, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires April 14, 1963
18 Claims. (Cl. 322—92)

1. A dynamo-electric generator having a main diametral armature-reaction axis and a control diametral armature-reaction axis, said axes being transverse to one another, said generator being connectible in a load circuit and comprising a carcase, a pair of main poles, in said carcase at opposite ends of said main axis, a pair of control poles in said carcase at opposite ends of said control axis, an armature with conductors formed as a short span winding having a span of approximately 90 electrical degrees, a commutator on said armature, pairs of brushes on said carcase cooperating with said commutator and connected to armature conductors lying between said main and control axes, one pair of said brushes being connected to the load circuit and the other pair of said brushes being interconnected by a short-circuiting link, and compensating field coils distributed over said main poles, said coils spanning armature conductors under the main poles so as to balance out armature reaction along said control axis due to said last-mentioned conductors and prevent interference by such armature reaction with the work of said control poles.

2,438,568
METHOD AND APPARATUS FOR MAKING COMPOSITE STRIP MATERIAL
Cecil A. Mann, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Original application January 29, 1941, Serial No. 376,512. Divided and this application April 3, 1944, Serial No. 529,325
5 Claims. (Cl. 117—48)

4. In a method for continuously casting a lower melting point metal on one surface only of metallic strip stock, the steps comprising, progressively heating a portion of the stock in the atmosphere as it is moving toward a casting tank containing the metal to be cast thereon in the molten state, progressively supplying a reducing atmosphere to one surface only of the heated strip for cleaning that surface of the strip and for fluxing the same, and then continuously immersing the strip in the molten metal in its heated and cleaned condition prior to exposure to atmospheric air, and finally casting a predetermined thickness of the lower melting point metal on said one surface only of the strip.

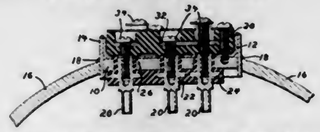
2,438,569
PREPARATION OF AN ALUMINA-GROUP VI OXIDE CATALYST
William J. Mattox, La Grange, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application November 29, 1944, Serial No. 565,812
10 Claims. (Cl. 252—257)



1. A process for manufacturing a composite catalyst which comprises incorporating a compound of a metal in the left-hand column of group VI of the periodic table into fused hydrated aluminum sulfate, heating the composite sufficiently to form a solid residue, and subjecting the residue to treatment with a reducing gas at a temperature of from about 350° C. to about 650° C. until there is substantially no evolution of sulfur dioxide or hydrogen sulfide.

2,438,570
PRODUCTION OF TOLUENE BY CATALYTIC CRACKING OF MONOALKYL BENZENES
William J. Mattox, La Grange, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application June 28, 1945, Serial No. 602,152
8 Claims. (Cl. 260—672)

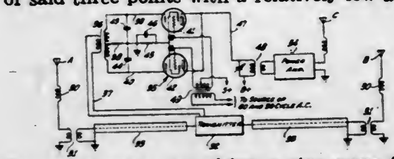
1. A process for the dealkanation of a monoalkyl aromatic hydrocarbon wherein the alkyl group contains two or more carbon atoms, which comprises contacting said hydrocarbon with a catalyst comprising an oxide of an element from the left-hand column of group VI of the periodic table at a temperature of from about 400° C. to about 650° C., a pressure of from atmospheric to about 1000 pounds per square inch, and a hourly weight space velocity of from about 0.1 to about 5, whereby to split said alkyl group at the bond between its alpha and beta carbon atoms and leave a methyl substituent attached to the aromatic nucleus.



2,438,571
STABILIZER FOR SPRING MOUNTED VEHICLES
Glenway Maxon, Jr., Milwaukee, Wis.
Application May 27, 1944, Serial No. 537,753
1 Claim. (Cl. 280—6)

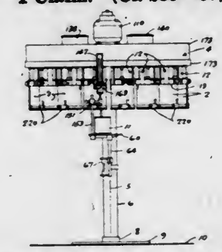
In a vehicle having an axle and a chassis supported thereon by springs: a stabilizer for substituting for the springs a non-yielding supporting connection between the chassis and the axle, comprising a pair of arms at each side of the chassis adjacent to the axle and pivotally connected to each other to form toggles, one arm of each toggle being pivoted to a part fixed with respect to the chassis and the other arm having a connection with the chassis constraining its end portion remote from the pivotal connection between the arms to travel in a defined path intersecting the axle from an inactive position entirely disconnected from the axle in the collapsed condition of the toggle to an active position with said end portion of the arm engaged with the axle to spread the axle and chassis apart in the straightened condition of the toggle so that straightening of the toggle spreads the axle and

chassis apart regardless of the load on the vehicle springs to effect lifting of the chassis and relief of the springs; and means for straightening and collapsing the toggle.



2,438,572
TERMINAL STRUCTURE FOR REFRIGERATING APPARATUS
Alex A. McCormack, Cleveland, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application May 11, 1944, Serial No. 535,066
6 Claims. (Cl. 174—153)

1. In combination, a casing having an opening therein, a terminal assembly mounted within said opening, said terminal assembly comprising a terminal plate having a plurality of terminal receiving apertures therein, a plurality of terminal studs within said casing and projecting into said apertures, said terminal studs having tapped recesses exposed on the outer side of said plate, flanges on said terminal studs overlying the inside face of said terminal plate, synthetic rubber gasket material disposed between said flanges and said plate and vulcanized to said flanges and said plate, said gasket material extending through said apertures and overlying portions of the outside face of said terminal plate, a contact mounting member of insulating material having a plurality of apertures in alignment with said tapped recesses, and threaded terminal screws projecting through said last-named apertures and into said tapped recesses whereupon tightening said terminal screws compresses the synthetic rubber gasket between said flange and said terminal plate.



2,438,573
EQUISIGNAL RADIO BEACON SYSTEM
William J. O'Brien, London, England, assignor to The Decca Record Company, Limited, London, England, a corporation of Great Britain
Original application March 2, 1942, Serial No. 432,948. Divided and this application November 5, 1943, Serial No. 509,024. In Great Britain March 1, 1943
8 Claims. (Cl. 343—107)

1. The method of producing a radio frequency equi-signal surface for guiding mobile vehicles which consists in simultaneously radiating radio frequency signals of like frequency from three aligned points spaced from each other, and modulating the signal radiated from the center one of said three points with a relatively low audible

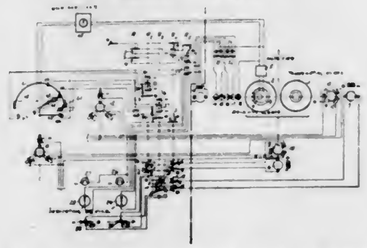
frequency wave comprising a sine wave fundamental and a lower amplitude sine wave second harmonic.

2,438,574
MIXING APPARATUS
Edward M. O'Neill, San Francisco, Calif., assignor to Union Machine Company, San Francisco, Calif., a corporation of California
Application August 24, 1942, Serial No. 455,833
1 Claim. (Cl. 259—67)

In a mixing apparatus, a rotatable table, a plurality of containers suspended below the table, each of said containers having a discharge opening directed away from the axis of rotation of the table, an agitator in each container, each of said agitators having a rotary shaft, a coupling for each shaft, extending upwardly through the table, a pulley at a point above said table associated respectively with each coupling, and a motor carried by and above the table for simultaneously driving said pulleys.

2,438,575
THERMOCOUPLE FOR PILOT BURNERS
William A. Ray, Glendale, Calif., assignor to General Controls Co., a corporation
Application February 24, 1945, Serial No. 579,646
1 Claim. (Cl. 136—4)

In a thermocouple structure: a first thermoelectric conductor having an aperture adjacent



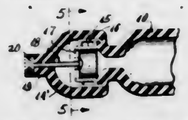
one end and a hollow extension at the other end; a second thermoelectric conductor disposed in the hollow extension and having an end inserted into the aperture; a hollow connector telescoping into the hollow extension; a lead connected to the interior of said connector; a layer of insulation on said second conductor; and a flexible armor encompassing the said lead and the second conductor; said hollow extension and the hollow connector being formed to hold the said lead firmly in relation to the connector.

2,438,576

DEVICE FOR LOCATING AND FOLLOWING OF OBJECTS

Helge Fabian Rost, Djursholm, Karl Harry Thunell, Nockeby, Sten Daniel Vigren, Stockholm, and Per Harry Elias Claesson, Jakobsberg, Sweden

Application October 30, 1944, Serial No. 561,004
In Sweden February 2, 1943
7 Claims. (Cl. 343—7)



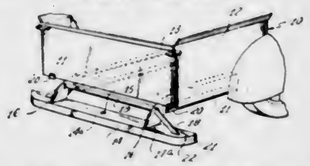
1. A system for locating and following an object in space comprising rotatable transmitting and receiving means pointing in substantially the same direction for the transmission and the reception of directed radio waves reflected from the object, driving means for rotating said transmitting and receiving means in at least one plane, impulse transmitting means coupled to said driving means for automatically turning said transmitting and receiving means in predetermined paths for searching said object in space, a current direction sensitive indicating device comprising a movable index and a scale for indicating departure of said index from its zero position, amplifying and distributing means coupled on one side to said receiving means and on the other side to said current direction sensitive indicating device for successively receiving and amplifying amounts of radio energy from two somewhat diverging directions in the same plane and corresponding to equal parts of the searching field and for transferring two successively received amounts of energy and delivering the resulting energy difference, if any, to said indicating device, manually operating electric means associated with said current direction sensitive indicating device and coupled to said driving means for turning said transmitting and receiving means in such a direction that the movable index of said current direction sensitive indicating device returns to or stays in zero position, in order to obtain a continuous indication of movement of an object in space corresponding to the instant position of the transmitting and receiving means, and a switching device coupled between said driving means on one side and said manually operable electric means and said impulse transmitting means on the other side for disconnecting said impulse transmitting means from said driving means at the moment, when reflected energy is received from an object in space by the receiving means, and for connecting said driving means to said manually operable means for the operation of said driving means in one or the other direction in accordance with the movement of said index in one or the other direction from its zero position.

2,438,577

MEDICINE DROPPER

Alex Rothman, Bronx, N. Y.

Application February 27, 1947, Serial No. 731,171
4 Claims. (Cl. 128—233)



4. A medicine dropper comprising a resilient bulb for drawing and forcing liquid in and out, a small resilient auxiliary bulb extension on said bulb for dispensing a small quantity of said liquid, a collar fixedly mounted within said small extension, a second collar slidably extended into said collar, and means for extending said second collar from said first collar to limit the amount the bulb extension may be compressed to control the amount of liquid which will be displaced thereby, and means for limiting complete disengagement of said collars.

2,438,578

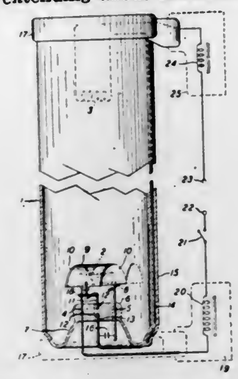
BUMPER

Jefferson T. Runyan, Downey, Calif.

Application May 16, 1947, Serial No. 748,554
2 Claims. (Cl. 293—55)

1. A rear bumper construction for use on automotive trucks of the type having a pair of rearwardly extending laterally spaced frame members comprising: a bumper bar formed with a vertical web and a horizontal web; and means for securing said bumper bar to the frame members comprising a pair of spaced support plates extending in vertical planes transverse to the length of said bumper bar, each of said plates having a horizontally extending portion for attachment to a frame member and a downwardly extending portion terminating at said bumper bar and rigidly secured to the upper surface of the horizontal web thereof to dispose the bar rearwardly of the frame members and below the level of the frame members.

2,438,579



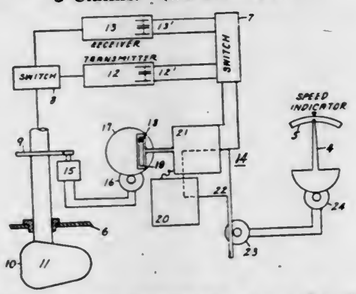
ELECTRIC GAS DISCHARGE TUBE

Pieter Schouwstra, Eindhoven, Netherlands, assignor to General Electric Company, Schenectady, N. Y.

Application March 30, 1946, Serial No. 658,408
In the Netherlands June 16, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires June 16, 1962
6 Claims. (Cl. 176—122)

1. An electric discharge device comprising a pair of cooperating electrodes at least one of which

is a thermionic electrode supported by a stem press, a bimetallic shield concave toward said press and extending about substantially the full



length of said thermionic electrode, the other one of said cooperating electrodes being positioned so that it faces the convex side of said shield, and contact means actuated by said shield.

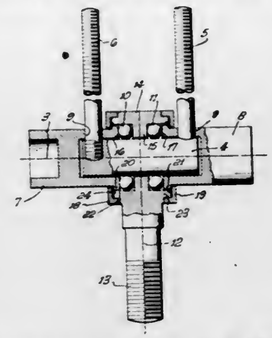
2,438,580

COMPENSATOR FOR DOPPLER EFFECT

Oscar Hugo Schuck, Belmont, Mass., assignor to the United States of America as represented by the Secretary of the Navy

Application November 6, 1943, Serial No. 509,300
5 Claims. (Cl. 177—386)

1. A method of compensating for the change of frequency due to the speed of the searching ship equipped with echo ranging apparatus comprising, training the transducer on the target, generating an electrical effect proportional to the cosine of the angle between the target and the ship's course, generating another electrical effect directly proportional to the speed of the ship, and combining the electrical effects in the frequency determining circuit of the transmitter to compensate for the change in frequency due to the speed of the ship.



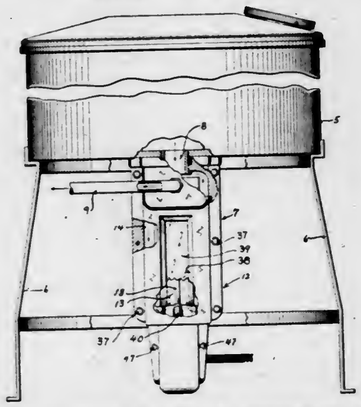
2,438,581

JOINT FOR ARTIFICIAL LIMBS

Emil Schwarzkopf, Los Angeles, Calif.

Application February 26, 1945, Serial No. 579,765
6 Claims. (Cl. 287—96)

1. In a device of the character described: a pin member; extensions at each end of the pin member, each of said extensions having an outwardly facing annular shoulder adjacent the inner end of the extension; means for fastening said pin member to an artificial leg, including a pair of studs transverse to the axis of the pin; a bolt having a hollow head through which the pin member passes, said head having an intermediate flange, co-operating with the inner ends



of said extensions and the pin to define a pair of ball races; balls in said races; and retaining rings carried respectively by the opposite sides of the head and having portions co-operating with said shoulders on the extensions for sealing the space in the head.

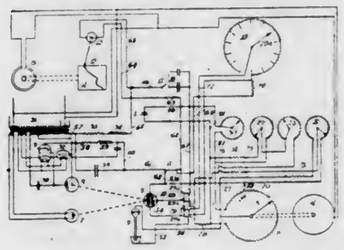
2,438,582

CONTINUOUS FLOW PASTEURIZER

Harold I. Southerwick, Des Plaines, Ill., assignor to The Do All Company, Des Plaines, Ill., a partnership

Application July 13, 1944, Serial No. 544,795
4 Claims. (Cl. 219—40)

1. A pasteurizer for liquids comprising: a substantially elongated housing; a pair of spaced electrodes in said housing extending lengthwise thereof and cooperating with the side walls of the housing to form a central liquid passage between the electrodes in which the liquid to be pasteurized is treated and two outer pre-treatment passages one at each side of the central passage with each of said outer passages separated from the central passage by one of said electrodes, said electrodes terminating short of one end of the housing so as to cause all of said passages to be communicated with each other at said end of the housing; means common to both of said electrodes for closing off the central pas-



sage from said outer passages at the opposite end of the housing, said central passage having an outlet at said opposite end of the housing through which liquid traveling through the central passage between said electrodes from the first designated end of the housing to the opposite end thereof discharges after being heated by the flow of electric current therethrough from one electrode to the other; and means connecting with said outer passages at said opposite end of the housing for simultaneously conducting liquid into said outer passages to thereby assure travel of the liquid the length of the housing prior to simultaneous entrance of the streams of liquid from said outer passages into the central passage for heating thereof.

2,438,583

EQUIPMENT FOR CARRYING OUT POLAROGRAPHIC ANALYSIS

Fritz Ludwig Steghart and Douglas Crisp Gall, South Norwood, London S. E. 25, England, assignors to Tinsley (Industrial Instruments) Limited, London, England

Application February 27, 1943, Serial No. 477,486
In Great Britain March 5, 1942
8 Claims. (Cl. 346—32)

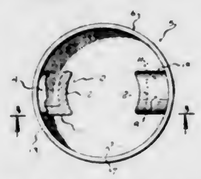
1. In equipment for carrying out polarographic analysis an electrolytic cell having a polarised electrode, means for applying an electromotive force to said cell, a light modulating galvanometer, means for passing at least part of the current traversing said cell through said galvanometer to produce a torque in the galvanometer representative of said cell current, a source of light, at least one photoelectric cell receiving the light modulated by said galvanometer, means for causing said photo-electric cell to control the output current of at least one valve which passes a second current, means for passing said second current in opposite direction through said galvanometer to cause the resultant countertorque to effect a balance of said galvanometer, and a recording device operated by the output current of the said valve.

2,438,584

PREPARATION OF NONSINTERED IRON CATALYST

Meredith M. Stewart, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware

No Drawing. Application December 22, 1945, Serial No. 637,114
4 Claims. (Cl. 252—257)



1. A method for the preparation of a nonsintered iron catalyst for the hydrogenation of carbon monoxide from an iron compound capable of conversion at least in part to iron oxides which comprises comminuting said iron compound in finely divided form, passing gas containing oxygen into contact with said compound at a temperature within the range of from about 750° F. to about 875° F. for a period of time sufficient to remove carbonaceous material and convert said compound into oxides of iron, passing a mixture of steam and oxygen into contact with the resulting material comprising oxides of iron under conditions of temperature and contact time such that substantially all of the iron present is converted to ferric oxide, thereafter passing a mixture of hydrogen and steam into contact with the resulting material containing ferric oxide at a temperature within the range of from about 700° F. to about 800° F. for a period of time sufficient to convert the ferric oxide to magnetite, passing hydrogen into contact with said material containing magnetite at a temperature within the range of from about 700° F. to about 800° F. for a period sufficient to reduce the magnetite to metallic iron.

2,438,585

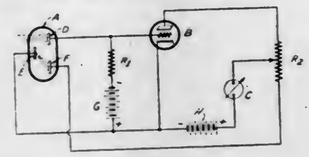
DIE-CAST PISTON

Felix J. Stuckert, Wauwatosa, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware

Application September 24, 1945, Serial No. 618,189
4 Claims. (Cl. 309—10)

2. A cast piston of the character described, comprising: a head; a substantially cylindrical skirt extending from one side of the head; diametrically opposite aligned wrist pin bosses projecting inwardly from the skirt; and reinforcing ribs cast on the inside of the skirt and joining the pin bosses with the piston head, said ribs being substantially angle-shaped in cross section with one leg of each rib projecting inwardly from the skirt tangentially to its boss with said legs parallel to but lying at opposite sides of a plane containing the pin and piston axes, the other legs of the ribs extending across the inner end portions of the pin bosses and facing each other adjacent to the central portion of the piston to hold said inner end portions of the bosses in axial alignment against the thrust imposed thereon during use of the piston, said other legs and the surfaces of the pin bosses which face each other being concentric to the cylindrical skirt of the piston, and said legs of the reinforcing ribs having a thickness substantially no greater than that of the pin boss walls so as to hold the weight of the piston to a minimum.

2,438,586



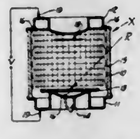
COLOR ANALYZING CIRCUIT

George C. Szikiai, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application September 21, 1945, Serial No. 617,857
9 Claims. (Cl. 250—41.5)

1. The combination of a device wherein primary electrons derived from a cathode are projected on an emissive electrode from which secondary electrons are applied to an output electrode, a pair of impedance elements having a

terminal in common, means for supplying to said terminal through one of said elements a current which is proportional to the number of said primary electrons, and means for supplying to said



terminal through the other of said elements component currents which are proportional respectively to the number of said primary electrons and to the speed of said primary electrons.

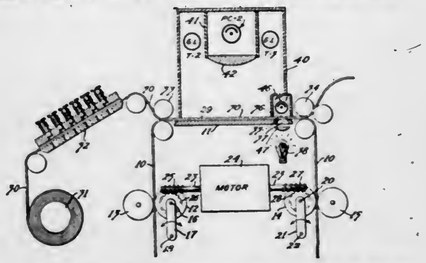
2,438,587

PHOTOTUBE CONTAINING MEANS TO COUNTERACT NEGATIVE WALL CHARGES

Augustus Hadley Taylor, East Cleveland, Ohio, assignor to General Electric Company, a corporation of New York

Application December 24, 1943, Serial No. 515,472
5 Claims. (Cl. 250—165)

1. A high vacuum space discharge phototube comprising a light-permeable vitreous tube; anode and cathode electrodes at opposite ends of said tube and adapted to coact with each other, said cathode being activated on its surface toward the anode and being exposed to the tube wall and thus photoelectrically responsive to light incident thereon through the lateral tube wall; and a conductor extending adjacent the lateral tube wall and said cathode and electrically connected directly to said anode, whereby it has substantially the anode potential, and being of small area compared to the tube wall area to leave the light shining through the lateral tube wall on said activated cathode surface substantially unobstructed; said conductor serving to neutralize negative wall charge on the lateral tube wall, without substantial diminution of the illumination of the cathode surface.



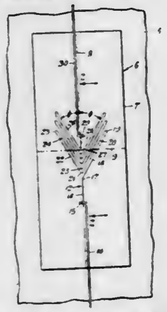
2,438,588

SYSTEM FOR COMPARISON OR ANALYSIS OF INFORMATION

William A. Tolson, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application September 14, 1946, Serial No. 697,126
15 Claims. (Cl. 250—41.5)

1. In a statistical comparator apparatus, the combination of a background having a non-reflecting surface, a length of tape having a light reflecting surface and a plurality of groups of perforations, each group representing certain informative data different from some or all the remaining groups, a strip of non-reflecting material juxtaposed to said tape and having perforations corresponding in number and arrangement with one group on said tape, means for feeding said tape across said background and relative to said strip, an indicator, and light con-



trolled means for operating said indicator when said tape and strip perforations are in register.

2,438,589

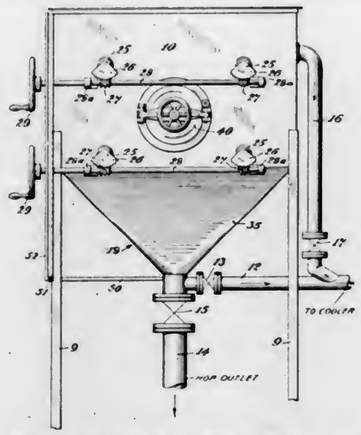
ELECTRIC STRAIN GAGE

Elwood C. Walker, Caldwell, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware

Application August 30, 1946, Serial No. 693,899
8 Claims. (Cl. 201—63)

1. In a stress gage, an insulating sheet adapted to be bonded to a body whose stress is to be measured along a certain axis, a gage axis index associated with said sheet to assist in orienting the gage axis relative to said certain axis, a continuous resistance filament bonded to said sheet, extending back and forth along said sheet in a plurality of substantially straight runs parallel to one another, said runs being disposed at an acute angle to said gage axis, said angle being a function of Poisson's ratio of the material upon which the gage is adapted to be bonded, and conductors forming gage terminals connected to the ends of said filament.

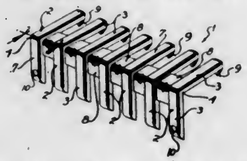
2,438,590



HOP SEPARATOR

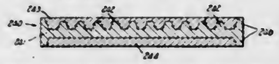
Hans H. Weiss and Steve A. Tabacchi, Seattle, Wash., assignors to Schock, Gusmer & Co., Inc., Hoboken, N. J., a corporation of New Jersey

Application May 8, 1946, Serial No. 668,234
1 Claim. (Cl. 210—149)



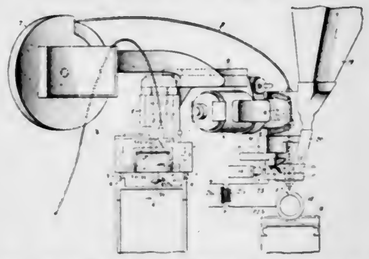
In a hop separator having a tank with vertical walls and an inclined bottom, the combination of a pair of spaced superposed false bottoms transversely across and within the tank, each having a plurality of openings, each false bottom having a stationary horizontal part, and a tiltable horizontal part aligned therewith, said false bottom when the tiltable parts are horizontally disposed dividing the tank into at least three compartments, means exterior to the tank and con-

nected with the false bottoms for tilting the tiltable parts, a wort discharge pipe having its entrance end above the upper false bottom and communicating with the upper compartment for receiving the wort in the upper compartment, a second discharge pipe having its entrance end at the bottom of the tank and communicating



with the lowest compartment and with the first wort discharge pipe, and a valve in said second discharge pipe, whereby when said valve is in one position the wort in the tank backs up to the top compartment and discharges into the first discharge pipe, and when the valve is in another position and the tiltable bottoms are tilted, the hops are discharged from the tank.

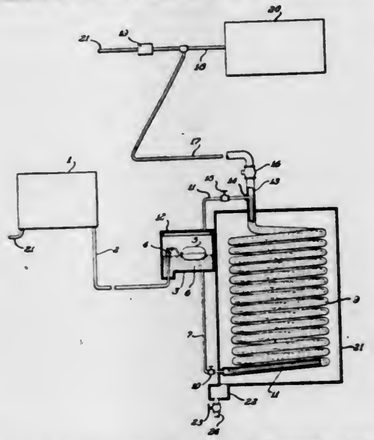
2,438,591
EDGE GUARD FOR HAND LUGGAGE
George Henry Wheary, Jr., Racine, Wis., assignor to Wheary, Incorporated, Racine, Wis., a corporation of Wisconsin
Application June 3, 1946, Serial No. 674,062
2 Claims. (Cl. 190—37)



2. A grille stamped from a single sheet of material and adapted to be secured to the side walls of a suitcase or the like at a juncture thereof defining one edge of the case to reinforce and protect the same comprising: a strip having alternate web and finger portions shaped to fit around and cover said edge of the case and to lie lengthwise therealong, said finger portions being formed by a plurality of spaced channel shaped fingers integral with the web portions and projecting beyond the edges of the web portions to extend around the edge of said case and overlie the marginal portions of the sides of the case adjacent to said edge, and with the open sides of the channels facing inwardly toward the sides of the case and the backs of the channels outermost and raised outwardly above the surface of the web portions; end closures for the fingers comprising extensions on the backs of the channels of the fingers bent downwardly and inwardly to close the ends of said channels; and means at the ends of the fingers for securing the same to the sides of the case at a distance from the edge thereof to be covered by the grille.

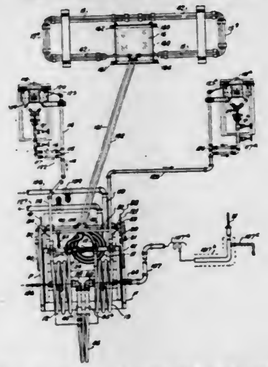
2,438,592
ELECTRICAL CONDENSER
Sidney Y. White, Wilmette, Ill., assignor to Victor S. Johnson, Chicago, Ill.; Alex Thomson, administrator of said Johnson, deceased
Original application December 8, 1942, Serial No. 468,195. Divided and this application October 15, 1943, Serial No. 506,374
3 Claims. (Cl. 175—41)

1. A condenser adapted to be adjusted substantially to a desired capacity by unit amounts through grinding, comprising a dielectric base having integral therewith a multiplicity of duplicate spaced, abruptly rising, island projections on a face thereof, the projections being of equal predetermined height and of equal predetermined cross-section a conductive metallic body accessible for grinding and covering said face to a depth sufficient to cover the projections, and a further conductive metallic body covering the opposite face of said base and disposed equidistantly from the tops of a plurality of the projections.



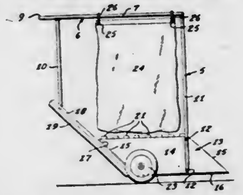
2,438,593
WELDING METHOD AND APPARATUS
Ben W. Wright, Mountain Lakes, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application April 29, 1944, Serial No. 533,359
15 Claims. (Cl. 219—8)

1. In the art of depositing weld metal in a groove having differing dimensions lengthwise thereof, the method which comprises feeding a welding rod toward the welding zone, moving the tip of the welding rod along said groove while the feeding operation proceeds, and controlling speed of movement of the rod along the groove in accordance with differing dimensions of said groove.



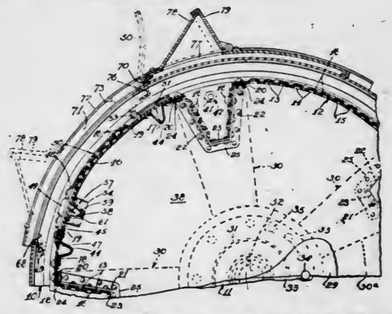
2,438,594
EVAPORATIVE COOLER
Bruno J. Zapart, Chicago, Ill., and Rudolph A. Mack, Phoenix, Ariz.
Application January 11, 1946, Serial No. 640,548
4 Claims. (Cl. 62—169)

1. In combination with a source of liquid refrigerant and an appliance wherein the refrigerant is normally consumed when converted into gas, a helical refrigerating device comprising a refrigerating coil, a conduit connecting said source with the one end of said coil, said conduit being adapted to constantly supply the refrigerant to said coil as the same is used up, a second conduit connecting the other end of said coil with said appliance, the appliance inducing vacuum in said coil through said last named conduit for vaporizing the refrigerant in said coil, the generated vapor passing through said last named conduit into said appliance to be normally consumed therein, and an air pipe concentrically



disposed within said coil and having one end thereof connected with the atmosphere, said air pipe being in a spaced relation with said coil and substantially coextensive with the length thereof, the vacuum induced in said coil by said appliance sucking in air from the other end of said air pipe to inject the same into and to mix with the refrigerant in the said coil for enhancing vaporization thereof, the air passing through said air pipe becoming pre-cooled before the injection thereof into the refrigerant.

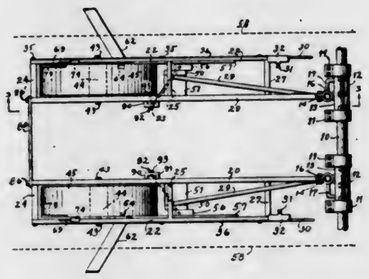
2,438,595
HIGH-FREQUENCY GENERATOR
Paul D. Zottu, Indian Hills, Ky., assignor to The Girdler Corporation, Louisville, Ky., a corporation of Delaware
Application May 3, 1944, Serial No. 533,997
12 Claims. (Cl. 250—36)



8. In an oscillator, a divided coil comprising at least two coil sections, rigid supporting conductors mechanically and electrically connected to the respective ends of said coil sections and forming the sole support therefor, pivotal means mechanically and electrically connecting two of said supporting conductors, and electrically separate means mechanically and electrically connected to the remaining conductors to assist in the support of said coil sections without interfering with pivotal movement of said coil about said pivotal means.

2,438,596
REFUSE CART
Franklin M. Arave and Thomas W. Nolan, Lava Hot Springs, Idaho; said Arave and said Nolan assignors of one-third to A. A. Foote, Lava Hot Springs, Idaho, and said Nolan assignor of one-third to Marian J. Bell, Lava Hot Springs, Idaho
Application September 27, 1946, Serial No. 699,716
3 Claims. (Cl. 280—8)

1. A refuse cart, comprising a dust pan, wheels mounted upon the dust pan, inclined runners secured to the rear end of the dust pan and projecting above the same, a generally horizontal loop arranged above the dust pan and runners, bars connected with the loop near its forward end and connected with the dust pan near its forward end, and bars connected with the loop near its rear end and connected with the runners near their upper ends.

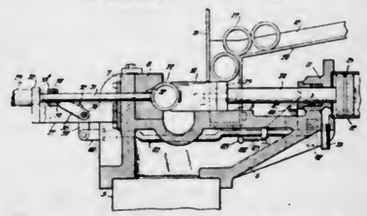


2,438,597
DOOR AND LATCH FOR TUMBLER WASHERS
Charles C. Batina, Chicago, Ill.
Original application October 8, 1941, Serial No. 414,075. Divided and this application August 10, 1942, Serial No. 454,221
2 Claims. (Cl. 68—142)

1. In a washing machine, a rotary shell comprising transverse discs, longitudinal ribs extending between said discs forming a plurality of panels, outturned flanges on the longitudinal edges of said ribs, and peripheral flanges on said discs interposed between the edges of the flanges on said ribs, one of said panels being provided with comparatively narrow longitudinally disposed

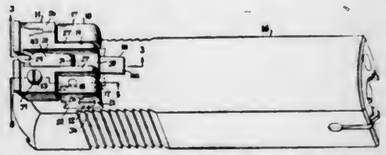
plates connected to the outer faces of the adjacent flanges of the ribs and discs, and transversely disposed plates connected to the disc flanges intermediate said longitudinally disposed plates and together defining a door opening in said shell, perforated plates closing the remaining panels, said longitudinally and transversely disposed plates being in the same cylindrical surface with said perforated plates, longitudinally disposed strips secured to the inner faces of said longitudinally disposed plates between the peripheral flanges on said discs, and curved strips secured to the inner faces of said transversely disposed plates and lying between the adjacent edges of said longitudinally disposed strips, the edges of said longitudinally disposed strips and said curved strips projecting inwardly beyond the edges of the plates to which they are secured forming a door seat, a door hinged to one of said longitudinally disposed plates and adapted to rest on said door seat when closed, and latches on said door adapted to engage under the edges of said strips.

2,438,598
CELERY CUTTER
Thomas J. Bell, Island Grove, Fla.
Application May 18, 1945, Serial No. 594,494
19 Claims. (Cl. 55—60)



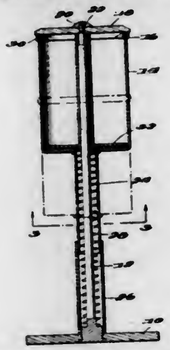
1. In a celery cutter, comprising a wheeled frame adapted to be drawn between two rows of celery and having a laterally and rearwardly extending blade projecting from each side thereof for cutting the celery, each blade being individually adjustable as to height relative to the wheeled frame, the wheels of the frame contacting the ground in a line intersecting the rows of celery at right angles. At the point where the blade contacts a stalk of celery, a coulter on each side of the frame for penetrating the ground in front of the cutters and wheels for severing the fallen celery leaves and for also severing the celery roots on one side of the stalks of celery, and a vertically adjustable scraper mounted in front of the wheels of the frame for leveling the ground in front of the wheels.

2,438,599
LUBRICATING OIL COMPOSITION
Edward S. Blake, Nitro, W. Va., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application June 17, 1944, Serial No. 540,891
17 Claims. (Cl. 252—48.4)



1. A composition of matter comprising an admixture of a hydrocarbon lubricating oil base admixed with minor amounts sufficient to impart E. P. properties to the lubricant of a chlor phenalkyl ester in which the ester forming group consists of carbon, hydrogen and chlorine of a thio acid the chlorine being attached to the phenyl nucleus of the said phenalkyl group.

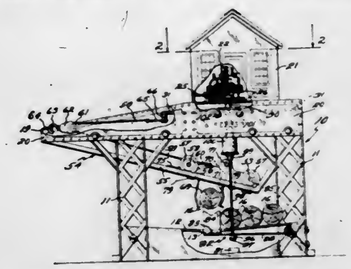
2,438,600
TRANSFER DEVICE FOR TUBE AND ROD CHUCKS
Byron F. Bower, Aurora, Ill., assignor to Pines Engineering Company, Aurora, Ill.
Application February 23, 1945, Serial No. 579,449
6 Claims. (Cl. 29—60)



1. A chucking device including two jaws adapted to clamp articles such as tubes, rods, etc. therebetween, means adjacent one of said jaws for directing articles to the device, the jaw being moveable between a retracted position, where the work may be placed in front of it, and advanced position, where it cooperates with the other jaw to clamp the article, a transfer finger moveable along the path of movement of said jaw between a position holding the article in said jaw as the jaw starts to advance the article and a retracted position where the article held by it is confined between both jaws, means to advance and retract said first named jaw, means urging said transfer finger toward its first named position, a latch holding said finger in retracted position and trip means operable to release the latch at about the time the first named jaw arrives at retracted position whereby to cause the finger to advance and hold an article in the jaw.

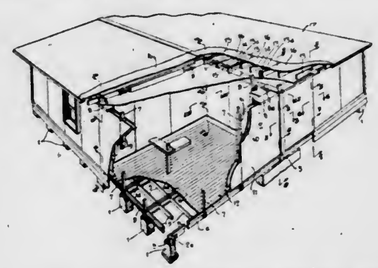
2,438,601
ADJUSTABLE SIGHT FOR FIREARMS
George F. Davis, New Haven, Conn., assignor to The High Standard Manufacturing Corporation, New Haven, Conn., a corporation of Connecticut
Application January 17, 1947, Serial No. 722,529
10 Claims. (Cl. 33—56)

2. An adjustable sight for firearms, including in combination: a sight-base for attachment to a firearm structure, the said sight-base having two laterally-spaced-apart side-arms connected together at their rears by a tie-bar which has its upper surface depressed below the respective upper surfaces of the said side-arms, the said side-arms and the said tie-bar providing boundaries for a clearance-opening located forwardly of the said tie-bar; a sight-leaf having a body-portion vertically movable to the rear of the said sight-base and having a forwardly-projecting pivot-portion extending over the tie-bar of the said sight-base and between the said side-arms of the latter and into the clearance-opening of the sight-base; a windage-adjusting screw extending transversely of and turning in the respective side-arms of the said sight-base and extending through the forwardly-projecting pivot-portion of the said sight-leaf, the said windage-adjusting screw extending across the clearance-opening of the sight-base and being connected to the said sight-base and also being connected to the forwardly-projecting pivot-portion of the said sight-leaf to shift the sight-leaf laterally with respect to the sight-base; elevating-means for swinging the said sight-leaf vertically about the said windage-adjusting screw; and a control-spring extending through the clearance-opening in the said sight-base and beneath the said windage-adjusting screw, the said control-spring also extending rearwardly over the tie-bar of the said sight-base and into engagement with the said sight-leaf to yieldingly depress the body-portion thereof.



2,438,602
DISPENSER
Frederick De Cesaris, Johnston, R. I., assignor to James Manufacturing Company, Inc., Providence, R. I., a corporation of Rhode Island
Application September 12, 1947, Serial No. 773,629
6 Claims. (Cl. 312—73)

1. A dispenser for slender articles comprising, a base, a guide rod extending upwardly from said base, an article magazine open at its upper end mounted on said guide rod for reciprocating movement therealong, a fixed article supporting platform within said magazine, a cover member fixed to the upper end of said guide rod, and a spring tensioned to normally maintain the open upper end of said magazine in contact with said cover member.

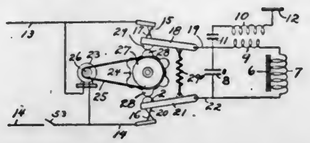


2,438,603
TOY LOADING STATION
Oscar P. Erhardt, West Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application February 22, 1944, Serial No. 523,411
21 Claims. (Cl. 46—40)

1. In a toy crane station for transferring toy articles from a repository to a delivery location some distance therefrom, the combination of, a repository for toy load articles in said station, a crane track in said station, a trolley supported by said track to perform an article conveying excursion therealong away from and back to an article receiving position proximate said repository, and means operative to transfer a toy load article from said repository to said trolley constructed

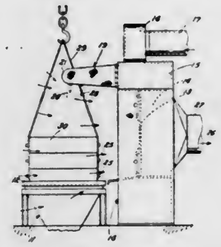
and arranged to remain at said repository while said trolley performs its said excursion.

2,438,604
PREFABRICATED AND DEMOUNTABLE HOUSE CONSTRUCTION
Henry L. Gogerty, North Hollywood, Calif.
Application January 8, 1943, Serial No. 471,702
2 Claims. (Cl. 20—2)



1. In a prefabricated building structure having floor joists, wall units and rafters, as a part thereof, the combination of: a vertical framing member disposed at the junction of two walls of said structure and secured top and bottom to a rafter and joist respectively; a horizontal framing member provided with an aperture therein through which said vertical member passes; a second horizontal framing member abutting said first horizontal member; and a plate secured to a horizontal face of said abutting member and provided with an aperture through which said vertical member passes, whereby said various parts are firmly locked together.

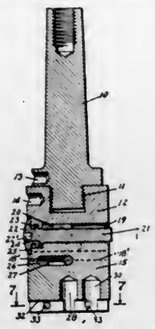
2,438,605
ELECTRICAL THERAPEUTIC DEVICE
Fred J. Hart, Salinas, Calif., assignor of one-half to College of Electronic Medicine, San Francisco, Calif., a corporation of California
Application September 12, 1945, Serial No. 615,858
1 Claim. (Cl. 128—419)



A device of the class described comprising an oscillation circuit including a capacitor and an inductor with the latter providing an electromagnet, two alternating current supply wires connected with said oscillation circuit, a switch connected in each supply wire, operating means connected with said switches adapted to operate the latter concurrently so that a magnetic field is set up around said electromagnet while said

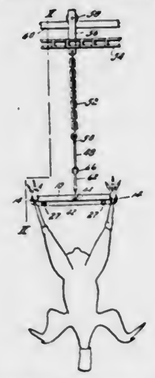
switches are closed and both of said supply wires are cut free from said oscillation circuit while said switches are open, a treatment wire connected to said oscillation circuit and adapted to

receive electrical energy trapped in said oscillation circuit at each opening of said switches, and a condenser in said treatment wire adapted to limit the flow of electrical current to said treatment wire while said switches are closed.



2,438,606
PNEUMATIC CANOPY
Charles S. Hulton, Cincinnati, Ohio, assignor to The Kirk & Blum Manufacturing Company, Cincinnati, Ohio, a corporation of Ohio
Application March 16, 1944, Serial No. 526,801
7 Claims. (Cl. 98—115)

1. In an air exhauster type collection apparatus the combination of a casing having an intake opening in a vertical side wall thereof, means connected with the casing for drawing in air and dust through said opening, an air pressure supply chamber mounted on the casing and having an outlet in a vertical plane disposed above said inlet opening in said casing and a flexible inflatable envelope connected at its rear edge with the air pressure chamber and communicating interiorly with the air outlet in said chamber, and means supplying pressure air to said chamber, whereby the envelope is maintained in an inflated condition and extends horizontally to form a canopy over a substantial area adjacent and communicating with said intake opening in the casing.

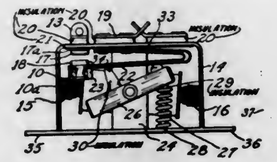


2,438,607
BORING ATTACHMENT
Ernest W. Jackson, Bellflower, Calif.
Application October 14, 1944, Serial No. 558,675
5 Claims. (Cl. 279—6)

1. A boring head including two body portions interfitted together for lateral movement relative to each other, two bores into said body portions at and intersecting the junctures of their interfitting portions, two smooth pins fitted into said bores for locking said body portions against separation while permitting lateral adjustment of one portion relative to the other, an adjustment screw threaded between said body portions and operable for moving one portion relative to the other, an arbor on one body portion for connecting it with operating power, the other body por-

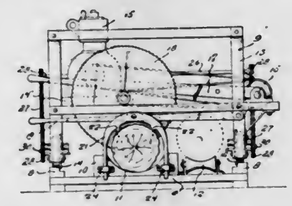
tion being provided in its end with tool-holding means.

2,438,608
POULTRY SHACKLE
Gordon W. Johnson, Overland Park, Kans., assignor to Gordon Johnson Company, Kansas City, Mo., a corporation of Missouri
Application July 29, 1944, Serial No. 547,214
3 Claims. (Cl. 17—44.1)



1. A poultry shackle comprising an elongated body member having recessed ends, a hook insert slidably mounted in each of the opposite end portions respectively of said body member with the hook portion thereof extending outwardly from the adjacent recessed end of said body member to receive a fowl's leg therebetween, a stop to limit the outward movement of said hook insert, resilient means positioned to constantly urge said hook insert outwardly against said stop, a spring means to normally secure said hook insert in the operative engaging position, and a release button extended through the wall of said body member, manually operable from outside the body member to release said hook securing spring.

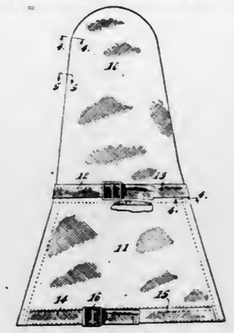
2,438,609
CIRCUIT CONTROL DEVICE
James G. Juhasz, Chicago, Ill.
Application February 19, 1945, Serial No. 578,747
8 Claims. (Cl. 200—103)



3. A current operated control device comprising in combination a coil in which the control

current may flow, a core of ferro-magnetic material having spaced pole faces, an armature having end portions positioned to be attracted by said pole faces, an arm adjacent to said armature and having a control element thereon positioned by said arm, when said armature is not attracted by the core adjacent to a pole face of said core, said armature having means thereon

for pressing said arm in a direction to move said element away from said pole face as the armature is attracted, means yieldingly opposing the action of said armature, and an auxiliary armature secured to the arm in proximity to a pole face of the core to be attracted thereby and to oppose movement of the arm by the first armature.



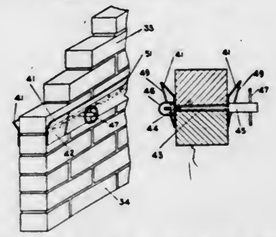
2,438,610
LOG- AND CARRIAGE-LOCKING SWINGING-SAW SAWMILL
Edmond Lambert, Danielson, Conn.
Application April 17, 1944, Serial No. 531,463
6 Claims. (Cl. 143—46)

5. In a saw mill, a selectively positionable saw carriage, a power driven saw mounted on said carriage for cutting action in a downward direction, an elongated log bed having the carriage mounted to slide longitudinally thereon and including a longitudinal series of spaced seats for supporting a log at intervals throughout the length of a log placed longitudinally thereon so that each log section as cut by the saw is supported so as to prevent binding of the saw, keepers on said seats, and a locking device mounted movably on the carriage to engage any one of the keepers with relation to which the carriage is selectively positioned for securing the carriage in saw cutting position.

2,438,611
MITTEN
Hilma E. Lindfeit, Des Moines, Iowa
Application July 6, 1945, Serial No. 603,502
3 Claims. (Cl. 2—162)

1. In a mitten, a hand-receiving portion tapering outwardly from the finger-holding portion to the wrist line, a gauntlet of flexible material joining the hand-receiving portion at the wrist line, said gauntlet tapering outwardly from the wrist line, said gauntlet having a portion thereof formed of elastic material, said elastic material extending the length of the gauntlet, means for tightening the mitten at the wrist line,

and means for tightening the mitten at the top of the gauntlet.

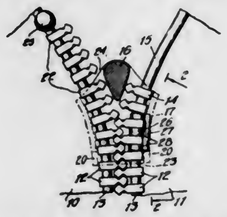


2,438,612
COPOLYMERS OF TETRAALLYLSILANE
Charles A. MacKenzie, Upper Montclair, and John B. Rust, Montclair, N. J., assignors, by direct and mesne assignments, of one-half to Montclair Research Corporation, a corporation of New Jersey, and one-half to Ellis-Foster Company, a corporation of New Jersey
No Drawing. Application September 26, 1944, Serial No. 555,901
8 Claims. (Cl. 260—84)

1. A composition comprising the product of copolymerization of a mass comprising tetraallylsilane and an addition polymerizable carbon compound containing a single

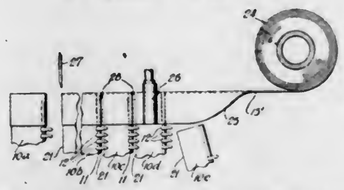
$$CH_2=C\diagup$$

group selected from the class consisting of methyl methacrylate, butyl methacrylate and vinyl acetate, the silane constituting from 1 to 20% by weight of the copolymer.



2,438,613
APPARATUS FOR USE IN ERECTING MASONRY STRUCTURES
Ernest G. Malthouse, Sheffield, England
Original application May 9, 1944, Serial No. 534,761. Divided and this application March 20, 1945, Serial No. 583,738. In Great Britain April 17, 1943
7 Claims. (Cl. 33—85)

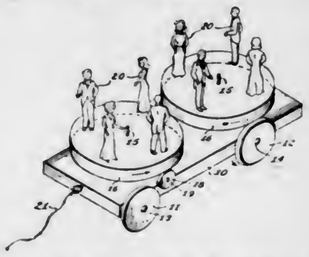
7. Apparatus for use in erecting masonry wall structures and the like, comprising, in combination, a pair of guide members adapted to be applied to opposite sides of the upper edge of a partially completed structure; each of said members comprising a generally vertically disposed



lower portion having at least one vertical plate-like part adapted to contact with one face of said structure, and an upper plate-like portion extending diagonally upwardly and outwardly from said face to extend at an acute angle thereto; rod-like bracing struts extending from said lower portions to said upper angled portions; and means adapted to extend across said partially completed structure for detachably connecting the guide members on the respective sides thereof and securing them firmly to the side face of said structure.

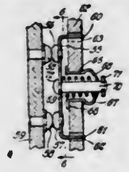
2,438,614
STOP DEVICE FOR PULL APART SLIDERS FOR SEPARABLE FASTENERS
Louis H. Morin, Bronx, N. Y., assignor of one-half to Davis Marinsky, Bronx, N. Y.
Application March 23, 1944, Serial No. 527,802
6 Claims. (Cl. 24—205)

5. In separable fasteners employing stringers having scoops spaced longitudinally of the stringer tapes, a slider movable along the stringers to couple and uncouple the scoops thereof, a stop device comprising a strip of sheet material having spaced loops joined at opposite ends by bearing portions, said device being arranged upon the tape of one stringer with the loops thereof intermediate scoops on said tape and with said bearing portions inwardly of and adjacent inner ends of the scoops, said slider comprising a channelled body having inturned side flanges engaging the inner ends of the scoops in coupling and uncoupling the scoops, and the inturned flanges at one side of the slider having projections adapted to engage the bearing portions of said stop device in checking normal sliding movement of the slider along the stringers.



2,438,615
FASTENER STRINGER AND METHOD OF PRODUCING THE SAME
Louis H. Morin, Bronx, N. Y., assignor of one-half to Davis Marinsky, Bronx, N. Y.
Application June 15, 1945, Serial No. 599,684
18 Claims. (Cl. 154—91)

1. The method of forming and finishing tape ends of separable fastener stringers which comprises cutting tape ends to form extensions of predetermined length beyond end scoops of the stringers, arranging stringer tapes in edge to edge relationship with said ends in common alinement, then folding an elongated strip over said tape ends to dispose side portions of the strip upon opposed sides of the tape ends, securing the strip to said tape ends by applied pressure, and then severing said strip intermediate adjacent tape ends in producing on the tape ends reinforcing and finishing strips, the folds of which are disposed at outer edges of said tape ends.

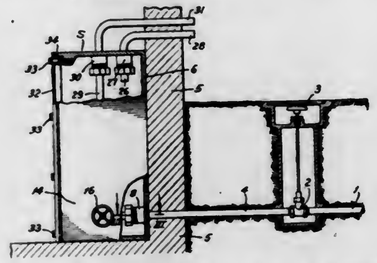


14. A stringer for separable fasteners comprising a tape having a beaded edge with scoops spaced longitudinally of said edge and terminating short of one end of the tape to form a mounting end, a folded finishing and reinforcing strip arranged upon and secured to said mounting end of the stringer tape, the fold of said strip being disposed at the outer edge of said mounting end, side portions of the strip being disposed upon opposed surfaces of said tape and including the bead thereof, and a coupling body arranged upon the beaded edge portion of said tape end and the strip secured thereto.

2,438,616
WHEELED TOY
Jesse B. Mosher, Colorado Springs, Colo.
Application August 23, 1946, Serial No. 692,656
1 Claim. (Cl. 46—204)

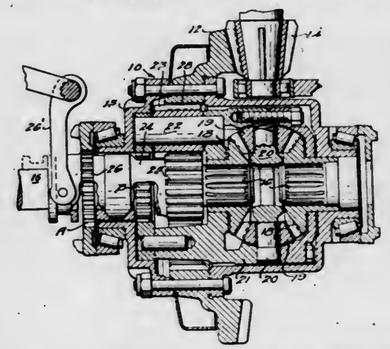
A wheeled toy, comprising a platform, front and rear ground wheels to support same, dual revolvable tables supported in longitudinal alignment on said platform, said ground wheels being staggered so that one front wheel impinges the underside of the forward table and one rear wheel impinges the underside of the rear table, idlers contacting the undersides of said tables and positioned in apposition to said impinging ground wheels, and a plurality of images mounted on said revolvable tables.

2,438,617
WAFER SWITCH
Donald P. Mossman, Sr., Chicago, Ill.
Application January 14, 1946, Serial No. 641,048
7 Claims. (Cl. 200—4)



3. In a wafer switch of the character described, a bridging contact and mounting therefor comprising a supporting disc of insulation having an aperture, an eyelet seated in the aperture and provided with a spring seat at one end, a coiled spring in said eyelet, a bridging bar having contact portions at its ends and having a central pin projecting into the spring and aperture, and means limiting the movement of the bridging bar away from the disc, said means comprising a portion of said central pin projecting through the eyelet and a stop on said portion for engaging the eyelet.

2,438,618
HAIR CURLER
Ruthel J. Mott, Georgetown, Tex.
Application February 27, 1945, Serial No. 579,930
3 Claims. (Cl. 132—33)

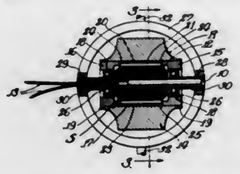


1. A hair curler comprising a curling surface formed of a plurality of longitudinally split sections arranged in spaced complemental relation with respect to one another, means connecting said sections together at an end thereof so as to permit expansile and contractile movement of said sections relative to each other, and a withdrawable member adapted to be inserted between said sections to cause expansile relative movement of said sections and maintain said sections in their spaced apart expansile movement position, and adapted upon being withdrawn to cause contractile relative movement of said sections to an extent such as to permit the return of said sections to their original spaced apart relation, said sections when in their maintained expansile movement position forming an exterior surface for the winding of strands of hair to be curled thereon and when upon completion of the contractile relative movement of said sections have the thus formed curl of hair loosely supported on said exterior surface.

2,438,619
GAS DISTRIBUTING SAFETY DEVICE
Stephen Rattay, New York, N. Y.
Application January 10, 1947, Serial No. 721,351
4 Claims. (Cl. 48—192)

4. A gas distribution safety cabinet, including, in combination: walls forming a chamber, one of said walls forming a cover; means for removably attaching the cover gas tight; means for projecting a main gas supply pipe within the chamber gas tight with a wall; means for projecting a distributing gas pipe through a wall gas tight therewith; a pressure reducing valve within the chamber connecting the main gas supply pipe and distribution pipe; a shut off valve in the main supply pipe within the chamber and means extending gas tight through a wall of the chamber for operating the valve without the chamber and means projected through a wall of the chamber gas tight venting the chamber to out of doors.

2,438,620
CLUTCH AND BRAKE DEVICE FOR A TWO-SPEED AXLE CONSTRUCTION
Robert C. Bussell, Cleveland Heights, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application December 10, 1941, Serial No. 422,364
5 Claims. (Cl. 192—12)

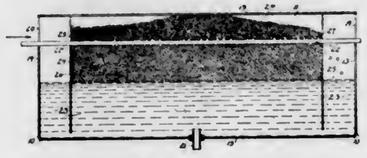


1. In a speed changing device the combination of a rotatable member having gear teeth formed thereon, the leading edges on one side thereof being removed from a normal to its axis, a fixed member having teeth formed thereon whose leading edges on one side thereof are inwardly angularly disposed from the mid-point thereof, and an axially shiftable member comprising a pair of axially spaced gears having teeth the leading edges of which are normal to its axis for selective meshing engagement respectively with said fixed gear member at synchronous speeds thereof for either direction of rotation of the axially shiftable member and said rotatable gear member at synchronous speeds thereof for only one direction of rotation of the axially shiftable member.

2,438,621
ELECTRIC MOTOR STRUCTURE FOR GYROSCOPES
John F. Schoeppel, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application March 27, 1944, Serial No. 528,191
5 Claims. (Cl. 172—36)

1. In a gyroscope structure, a stationary shaft, a stator mounted thereon and having a bore receiving said shaft, and a rotor comprising a massive cylindrical shell, a squirrel cage in said shell, said squirrel cage comprising a magnetic cylinder, said shell being wholly outside of said cylinder, a relatively large number of relatively small conductor bars extending longitudinally through said cylinder and electrically connected

together at their ends, said bars being formed of a metal having relatively high conductivity, an annular bearing housing pressed in each end of said shell and retaining said squirrel cage in



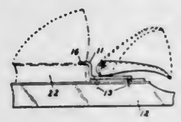
position therein, and bearings spanning the distance between said shaft and said bearing housings and located within the ends of said cylindrical shell.

2,438,622

METHOD FOR REDUCING THE SURFACE ADHESIVENESS OF ARTICLES

Robert H. Sperzel, Hamden, Conn., assignor to The Whitney Blake Company, Hamden, Conn., a corporation of Connecticut

Application August 17, 1944, Serial No. 549,939
6 Claims. (Cl. 117—139)



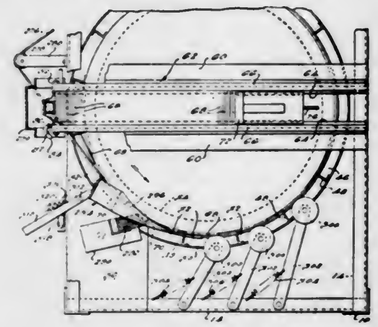
1. In the process of manufacturing a strand of rubbery material having a tacky surface: the method of applying a quick-drying coating film to the tacky surface of a continuous length of said strand to permit said strand to be wound on a reel without adherence between successive convolutions, comprising the steps of providing a body of coating foam supported on the surface of a body of foam-producing tackiness-reducing coating liquid which is a nonsolvent for the said rubbery material; and then passing said continuous length of strand through said foam to cover the tacky surface of said strand with a quick-drying tackiness-reducing coating film.

2,438,623

SKI ATTACHMENT

William Stanimir, Montreal, Quebec, Canada, assignor to Victoria Precision Works Company Limited, Montreal, Quebec, Canada

Application December 6, 1945, Serial No. 633,160
2 Claims. (Cl. 280—11.35)



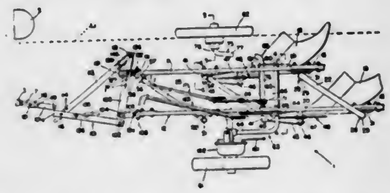
2. In a ski attachment, a fixed member adapted to be secured to a ski and having a stud extending upwardly therefrom, a movable member having a slotted portion which is engaged by the stud of said fixed member, said fixed member having a plurality of apertures, a pin extending downwardly from the underside of said movable member and adapted to engage with one of the apertures in said fixed plate, and a locking member pivotally secured through the stud of said fixed member and adapted to detachably hold said movable member in its various adjusted positions.

2,438,624

APPARATUS WITH ROTATABLE HEAD AND BELT FOR SUPPORTING CONTAINERS AND WITH MEANS FOR CLOSING CONTAINERS

Karl Stenglein, Saginaw, Mich.

Original application February 4, 1942, Serial No. 429,441. Divided and this application March 19, 1945, Serial No. 583,442
4 Claims. (Cl. 226—56)



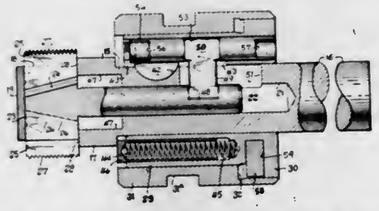
1. In a packaging machine, in combination, a circular head rotatable about its vertically positioned axis, means for rotating said head, means for delivering envelopes with their flaps in open position to said periphery of said head, continuous belt means surrounding said head in peripherally engageable relation with respect thereto over an angular extent of less than 360° for clamping said envelopes in succession to said head for support and movement therewith, means for moistening said flaps, means for closing said flaps, means for pressing said closed flaps against said envelopes to effect sealing of the same, and said third mentioned means being operable to release said envelopes from said head after said sealing has been effected.

2,438,625

LATERALLY ADJUSTABLE GANG PLOW

Carl G. Strandlund, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois

Application April 1, 1944, Serial No. 529,160
5 Claims. (Cl. 97—97)



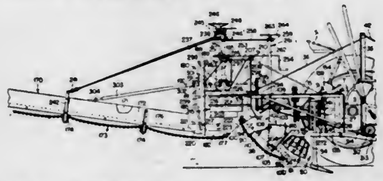
5. A gang plow comprising a pair of plow beams, bracket means fixed to one of said plow beams and extending laterally across the other beam, means for connecting the other plow beam with said one plow beam for movement toward and away from the latter and also relative to said bracket means, crank axle means having journal sections rockably mounted on said bracket means independently of said other plow beam and generally laterally outwardly extending wheel receiving sections at opposite sides of said plow beams, a land wheel journaled on the crank axle means adjacent said one plow beam, a furrow wheel journaled on the crank axle means adjacent the other plow beam, an adjustable part mounted on said one plow beam to which said bracket means is connected and operatively connected to said crank axle means, and means for transmitting draft to the forward ends of both of said plow beams irrespective of the lateral position of said other plow beam relative to said one plow beam.

2,438,626

COLLAPSING TAP

Royce M. Strickland, New Haven, Conn., assignor to The Geometric Tool Company, New Haven, Conn., a corporation of Connecticut

Application June 7, 1946, Serial No. 675,025
16 Claims. (Cl. 10—145)



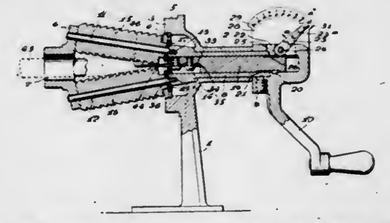
1. A collapsing tap having a plurality of advanceable and retirable thread-cutting chasers and including in combination: a chaser-carrying member having a plurality of substantially-radial chaser-guides and formed with a forwardly-facing latching-abutment; a plurality of thread-cutting chasers carried by the said chaser-carrying member and movable substantially radially in the chaser-guides thereof; an operating-sleeve mounted for axial movement upon the said chaser-carrying member and formed with a substantially-radial latch-receiving passage and with transmitter-guiding means extending in substantial parallelism with the longitudinal axis of the tap; chaser-operating means operatively connecting the said operating-sleeve with the said chasers; spring-means urging the said operating-sleeve rearwardly; a latch-member mounted for movement in a substantially-radial direction in the latch-receiving passage of the said operating-sleeve and engageable with and disengageable from the latching-abutment of the said chaser-carrying member, the said latch-member being provided with an inclined releasing-surface sloping forwardly and laterally outwardly away from the longitudinal axis of the tap; a rolling transmitting-member rollable in the transmitter-guiding means of the said operating-sleeve in a direction substantially longitudinal of the latter; and a tripping-sleeve axially movable upon the said operating-sleeve and having a rearwardly-facing abutment engageable with the said transmitting-member to roll the same rearwardly in the transmitter-guiding means of the said operating-sleeve and along the inclined releasing-surface of the said latch-member to force the latter out of engagement with the latching-abutment of the said chaser-carrying member.

2,438,627

BEET HARVESTER

Claude W. Walz, Avondale, Colo., and Clarence T. Rasmussen, Moline, and Robert D. Griff, Rock Island, Ill., assignors to Deere & Company, Moline, Ill., a corporation of Illinois

Application May 3, 1943, Serial No. 485,526
50 Claims. (Cl. 55—9)



1. A beet harvester comprising a mobile frame, beet lifting plows carried thereby, a pair of kicker wheels carried for rotation by said frame and disposed to receive beets from said plows and forcibly project them rearwardly, and a rearwardly and upwardly extending conveyor supported from said mobile frame and disposed rearwardly of said kicker wheels, said conveyor having a beet receiving flight movable rearwardly in substantially the same direction as the direction in which said kicker wheels project the beets, the forward end of said conveyor being disposed underneath the rear portions of said kicker wheels.

2,438,628

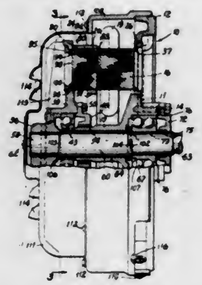
PENCIL SHARPENER

John A. Yerkes, New York, N. Y.

Application August 12, 1944, Serial No. 549,214
10 Claims. (Cl. 120—96)

1. A pencil sharpener comprising a support, a head rotatably mounted on said support, substantially cylindrical milling cutters carried by said head with their cutting faces in converging relationship to form a tapered space between said cutters, and a cutting blade carried by said head substantially axially thereof and projecting between the converging ends of said cutters into the space between said cutters, said cutting blade having a substantially V-shaped cutting edge and the faces of said cutting blade being hollow-ground to permit the projection of said cutting blade between the faces of said converging milling cutters.

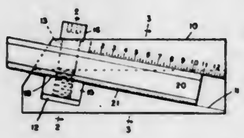
2,438,629



AXIAL AIR GAP MACHINE

Gordon R. Anderson, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois

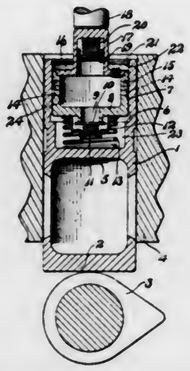
Application February 28, 1944, Serial No. 524,181
16 Claims. (Cl. 171—252)



1. In an electrical machine of the character described, embodying an annular, magnetic core having an electrical winding thereon, a core-supporting frame having a core-engaging surface,

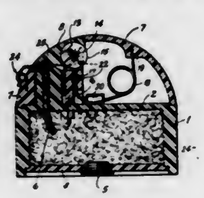
a ring element having a flange, formed separately of the frame and carried thereby in a position adjacent said core-engaging frame surface with said flange in engagement with the frame, and

a weld-connection between said element and said core, said element coacting with said frame to effect through said flange and weld-connection, a clamped seating of the core on said core-engaging frame surface.



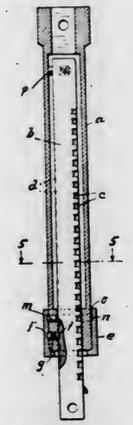
2,438,630
TOOLHOLDER
William Barks, Detroit, Mich., assignor to Clifford C. Stone, Detroit, Mich.
Application May 25, 1944, Serial No. 537,339
2 Claims. (Cl. 29—96)

1. A tool holder and blade combination consisting of an elongated holder body having a longitudinally extending angularly arranged groove in its side wall and a through passage near its forward end, said passage having its upper wall substantially in the plane of the lower side wall of said groove, a nut in said passage, a bolt extending down through said body and threaded into said nut, one edge of said nut extending into said groove and provided with serrations presented to said groove, and a tool blade in said groove and correspondingly serrated on its lower edge.



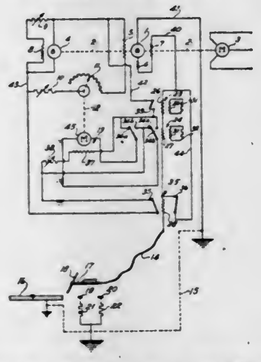
2,438,631
HYDRAULIC TAPPET
Paul F. Bergmann, Muskegon, Mich., assignor to Johnson Products, Inc., Muskegon Heights, Mich., a corporation of Michigan
Application June 24, 1946, Serial No. 678,744
6 Claims. (Cl. 123—90)

5. A tappet construction comprising a tappet body having a cylindrical recess in its upper portion, a chambered piston therewithin having a valve closed passage from the chamber within the piston to said cylindrical recess within the body below the piston, said piston having restricted liquid passing means for the circulation of the liquid from below the piston to the chamber therewithin, movable means for dividing the chambered piston into two parts one over the other, the lower of said chambered portions being adapted to contain liquid, and the upper portion to contain air, and yielding means normally tending to enlarge the air portion of the



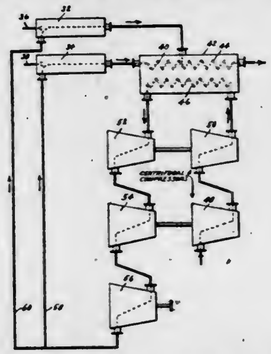
chamber and lessen the capacity of the liquid containing portion thereof acting upon said movable dividing means.

2,438,632
AUTOMATIC LIGHTER
Frederick P. Bushman, Vallejo, Calif.
Application July 19, 1945, Serial No. 605,904
2 Claims. (Cl. 67—4.1)



1. An automatic lighter comprising a hollow base forming a fluid reservoir, an upstanding boss on said base having a vertical bore therethrough, a wick in said bore having one end extending above said boss and the other end extending into said reservoir, a cover section removably connected to said base enclosing said boss, a web formed integral with said cover section including a portion adjacent said boss, a well in said web portion, a flint in said well having its upper end near the upper end of said wick, a wire spring having one end anchored in said cover and the other end extending into said well from the bottom thereof into contact with said flint biasing said flint upwardly in well expelling relation, a pivoted lid forming part of said cover section, an abrasive wheel anchored in said lid against relative movement, a shaft extending through the center of said wheel and having bearing support in said web forming a pivotal support for said lid and wheel, said wheel including an exposed serrated portion in contact with said flint maintaining said flint in said well against the force of said spring, latching means normally maintaining said lid closed, and spring means biasing said lid towards open position adapted upon release of said latching means to rotate said serrated portion of the wheel across said flint to effect sparks which strike said wick for igniting the same.

2,438,633
EXTENSIBLE TOOL SHANK
John Condor, Philadelphia, Pa.
Application November 17, 1944, Serial No. 563,911
9 Claims. (Cl. 287—58)

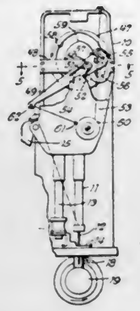


8. A tool shank adapted to carry at one end a tool and at the other end an operating handle, comprising two longitudinally extending members, one of which is slidable longitudinally along the other, a third member turnable on the other two members, interlocking elements on one of the longitudinally sliding members and the turnable member adapted to be brought into and out of locking relation by the turning of the turnable member to different angular positions, and other mutually engageable elements on the longitudinally extending members adapted, in said relative sliding movement of said members into any of a multiplicity of relative longitudinal positions, to bring said interlocking elements into position to enable their engagement to be effected.

2,438,634
REMOTE-CONTROL GENERATOR CIRCUIT
Cecil Farrow, Bainbridge Township, Geauga County, Ohio
Application December 8, 1943, Serial No. 513,383
7 Claims. (Cl. 322—80)

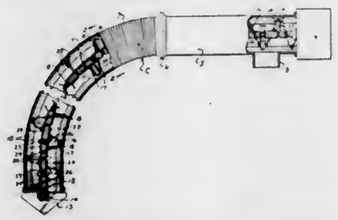
1. A remote control circuit including a main feed line, a first means operative in response to current in said feed line, a second means responsive to current of a different magnitude in the feed line and a third means responsive to current of still a different magnitude in said feed line and means to vary the current through the feed line to selectively operate said current responsive means, delay means connected to said second current responsive means to cause it to operate after the third means and delay means in said first current operated means to cause it to operate last.

2,438,635
TURBINE SYSTEM UTILIZING HOT DRIVING GASES
John S. Haverstick, Trenton, N. J., assignor to De Laval Steam Turbine Company, Trenton, N. J., a corporation of New Jersey
Application September 3, 1943, Serial No. 501,101
2 Claims. (Cl. 60—59)



1. A turbine system comprising a plurality of turbines arranged in series, means for compressing air driven by at least one of the turbines, means for heating the air, means for directing the heated air to the turbines to drive the same, and means for burning fuel in air exhausted from the turbines, the means for heating the air utilizing the products of said combustion, said means for heating the air involving an air passage, means for subjecting the air in counterflow arrangement to heat exchange with one stream of said products of combustion and means for adding to said stream at an intermediate point thereof an additional stream of said products of combustion.

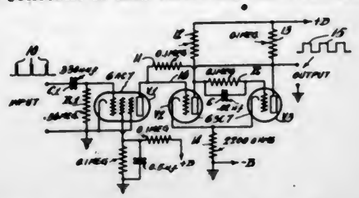
2,438,636
SEWING MACHINE
Matthew G. Ivandick, Rockford, Ill., assignor to Free Sewing Machine Co., Rockford, Ill., a corporation of Illinois
Application January 1, 1945, Serial No. 570,869
4 Claims. (Cl. 112—241)



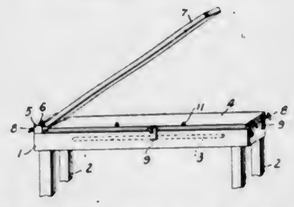
1. In a sewing machine having a reciprocating needle and a loop-taker cooperating therewith to produce lock-stitches, the combination of interconnected upper and lower shafts and driving means therefor to turn the shafts at a substantially constant speed and one-to-one ratio, the lower shaft having driving connections with the loop-taker, a crank on the upper shaft carrying a crank pin, a pitman rod pivoted thereon and a needle bar carrying the aforesaid needle operatively connected with said pitman rod, a needle thread take-up arm pivotally mounted to oscillate in a plane parallel to the plane of rotation of the crank, and a cam disk carried on the crank pin and in coaxial relation to and turning with the upper shaft and having a cam track thereon ex-

tending annularly relative to the axis of the upper shaft throughout 360° and cooperating with follower means carried directly on the take-up arm

to operate the latter in its thread take-up movements in a predetermined timed relationship to the operation of the needle and loop-taker.



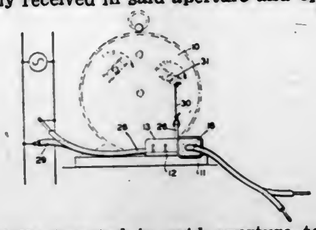
2,438,637
COMBINED CONVEYOR AND EXCAVATOR
Herbert D. Jansen, Shorewood, Wis.
Application March 7, 1946, Serial No. 652,648
3 Claims. (Cl. 37—189)



1. A combined excavator and conveyor comprising a flexible casing, a flexible shaft arranged axially in the casing for rotation, means for rotating the shaft, an excavating head secured to the forward end of the shaft for rotation therewith and a spiral flight carried by the shaft for rotation therewith arranged in said conveyor, said flight including a plurality of resilient wires, and said flight being formed in sections, the terminals of the sections being provided with flanges and slide clamps detachably fitted over said flanges for uniting the sections together.

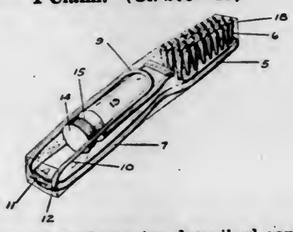
2,438,638
PULSE TO RECTANGULAR WAVE CONVERTER
Louis L. Lakatos, Bala Cynwyd, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application March 30, 1943, Serial No. 481,176
9 Claims. (Cl. 250—27)

2. Apparatus for converting periodically recurring short electrical pulses into pulses of longer duration recurring at the same rate as the short pulses, said apparatus comprising a pair of amplifier tubes having cathodes and having anodes and grids which are direct-current cross-connected, one of said connections including a series capacitor shunted by a resistor, the other of said connections being substantially purely resistive, and a cathode resistor common to said tubes, the time constant of said series capacitor and shunting resistor being long compared with the period between successive short pulses.



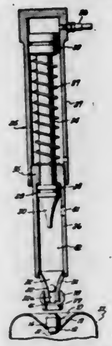
2,438,639
COLOR PROCESS REGISTRATION TABLE
Ralph Lawrence, Miami, Fla.
Application May 15, 1946, Serial No. 670,013
1 Claim. (Cl. 101—126)

A color process registration table, comprising in combination, a rectangular main frame, a transparent work bed carried thereby and shiftable horizontally thereon and adapted to support a work sheet having multiple perforations at predetermined spacings, a plurality of guide pegs carried by said work bed and shiftable therewith, said pegs projecting upwardly from said bed to engage said perforations to position said sheet in relation to said bed, a hinge block formed on said main frame at one end thereof, a screen frame overlying said work sheet and having a hingeable connection with said hinge block, threaded adjustment members carried by said hinge block and engageable with said screen frame to urge said screen frame away from said block to tighten said hingeable connection for the removal of loose play therefrom, a plurality of continuous and elongated lamps nested within said main frame below said work bed and longitudinally thereof, a plurality of bed adjusting members carried by said main frame and engageable with said bed to effect the horizontal adjustment thereof in relation to said screen frame.



2,438,640
SWITCH ASSEMBLY
Edgar L. Lees, Youngstown, Ohio
Application June 19, 1946, Serial No. 677,657
4 Claims. (Cl. 200—35)

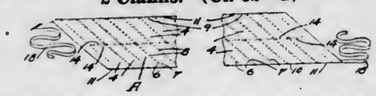
1. A switch mechanism comprising in combination an insulating housing, a pair of electrically conductive spring contacts secured in said housing and adapted to be engaged by the prongs of a conventional line cord plug, a movable switch arm in said housing and normally biased to predetermined position with respect to one of said spring contacts, a switch contact on said arm adapted to move into and out of engagement with said one of said spring contacts upon movement of said arm, an aperture in one wall of said housing, and a retractible insulating bar slideably received in said aperture and operative



when fully inserted in said aperture to retain said arm away from its normally biased position.

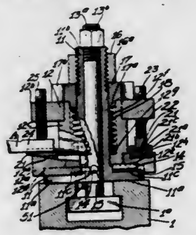
2,438,641
TOOTHBRUSH HAVING PASTE TUBE ON HANDLE
Aloysius Loehr, Wichita, Kans.
Application October 24, 1946, Serial No. 705,306
1 Claim. (Cl. 206—47)

A device of the character described comprising a toothbrush, a stub handle leading from the brush, a tooth paste tube positioned on the said handle, a removable cap on the said tube, the said cap having a notched periphery, a wire fork fixed into the end of the said handle and bent over the paste tube for retaining the tube on the handle, the prongs of the wire fork being serrated for engaging the said notched periphery of the paste tube cap, the said wire fork when straightened providing additional hand gripping surface to the handle.



2,438,642
APPARATUS FOR INSERTING VALVE ELEMENTS
Earnest E. Martin, Redondo Beach, Calif., assignor to Ralph Walsh, Los Angeles, Calif.
Application November 20, 1944, Serial No. 564,353
2 Claims. (Cl. 29—235)

1. A device for inserting an individual elastic deformable closure element through a passage

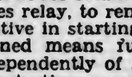


having a smaller diameter than said element into an enlarged space beyond said passage, that includes a separate body containing a chamber and a tapered restricted outlet smaller than said element and communicable with said passage, a plunger within said body operable to develop and apply gas pressure to said element when positioned in said restricted outlet, and movable means engageable with the element to project it under the applied gas pressure through the passage into said space.

2,438,643
PACK FOR USE IN REFRIGERATION ANESTHESIA
Hazel E. Moore, Oakland, Calif.
Application October 3, 1944, Serial No. 557,012
2 Claims. (Cl. 62—1)

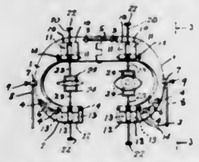
1. A pack for use in refrigeration anesthesia comprising an absorbent material in the form of sawdust, a fabric material confining the absorbent, said fabric having sewed seams forming a plurality of compartments each containing the absorbent and the fabric between the compartments forming flexible connections between them, and a brine solution substantially saturating the fabric and the absorbent.

2,438,644
TURRET TOOL POST
Alfred R. Oberwegner, Los Angeles, Calif.
Application August 18, 1943, Serial No. 499,098
6 Claims. (Cl. 29—48)



1. In a means of the class described, a support, a turntable mounted on said support and provided with a face adjacent the support, a plurality of positioning rollers located between the support and the turntable, each of the latter being provided with circumferentially spaced radiating index notches for receiving the rollers, screw means for securing the turntable with respect to the support, and a spring for resiliently holding the turntable, rollers, and support in engagement when the screw means is released to facilitate the raising of the turntable from one of the index notches to permit the turntable to ride on the rollers to the next circumferentially spaced index notch.

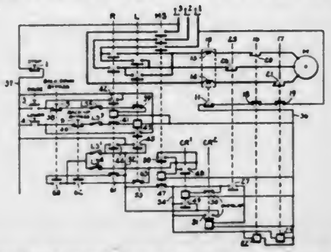
2,438,645
COLLAR CLIP
Joseph Raymond Palagonia, Brooklyn, N. Y.
Application March 17, 1944, Serial No. 526,854
4 Claims. (Cl. 24—81)



1. A collar clip having a bar member for extending across the front face of the points of a collar and a clamp jaw member for extending

across the back faces of the points of a collar behind said bar member, means for drawing said bar member and jaw members together with the points of said collar in position between the ends of said bar member and jaw member to be clamped thereby, comprising a socket portion formed on the inner face of one of said members, a stud portion formed on the other of said members and slidably engaging said socket portion, and a screw providing a wide handling face rotatively supported on the member having said socket portion and threadedly engaging said stud

portion for extending and retracting said stud portion relative to said socket portion throughout a continuously variable range of adjustment and further adapted to provide a continuously variable range of adjustment of the compressive forces exerted on the points of said collar as said screw is turned in one direction or the other to urge said members away from each other or towards each other, said bar and said clamp jaw member having intimate contact at their center and edge portions and being apart from each other at their intermediate portions.

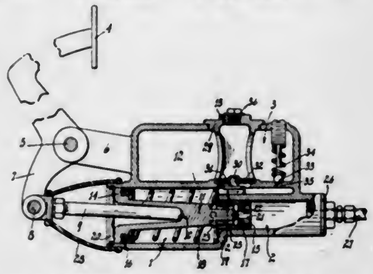


2,438,646
EYE SPECULUM
Seeley T. Pulliam, Houston, Tex.
Application November 6, 1945, Serial No. 626,957
4 Claims. (Cl. 128—20)

1. An eyelid speculum comprising, a face mask composed of side pieces of a general arcuate shape and curved to conform to the contour of the human face, said side pieces being connected together at the top to be relatively adjusted on a vertical axis and forming a forehead portion adapted to fit closely against the forehead of the patient, means for maintaining said side pieces at any point of adjustment, said side pieces being adapted to surround the respective eyes and to fit closely against the sides of the face and having free ends which rest against the cheeks of the patient, means on the mask for selectively engaging the eyelids and adjustable to move the engaged lid to the desired position relative to the eye ball and means for securing the lid-engaging means at a selected position of adjustment.

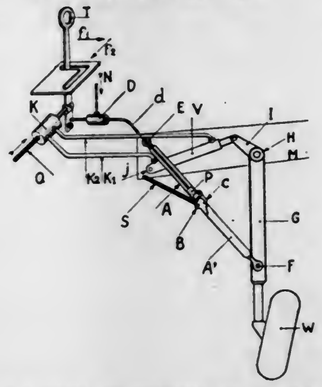
2,438,647
CONTROLLER FOR ELECTRIC MOTORS
Richard R. Ranson, Whitefish Bay, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application April 22, 1946, Serial No. 663,831
8 Claims. (Cl. 318—447)

7. The combination with an electric motor, of quick acting overload protective means for said motor, starting means for said motor, and means inclusive of a series relay, to render said protective means ineffective in starting, of said motor, the third mentioned means further including means acting independently of said series relay to render said protective means ineffective at the time the motor circuit is initially completed by said starting means and then rendering



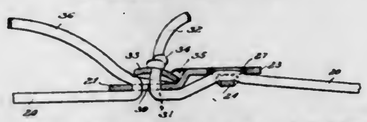
said series relay effective to determine the duration of the period of ineffectiveness of said protective means.

2,438,648
PHOTOPRINT WASHER
James Rodack and Harold E. Bauer, Detroit, Mich.
Application January 7, 1946, Serial No. 639,503
2 Claims. (Cl. 95—97)



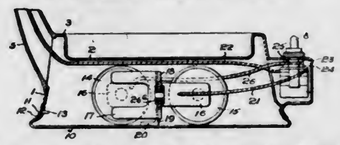
2. A print washer of the class described, comprising: a liquid receptacle embodying oppositely disposed side walls, oppositely disposed end walls and a bottom; a transversely extended partition mounted in said container adjacent one of said end walls; a pair of hangers mounted on one face of said partition; an inlet delivery pipe supported on said hangers and extending longitudinally of said partition; an angularly turned closed end on said delivery pipe turned into substantially a circular formation and projecting downwardly from said delivery pipe, said angularly turned end having outlet openings formed therein and said pipe having outlet openings formed therein, the outlet openings in said pipe being positioned above the outlet openings in said angularly turned portion; and means for adjusting said hangers vertically on said partition for adjusting the position of said inlet delivery pipe relatively to the bottom of said container.

2,438,649
COMPOUND MASTER CYLINDER
Albert E. Roy, Los Angeles, Calif.
Application March 17, 1942, Serial No. 435,003
3 Claims. (Cl. 60—54.6)



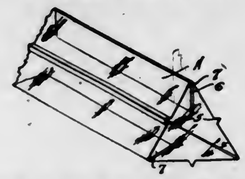
3. In hydraulic brake mechanism the combination with a two-stage master cylinder having high and low pressure cylinders, of a reservoir connected to said low pressure cylinder by valving mechanism which includes: a valve cage having a port connecting said reservoir and said low pressure cylinder; said port being modified to form a bleed port; a gravity operated valve vertically movable in said cage and adapted to close said first port but not said bleed when pressure increases in said cylinder; and a spring operated valve connecting said cylinder and reservoir and adapted to open when said pressure further increases.

2,438,650
CONSTRUCTION OF RETRACTABLE LANDING GEAR
Raymond Saulnier, Paris, France
Application February 13, 1942, Serial No. 430,821
In France May 15, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires May 15, 1960
15 Claims. (Cl. 244—102)



1. A retractable landing gear including a shock absorber pivoted to the airplane proper, a member adapted to run on the ground carried by said shock absorber, a jointed strut pivoted at one end to the airplane proper and at the other end to the shock absorber, said strut being broken in the folded position of the landing gear and straightened in the extended position of said landing gear, means for locking said strut in the landing position, means carried by the strut for bringing said locking means out of action and substantially simultaneously starting the breaking of said strut, and a jack interposed between the airplane proper and said shock absorber for finishing the folding movement started by the above mentioned means.

2,438,651
PULL CLASP
Charles P. Schlegel, Rochester, N. Y., assignor to The Schlegel Manufacturing Company, Rochester, N. Y., a corporation of New York
Application October 9, 1944, Serial No. 557,744
3 Claims. (Cl. 24—18)

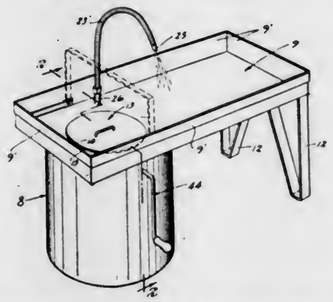


1. A pull clasp for fastening and holding articles comprising a slide plate, flexible ligature means for connection with an article to be fastened and having oppositely extending ends, said plate having a holding means adjacent one end thereof for engagement by one of said ligature end portions and having adjacent the other end thereof a slot opening laterally through an edge of said plate, an abutment on said plate adjacent said slot, and a circular disk fastened to said ligature end and adapted to be pulled thereby into positioning engagement with said abutment and into clamping cooperation with an edge of said slot, whereby when the other of said ligature ends is passed through said slot and tensioned, the said disk will clamp the same against movement.

2,438,652
UTILITY DEVICE FOR SIGNALLING WAITERS IN HOTEL DINING ROOMS, ETC.
Roland L. Smith, Belmont, Mass.
Application April 19, 1946, Serial No. 663,372
10 Claims. (Cl. 177—329)

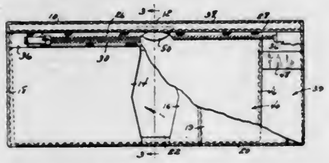
1. A utility device for signalling waiters in hotel dining rooms, in restaurants, etc., comprising a hollow basal member adapted to be received upon and supported by a hotel dining or restaurant table or the like and shaped to support upon an upper face thereof a readily removable table utility receptacle and to receive between such receptacle and the bottom of the hollow basal member a source of electrical energy for the production of a signalling electric light at such table, said device having at least one arm upwardly extending from said hollow basal member laterally outside of the supported utility receptacle so as not to interfere therewith, and provided with a small electric light bulb and also having circuit wiring connecting said light bulb and the individual source of electrical energy within the said hollow basal member, said device being also provided with a switch in the circuit wiring at a point conveniently accessible to a guest seated at the table so that a waiter may be signalled when service is needed.

2,438,653
SCALE
Charles M. Ware, Salt Lake City, Utah
Original application November 7, 1942, Serial No. 464,917, now Patent No. 2,365,735, dated December 26, 1944. Divided and this application November 29, 1944, Serial No. 565,598
5 Claims. (Cl. 33—107)



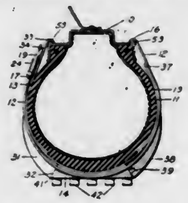
2. A scale of the class described comprising a transparent elongated triangle shaped scale body when viewed from the end having each angle bisected by a longitudinal narrow groove; indicia printed on each side of each angle of the scale;

and an opaque strip secured in said groove to separate the indicia by the strip to prevent interference in reading said indicia.



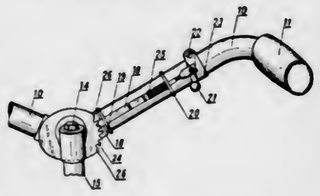
5. A device of the class described comprising a triangular elongated scale having three elongated faces; a groove bisecting each angle; a parting strip carried in each groove; and means medially of each face to raise the greater portion of the scale from the working surface.

2,438,654
AUTO PARTS WASHER
Victor N. Albertson, Minneapolis, Minn.
Application February 25, 1944, Serial No. 523,828
3 Claims. (Cl. 134—111)



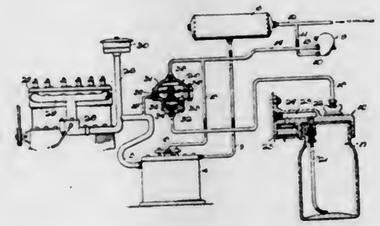
1. In a parts washer of the kind described, a a vertically disposed cylinder acting fluid reservoir, a work deck overlying and supported from said reservoir, a piston mounted for limited reciprocating movement in the fluid reservoir and having sliding sealing engagement with the inner surfaces thereof, a fluid delivery conduit leading from the reservoir at a point beyond one limit of movement of the piston and arranged to discharge above the said work deck, fluid return passages from the work deck back to that portion of the reservoir lying on the opposite side of said piston, yielding means biasing the piston to move toward one of its extreme positions, manually operated means for returning the piston to its other extreme position against the action of said yielding means, and a valve controlled port in said piston, said valve being in the nature of a one-way opening check valve permitting free flow of fluid therethrough under return movements of the piston and preventing flow of fluid therethrough under operative movements of the piston responsive to the yielding biasing means.

2,438,655
SECRET POCKET BILLFOLD
Milton Becker, Passaic, N. J.
Application December 7, 1945, Serial No. 633,416
1 Claim. (Cl. 150—36)



A device of the character described, comprising an elongated body foldable on the line of its transverse center, the upper edge of said body turned upon itself to form a fold, a track of a slide fastener secured to said fold, a wall having tabs for securing said wall to said body, the companion track of said fastener being secured to the upper end of said wall, said wall and said body thereby forming a bill receiving compartment closed by said fastener, a pocket in said compartment, means for securing said pocket in said compartment, said pocket being of a width to extend from the bottom of said compartment to a line in the rear of said first named track whereby said track retains said pocket in said compartment, a semi-circular shaped tab secured to the body at the central portion of the fold thereof, which extends downwardly from the fold to engage and aid the first track in retaining the pocket in said compartment when said fastener is moved to open said compartment, and inwardly opening pockets secured to said body outermost of said wall.

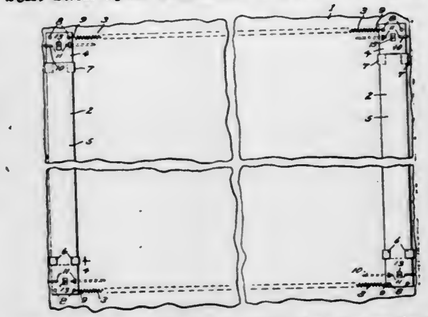
2,438,656
TRACTION DEVICE
Sol M. Crumrine, Des Moines, Iowa
Application August 29, 1946, Serial No. 693,726
5 Claims. (Cl. 152—226)



2. A traction device for a vehicle wheel having a rim and a tire comprising, a pair of nested substantially U-shaped members adapted to extend about said tire, means at opposite ends of said U-members adapted to be connected with opposite sides of said wheel rim to hold said two members about the tire, means yieldably connecting said pair of U-members for relative longitudinal movement, and a traction unit supported on said pair of U-members intermediate the ends thereof.

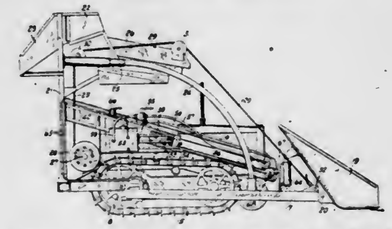
2,438,657
BICYCLE HANDLE
Marie-Marguerite Dufaux, Geneva, Switzerland
Application August 24, 1944, Serial No. 550,950
In Switzerland October 7, 1943
1 Claim. (Cl. 74—551.5)

In a bicycle handle construction, a toothed flange carried in a nearly vertical plane by the nipple of the steering column, two pivots on said flange, a pair of handle arms pivotally mounted on said pivots and having their inner ends in intermeshing engagement so that they may be simultaneously adjusted to the desired angular position, a spring urged and manually operable pawl slidingly mounted along one of said handle arms and adapted to engage with its inner end said toothed flange for locking said handle arms in the desired angular position, a plate movably engaged with the projecting ends of said pivots, springs arranged about the projecting ends of said pivots and pressing said plate against the inner ends of the handle arms for braking the angular movements of said arms when released from the locking pawl, whereby the handle arms may be adjusted to the desired height while running, and adjusting elements threaded on the projecting ends of the pivots for adjusting the tension of the braking springs.



2,438,658
CONTROL MECHANISM
Ellery R. Fitch, Elyria, Ohio, assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware
Application November 8, 1944, Serial No. 562,555
9 Claims. (Cl. 230—2)

1. The combination in a fluid pressure supply system of the type having a reservoir, an air compressor having a discharge port connected to the reservoir, an inlet port connected to a source of air having a pressure below atmospheric pressure, and means responsive to variations of pressure in the reservoir for unloading the compressor when the pressure therein exceeds a predetermined value, of means operated by the vacuum in the inlet port for supplying an anti-freeze fluid thereto and to the air compressed by the compressor including a fluid container and a connection between said container and inlet port, and means controlled by the operation of said pressure responsive means for preventing the flow of anti-freeze fluid through the last named connection to the compressor when the compressor is unloaded.

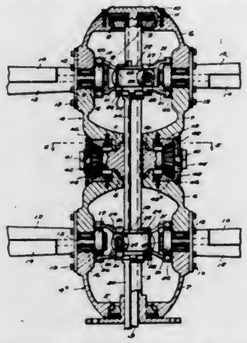


2,438,659
DEVICE FOR HOLDING ARTICLES IN ROOFS OF AUTOMOBILES
Raymond F. Fowler, Colorado Springs, Colo.
Application May 29, 1946, Serial No. 673,115
5 Claims. (Cl. 211—31)

2. A hat holder comprising end bars each formed of companion strips arcuate in cross section, and having their inner end portions provided with side tongues holding the strips together and permitting longitudinal sliding adjustment of the strips, helical springs extending between ends of said end bars and connected with outer ends of their strips, said strips having their outer ends formed with transversely spaced openings and between their openings being cut to form tongues bent inwardly to form loops extending longitudinally of the strips, and pins passed through the openings and the loops and having portions projecting from outer side edges of the strips and bent back upon themselves across inner faces of

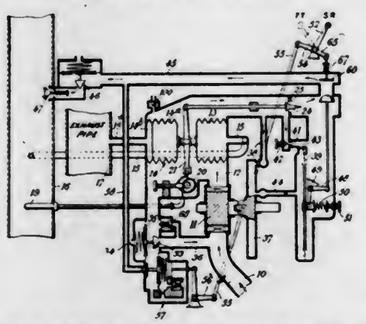
the strips with their sharpened ends projecting from inner side edges of the strips.

2,438,660
EXCAVATING AND LOADING APPARATUS
Fay Garner, Longmont, Colo.
Application September 8, 1944, Serial No. 553,182
7 Claims. (Cl. 214—131)



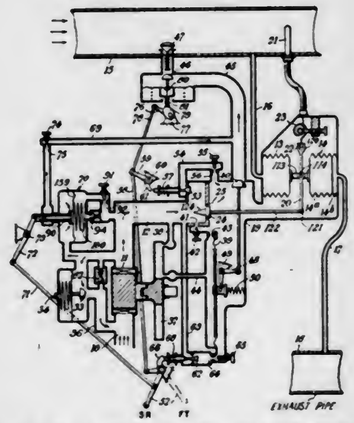
1. Excavating and loading apparatus for association with a powered tractor, comprising an auxiliary frame fixedly mountable on the tractor, a bucket-equipped yoke hinged for actuation through a vertical arc in embracing relation with the tractor and frame, means including a rotatable winding shaft and associated cables wholly and operatively carried by said frame and connecting with said yoke power-actuatable to swing the latter relative to said frame, an hydraulic system including a pressure pump and an extensible ram fixedly mountable on and in powered relation with the tractor independently of the frame, and flexible connections operatively between the shaft of said means and said ram for the reflection of ram displacement as proportional rotation of said shaft.

2,438,661
PROPELLER ASSEMBLY
Jessie B. Grady, Pasadena, Calif.
Application June 20, 1945, Serial No. 600,429
1 Claim. (Cl. 170—135.6)



A propeller assembly comprising a shaft housing, a vertical tubular spindle, an annular flange rigid with the lower end of said spindle and bolted to said shaft housing, upper and lower propellers having hollow hubs journaled on said spindle in vertically spaced relation, said hubs having centrally apertured end walls through which said spindle extends, a pair of oppositely projecting radial blades carried by each hub, a drive shaft journaled in and extending through said spindle, a nose fixed to the upper end of

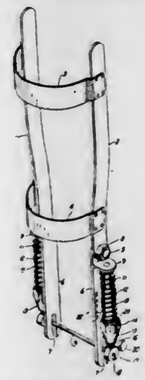
said drive shaft and bolted to the upper end wall of the hub of the upper propeller, a spider keyed on said spindle between the hubs of said propellers and provided with radial stub shafts having bevel pinions journaled thereon, bevel ring gears secured on the adjacent ends of the propeller hubs and meshing with said pinions, a circular housing encompassing said pinions and ring gears and secured on said stub shafts, packings between the edges of said circular housing and



the adjacent ends of said propeller hubs, a sleeve slidable on said spindle within each propeller hub, at least a part of each propeller blade being capable of feathering movement, means within each propeller hub operatively connecting the adjacent sleeve to at least a part of each associated propeller blade for feathering the same, and operating bars for said sleeves slidable longitudinally of said spindle and extending into said shaft housing.

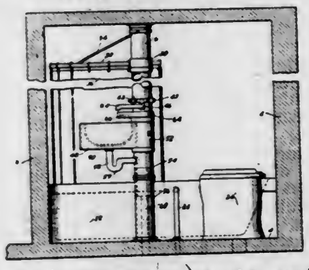
2,438,662
FUEL INJECTION SYSTEM FOR INTERNAL-COMBUSTION ENGINES
Leonard Sidney Greenland, Weston-super-Mare, England, assignor to H. M. Hobson Limited, London, England, a company of Great Britain
Application December 29, 1945, Serial No. 638,128
In Great Britain February 12, 1945
9 Claims. (Cl. 123—119)

1. In a fuel injection system for an internal combustion engine comprising a fuel supply conduit, a fuel metering orifice therein, means for feeding fuel under pressure along said conduit and through said orifice, an engine driven centrifugal impeller for controlling the proportion of fuel in the fuel-air mixture supplied to the engine, a pressure regulating valve on the downstream side of the metering orifice, a pressure responsive device controlling said valve, said pressure responsive device being exposed at one side to the fuel pressure at the exit of the metering orifice, a conduit for subjecting the other side of said device to the pressure at the eye of the impeller, and a conduit connecting the tip of the impeller to the fuel supply conduit at the entry side of the metering orifice, the combination with said pressure responsive device of means for exerting thereon a biasing force which is small in comparison with the fuel pressure difference prevailing across the metering orifice except under slow running conditions.



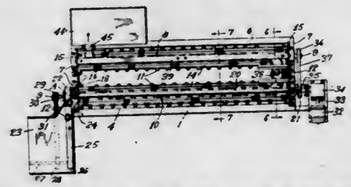
2,438,663
FUEL INJECTION SYSTEM FOR INTERNAL-COMBUSTION ENGINES
Leonard Sidney Greenland, Weston-super-Mare, England, assignor to H. M. Hobson Limited, London, England, a company of Great Britain
Application December 29, 1945, Serial No. 638,130
In Great Britain February 12, 1945
6 Claims. (Cl. 123—119)

1. In a fuel supply system for an internal combustion engine, comprising a main fuel conduit, a variable area metering orifice in said conduit, a fuel pump for feeding fuel under pressure along said conduit and through said metering orifice, means for varying the effective area of said orifice as a desired function of boost pressure, and means for maintaining across said orifice a metering pressure which varies as a desired function of engine speed and thereby controlling the ratio of fuel to air in the mixture supplied to the engine, the combination with a pilot's throttle lever, movable from a slow running position through a weak cruising range to a normal cruising position and beyond to select higher power from the engine, of a first supplementary fuel conduit, a slow running valve for controlling the flow of fuel through said first supplementary conduit, a second supplementary fuel conduit, a weak-to-normal enrichment valve for controlling the flow of fuel through said second supplementary conduit, a third supplementary conduit in parallel with the metering orifice, an accelerator pump for feeding fuel through said third supplementary conduit, all of said supplementary conduits, when in operation, providing passages alternative to the metering orifice for the fuel supplied by the fuel pump, and a single manually operable linkage controlled by the pilot's throttle



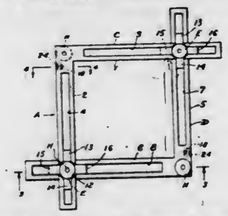
lever and arranged to operate both valves and the accelerator pump automatically and as an incident to movement of said lever, and by the resultant control in the flow of fuel through said supplementary conduits to provide an adjustment in the fuel flow at slow running, to give an enrichment in mixture strength on movement of said lever from weak cruising position to normal cruising position, and to provide an enrichment in mixture strength during periods of acceleration.

2,438,664
HEEL BONE TRACTION SPLINT
Lloyd E. Hansberry, San Francisco, Calif.
Application February 4, 1946, Serial No. 645,343
3 Claims. (Cl. 128—85)



1. A traction splint of the character described comprising: a pair of generally parallel and opposed straps; a transverse arched member secured at either end to said straps for holding them in laterally spaced relation with respect to each other; strap extensions pivoted to the lower ends of said straps, the lower end of each of said extensions being provided with an elongated slot; a transverse bracket secured to and extending outwardly from the upper end of each of said extensions; and a spring loaded longitudinally extendable and adjustable heel bone pin carrier mounted on each of said brackets in parallelism with the extension on which said bracket is mounted.

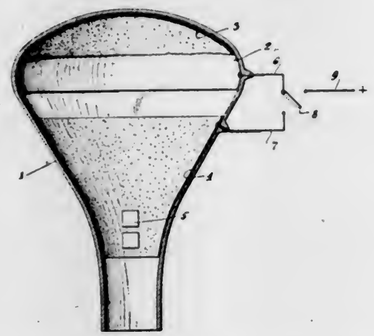
2,438,665
BATHROOM EQUIPMENT.
Arthur T. Hesse, Long Beach, Calif.
Application May 15, 1946, Serial No. 669,735
6 Claims. (Cl. 4—2)



2. In bathroom equipment, the combination, which comprises, a centrally disposed tubular stanchion having a plurality of water supply pipes therein, a tubular post spaced from the stanchion having a drain pipe therein, an upper section rotatably mounted on said post, a wash basin carried by the said upper section of the post, a drain from the wash basin extending through the said upper section of the post and connected to the drain pipe of the post through a swivel joint, and faucets having swivel joints therein carried by the stanchion, connected to the water supply pipes therein, and extending over the wash basin.

2,438,666
CONVEYOR EGG WASHING AND DRYING MACHINE
George F. Hodson, Altus, Okla.
Application July 5, 1946, Serial No. 681,562
1 Claim. (Cl. 15—3.13)

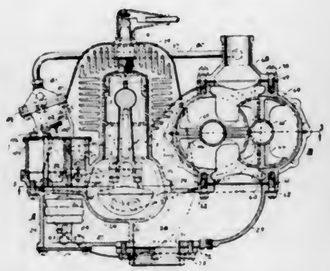
In an egg cleanser, a pair of conveyors coacting, a frame on which the conveyors are journalled and legs to carry the frame, a table carried by the frame in working relation to one end of one of the conveyors, a belt and pulleys to carry the belt, the belt being on a plane with the table and positioned on its side adjacent the said one end of the conveyor, guiding means carried by the table to conduct eggs across the belt and from thence onto the conveyor, and a trough on the other ends of said conveyors to conduct eggs onto one end of the other conveyor, guiding and aligning means for the eggs carried by the conveyors along their upper sides, a table at the other end of last said conveyor and guiding means to dispense the eggs on last said table, a motor and transmission gears to turn said conveyors and move the belt, a pipe and means to carry the pipe in parallelism with first said conveyor and in spaced relation thereabove, said pipe being apertured along its lower side to dispense water over the eggs as conveyed thereunder, fluorescent lamps of suitable length to extend full length of the last said conveyor, and means to carry the same thereabove and being vertically aligned with the turning axis of said conveyor.



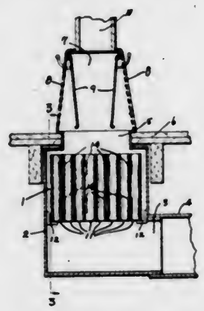
2,438,667
ANGLE CALCULATOR FOR STRUCTURAL MEMBERS
James T. Hogue, San Francisco, Calif., assignor by decree of court to Lenna M. Hogue
Application October 12, 1943, Serial No. 506,001
9 Claims. (Cl. 33—174)

1. An angle calculator comprising a pair of adjustable rectangular frames, adjustable exten-

sions connecting the two frames together, said frames having central openings for receiving a structural member that is to be marked for cutting, and measuring screws placed at the corners of the frames and adapted to be adjusted to contact with surfaces against which the ends of the structural member are to abut, the ends of said screws indicating on the structural member when the member is received in the frames, the place for cutting the member and the angle of cut.



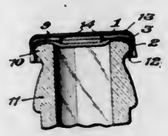
2,438,668
CATHODE-RAY TUBE SCREEN AND PROCESS
Stanley J. Koch, Clifton, and Robert E. Rutherford, Rutherford, N. J., assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application April 28, 1944, Serial No. 533,116
1 Claim. (Cl. 250—164)



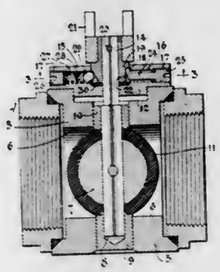
A cathode-ray tube having a layer of approximately molecular particles of electrically conductive material fused together on the inner surface of the outer end thereof, a layer of fluorescent material on said layer, a layer of conducting material on the inside of said tube separated from said layer of particles and means to connect and disconnect said layer of fused particles and said layer of conducting material.

2,438,669
MOTOR FUEL POWER INDUCTION DEVICE
William F. Krenzke, deceased, late of Racine, Wis.; E. A. Jacobsen, special administrator of said William F. Krenzke, assignor to Jacobsen Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Original application January 4, 1943, Serial No. 471,292, now Patent No. 2,397,457, dated March 26, 1946. Divided and this application February 11, 1946, Serial No. 646,779
6 Claims. (Cl. 123—72)

2. A device of the character described comprising, a two cycle internal combustion engine, a carburetor having an outlet, an elongated flat upper surface chamber extending horizontally from the crank case of the engine, the outlet of said carburetor extending through said flat surface adjacent one end thereof, a thin elongated reed valve with spring characteristics having one end secured to the other end of said flat upper surface, its free end adapted to yieldingly close said carburetor outlet and act as an inlet valve to the engine, an oil chamber having an aperture which extends through said flat surface and in proximity to said carburetor outlet and adapted to be closed by said reed valve when the carburetor outlet is closed, whereby oil will be metered into the crank case relative to the volume of mixture admitted into the crank case of the engine.

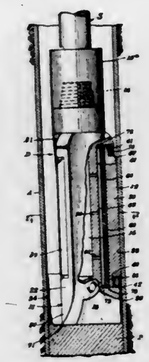


2,438,670
ELECTRIC CIRCULATING HEATER
Harry F. MacDonald and William N. Askers, Spokane, Wash.; said Askers assignor to H. F. MacDonald and J. C. MacDonald, both of Spokane, Wash.
Application May 8, 1946, Serial No. 668,194
1 Claim. (Cl. 219—38)



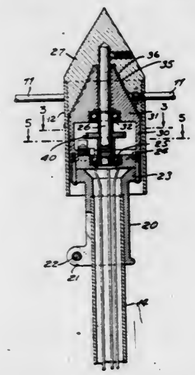
An air heater comprising a casing having side walls and a top and a bottom, the top being formed with an outlet opening surrounded by an upstanding neck and a side wall being formed with an inlet opening surrounded by an outstanding neck, brackets in said casing mounted against side walls thereof above the inlet opening, a bank of vertically extending air tubes in said casing spaced from the walls and top of the casing, the tubes being arranged in horizontal rows and the tubes of each row being welded in side by side engagement with each other and in side by side relation to tubes of adjoining rows, contacting side portions of adjoining rows of tubes being formed with vertically spaced side openings disposed in registering relation with companion openings of the said adjoining tubes and providing the said bank of tubes with transversely extending passages, and electrically energized heating units passing through said passages with end portions projecting from opposite sides of the bank of tubes and adapted for connection with conductors.

2,438,671
RESILIENT SEALING DISC FOR BOTTLE SEALS
José María Bolaño Marana, Buenos Aires, Argentina
Application August 14, 1944, Serial No. 549,357
In Argentina August 18, 1943
2 Claims. (Cl. 288—33)



1. In a container cap, yieldable sealing means comprising a plurality of laminated layers of material, having top and bottom layers of imperforate material and intermediate perforate material, said perforate material comprising a disc having a circular imperforate center and an imperforate outer rim connected by webs, said webs being adapted to flex when capping pressure is applied thereto over the mouth of a container.

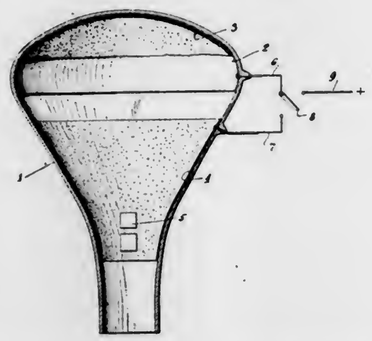
2,438,672
VALVE INDEXING MEANS
Wilton Margrave, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application September 5, 1944, Serial No. 552,775
3 Claims. (Cl. 74—527)



1. Indexing means for a valve structure wherein are provided a casing and a rotor turnable back and forth to and between two selective positions, said indexing means comprising a rotor portion movable with the rotor, a part fixed on the casing and having a bore therethrough intersecting the axis of the rotor, a stop screw mounted in one end of the bore and projecting radially inwardly for engagement with said rotor portion, and a spring detent mounted in the other end of the bore and projecting radially inwardly for engagement with said rotor portion, said rotor portion having a recess in the side thereof presented toward said screw with the ends of the recess disposed to engage as stop means with the screw when the rotor is turned to one or the other of said selective positions, and said rotor portion also having two recesses in its periphery at its other side in which to selectively receive the spring detent and disposed cooperatively with relation to the recess ends to yieldably hold the rotor in one or the other of said selective positions.

2,438,673
WELL TOOL
Thomas E. McMahan, Ojai, Calif.
Application February 20, 1945, Serial No. 578,820
1 Claim. (Cl. 166—18)

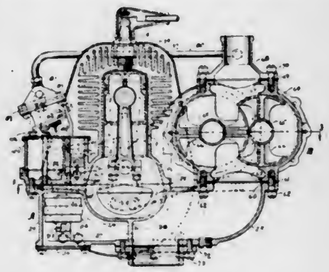
A tool of the character described including an elongate body to be rotated by a well string, there being a longitudinal fluid passage in the body and restricted outlet passages at the lower end of the body, a blade having an edge, a rib projecting from the side of the body forming a guideway carrying the blade so its edge faces in the direction of rotation of the body, there being a passage connecting the said fluid passage and the guideway, and a sealing member in the guideway behind the blade, the rib extending to the lower end of the body and there having an edge facing in the direction of rotation of the body.



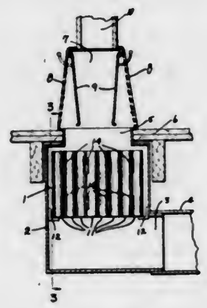
2,438,674
ANEMOMETER
Arthur T. Newell, Huntington, N. Y., assignor to Kenyon Instrument Co., Inc., Huntington Station, N. Y., a corporation of New York
Application November 16, 1945, Serial No. 629,047
1 Claim. (Cl. 200—81.9)

A remote reading anemometer comprising a post, a housing mounted on said post having a cylindrical wall and upper and lower closure members forming a closed chamber and carrying upper and lower bearings, said upper closure member having a conical surface of substantial

sions connecting the two frames together, said frames having central openings for receiving a structural member that is to be marked for cutting, and measuring screws placed at the corners of the frames and adapted to be adjusted to contact with surfaces against which the ends of the structural member are to abut, the ends of said screws indicating on the structural member when the member is received in the frames, the place for cutting the member and the angle of cut.



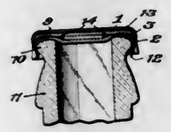
2,438,668
CATHODE-RAY TUBE SCREEN AND PROCESS
Stanley J. Koch, Clifton, and Robert E. Rutherford, Rutherford, N. J., assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application April 28, 1944, Serial No. 533,116
1 Claim. (Cl. 250—164)



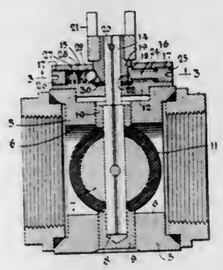
A cathode-ray tube having a layer of approximately molecular particles of electrically conductive material fused together on the inner surface of the outer end thereof, a layer of fluorescent material on said layer, a layer of conducting material on the inside of said tube separated from said layer of particles and means to connect and disconnect said layer of fused particles and said layer of conducting material.

2,438,669
MOTOR FUEL POWER INDUCTION DEVICE
William F. Krenzke, deceased, late of Racine, Wis.; E. A. Jacobsen, special administrator of said William F. Krenzke, assignor to Jacobsen Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Original application January 4, 1943, Serial No. 471,292, now Patent No. 2,397,457, dated March 26, 1946. Divided and this application February 11, 1946, Serial No. 646,779
6 Claims. (Cl. 123—72)

2. A device of the character described comprising, a two cycle internal combustion engine, a carburetor having an outlet, an elongated flat upper surface chamber extending horizontally from the crank case of the engine, the outlet of said carburetor extending through said flat surface adjacent one end thereof, a thin elongated reed valve with spring characteristics having one end secured to the other end of said flat upper surface, its free end adapted to yieldingly close said carburetor outlet and act as an inlet valve to the engine, an oil chamber having an aperture which extends through said flat surface and in proximity to said carburetor outlet and adapted to be closed by said reed valve when the carburetor outlet is closed, whereby oil will be metered into the crank case relative to the volume of mixture admitted into the crank case of the engine.

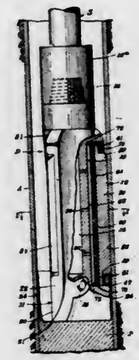


2,438,670
ELECTRIC CIRCULATING HEATER
Harry F. MacDonald and William N. Askers, Spokane, Wash.; said Askers assignor to H. F. MacDonald and J. C. MacDonald, both of Spokane, Wash.
Application May 8, 1946. Serial No. 668,194
1 Claim. (Cl. 219—38)



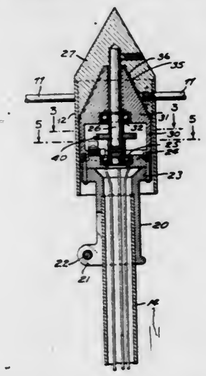
An air heater comprising a casing having side walls and a top and a bottom, the top being formed with an outlet opening surrounded by an upstanding neck and a side wall being formed with an inlet opening surrounded by an outstanding neck, brackets in said casing mounted against side walls thereof above the inlet opening, a bank of vertically extending air tubes in said casing spaced from the walls and top of the casing, the tubes being arranged in horizontal rows and the tubes of each row being welded in side by side engagement with each other and in side by side relation to tubes of adjoining rows, contacting side portions of adjoining rows of tubes being formed with vertically spaced side openings disposed in registering relation with companion openings of the said adjoining tubes and providing the said bank of tubes with transversely extending passages, and electrically energized heating units passing through said passages with end portions projecting from opposite sides of the bank of tubes and adapted for connection with conductors.

2,438,671
RESILIENT SEALING DISC FOR BOTTLE SEALS
José María Bolaño Marana, Buenos Aires, Argentina
Application August 14, 1944, Serial No. 549,357
In Argentina August 18, 1943
2 Claims. (Cl. 288—33)



1. In a container cap, yieldable sealing means comprising a plurality of laminated layers of material, having top and bottom layers of imperforate material and intermediate perforate material, said perforate material comprising a disc having a circular imperforate center and an imperforate outer rim connected by webs, said webs being adapted to flex when capping pressure is applied thereto over the mouth of a container.

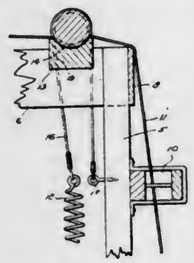
2,438,672
VALVE INDEXING MEANS
Wilton Margrave, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application September 5, 1944, Serial No. 552,775
3 Claims. (Cl. 74—527)



1. Indexing means for a valve structure wherein are provided a casing and a rotor turnable back and forth to and between two selective positions, said indexing means comprising a rotor portion movable with the rotor, a part fixed on the casing and having a bore therethrough intersecting the axis of the rotor, a stop screw mounted in one end of the bore and projecting radially inwardly for engagement with said rotor portion, and a spring detent mounted in the other end of the bore and projecting radially inwardly for engagement with said rotor portion, said rotor portion having a recess in the side thereof presented toward said screw with the ends of the recess disposed to engage as stop means with the screw when the rotor is turned to one or the other of said selective positions, and said rotor portion also having two recesses in its periphery at its other side in which to selectively receive the spring detent and disposed cooperatively with relation to the recess ends to yieldably hold the rotor in one or the other of said selective positions.

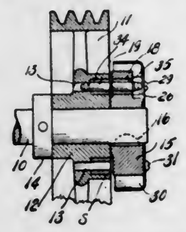
2,438,673
WELL TOOL
Thomas E. McMahan, Ojai, Calif.
Application February 20, 1945, Serial No. 578,820
1 Claim. (Cl. 166—18)

A tool of the character described including an elongate body to be rotated by a well string, there being a longitudinal fluid passage in the body and restricted outlet passages at the lower end of the body, a blade having an edge, a rib projecting from the side of the body forming a guideway carrying the blade so its edge faces in the direction of rotation of the body, there being a passage connecting the said fluid passage and the guideway, and a sealing member in the guideway behind the blade, the rib extending to the lower end of the body and there having an edge facing in the direction of rotation of the body.



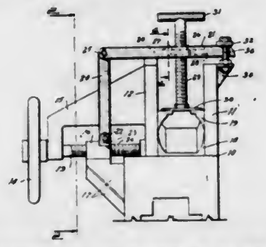
2,438,674
ANEMOMETER
Arthur T. Newell, Huntington, N. Y., assignor to Kenyon Instrument Co., Inc., Huntington Station, N. Y., a corporation of New York
Application November 16, 1945, Serial No. 629,047
1 Claim. (Cl. 200—81.9)

A remote reading anemometer comprising a post, a housing mounted on said post having a cylindrical wall and upper and lower closure members forming a closed chamber and carrying upper and lower bearings, said upper closure member having a conical surface of substantial



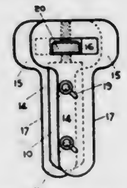
extent extending above the upper bearing to shield the same, a shaft journaled in said bearings and projecting upwardly beyond the upper closure member, a cap mounted on said shaft having a lower conical surface registering with and having a running fit over the conical surface of said upper closure member, a sleeve on said cap extending downwardly around said cylindrical wall and projecting below said lower closure member, radial arms carried by said sleeve, wind cups on said arms, a switch located in said chamber, a cam disc carried by said shaft within said chamber, and a cam follower actuated by said cam disc and connected to actuate said switch.

2,438,675
WARP TENSION ATTACHMENT
George K. Nicholas, La Porte, Ind.
Application September 26, 1946, Serial No. 699,431
2 Claims. (Cl. 139—97)



2. A warp tensioning attachment for looms comprising a grooved block over which strands of yarns are drawn, a roller seated on the block, a flexible member extended over the roller and slidably extended through said block to yieldably maintain the roller seated in the groove of the block.

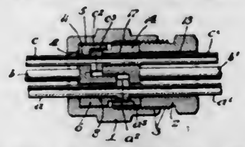
2,438,676
SAFETY SHEAR-PIN DRIVE
Frank H. Nickle and Arthur G. Nickle, Saginaw, Mich.
Application December 31, 1943, Serial No. 516,556
10 Claims. (Cl. 64—28)



3. A safety driving means for transmitting rotative movement from a driving member to a driven member axially aligned therewith, said means comprising a cylindrical shear-pin having an annular groove near one end thereof, and means carried by one of said members for holding the unsheared shear-pin in proper relation therewith, said holding means comprising a bifurcated element that straddles the shear-pin and seats in opposite sides of the annular groove.

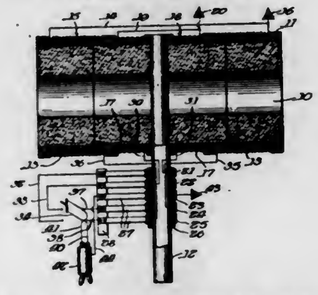
2,438,677
TIRE CASING VULCANIZER
Virgil F. Ostler, Denver, Colo., assignor to Lewis Equipment and Supply Company, Denver, Colo.
Application December 29, 1945, Serial No. 638,076
1 Claim. (Cl. 18—18)

The combination in a casing vulcanizer of a fixed vise jaw; a movable vise jaw; a nut fixed adjacent said movable jaw, said nut and said fixed jaw being on opposite sides of said moveable jaw, a vise screw threaded through said nut into contact with said movable jaw; link means hingedly mounted on said nut and extending upwardly therefrom; a beam hinged to the upper extremity of said link means and extending across both vise jaws; means for clamping the free extremity of said beam to said fixed jaw; and a jack screw extending downwardly from said beam between said jaws.



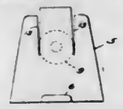
2,438,678
TOBACCO-PIPE SCRAPING TOOL
Donald Ashford Palmer, Sheffield, England
Application August 20, 1945, Serial No. 611,535
In Great Britain August 31, 1944
9 Claims. (Cl. 131—246)

1. A tobacco-pipe scraping tool comprising in combination a base having more than one flat face, a scraper blade mounted on each of such faces, and guided to slide in relation thereto between closed and expanded positions in which latter positions operative edges of all the blades project equal distances beyond the base faces and a screw device axially aligned with said base capable of causing such relative sliding movement between the base and each blade.



2,438,679
MANIFOLD TUBE COUPLING
Arthur L. Parker, deceased, late of Cleveland, Ohio, by Helen M. Parker, executrix, Shaker Heights, and Lorain N. Vandervoort, Cleveland, Ohio, assignors to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application May 15, 1945, Serial No. 593,800
5 Claims. (Cl. 285—21)

1. A coupling for a group of tubes comprising coupling members having a threaded connection, said coupling members when connected being provided with bores in alignment through which groups of tubes to be connected may be inserted, said coupling members being provided with a recess, opposed tube positioning members in said recess each of said positioning members having

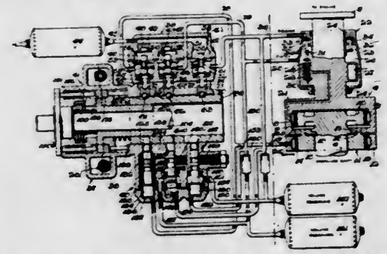


a separate bore for each tube of the group associated therewith in which the tubes may be arranged in a desired order, and means ensuring the connection of certain selected tubes in the group when said coupling members are joined.

2,438,680
LOOP ANTENNA APPARATUS
Wladimir J. Polydoroff, Glencoe, Ill.
Original application March 11, 1943, Serial No. 478,748. Divided and this application October 20, 1944, Serial No. 559,496
5 Claims. (Cl. 250—33.67)

1. A low impedance directional loop antenna system for the reception of electromagnetic waves, comprising in combination, an elongated tubular ferromagnetic core made in sections of finely divided and compressed magnetic particles, coil windings spread substantially over the length of said core and serially connected in aiding sense to increase the effective permeability of said core in said windings, a supporting form common to said core and coil and in close association with the core, means supporting the core and coil combination for rotation, said means having securement to the supporting form and having provision for carrying the terminal connections of said coil windings.

2,438,681
KNIFE SHARPENER
Jay R. Reese, Hamburg, Iowa
Application September 8, 1947, Serial No. 772,832
4 Claims. (Cl. 76—89)

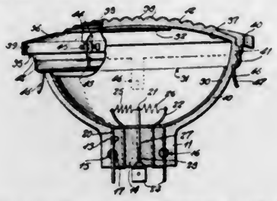


4. A knife sharpener comprising a hollow body, a rib extended across the interior of the body, said rib having a slot extending longitudinally thereof, a sharpening disc removably held within the slot, said body having knife guide slots extending inwardly from one end thereof and intersecting the slot of the rib whereby portions of the sharpening disc are exposed within the guide slots, and means for removably holding the sharpening disc within the slot.

2,438,682
METHOD AND MATERIALS FOR CLEANING OIL WELLS AND EQUIPMENT
Pearlie B. Roberts, Tyler, Tex.
No Drawing. Application August 7, 1945, Serial No. 609,491
6 Claims. (Cl. 252—8.55)

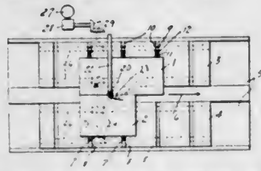
1. The method of liquefying solids deposited from petroleum, in which said deposits are treated with a mixture consisting essentially of a chemical selected from the group consisting of sodium hydroxide and potassium hydroxide, said chemical representing from 10% to 90% of the mixture, a phenol representing from 90% to 10% of the mixture, and sufficient water to dissolve the mixture, said treatment being accomplished in the presence of crude oil.

2,438,683
FLUID PRESSURE CONTROL MECHANISM
Frederick F. Rohrer, Jr., Philadelphia, Pa., assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware
Application March 22, 1944, Serial No. 527,649
32 Claims. (Cl. 192—.01)



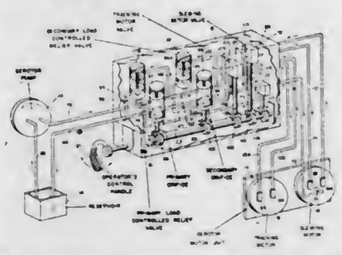
1. Control mechanism for a pair of fluid actuators including valve means for controlling the supply of fluid pressure to each actuator, means including a control element for selectively operating said valve means to supply fluid pressure to either of said actuators, and means controlled by the pressure of fluid supplied to one of said actuators for preventing operation of the valve means by said element to supply fluid pressure to the other actuator except when the pressure of fluid supplied to said one actuator is less than a predetermined value.

2,438,684
ELECTRIC LAMP
Grover C. Singer, Brownsville, Tex.
Application June 16, 1945, Serial No. 599,785
2 Claims. (Cl. 240—41.5)



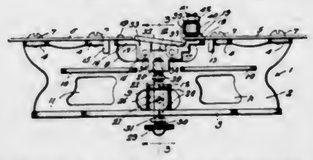
2. In an electric lamp including a globe, a mounting protector therefor applied to the outer edge of said globe where the side wall meets the top, said protector comprising a ring having flanges extending in different directions, one being an inwardly curved annular flange extending from the inner periphery of the ring and embracing a portion of the top of the globe, the other flange extending rearwardly from the ring and embracing a portion of the side wall of said

globe and provided with a plurality of spaced tongues disposed in a non-engaging position with reference to the globe, said ring and tongues



having perforations lying beyond the surface of the globe to receive means for attaching the globe to a fixed support.

2,438,685
METHOD FOR JOINING THERMOPLASTIC PIECES
Don E. Stevens, South San Francisco, Calif., assignor to Hammond Aircraft Company, South San Francisco, Calif.
Application September 20, 1943, Serial No. 503,168
3 Claims. (Cl. 154—42)



1. The method of joining pieces of thermoplastic material that comprises the steps of arranging a pair of said pieces having similar opposed surfaces with said surfaces in engagement with each other, yieldably urging said surfaces into engagement and then, while so urging said surfaces, fusing said surfaces together by passing a member between said surfaces at a temperature above the melting point of said material, and finally heating the material of said pieces at opposite edges of said surfaces after said surfaces have been so fused together.

2,438,686
MULTIPLE MOTOR
Albert Rivington Stone, Baltimore, Md.
Application June 22, 1945, Serial No. 600,947
2 Claims. (Cl. 74—189.5)

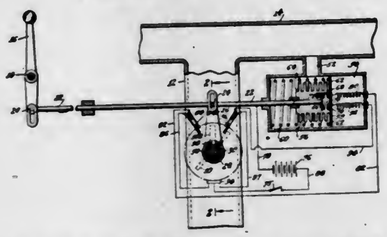
2. A hydraulic power assembly comprising, paired hydraulic motors having power output shafts, a source of fluid power supply for said motors, control valve means for metering fluid to said motors from said power supply, a diaphragm disposed at the end of one of said motor shafts and serving as a brake for the same, means for releasing said brake, a power take-off shaft common to said motors, planetary gearing connecting the output shafts of said motors in driving relation with said take-off shaft, and control means for regulating said control valve means and serving to actuate said brake release means as an incident to admittance of energizing fluid to the motor corresponding to said brake.

2,438,687
RAKER SHARPENING GAUGE
Jay C. Stone, Clayton, Wash.
Application May 24, 1946, Serial No. 672,036
3 Claims. (Cl. 76—46)

3. A device of the character described comprising a frame, front and rear cap plates projecting laterally of the frame, a bridge between the cap plates formed with a vertically extending bore, upper and lower side extensions for the frame having openings aligned with the bore, an adjusting screw extending vertically and rotatably mounted through the openings and having its upper portion threaded through the bore, a collar about said bolt removably secured thereon between the side extensions with its ends engaging the side extensions and preventing vertical movement of the bolt, the bolt when turned shifting the bridge to vertically adjusted positions, a nut threaded upon the bolt under the lower side extension for engaging the under face of the said lower side extension and securing the bolt in an adjusted position, a guide plate carried by said bridge and extending at a longitudinal incline between the cap plates, a swage carried by said guide plate and extending vertically in advance of the front end thereof, and means for mounting a file longitudinally of the frame under the guide plate and the cap plates.

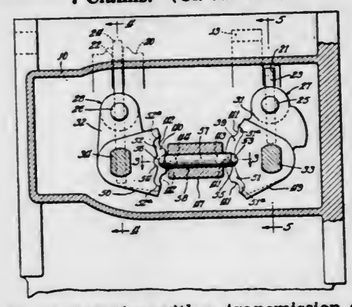
2,438,688
LAP
Earl E. Swanson, North Hollywood, Calif., assignor to Ruth C. Swanson, North Hollywood, Calif.
Application September 11, 1945, Serial No. 615,647
3 Claims. (Cl. 51—184.2)

1. A lap of the character shown and described including a body the upper part of which constitutes the supporting shank and the lower part



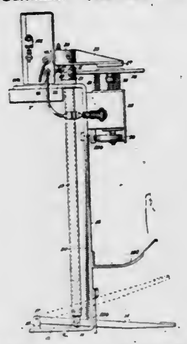
of which is hollow and constitutes the working body, the working body part being split longitudinally and also being cut circumferentially from said split in opposite directions therefrom for a part of the circumference of said hollow body and leaving the uncut portion as the supporting connection between the working body and the shank part of said body, and providing two wing portions to function as the work-portion of said work body.

2,438,689
CONTAINER AND CLOSURE THEREFOR
Arthur John Williams, Poole, and William Johnston Dyson, Bournemouth, England, assignors of one-third to The Wallis Tin Stamping Company Limited, Poole, England, a British company
Application February 8, 1946, Serial No. 646,292
In Great Britain January 22, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires January 22, 1965
3 Claims. (Cl. 215—38)



1. The combination of a container having an external flange around its mouth, which flange is circumferentially grooved between its lower edge and the top of the container, which groove is interrupted to provide a single abutment, of a two-part closure comprising an inner flanged metal cap to close the mouth of the container and reach down around the outside thereof, which cap flange is provided with two diametrically opposite extensions each reaching around about one-quarter of the circumference of the flange with its lower edge inwardly directed to clip into the groove in the container flange and hold the cap in sealing position and also to engage the said abutment when the extensions are in the groove, if the cap is rotated, and a removable metal band the edges of which are turned over on to the top of the said cap and under the flange on the container.

2,438,690
THROTTLE CONTROL SYSTEM
Douglas H. Andrews, Jr., West Hartford, and Donald E. Lipfert, Meriden, Conn., assignors, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application October 16, 1943, Serial No. 506,524
4 Claims. (Cl. 137—139)



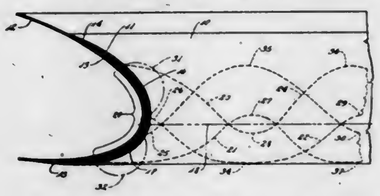
1. A throttle control system comprising, in combination, manual and electric means for moving said throttle to provide a desired manifold pressure, a single clutch member movable to interconnect either said manual moving means or said electric moving means with said throttle, said clutch being so constructed as to be effective upon disconnection of said electric moving means and connection of said manual moving means with said throttle for causing said manual moving means to indicate the position of said throttle.

2,438,691
TRANSMISSION CONTROL MECHANISM
Kenneth M. Armantrout, Muncie, Ind., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application September 11, 1944, Serial No. 553,504
7 Claims. (Cl. 74—477)

1. In combination with a transmission assembly having a plurality of shiftable torque transmitting members, and separate cam elements carried by spaced rock shafts for shifting said members, the improvement comprising peripherally notched indexing sectors on said shafts in confronting edge relation to each other; peripherally notched interlock sectors on said shafts arranged in confronting edge relation to each other; an indexing poppet device between said shafts cooperating with the notched peripheries of said indexing sectors; and an interlock device between said shafts cooperating with the notched peripheries of said interlock sectors.

2,438,692
PNEUMATIC TORQUE MACHINE
Lewis C. Broecker, Nichols, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn., a corporation of Connecticut
Original application February 19, 1943, Serial No. 476,472. Divided and this application June 13, 1945, Serial No. 599,181
3 Claims. (Cl. 192—150)

1. In a fluid pressure-actuated device for uniformly tightening parts together on another part,



means for delivering actuating fluid under pressure to said device, valve means in conjunction with said fluid-delivering means, electrical means for operating said valve means, said electrical means including a solenoid for operating said valve and a switch for connecting said solenoid to a source of electrical power, a second solenoid, pressure-responsive electrical control means for connecting said second solenoid to said source of power, a movable member operated by said second solenoid and movable in response to the position of an element of one of said first-named parts, a second switch responsive to movement of said movable member, a third solenoid connected to said second switch and to said source of power and means coupling said third solenoid to said first-named switch to open and close the latter whereby said valve means will be actuated to cut off said fluid under pressure when a determined amount of tightening action has been effected by said device and said element has been moved to a determined position.

2,438,693

ICE REMOVING COVERING FOR AIRFOILS

Robert G. Campbell, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

Application March 17, 1944, Serial No. 526,866
6 Claims. (Cl. 244—134)

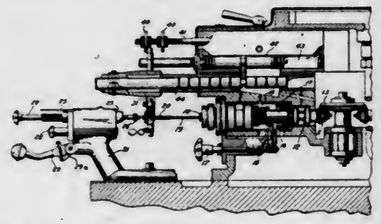
1. Apparatus for preventing the accumulation of ice on the leading edge of an airfoil, said apparatus comprising a covering for said leading edge comprising resilient rubber-like material having an inflatable tube extending along the covering and throughout the width of its bore diagonally across a substantially straight line along the covering with a portion of said tube throughout the width of its bore disposed entirely to one side of and spaced from said line and with another portion of said tube throughout the width of its bore disposed entirely to the other side of and spaced from said line, said covering being constructed and arranged to present upon inflation of said tube a distended surface of the covering substantially coextensive with the width of said tube throughout its extent.

2,438,694

MANUFACTURE OF PHENOLS

Charles Arthur Cross, Northwich, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application December 11, 1945, Serial No. 634,389. In Great Britain December 22, 1944
5 Claims. (Cl. 260—619)



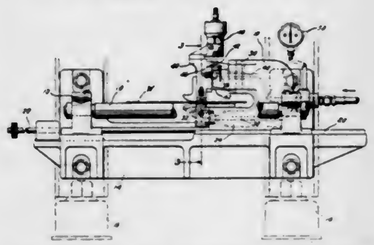
1. Process for the manufacture of phenols which comprises passing a vapour containing a volatile aromatic non-tertiary amine and a molecular excess of steam, the range being between 5 and 50 moles of steam per mole of amine, over alumina catalyst at a temperature exceeding 350° C., preferably 400°–550° C., and at substantially atmospheric pressure, and thereafter separating the phenol from the mixture produced.

2,438,695

HOLE LAPPING MACHINE

Alden M. Drake, West Hartford, Conn., assignor to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey

Application January 29, 1944, Serial No. 520,257
6 Claims. (Cl. 51—92)



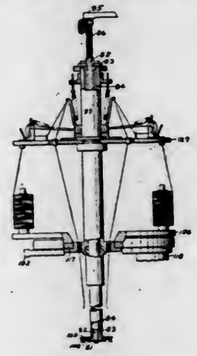
5. A lapping machine comprising in combination, a base having a lapping tool rotatable therein, a piston reciprocable in a direction parallel to the axis of rotation of said lapping tool, a holder comprising a clamping member engaging a work piece on said lapping tool, co-axial alined projections extending from opposite portions of said clamping member, a yoke member having recesses engaging said projections whereby said work piece may swivel about the axis of said projections, and a projection on said yoke member extending at right angles to the axis of said recesses whereby said work piece may be reciprocated over said lapping tool by said piston.

2,438,696

CONTINUOUS AIR GAGE

Raymond S. Fox and Charles A. Whitney, West Hartford, Conn., assignors to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey

Application November 21, 1945, Serial No. 630,052
5 Claims. (Cl. 73—37.5)



1. An air gage for continuously gaging strip material while in motion, comprising in combination, a guide roll over which the material being gaged passes, a nozzle disposed slightly below the plane of the material passing over said roll, a nozzle disposed slightly above the plane of the upper surface of said material, micrometer means to adjust said second nozzle toward and from the first nozzle, conduits for supplying air to said nozzles, and means to indicate the pressure within said conduits adjacent said nozzles.

2,438,697

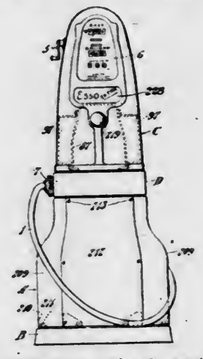
KNITTING MACHINE

Oscar Fregeolle, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a corporation of Massachusetts

Original application October 18, 1944, Serial No. 559,136. Divided and this application September 12, 1945, Serial No. 615,808
3 Claims. (Cl. 66—135)

1. In a knitting machine having superposed, axially aligned, rotatable, needle cylinders, a wrap spindle projecting through the upper cylinder, a wrapping head on said spindle positioned at wrapping level with respect to needles knitting in the lower cylinder, means for moving said spindle and said head into wrapping position eccentric of said cylinders and for moving said spindle and said head into an idle position substantially concentric of said cylinders, a heel and toe pocket spreader concentric with and rotatable by said wrap spindle and vertically movable independently thereof and means for causing said spreader to engage the heel or toe pocket of a stocking being knitted when said wrap spindle is in its idle, substantially, concentric position.

3. In a knitting machine having superposed axially aligned needle cylinders, a wrap spindle eccentrically positioned with respect to the cylinders and having an integral head including a plurality of substantially identical flat fingers all extending radially in the same horizontal plane from a common hub and being in close adjacency throughout the periphery of the head, each of said fingers having a radially tapered form being relatively narrow at the inner end and wide at the outer end so that the adjacent sides of adjacent fingers are substantially parallel whereby selection of the desired fingers may be made by the breaking off of the remaining fingers at their narrow inner ends, and a yarn eyelet in the outer end of each finger.



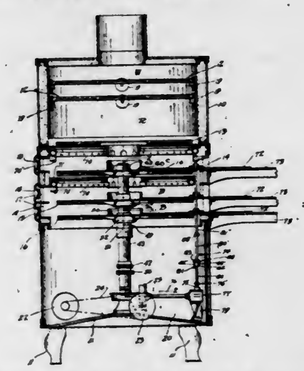
2,438,698

LIQUID DISPENSING APPARATUS

Alfred L. Grisé, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, Springfield, Mass., a corporation of Massachusetts

Application July 26, 1944, Serial No. 546,642
13 Claims. (Cl. 222—23)

1. The combination in liquid measuring and dispensing apparatus, of a standard, a turret supported by the standard for rotation about a vertical axis, a register and a meter for driving the register both carried by the turret, liquid-supply means carried by the standard, connections between said means and meter including an interposed swivel enabling rotation of the meter with the turret, a hose reel fixed to said turret and held against rotation relatively to the turret, a discharge conduit for the meter including a flexible hose wound on said reel, said turret being

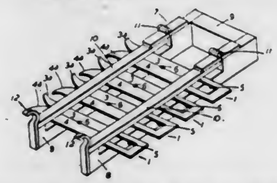


rotatable by pulling on the hose to unwind the hose from the reel and turn the register for convenient reading, and means automatically operable when the pull on the hose is released for returning the turret and register to initial position and for winding up the hose on the reel.

2,438,699

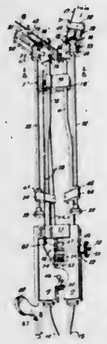
COOKER

Richard Groetchen, Chicago, Ill.



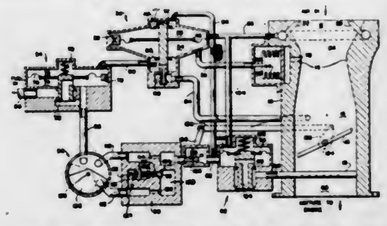
Application November 29, 1943, Serial No. 512,156
1 Claim. (Cl. 99—427)

In combination, a cooker having a burner element, a hollow column, a conical shaped collar fixed to said column, a grid plate having a conical shaped hub engageable with said collar and supported by said collar in spaced parallel relation with respect to the burner element, a shaft in the column and having an end portion extending exteriorly thereof, bearing means within said column for stabilizing said shaft, a conical shaped collar mounted on the exterior end of the shaft, a grid plate having a conical shaped hub engageable with said last named collar, driving means, and means connecting the driving means to the column and shaft for rotating the shaft and column simultaneously and at different speeds comprising a gear fixed to said column, a gear fixed to said shaft, and of a smaller gear



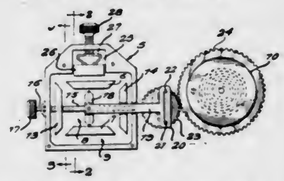
ratio than that of said first gear, and a pair of interconnected gears of different gear ratios operatively meshing with the said first and second gear.

2,438,700
WIPER OR DIE FOR USE IN THE COATING OF WIRES
Hugh Charles Hoban, Dartford, England, assignor to W. T. Henley's Telegraph Works Company Limited, Dorking, England, a British company
Application July 7, 1944, Serial No. 543,845
In Great Britain August 4, 1943
12 Claims. (Cl. 91—53)



10. A wiping die for use with the application of enamels, lacquers or the like to wire, comprising a piece of sheet metal divided by a cut extending inwards from one edge of the piece to and beyond a hole forming the die aperture towards the opposite edge of the piece, into two limbs united by a body portion whose minimum dimension in the plane of the piece is at least several times as great as the thickness of the piece, whereby the two limbs are substantially incapable of relative elastic movement in the plane of the piece but are readily elastically deflected in opposite directions from the said plane to form a tapering opening leading to the die aperture.

2,438,701
ADJUSTABLE-ELECTRODE ARC WELDING TORCH
William C. Huguley, Belleville, N. J.
Application May 2, 1944, Serial No. 533,774
8 Claims. (Cl. 219—14)

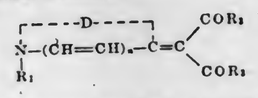


1. In an arc welding apparatus, a pair of conductors, handle members, means to secure said conductors to said handle members, means to slidably position electrodes in said conductors remote from said handle members, brackets fixed to said conductors, means to secure said electrodes to said brackets, and means carried by said conductors and adapted to engage the electrode securing means of said brackets to reciprocate the electrodes in said conductors.

2,438,702
CARBURETOR
Scott F. Hunt, Meriden, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application October 26, 1944, Serial No. 560,435
9 Claims. (Cl. 261—41)

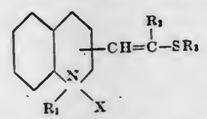
1. A fuel supply system for an internal combustion engine, comprising a fuel conduit, three parallel branch passages in said conduit, a metering restriction in each of said branch passages, means for controlling the fuel pressure differential across said branch passages to control the fuel flow therethru, valve means movable in an opening direction in response to said fuel pressure differential for controlling the area of the restriction in one of said passages, spring means associated with said valve means for applying thereto a force acting in a valve closing direction, manually operable valve means for opening and closing another of said passages, means for applying an additional force to said pressure responsive valve means, means for controlling said force applying means including an expansible chamber having a movable wall, means connecting the interior of said chamber to said other passage between said valve means and the restriction therein, said wall being moved to control the application and removal of said additional force from said pressure responsive valve means in response to changes in pressure in said chamber due to operation of said manual valve means and thereby to vary the resultant of the forces applied to said pressure responsive valve means so that it opens at different values of said fuel pressure differential, depending upon whether said manual valve means is open or closed.

2,438,703
SPEED REGULATOR
Paulo Kemeny, Sao Paulo, Brazil
Application July 3, 1946, Serial No. 681,324
In Brazil August 27, 1945
2 Claims. (Cl. 188—97)



1. A speed regulator of the dash pot type, comprising an oil filled hollow casing, fixed partial partitions in the casing dividing the latter into a central pressure chamber and an oil space extending continuously about the top, bottom and ends of said pressure chamber, valve heads movable in said oil space toward and from the ends of said partial partitions to adjustably restrict

passage of oil into and out of opposite ends of the pressure chamber, manually operable means to similarly and simultaneously adjust said valve heads toward or from said partial partitions, and a piston plate reciprocable in said pressure chamber and having a piston rod projecting outwardly of the casing for operative connection with the part whose speed is to be controlled.

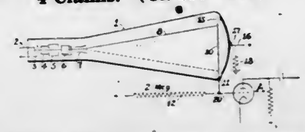


2,438,704
ORGANIC COMPOUNDS SERVING AS CYANINE DYESTUFF INTERMEDIATES
John David Kendall, Henry Walter Wood, and John Raymond Majer, Ilford, England, assignors to Ilford Limited, Ilford, Essex, England, a British company
No Drawing. Application October 8, 1942, Serial No. 461,323. In Great Britain November 6, 1941
16 Claims. (Cl. 260—240)

1. A process for the production of dyestuff intermediates which comprises reacting a compound of the general formula:

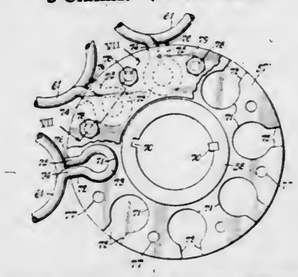
where D is the residue of a heterocyclic nitrogen compound of the type used in cyanine dyes, R_1 is selected from the class consisting of alkyl and aralkyl groups, R_2 and R_3 are hydrocarbon groups, and n is selected from the class consisting of nought and 1 with a substance selected from the class consisting of alkyl and aralkyl mercaptans, in the presence of a strong acid.

16. A compound of the following formula:



wherein R_1 represents alkyl, R_2 represents a hydrocarbon group, R_3 represents an alkyl group, and X represents an anion and the trivalent acyclic carbon atom is attached to a carbon atom of the hetero ring in a position taken from the group consisting of alpha and gamma positions to the nitrogen atom.

2,438,705
CYANINE DYESTUFF INTERMEDIATES
John David Kendall, Ilford, England, assignor to Ilford Limited, Ilford, England, a British company
No Drawing. Application February 24, 1943, Serial No. 476,911. In Great Britain March 2, 1942
5 Claims. (Cl. 260—240)



1. Process for the production of dyestuff intermediates which comprises condensing a salt taken from the group consisting of alkyl and aralkyl p-toluene sulphonate quaternary salts of a heterocyclic nitrogen compound of the type used in cyanine dyes containing a reactive methylene group in the alpha or gamma position to the heterocyclic quaternary nitrogen atom with an ester of trithio-orthoformic acid, the condensation being effected in the presence of a non-basic, non-hydrolytic solvent for the reactants but in the absence of a basic condensing agent.

2,438,706
PULSE GENERATOR
Walter A. Knoop, Jr., Packanack Lake, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application December 27, 1943, Serial No. 515,675
4 Claims. (Cl. 250—164)

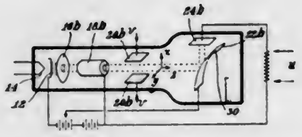
1. A device for generating electrical pulses which comprises a cathode-ray tube having a layer of positively charged conducting material on the inside face thereof connected to ground through a resistance, a wire in said tube in front of said layer extending outside of said tube and connected to a source of positive potential and means to cause the beam of said tube to turn and strike said wire twice per revolution of said beam.

2,438,707
ROTARY TILLER TOOTH AND MOUNTING
Roy A. Kropp, River Forest, Ill., assignor to Kropp Forge Company, Cicero, Ill., a corporation of Illinois
Application April 13, 1944, Serial No. 530,797
3 Claims. (Cl. 97—216)

1. A tiller comprising a hub having a radial plate portion of circular contour with recesses on one side communicating with the periphery thereof, said recesses having circular portions and restricted throat portions adjacent the periphery, tines having loops with constricted shanks seated in the recesses and throat portions, and means secured against the plate over the recesses and loops to prevent displacement of the tines and loops laterally from the recesses.

2,438,708
CRYSTAL HOLDER
Walter E. Kuenstler, Cliffside Park, N. J.
Application September 14, 1945, Serial No. 616,287
13 Claims. (Cl. 171—327)

7. A crystal holder comprising, a frame of insulating material provided with an aperture extending through it, a crystal located in said aper-



ture, a cupped metallic cover member extending over each face of the frame whereby the frame and the crystal within the same are sandwiched between the cover members, the frame being indented and the cover members having indented portions engaging with the indentations in the frame to thereby secure the cover members to the frame, said cover members being maintained in spaced relation by means of the frame interposed between them, one of the cover members being electrically connected to a face of the crystal and the second cover member being electrically connected to the second face of the crystal.

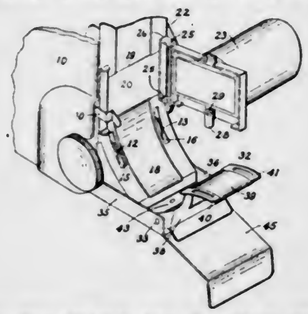
2,438,709

THERMIONIC TUBE HAVING SECONDARY ELECTRON EMISSIVE ELECTRODE WITH SURFACE AND FORM VARIATIONS

Edouard Labin and Manuel Julio Kobilsky, Buenos Aires, Argentina, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee

Application August 6, 1942, Serial No. 453,890
8 Claims. (Cl. 315—12)

1. A thermionic tube having a response characteristic adapted to produce an output voltage proportional to a predetermined mathematical function of an electrical quantity impressed on the tube as a control factor, comprising a source of an electron beam, a non-accelerating control means positioned in operative relationship with respect to said beam for deflecting the said beam, a response forming system arranged remote from said source and in the path of the electron beam and comprising a secondary-electron emissive electrode having a geometrical configuration and surface variations producing in combination an emission response variable over the surface of the electrode and adapted to produce an issuing electronic current variable in magnitude substantially proportional to the position of the point of impact of the electron beam on the surface of the electrode, and a collector electrode arranged adjacent to said response forming system and between the said source and the secondary-electron emissive electrode for collecting secondary emissive electrons from said emissive electrode to produce an output voltage substantially proportional to the said predetermined function of the said electrical quantity impressed as a control factor.



2,438,710

FILM GATE

Robert H. Larson, Batavia, Ill.

Application October 7, 1946, Serial No. 701,783
9 Claims. (Cl. 88—17)

1. A film gate construction comprising a film gate proper, a lens barrel, means for pivotally mounting said barrel at said gate, said barrel being movable on its pivot to open and close said gate, a film guide adjacent one end of said gate along the line of film travel, means adjacent said guide for moving said film through said gate, a film retainer for holding film in position against said guide, means for pivotally mounting said retainer for movement to an open or closed position, and means for preventing the closure of said film retainer while said lens barrel is in a closed

position, said retainer and lens barrel being successively movable to closed positions.

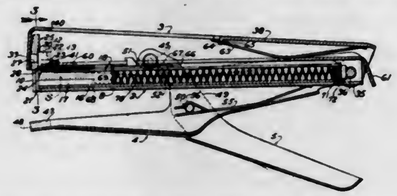
2,438,711

SHOE WITH DETACHABLE UPPER

Raymond A. Leach and Geraldine M. Leach, Los Angeles, Calif.

Application March 2, 1945, Serial No. 580,522
1 Claim. (Cl. 36—2.5)

A shoe comprising a sole and heel tread-forming portion, a toe box fixed on the forepart of said tread-forming portion, a heel counter fixed upon the rear part of the tread-forming portion, a flexible upper adapted to be received about said toe box and heel counter and to enclose the foot of the wearer therein, the end portions of said upper having their transverse edges disposed to assume spaced apart parallel positions at the rear of the heel counter and having rows of openings adjacent said transverse edges, coacting loops formed on the bottom longitudinal edge of said cover and the upper perimeter of the tread-forming portion, and a lacing element adapted to be laced through said coacting loops and the respective rows of openings in the end of said upper to detachably connect the cover with the tread-forming portion and adjustably connect the ends of the upper for maintaining the upper in smoothly drawn condition upon the toe box, the heel counter, and the foot of the wearer.



2,438,712

FASTENER-APPLYING IMPLEMENT

Charles M. Lindstrom, Westerly, R. I., assignor to Boston Wire Stitcher Company, Stonington, Conn., a corporation of Maine

Original application March 29, 1945, Serial No. 585,486. Divided and this application January 31, 1947, Serial No. 725,522
6 Claims. (Cl. 1—49)

1. A fastener applying implement comprising a magazine for containing a supply of fasteners having crowned crossbars, means to support the fasteners in the magazine, a rest for supporting a fastener below its normal position in the magazine at the forward end thereof to hold it in reserve position, fixed hold-down means engageable across the ends of a fastener on the rest to prevent it from rising up therefrom, a reciprocable driver slidable across the front of the magazine and having a portion engageable with a fastener to carry it down onto the rest, straighten its crowned crossbar and position the ends there-

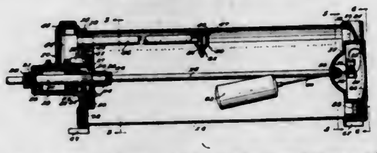
of beneath the hold-down means, and resiliently-operated means for feeding the fasteners forwardly to position the foremost one beneath the driver and cause it to be forced down onto the rest, said feeding means operative thereafter to advance the reserve fastener into position to be driven into the work at a subsequent stroke of the driver.

2,438,713

FASTENER-APPLYING IMPLEMENT

Arthur H. Maynard, Warwick, R. I., assignor to Boston Wire Stitcher Company, Warwick, R. I., a corporation of Maine

Application February 26, 1946, Serial No. 650,190
14 Claims. (Cl. 1—3)



1. In a device of the type indicated, an open-top magazine for containing a supply of fasteners, said magazine formed with a throat through which the fasteners may be driven, a driver slidable in the throat in the magazine and normally releasable therefrom, means for limiting the extent of sliding movement of the driver to prevent its release from the throat in the magazine, a lever for reciprocating the driver, said lever constituted as a cover for closing the top of the magazine, and manually-operable means for releasably connecting said lever to said driver, said manually-operable means being releasable to adapt the lever to be lifted above the magazine to open the latter for loading it with fasteners.

2,438,714

CARBONATOR

James O. McMillan, Wichita, Kans., assignor to Frank J. Ablah, Wichita, Kans.

Application September 9, 1946, Serial No. 695,647
12 Claims. (Cl. 261—84)

1. A motor driven carbonator unit comprising an elongated cylinder, a housing supporting one end of the cylinder, an inlet for carbon dioxide gas in said housing, a water inlet in said housing, a rotary pump in said housing for delivering water from said inlet into said cylinder, a second housing supporting the other end of the cylinder, and water level control means supported by the second housing.

2,438,715

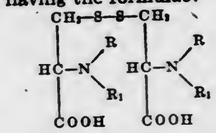
PURIFICATION OF DEHYDROCORTICOSTERONE ACETATE

Stewart M. Miller and Jacob van de Kamp, Westfield, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application April 13, 1946, Serial No. 662,105
2 Claims. (Cl. 260—397.4)

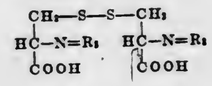
1. The process of securing dehydrocorticosterone acetate, which comprises: treating a reaction product containing dehydrocorticosterone acetate in order to remove water-soluble basic and acidic impurities present therein; concentrating the resulting crude partly purified neutral residue; dissolving the crude residue in benzene; adding ether thereto in order to precipitate the higher molecular weight condensation products and complexes present as impurities therein; removing said higher molecular weight condensation products and complexes; evaporating the resulting solution containing dehydrocorticosterone acetate in substantially purified form to dryness; removing oily and tarry impurities present therein by washing the residue first with ether, and then with a mixture of acetone and ether; adsorbing colored impurities present therein by treating an ether-chloroform solution of said purified products on activated alumina; and crystallizing said product in the form of pure white crystals of dehydrocorticosterone acetate.

2,438,716



STABILIZED SILVER HALIDE EMULSIONS

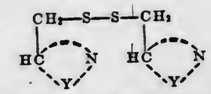
Fritz W. H. Mueller, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware



No Drawing. Application October 6, 1944, Serial No. 557,546
5 Claims. (Cl. 95—7)

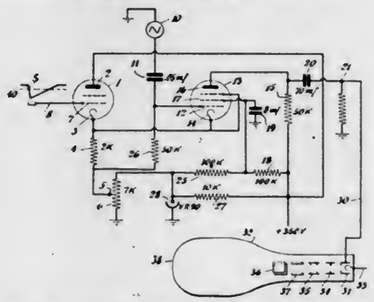
1. A photographic material comprising a silver halide gelatin emulsion in contact with a member of the group consisting of a sulfinic acid, a seleninic acid and their salts, and a cystine compound selected from the group consisting of such compounds having the formulae:

I.



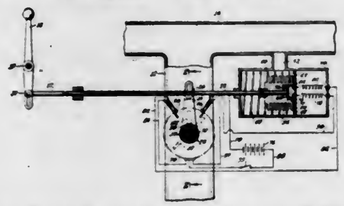
II.

and



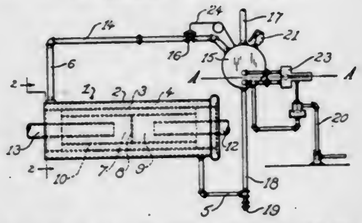
III.

wherein R stands for a member of the group consisting of hydrogen and alkyl; R_1 stands for a member of the group consisting of hydrogen, acetyl, benzoyl, brom-propionyl, chloroacetyl,



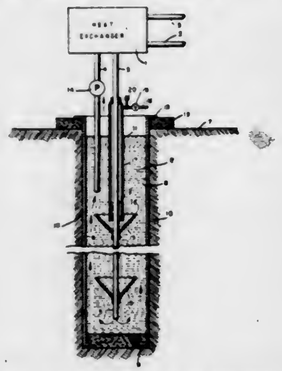
carbaminyl, phenylacetyl, α-amino propionyl, carbo-benzoxy, benzo-sulfonyl, and guanyl radicals; R_3 stands for a member of the group consisting of benzylidene and substituted benzylidene radicals; and Y represents the atoms necessary to complete a heterocyclic ring system, in the proportion of from 0.00025 to 0.0050 mol of the member of the last named group to one mol of the member of the first named group.

2,438,717
BEAM SWITCH FOR SINGLE TRACE OBSERVANCE
Charles Puckette, Jr., Ridgewood, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application May 28, 1943, Serial No. 488,936
3 Claims. (Cl. 315—22)



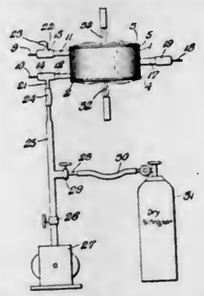
1. A device for producing upon the screen of a cathode-ray tube a series of dots, which comprises a vacuum tube to the control grid of which a sawtooth wave of potential is applied, another vacuum tube having its cathode directly connected to the cathode of said first named vacuum tube, an adjustable resistor between the cathodes of said tubes and ground and a source of potential of higher frequency than said sawtooth wave connected to the control grid of said other vacuum tube, another resistor, a source of positive potential connected through said last named resistor to the plate of said second named vacuum tube and to the ungrounded end of said adjustable resistor, and a condenser coupling said plate to the control grid of said cathode-ray tube.

2,438,718
THROTTLE CONTROL SYSTEM
Donald E. Lipfert, Meriden, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application October 16, 1943, Serial No. 506,523
11 Claims. (Cl. 137—139)



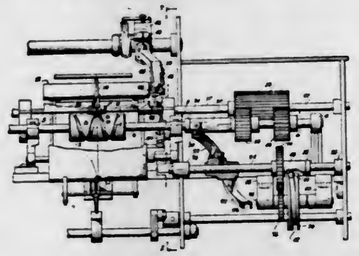
1. A throttle control system comprising manual means for causing said throttle to be moved to provide a desired manifold pressure, power means for moving said throttle, a clutch member movable to interconnect either said manual moving means or said power means with said throttle, and means responsive to changes in the manifold pressure for controlling said movements of the clutch.

2,438,719
AUTOMATIC CONTROL FOR WASTE HEAT UTILIZERS
Felix Saco, Jr., West Hartford, and William R. Williamson, Hartford, Conn., assignors to The Maxim Silencer Company, Hartford, Conn., a corporation of Connecticut
Continuation of application Serial No. 426,868, January 15, 1942. This application June 19, 1944, Serial No. 541,036
11 Claims. (Cl. 122—456)



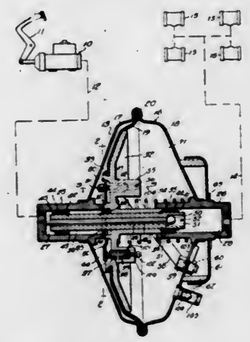
1. A waste heat utilizer having a water jacketed shell and conduits for conducting exhaust gases in heat transferring contact with the shell, and an automatic control for regulating the amount of heat utilized, said control comprising a water drum connected at its bottom to a low point of said jacket and near its top to a high point of the jacket, said latter connection having a pressure reducing valve therein responsive to steam pressure in the top of the drum, and means to conduct steam from the drum.

2,438,720
DEEP WELL CIRCUIT FOR HEAT PUMPS
Marvin M. Smith, Muncie, Ind., assignor to Muncie Gear Works, Inc., Muncie, Ind., a corporation of Indiana
Application February 19, 1947, Serial No. 729,521
2 Claims. (Cl. 62—129)



1. In a heat pump, a well bore subject to subterranean temperature and containing a fluid heat-conveying agent, a heat conducting casing defining said well bore, a pipe extending downward within said well bore and communicating therewith near the bottom thereof, and baffle means carried by said pipe at its lower part to direct an upward current of said fluid heat conveying agent toward and along the walls of said casing, said pipe being insulated against direct transfer of heat between it and the water in the upper portion of said casing.

2,438,721
METHOD OF SEALING ELECTRICAL DISCHARGE TUBES
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application December 4, 1941, Serial No. 421,668
4 Claims. (Cl. 113—112)

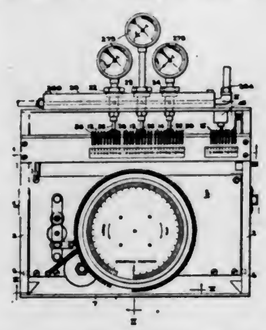


3. The method of sealing an electrical discharge tube having a plurality of component copper-containing parts which are to be sealed together, said method comprising soldering said parts together at a soldering temperature above about 300° C. while maintaining in said tube an atmosphere of nitrogen, cooling said parts below said soldering temperature, and exhausting said tube before said parts have fallen to a temperature of about 300° C.

2,438,722
YARN WINDING MACHINE
Ferdinand F. Stange, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a corporation of Massachusetts
Application January 16, 1945, Serial No. 573,061
37 Claims. (Cl. 242—43)

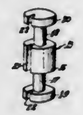
1. A yarn winding machine for winding a package which gradually tapers toward its ends, comprising a yarn guide, traversing means for moving said yarn guide back and forth, having a stroke less than the overall length of the yarn package, a first auxiliary means for moving said traversing means in a direction longitudinally of the package for increasing the travel of the yarn guide, and a second auxiliary means acting on said first auxiliary means for continuously varying the effect of the first auxiliary means on said traversing means.

2,438,723
HYDRAULIC BRAKE MECHANISM
William Stelzer, Summit, N. J.
Application October 12, 1944, Serial No. 558,407
10 Claims. (Cl. 60—54.5)



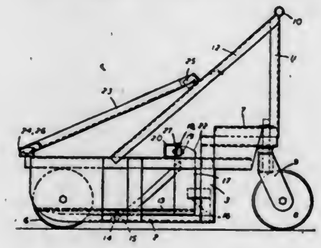
1. An operating mechanism for a hydraulic vehicle brake system having wheel cylinders to apply the brakes and a pedal-controlled master cylinder, a booster unit connected between the master cylinder and the wheel cylinders and comprising a fluid pressure motor having a pressure responsive unit therein dividing it into chambers and operative for boosting the pressure transmitted to the wheel cylinders upon energization of said motor, a pair of valves for controlling pressures in one of said chambers relative to the other, a member movable by fluid displaced from the master cylinder, a lever engageable with said fluid responsive member, said lever being fulcrumed between its point of engagement with said fluid responsive member and one end of said lever, and motion transmitting connections between said end of said lever and the respective valves, one of said motion transmitting connections being adjustable relative to said lever to vary the point of opening of its associated valve relative to the point of closing of the other valve.

2,438,724
TIME CYCLE CONTROLLER
Eugene B. Sutherland, Akron, Ohio, assignor to Seely Instrument Co., Inc., Akron, Ohio
Application June 26, 1945, Serial No. 601,579
13 Claims. (Cl. 192—139)



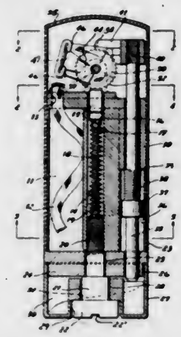
1. In a time cycle controller including a pilot control device, a time control wheel, means operable to partially rotate said wheel intermittently at equal time intervals, a feeler device, means driving said feeler device to advance toward said wheel subsequent to each rotation of the latter and to retreat relative to said wheel prior to the next rotation thereof, said wheel having key means slidable thereon and adapted to be radially displaced thereon so as to present differently dimensioned abutment means thereon into registry with said feeler device whereby to limit the degree of advancement of said feeler device to either first or second positions of advancement,

and control means operably connected to said feeler device for actuation of said pilot control



device only upon advancement of said feeler device to said second position.

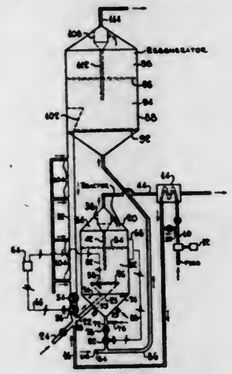
2,438,725
DENTAL INLAY
Abraham H. Tamarin, Chicago, Ill.
Application April 30, 1945, Serial No. 590,996
2 Claims. (Cl. 32—12)



1. A dental anchor comprising a cylindrical portion formed with pins longitudinally extending from the center thereof, and provided with heads at the free end, said cylindrical portion and heads being provided with a peripheral groove parallel to the longitudinal axis to provide a channel.

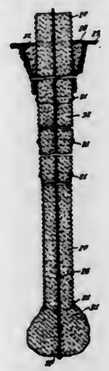
2,438,726
HAND TRUCK FOR HEAVY ARTICLES
Wilfred Randall Theg, Glasgow, Scotland
Application August 21, 1945, Serial No. 611,746
In Great Britain March 17, 1944
5 Claims. (Cl. 214—85)

1. A hand truck for heavy articles comprising a wheeled frame including a hand frame by which the truck can be pushed and pulled by a worker, a low level platform mounted in said wheeled frame to pivot about a cross axis between a normal position and a tipped position in which the platform inclines downwards and forwards to about ground level, said platform extending rearwards so that it can be controllingly pressed upon by a foot of the worker holding said hand frame, locking means on said wheeled frame and platform for holding the platform in the normal position and control means for said locking means extending to said hand frame for operation there by a hand of said worker.



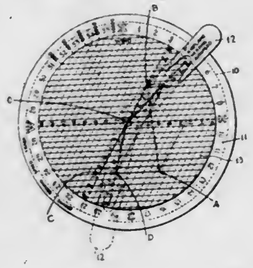
2,438,727
AUTOMATIC LIGHTER
Bernard Troubh, Portland, Maine
Application May 21, 1945, Serial No. 594,968
3 Claims. (Cl. 67—7.1)

1. A pocket lighter including a body, a fluid reservoir in said body, a flint and steel igniter secured upon one end of said body, a wick associated with said reservoir and extending into proximity to said flint and steel, an axial, internally screw threaded bore in said body, a second bore in said body, a flint and steel actuating rod being reciprocable in said second bore, a sleeve upon the other end of said body, said sleeve constituting a closure for said reservoir and having apertures aligned with said body bores, and a cover rotatably journaled on said sleeve, said cover having a cam groove for reciprocating said rod and having an axial aperture, and a single fastening means extending through said cover, said sleeve and engaging said threaded bore.



2,438,728
TEMPERATURE CONTROL IN FLUIDIZED CATALYST SYSTEMS
Charles W. Tyson, Summit, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application June 10, 1944, Serial No. 539,705
17 Claims. (Cl. 196—52)

1. In a catalytic conversion process wherein a reactant at a substantially constant rate and at a substantially constant temperature is introduced into a conversion zone and a regenerating gas is introduced into a regeneration zone and constant operating conditions are to be maintained in the conversion zone and contaminated catalyst particles from the conversion zone are withdrawn from the bottom portion of said conversion zone and are passed to a spent catalyst standpipe extending downwardly from said conversion zone and provided with a control valve and the particles are then regenerated in a regeneration zone and the catalyst particles at a temperature above conversion temperature are passed to a regenerated catalyst standpipe having a control valve, the improvement which comprises maintaining the temperature in the conversion zone substantially constant by controlling the amount of hot regenerated catalyst passing from said regenerated catalyst standpipe to said conversion zone to compensate for undesired

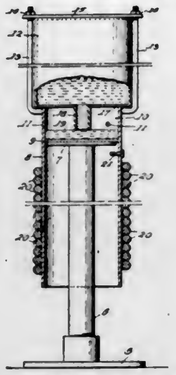


changes in the temperature in said conversion zone while maintaining a substantially constant amount of catalyst in said conversion zone by controlling separately the amount of spent catalyst withdrawn from said spent catalyst standpipe.

2,438,729
CONCRETE PILE WITH BULB AT LOWER END
Maxwell M. Upson, Englewood, and Elihu D. Watt, Plainfield, N. J., assignors to Raymond Concrete Pile Company, New York, N. Y., a corporation of New Jersey
Application September 5, 1945, Serial No. 614,460
9 Claims. (Cl. 61—57)

1. A concrete pile, comprising a superstructure including a shell constructed and arranged to be driven into the ground and to remain in intimate contact with the ground at the position to which it is driven, and including a concrete column formed in situ and filling the inside of said shell and in intimate contact therewith substantially throughout its length; an enlarged concrete bulb on the end of said column beneath said shell formed in situ and integral with the lower end of said column; and an anchoring device including a member engaging the lower end of said bulb and a connecting member embedded in said bulb and secured to said superstructure for anchoring aforesaid parts of the pile together.

2,438,730
COMPUTING DEVICE
Michael Watter, Philadelphia, Pa.
Application November 14, 1944, Serial No. 563,343
6 Claims. (Cl. 235—61)

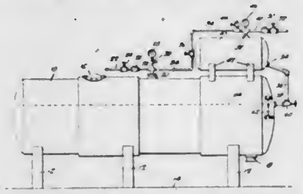


4. A computing device comprising in combination, a flat circular sheet compass rose disk having compass points in degrees marked around the outer edge, a center post on said disk, a first upper flat circular sheet disk mounted upon the center post to turn about the axis of the compass rose disk, said first upper disk having a scaled diametral base line and a plurality of parallel lines equally spaced to the same scale as said base line, said first upper disk being of a larger diameter than the compass rose disk and being transparent at least in that portion which overlies the edge markings on the compass rose disk, a flat sheet arm mounted upon the center post to turn about the axis of said compass rose disk, said arm having a base line scaled the same as that of the first upper disk, said arm being transparent above the markings of the disks therebelow and being of greater radius to provide an outwardly protruding tip, and a second upper flat circular sheet disk mounted to turn about said center post, said second upper disk having a diameter base line and a plurality of parallel lines equally spaced to the same scale as those of the lower disks, said second upper disk being transparent and of smaller diameter than the first upper disk.

2,438,731
STOCK OILER
Lorenz A. Wedeking, Clear Lake, Iowa, assignor, by direct and mesne assignments, to The Lake Manufacturing Company, Inc., Clear Lake, Iowa, a corporation of Iowa
Application January 2, 1946, Serial No. 638,647
7 Claims. (Cl. 119—157)

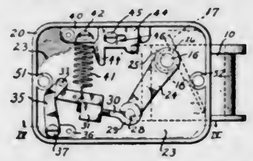
1. A stock oiler comprising a normally upright rubbing member and means for tiltably supporting the same, said member having an oil chamber in its upper end and an oil discharge opening from said chamber to its periphery, said oil discharge opening being spaced upwardly from the bottom of said oil chamber, and an oil tank rigidly carried by said upper end of said member and closing the upper end of said oil chamber, said oil tank having a discharge nipple extending into said oil chamber, the lower end of said nipple being below said oil discharge opening, said oil

tank being airtight except for said nipple, whereby the oil in said chamber will form a liquid seal



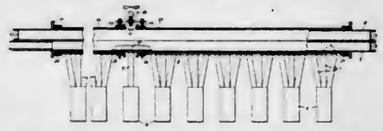
for said nipple until said member is tilted and oil discharges from said oil discharge opening.

2,438,732
ELECTRON TUBE CATHODE
Paul D. Williams, Palo Alto, Calif., assignor to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application March 15, 1947, Serial No. 734,923
5 Claims. (Cl. 250—27.5)



1. A cathode for an electron tube comprising a body of sintered thorium oxide, and a metallic carbide incorporated in the cathode.

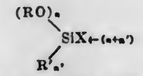
2,438,733
AUTOMATIC WATER LEVEL CONTROL
Robert Parzilla Yorke, New Orleans, La.
Application January 29, 1944, Serial No. 520,290
1 Claim. (Cl. 137—68)



In a water pressure system of the type described the combination of a water supply tank, having a discharge outlet on the bottom of and adjacent one end thereof, an air inlet fitting on the top thereof having communication with said supply tank, a line connecting said fitting to a source of pressure, a globe valve interposed in said line, remote from said fitting a check valve interposed in said line intermediate said fitting and said globe valve, both valves being located in the line in advance of said fitting, a pressure gauge connected to said fitting, a petcock located intermediate said gauge and said fitting an auxiliary water feed tank mounted on said water supply tank above the normal level of the water supply tank, an air inlet fitting on the top of said auxiliary tank, a line connecting the fitting on the water supply tank with the fitting on the auxiliary tank, a valve interposed in said line between the fitting on the water supply tank and exhaust valve interposed in the line adjacent the fitting on the auxiliary feed tank, a pressure gauge mounted on the fitting on the auxiliary feed tank, a water supply line connected to the fitting on the auxiliary feed tank, a check valve and globe valve interposed in said supply line in advance of said fitting a conduit placing said auxiliary water feed tank in communication with said water supply tank at a point located at the normal water level to be maintained in the water supply tank and a valve interposed in said conduit intermediate said tanks.

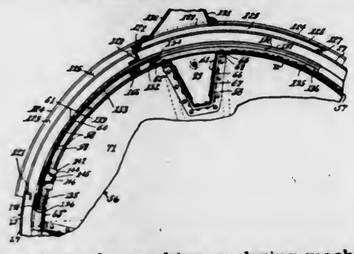
2,438,734
GOVERNOR
Frank A. Zimmerman, Oak Park, Ill.
Application April 6, 1946, Serial No. 660,177
4 Claims. (Cl. 137—153)

1. In a governor for controlling the valve in the intake manifold of an internal combustion engine, a linkage for moving the valve, a fixed casing providing a spring anchor, a helical spring having one end secured to said anchor and the other end to said linkage, said anchor being disposed relative to the path of said linkage so that said spring is elongated and angularly shifted by movement of said linkage in one direction, and means adjustably mounted on said casing in the path of angular movement of said spring so as to be laterally contacted by said spring, whereby the resistance of said spring to the movement of said linkage in said direction may be selectively increased as a function of the position of said last mentioned means.



2,438,735
HIGH-FREQUENCY WAVE TRANSMITTING APPARATUS
Ernst F. W. Alexanderson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application October 2, 1944, Serial No. 556,865
14 Claims. (Cl. 250—33.63)

11. An apparatus for transmitting high frequency electric energy comprising a wave guide of the hollow pipe type, means for supplying high frequency wave energy to said guide and for maintaining a continuous traveling wave of energy therein, said guide having a series of energy radiating openings arranged therein longitudinally thereof and spaced at distances corresponding to predetermined equal phase intervals of the wave energy in said guide, and commutating means arranged selectively and progressively to change the amount of radiation of energy from each of said openings for producing a beam of radfation and for angularly changing the direction of radiation of the beam to sweep the beam back and forth along a predetermined line.

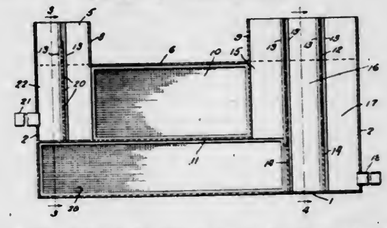


2,438,736
HIGHER ALKOXY-SILICON HALIDES
Arthur J. Barry, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Original application December 10, 1943, Serial No. 513,745. Divided and this application January 31, 1946, Serial No. 644,653
12 Claims. (Cl. 260—462)

1. An organosilicon compound having the general formula:

wherein each R represents a hydrocarbon radical selected from the class consisting of alkyl radicals and aromatic hydrocarbon radicals of the benzene series and at least one R is an alkyl radical containing at least 8 carbon atoms, R′ represents a monovalent hydrocarbon radical selected from the class consisting of alkyl radicals and aromatic hydrocarbon radicals of the benzene series, X represents a halogen, and n and n' are whole numbers having a sum not greater than 3, n being a number from 1 to 3 and n' being a number from 0 to 2.

2,438,737
TUMBLING DRUM FOR LAUNDRY MACHINES
Charles C. Batina, Chicago, Ill.
Application October 8, 1941, Serial No. 414,075
6 Claims. (Cl. 68—143)



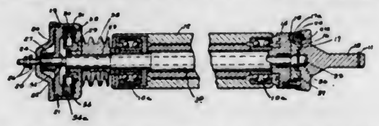
6. In a drum for washing or drying machines, end discs, a plurality of trough-shaped inwardly projecting ribs extending longitudinally between said discs and having outwardly turned flanges on their longitudinal edges, said discs having inturned segmental flanges fitting between and abutting the adjacent edges of the rib flanges, and side walls consisting of plates having their longitudinal edges overlapping and secured to the rib flanges and their ends overlying and secured to said segmental flanges of the end discs.

2,438,738
CARROTING REAGENTS AND PROCESS
Albert Frank Bowles, Naugatuck, Conn., and Anthony J. Keegel, Jersey City, N. J., assignors to Trinity Holding Corporation, Beacon Falls, Conn., a corporation of Connecticut
No Drawing. Application February 19, 1947, Serial No. 729,662
8 Claims. (Cl. 8—112)

1. The process of carroting fur fibers employing a medium comprising a nitric acid solution and hydrogen peroxide, the improvement comprising treating said fibers with said medium containing soluble salts of the two radioactive metals, uranium and thorium, a soluble salt of strontium, said three salts being present in such proportion that the average atomic weight of the three metals is in the range of 195–220, a hydrolyzing agent consisting of hydrochloric and sulfuric acid and acetic acid and a soluble potassium salt.

2,438,739
BAIT TANK
Walter Hart Burruss, Astoria, Oreg., assignor to Columbia River Packers Association, Inc., Astoria, Oreg.
Application May 21, 1945, Serial No. 594,920
6 Claims. (Cl. 43—56)

1. Live bait box comprising a bait compartment, an auxiliary water supply compartment, a screened passage from the bottom level of the supply compartment to the bait compartment, an auxiliary water exhaust compartment, and a screened passage from the upper level of the bait compartment to the exhaust compartment, the screened inlet passage to the bait compartment being positioned immediately below the screened outlet passage from the bait compartment.



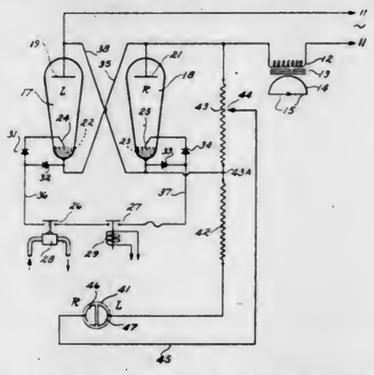
2,438,740
METHOD OF PROTECTING THE SURFACE OF ARTICLES FORMED FROM A MAGNESIUM ALLOY
Charles William Clark, Westmount, Quebec, and Warren Arthur Sheaffer, Montreal, Quebec, Canada, assignors to Canadian Copper Refiners Limited, Montreal East, Quebec, Canada, a body corporate
No Drawing. Application March 27, 1944, Serial No. 528.360
4 Claims. (Cl. 148—6.24)

1. The method of forming a selenium-containing protective coating on an article, which is composed principally at least of magnesium, comprising the steps of cleaning the surfaces of the article to be coated, preparing an immersing solution in the following proportions: dissolving 20 grams of selenium dioxide in water, separately dissolving 10 grams of potassium permanganate in water, mixing the solutions thus made, diluting the mixed solutions to a total volume of 1 liter, and filtering off any precipitate formed to leave the filtrate as an immersing solution, and immersing the article in a solution as thus prepared while the solution is at a temperature of about 90° C. to its boiling point and for a period of about 5 to 15 minutes.

2,438,741
RETRACTABLE BORING TOOL ASSEMBLY
Walter Coulson, Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application September 27, 1945, Serial No. 618,935
8 Claims. (Cl. 77—58)

1. In a retractive boring tool assembly, the combination of a rotatable spindle having a cutter

element mounted thereon for limited radial movement between a laterally projected working position and a retracted idle position, biasing means for yieldably urging said element into idle position, an actuating piston operable upon movement thereof to shift said element to working po-



sition against the urging of said biasing means, means for confining a body of fluent material in operative relation with said piston, and means connecting said confining means with said spindle for rotation therewith to generate in the contained body of fluent material by centrifugal force a pressure effective to shift said piston.

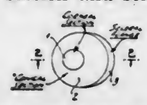
2,438,742

IGNITRON WELDING CONTROL

Cecil Farrow, Bainbridge Township, Geauga County, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey

Application August 9, 1945, Serial No. 609,780
7 Claims. (Cl. 177—311)

1. A fault indicator for an ignitron welding control of the type having two ignitron tubes connected in parallel with opposite polarities in a welding-current supply circuit, said indicator comprising a gaseous discharge glow lamp having a pair of substantially similar electrodes, an impedance connecting said glow lamp across said ignitron tubes, and means for adjusting the voltage applied to the glow lamp to such a value as to cause the glow lamp to become illuminated only when substantially the full voltage of the supply circuit is present across the ignitron tubes, and one or the other of said electrodes has the glow adjacent to it according to which of said ignitron tubes fails to conduct current.



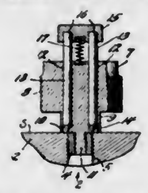
2,438,743

TANGENT CONE CONTACT LENS

William Feinbloom, New York, N. Y.

Application December 15, 1945, Serial No. 635,254
7 Claims. (Cl. 88—54.5)

2. An all-plastic contact lens having a conical scleral bearing section, a corneal lens section provided as a smooth and continuous extension of the conical section on the inner surface, whereby the eyeball cannot feel any discontinuity between the lens section and scleral bearing sec-



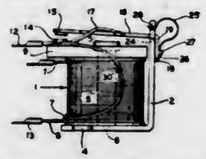
tion on the inner surfaces thereof and practically the entire area of the lens peripheral to the corneal section being of conical configuration.

2,438,744

TOOL FOR SETTING BUSHINGS OR INSERTS

Maurice J. Flynn, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts

Application February 12, 1944, Serial No. 522,151
7 Claims. (Cl. 81—10)



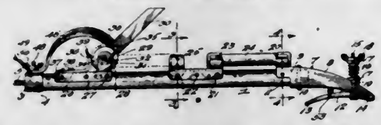
1. In a bushing setting tool having a body, a stem on the body rigid with respect thereto to position the bushing with respect to the body and prevent relative lateral displacement between the bushing and body, a shoulder on the body transverse of the stem to engage the bushing and limit movement thereof on the stem toward the body, the body having a series of bores therethrough terminating in the shoulder, the axes of the bores at the shoulder being spaced from the stem by a distance equal substantially to the radius of the bushing, and punch means guided in said bores for movement toward the bushing.

2,438,745

ELECTROMAGNETIC APPARATUS

Kenneth Herbert Fox, Red Bank, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Application December 14, 1945, Serial No. 635,088
2 Claims. (Cl. 175—336)



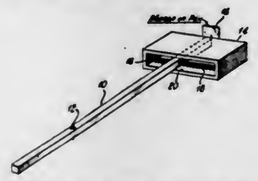
1. In apparatus of the class described, an electromagnet, a bracket having a pair of arms extending substantially at right angles one to the other, said electromagnet having one end thereof fixedly mounted on one of said arms, an armature member having one end thereof projecting through the other of said arms and pivotally mounted therein, said armature member cooperating with the other end of said electromagnet, a plate projecting from said armature member at said one end and cooperating with said other arm of said bracket, a looped leaf spring having one end thereof fastened to said end plate, said other arm of the bracket having a slot formed therein for receiving the one end of said armature member and another end of said looped leaf spring, said leaf spring being arranged so as to bias said armature member away from said electromagnet, and said slot permitting the removal of said other end of the leaf spring and said armature member for disassembling the armature member from said bracket.

2,438,746

HOT LINE JUMPER STICK

John Wesley Garrison, Oceanside, Calif.

Application February 2, 1946, Serial No. 645,084
2 Claims. (Cl. 200—51)



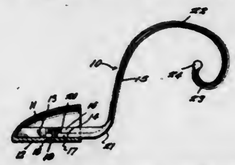
2. A line stick for connecting a hot line to a cold line comprising an elongated head section of insulation material, a hot line clamp on one end of said head section, a handle extending from the other end of said head section for manipulating the same to engage said clamp with a hot line, a cold line clamp having a handle for manipulating the same to engage a cold line, a line of connection between said clamps including a flexible jumper tape, a switch in said line of connection mounted on said head section including a pivoted member, spring actuated into switch closing position and adapted to be cocked to open the switch, and manipulative means for maintaining said member cocked and for releasing the same at will, said jumper tape being electrically connected to said member to one side of the pivot thereof, and a fuse on said head in said line of connection between the other side of said switch and the hot line clamp.

2,438,747

APPARATUS FOR REMOVING RANDOM FLUCTUATIONS FROM INTENSITY MEASUREMENTS

Clifford J. Gibbs, Laingsburg, Mich., and James H. Stein, Toms River, N. J., assignors to Texaco Development Corporation, New York, N. Y., a corporation of Delaware

Original application March 4, 1944, Serial No. 525,050. Divided and this application September 22, 1945, Serial No. 618,040
1 Claim. (Cl. 73—430)



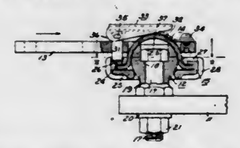
An instrument for indicating continuous variations in a quantity, said instrument having a pointer arm movable in response to said variations and also in response to random fluctuations, means for smoothing out said random fluctuations comprising an inertia member provided with a slot in the plane of movement of the pointer arm, an indicating device on said inertia member, the outer end portion of said pointer arm projecting into said slot, and compression springs between opposite sides of said end portion of the pointer arm and the walls of the inertia member at the ends of the slot, said springs serving to absorb movements of said pointer arm caused by said random fluctuations and to transmit to said inertia member and indicating device movements of the pointer arm caused by average variations in said quantity.

2,438,748

SHOE TREE

Edward H. Greenberg, St. Louis, Mo.

Application November 19, 1946, Serial No. 710,804
1 Claim. (Cl. 12—128.6)



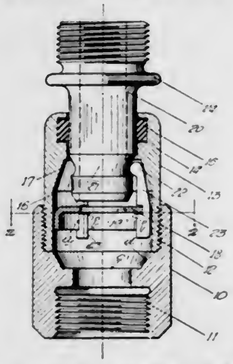
A shoe tree comprising in combination, a hollow toe cap, a pair of spaced parallel guides forming a channel in said cap, an extension arm, the forward end portion of said arm being slidable in said channel and being formed with a longitudinal slot, the mid-portion of said arm being arcuated and constituting an upraised handle, the remaining end portion of said arm being downturned and terminating in an arcuate heel-piece, and a clamping bolt provided on said cap and extending through said slot, whereby said arm and said cap are adjustably connected together.

2,438,749

HITCH

Paul H. Harrer, La Porte, Ind., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application September 30, 1944, Serial No. 556,581
4 Claims. (Cl. 280—33.17)

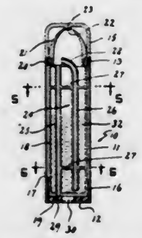


1. A trailer hitch of the ball and socket type comprising, a socket member provided with a series of outwardly extending peripheral lugs, a ball element formed for reception within said socket member, a ring member provided with a series of inwardly extending lugs, said socket lugs and said ring lugs being formed for interlocking engagement to retain said ball element within said socket member, a locking pin engageable with a lug of said ring member for preventing disengagement of said lugs when interlocked, spring means for constantly urging said locking pin toward engagement with said ring lug, and cam means for moving said pin into and out of engagement with said lug.

4. A hitch of the ball and socket type detachably connecting a first structure and a second structure, comprising a socket member attached to said first structure and provided with a series of outwardly extending peripheral lugs, a ball member attached to said second structure and formed for reception in said socket member with

free angular sliding contact between said ball and socket members, an annular retaining member embracing said ball member and provided with a series of inwardly extending lugs and a locking recess, the lugs on said socket member and said annular member being formed for interlocking engagement to retain said ball member and said socket member in operative relation, a locking element adapted to enter into locking engagement within said locking recess, and means for actuating said locking element, said means being carried by said first structure and including a resilient device for biasing said locking element into locking position within said recess, and a manipulable portion disposed in position where it may be readily actuated from the upper side of said first structure and having a cam surface operatively engageable with a portion of said first structure operative to cause actuation of said locking element out of said locking recess.

2,438,750
HOSE COUPLING
John W. Hughes, Dallas, Tex.
Application April 27, 1945, Serial No. 590,575
5 Claims. (Cl. 285—170)



1. A hose coupling including a fixture sleeve and a socket removably mounted therein having an internal cavity provided with converging walls at one end, a cup conforming to and slidable in said cavity having peripheral slots, fingers rockably mounted in said slots having ends engageable with and collapsible by the converging walls of said cavity, a hose nipple adapted for insertion into said socket to force said cup towards the opposite end of said cavity and having an annular recess therein adjacent its end, said cup being effective upon release of fluid pressure into said sleeve to propel said nipple in a counterdirection to collapse said fingers into the annular recess of said nipple, means effective upon relieving said pressure to retract said fingers and means for sealing said socket against pressure leakage past said nipple.

2,438,751
TETRALYL COMPOUNDS
Franklin D. Jones, Upper Darby, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware
No Drawing. Application May 13, 1941, Serial No. 393,248
4 Claims. (Cl. 260—454)

1. The substance selected from the group consisting of tetralyl-6-acetonitrile, tetralyl-6-acetic acid, the lower esters and alkali metal salts of said acid, tetralyl-6-acetamide, tetralyl-6-methyl thiocyanate and tetralyl-6-methyl isothiocyanate.

2,438,752
INHALER
Milford Lee Kahn, Chicago, Ill., assignor of one-half to Roger N. Kinkella, Chicago, Ill.
Application July 11, 1946, Serial No. 682,742
3 Claims. (Cl. 128—200)

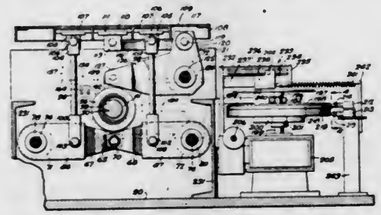
2. In an inhaler, a substantially cylindrical casing including a screw-threaded portion and provided with an aperture at the center of one of its ends, a receptacle provided with a further screw-threaded portion and positioned in said casing, said screw-threaded portions being in operative engagement, an end of said receptacle being formed with an eccentrically disposed aperture and said eccentrically disposed aperture normally being closed by the apertured end of said casing.

2,438,753
BUTADIENE - 1,3-ACRYLONITRILE COPOLYMER PLASTICIZED WITH NAPHTHENIC ACID ESTERS
Henry B. Kellog, Union City, N. J., assignor, by mesne assignments, to Jasco, Incorporated, a corporation of Louisiana
No Drawing. Application December 20, 1940, Serial No. 370,967
2 Claims. (Cl. 260—36)

1. A plasticized composition comprising butadiene-acrylonitrile emulsion interpolymer and a naphthenic acid ester of petroleum phenols.

2,438,754
COPPER CONTAINING DISAZO DYESTUFFS
Adolf Krebser, Riehen, near Basel, and Werner Bossard, Basel, Switzerland, assignors to the firm J. R. Geigy A. G., Basel, Switzerland
No Drawing. Application March 1, 1943, Serial No. 477,630. In Switzerland April 28, 1942
11 Claims. (Cl. 260—148)

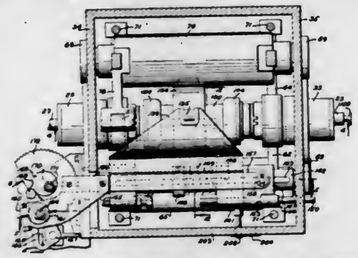
1. A process for the manufacture of copper-containing disazo dyestuffs of the general formula



A—N=N—B—N=N—C

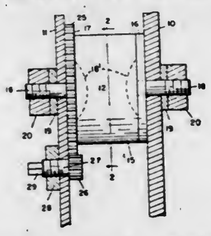
wherein A stands for a sulfonated aryl radical of the benzene series containing in o-position to the azo group a group capable of being coppered, B stands for a radical of a 1:3-dihydroxybenzene and C stands for an unsulfonated aryl radical of the benzene series, which comprises diazotising an aminoarylsulfonic acid of the benzene series containing in o-position to the amino group a group capable of being coppered, coupling the diazo compound with a 1:3-dihydroxybenzene and coupling the monoazo dyestuff with a diazotised unsulfonated arylamine of the benzene series, with the condition that at least one of the radicals A and C is linked to a benzene radical by means of a member selected from the group consisting of —SO_2—,

$$-SO_2N(\text{alkyl})-$$



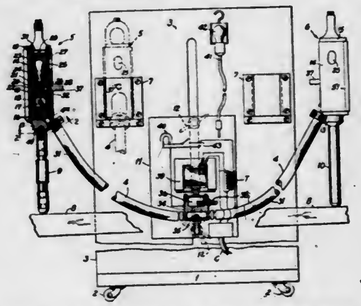
—SO_2—O—, —O—, and —CO—, and converting the dyestuff into its copper complex compound.

2,438,755
VIBRATING APPARATUS
Einer W. Larsen, Elmhurst, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application February 15, 1944, Serial No. 522,524
28 Claims. (Cl. 73—67)



21. A vibratory apparatus comprising a vibratory table, a shaft substantially midway between the ends and underneath said table, a pair of arms, a pivotal support for each of said arms, eccentric means on said shaft settable for oscillating said arms, a link connected to each arm between said pivotal support and said eccentric means for vibrating said table in one direction, a pivotally mounted bell crank lever having one end attached to said table for vibrating said table in another direction, a second eccentric means on said shaft connected to the opposite end of said bell crank lever and settable to rock said bell crank lever, means for rotating said shaft to vibrate said table, and means connectible to render both of said eccentric means operative simultaneously to move the table in a predetermined path by setting them to a position of eccentricity with respect to the shaft.

2,438,756
VIBRATING APPARATUS
Einer W. Larsen, Elmhurst, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 27, 1946, Serial No. 657,355
15 Claims. (Cl. 74—26)



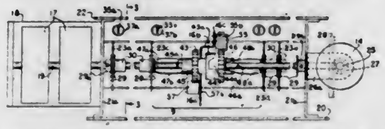
11. In a vibrating apparatus, a vibratory means to be vibrated, variable means for vibrating said vibratory means, a variable speed motor for driving said vibrating means, an operative connection between said vibrating means and said vibratory means, and means for varying the action of said vibrating means to compensate for inherent elasticity between said vibrating means and said vibratory means including a driven cam, a cam lever driven by said cam, an adjusting lever for varying the vibratory action of said vibrating means, means for operatively connecting said adjusting lever to said vibrating means comprising reciprocatory elements movable in spaced parallel paths, a universal joint connecting said elements, and means for operatively connecting said adjusting lever to said cam lever at a selected position on the cam lever to vary the action of said adjusting lever on said vibrating means in accordance with the speed of the motor.

2,438,757
MOUNTING ELEMENT FOR MACHINES OR THE LIKE
Roger K. Lee, Detroit, Mich., assignor to Kenlee Corporation, Detroit, Mich., a corporation of Michigan
Application September 16, 1944, Serial No. 554,376
3 Claims. (Cl. 248—22)

1. A mounting element for machines or the like consisting of a rubber body provided with means at one end for fixing said body to a suitable support, means at its opposite end for fixing said body to the machine to be mounted, said latter means including a plate bonded to said body, means for rotating said plate, whereby to generate torsion stresses in said body, and means for fixing said plate against return rotation.

2,438,758
LIQUID COLUMN LEVEL
Charles C. Leach, Clayton, Mo., assignor of one-half to Marcel Boulicault, St. Louis, and Roland J. Milier, Webster Groves, Mo.
Application December 29, 1943, Serial No. 516,016
6 Claims. (Cl. 33—209)

1. In a level comprising independently movable instruments connected by an elongated flexible tube containing liquid and a signal device actuated by the height of the liquid in one of the

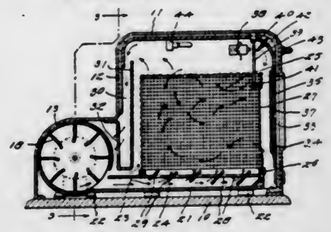


instruments, means arranged to jar the liquid to promote the ready flow of the liquid in said instrument.

2,438,759
MANUFACTURE OF COMPOSITE STEEL PLATES
Benjamin Liebowitz, Lewisboro, N. Y.
Application May 21, 1941, Serial No. 394,508
15 Claims. (Cl. 29—189)

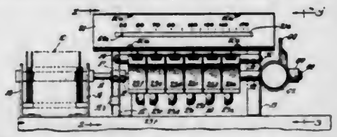
1. In a process of manufacturing composite armor plates by welding together at their interface at least two plates of steel which differ in their carbon content, the steps comprising cleaning the plate surfaces to be welded together, placing said surfaces together and excluding the ambient atmosphere from said surfaces, then welding said surfaces by hot rolling the assembled plates, subjecting the composite plate including the welded interface to a temperature of about 2100° F. to about 2300° F. until a carbon diffusion zone of substantial thickness is formed in the region of said interface, and thereafter subjecting the composite plate to further hot rolling.

2,438,760
RADIO CONTROL APPARATUS
Richard C. Marholz, Chicago, Ill., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill., a corporation of Illinois
Application June 12, 1944, Serial No. 539,937
8 Claims. (Cl. 74—10)



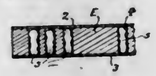
1. In a control device which includes a plurality of control elements spaced axially along a shaft, a pair of pinions rotatably carried by said shaft intermediate the ends of said shaft and between two of said control elements, bowed leaf springs extending longitudinally of said shaft and having their removed ends respectively thrusting against said two control elements, means movable axially of said shaft with said pinions to bow said springs away from said shaft, thereby to exert an axially directed clamping pressure against said control elements sufficient to restrain said control elements against movement relative to said shaft, means interconnecting said pinions to move said pinions axially toward each other in response to opposite rotation of said pinions relative to said shaft, thereby to at least partially relieve the clamping pressure exerted upon said control elements by said leaf springs, means movable transversely of said shaft and provided with offset rack elements aligned with said pinions upon opposite sides of said shaft, said rack elements including teeth engageable with said pinions upon movement of said last-named means transversely of said shaft, whereby said pinions are oppositely rotated to move toward each other under the influence of said springs in response to movement of said last-named means transversely of said shaft.

2,438,761
MANUFACTURE OF CERAMIC MATERIALS OF HIGH PERMITTIVITY
Edward Charles Martin, London, England, assignor to Hartford National Bank & Trust Company, Hartford, Conn., as trustee
No Drawing. Application October 3, 1945, Serial No. 620,165. In Great Britain April 4, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires April 4, 1964
4 Claims. (Cl. 106—39)



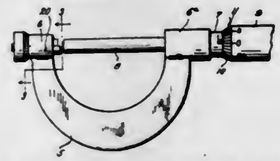
1. A process for manufacturing ceramic materials of high permittivity comprising the steps of mixing together a first portion of wet milled barium titanate and a second portion of dry milled barium titanate, in the proportion of 1% to 70% of wet milled barium titanate and 99% to 30% of dry milled barium titanate, and then fabricating the mixture of wet and dry milled portions of barium titanate into desired shape for conventional treatment and firing.

2,438,762
HAND DRYER
Harry W. McLeckie, Naples, Tex.
Application March 29, 1944, Serial No. 528,588
3 Claims. (Cl. 34—87)



1. A hand dryer of the class described having a casing, said casing being open for insertion of the hands into the interior, a guard interiorly of the casing, to confine the hands, a heater within the casing, means to draw air through the heater and discharge it within the guard, a wall at the base of the guard mounting the same, said wall being open and having louvers therethrough to direct the air into the guard, said wall forming part of a pan-shaped structure, said structure having a neck for the inlet of air.

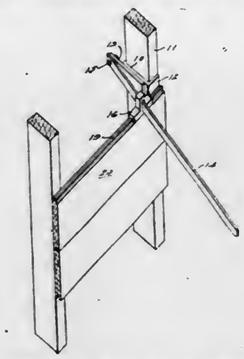
2,438,763
PUSH-BUTTON TUNING CONTROL
Anthony P. Olesky, Chicago, Ill., assignor, by mesne assignments, to Belmont Radio Corporation, Chicago, Ill., a corporation of Illinois
Application September 20, 1944, Serial No. 554,935
21 Claims. (Cl. 74—10)



1. In radio tuning apparatus which includes a tuning shaft rotatable through a desired tuning range and a plurality of tuning selector elements carried by said shaft; spring means normally restraining said selector elements against movement relative to said shaft, a manually operable element, means supporting said element for movement in two directions, means for rotating said shaft to any setting within said range in response to a corresponding movement of said manually operable element in one of said two directions, and means responsive to movement of said manually operable element in the other of said two directions for relieving the restraining force exerted by said spring means upon said selector elements, thereby to release said selector elements for movement relative to said shaft.

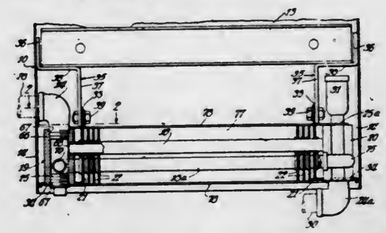
2,438,764
HIGHWAY AND STREET TRAFFIC MARKING AND METHOD AND APPARATUS FOR MAKING SAME
Walter A. Phillips, Salinas, Calif.
Application January 24, 1945, Serial No. 574,386
6 Claims. (Cl. 94—1.5)

1. In a device for use in applying a traffic control marking to the soft upper surface of a highway, a carrier composed of a compressible material provided with a series of spaced openings extending entirely through the carrier and arranged to depict the desired traffic control marking, an individual hard element in and substantially filling each of said carrier openings, and a frangible sheet closing the ends of said openings for retaining said elements therein.



2,438,765
ADJUSTABLE ANVIL FOR MICROMETER CALIPERS
Harold Pollitt, Waukegan, Ill.
Application January 10, 1944, Serial No. 517,696
2 Claims. (Cl. 33—164)

1. An anvil structure for use on the frame of a micrometer comprising a barrel having a closed end and adapted to form a part of said frame, a stationary anvil section extending part way out of the other end of the barrel and permanently fixed therein against movement relative thereto, a movable anvil section slidably fitted in said barrel for adjustment out of said other end of the barrel past said fixed section and having a reduced projection sliding on said stationary section, a calibrated cap rotatably mounted on the closed end of said barrel and for adjusting said movable section, and a rotatable operating connection between said cap and movable section with its axis of rotation in the line of movement of the movable section.

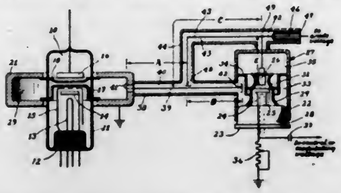


2,438,766
SIDING TOOL
Milo Rifenberg, Constantine, Mich.
Application October 29, 1946, Serial No. 706,290
1 Claim. (Cl. 254—17)

A siding tool of the character described for use in exerting pressure upon siding before securing same to its studs, comprising means for contacting a stud, said means comprising a U-shaped member, a bar rigidly secured to said U-shaped member and extending outwardly therefrom, a lever pivotally mounted upon the outwardly

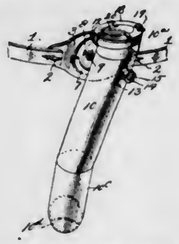
extending portion of said bar, a morticed siding contacting shoe slidable upon said lever, said shoe being formed to contact said siding while pressure is being applied to said lever.

2,438,767
HEATING ELEMENT AND SUPPORT THEREFOR
Benjamin Spieth, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application July 1, 1944, Serial No. 543,117
5 Claims. (Cl. 257—136)



1. A heating element and support therefor comprising, in combination, headers whose center lines are substantially parallel to the air flow through the element, fluid carrying tubes extending from header to header, fins traversing said tubes, flanged supporting brackets through which the fluid carrying tubes extend, the flanges of the supporting brackets having holes therein to receive an end of each header, and flanged side plates extending along the ends of the fins with their flanges projecting over the top and bottom edges of the fins.

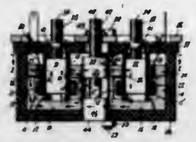
2,438,768
APPARATUS FOR VARYING THE FREQUENCY OF RESONANT CAVITIES
William A. Stewart, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application April 28, 1944, Serial No. 533,183
9 Claims. (Cl. 179—171.5)



1. In an ultra-high frequency circuit, the combination comprising an ultra-high frequency oscillating circuit the frequency of which is to

be varied, an ultra-high frequency amplifier including a vacuum tube having a plurality of cavities, a coaxial line interconnecting one of said cavities with said oscillating circuit, and

a coaxial line interconnecting the other of said cavities with said first coaxial line so as to provide a reinjection coupling point at a voltage point on said first coaxial line.



2,438,769
COLOSTOMY APPLIANCE
Asa E. Thomas, Miami, Fla., assignor of one-half to James A. Dunn, Miami, Fla.
Application December 26, 1945, Serial No. 637,143
5 Claims. (Cl. 128—283)

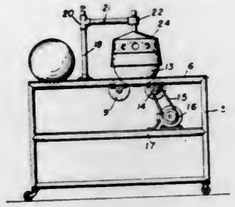
1. A colostomy appliance comprising a tubular body, the upper end of said body being open, a hinged closure for said open end, a sight opening in said hinged closure, said hinged closure being substantially horizontal when the appliance is attached to the body, a substantially horizontal catheter receiving valve carried by the forward side of the body in horizontal relation to a colostomy opening, a rearwardly extending hollow extension carried by the rear side of the body axially of the catheter valve, a horizontally elongated supporting plate surrounding the colostomy opening, a belt detachably connected to the ends of the plate and adapted to encircle the body of the user, said rearwardly extending portion carried by the body being detachably connected to the supporting plate, said hinged closure being hinged to the body at substantially a right angle to the catheter opening, whereby the catheter can be observed during the insertion operation and the closure is open.

2,438,770
ADJUSTABLE MUTUAL COUPLING
John E. Tillman, Stratford, Conn., assignor to General Electric Company, a corporation of New York
Application June 5, 1943, Serial No. 489,803
10 Claims. (Cl. 171—777)

1. A radio frequency transformer comprising a body member of magnetic material having a plurality of recesses therein, each of said recesses having a corresponding winding of said transformer positioned therein, said windings being tuned to a desired band of frequencies, a magnetic closure member for said recesses, said recesses being completely encircled by said magnetic material and being separated by a wall of said body member, said wall being included in

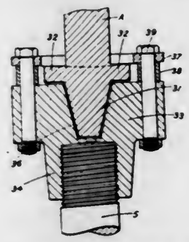
the common magnetic path of said windings, and means whereby the reluctance of a portion of said wall may be varied to adjust the coupling between different of said windings to control the width of said band of frequencies.

2,438,771
GARMENT PROTECTOR
Daniel Topjian, Watertown, Mass.
Application February 14, 1945, Serial No. 577,794
9 Claims. (Cl. 2—53)



1. A removable absorbent pad for use in a garment shield, said pad comprising a single, lune-shaped, leaf-like, uniformly thick sheet of unspun fibrous cellulosic material which is highly absorbent of moisture, said sheet being easily disintegrated when wet, and a thin film of tough, flexible normally non-adhesive material adherent to the marginal portion of one face of said sheet thereby to strengthen the sheet and preserve the shape of the pad when wet, the outer edge of said marginal film registering with the outer edge of said leaf-like sheet.

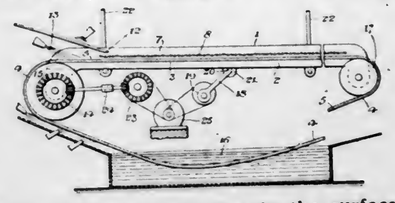
2,438,772
CABINET WITH DOOR ACTUATED SHELF
Otto M. Waara, Detroit, Mich.
Application February 10, 1945, Serial No. 577,280
5 Claims. (Cl. 312—186)



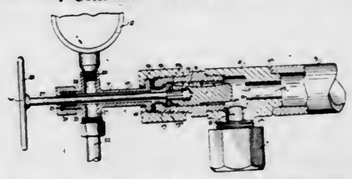
2. A cabinet having rear, side and top walls and a door constituting the front and bottom panels thereof and pivoted to said side walls adjacent the upper end of said door, a channel plate member secured to the inside upper portion of one of the said side walls, a hanger plate vertically slidably mounted in said channel plate member, said hanger plate having a link pivotally connected thereto and pivotally connected to the extreme upper end of said door, a pair of parallel hanger bars pivoted on said hanger plate and on a second plate, this second plate being thereby adapted to swing downwardly and forwardly when the door is opened, and a member horizontally disposed and carried by said second plate.

2,438,773
BALL CLEANING AND POLISHING DEVICE
Sam J. Warlick, Kiowa, Kans.
Application May 5, 1947, Serial No. 746,141
3 Claims. (Cl. 51—154)

1. A ball burnishing and cleaning device comprising a ball support including a pair of rollers, means for driving one of the rollers to rotate a ball resting thereon, a hood positioned on the ball and having a lining in contact with the ball to treat the surface thereof, and a support for the hood.



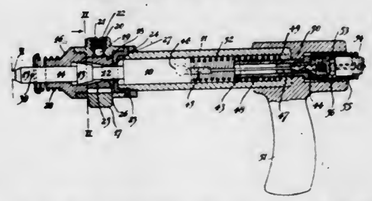
2,438,774
CHUCK DEVICE, PARTICULARLY FOR COAL CUTTING MACHINES
Samuel Baillie, New Invention, Willenhall, England
Application February 8, 1946, Serial No. 646,421
In Great Britain April 5, 1945
2 Claims. (Cl. 279—93)



1. A chuck device comprising a chuck body having a conical recess therein, a tool having a tapering shank for entering said recess, lateral projections on diametrically opposite sides of the shank, a member off-set from the portion of the body of the chuck, said member having a slot through which said projections are adapted to pass so as to lie between said off-set member and said body of said chuck with the shank engaging said recess, and wedge surfaces formed on the surface of said off-set member facing said recess so that when said tool is rotated said tapering shank is wedged in said conical recess.

2,438,775
CONCENTRATOR HAVING SLOPING RECIPROCATING TABLE WITH MOVABLE DECK
Adam Barnard Bouwer and Leslie Dorfman, Johannesburg, Transvaal, Union of South Africa
Application October 23, 1945, Serial No. 623,910
In the Union of South Africa July 20, 1945
1 Claim. (Cl. 209—433)

In a concentrator having a long table sloping longitudinally with means for oscillating the table in a longitudinal direction, feeding means at the top of the table for passing the material to be concentrated down the length of the table and a surface for the table consisting of cells with open tops, slotted walls and retaining pockets, said cells comprising a belt moving upwardly against the passage of the material passing down the table, grooves in the surface of the belt, an open meshed screen fixed relatively to the moving belt and in close parallel association with the same, said grooves and the mesh of the screen combining to form concentrating pockets.

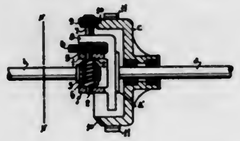


2,438,776
PACKLESS BACK-SEATING VALVE
Charles H. Boylan, Lakewood, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application January 24, 1946, Serial No. 643,008
7 Claims. (Cl. 251—22)

1. A valve comprising a valve body having two fluid conducting ports and valve seat means between said ports, said valve body including a third port, second valve seat means between said third port and said first two ports, a valve member threaded into said valve body and having portions formed to selectively engage said valve seats, the threads lying between the third port and the first two ports, said valve having passageway means formed to permit communication between said third port and said first two ports, said valve member being provided with driving means to receive a tool, and means on said valve body for attachment of a fluid conducting housing for said tool.

2,438,777
PERCUSSIVE TOOL
William Henry Dean, Darlington, England
Application June 20, 1945, Serial No. 600,495
In Great Britain June 26, 1944
3 Claims. (Cl. 125—33)

1. A power-operated percussive tool comprising a reciprocable hammer, a working head se-



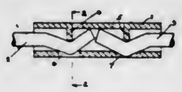
cured to said tool, a work-engaging member supported in said head for reciprocable movement in axial alinement with said hammer, a transversely movable block disposed within the head between the hammer and said work-engaging member, resilient means in engagement with said block and normally retaining it in position to prevent contact of the hammer with said work-engaging member, said block and work-engaging member having cooperating means whereby the block may be moved against the tension of said resilient means to establish contact of the hammer with the work-engaging member.

2,438,778

PROGRESSIVE VARIABLE-SPEED DEVICE

Manuel Andrés González Fabiá, Buenos Aires, Argentina, assignor to Tecnica Industrial y Comercial Sociedad Anonima Tecosa, Buenos Aires, Argentina, a corporation of Argentina

Application December 29, 1944, Serial No. 570,304
In Brazil December 29, 1943
3 Claims. (Cl. 74—280)



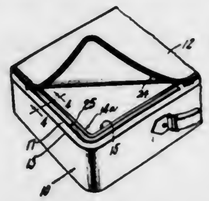
1. In a progressively variable speed transmission, the combination of axially alined driven and driving shafts, a cup-shaped member fixedly secured to said driving shaft, a pair of shafts arranged with their axes parallel to each other and rotatably supported in spaced bearings provided in said cup-shaped member, a worm fixedly mounted on each said last named shafts between said spaced bearings, a worm gear fixedly mounted on said driven shaft and meshing with both said worms, a spur gear fixed to one end of each said worm carrying shafts, a radial shaft rotatably mounted on said cup-shaped member and having a spur gear fixed to its inner end meshing with both said spur gears on said worm carrying shafts, a bevel gear fixed to the outer end of said radial shaft, and a rotatable speed regulating member rotatably supported on the driving shaft and provided with an axially extending flange forming an annular chamber within which is located said cup-shaped member, the outer circumference of said flange forming a braking surface, and manually operable means engaging said braking surface, the outer edge of said flange being provided with gear teeth meshing with said bevel gear on the outer end of said radial shaft.

2,438,779

WIRE CONNECTOR

Herman L. Gordon, Silver Spring, Md.

Application November 21, 1944, Serial No. 564,513
13 Claims. (Cl. 287—75)



9. Means for securing a wire end comprising a deformable receptacle adapted to receive said wire end, means within said receptacle for at times gripping said wire end, and locking means on said receptacle rendered effective responsive to compression of said receptacle for maintaining said gripping means in gripping relationship to said wire end.

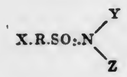
2,438,780

COVER STRUCTURE FOR SUITCASES, VALISES, AND SIMILAR CARRYING CASES

Alex Hochner, New York, N. Y.

Application November 29, 1946, Serial No. 712,832
6 Claims. (Cl. 190—41)

1. In a suitcase provided with upright walls; a frame-shaped ledge angularly directed from and forming an extension of said upright walls, said frame-shaped ledge terminating in a free edge, said free edge being provided with a binding, said binding including a tape carrying first fastener elements, said first fastener elements being movably positioned on said ledge and substantially intermediate said binding and said upright walls, whereby a space is provided between said binding and said first fastener elements, a cover arranged for position on said ledge, said cover terminating in a reinforced end for location within said space, in closed condition of said suitcase, and a tape fixed above and projecting beyond said reinforced end and carrying second fastener elements, said second fastener elements being complementary to said first fastener elements and facilitating closing of said suitcase.



2,438,781

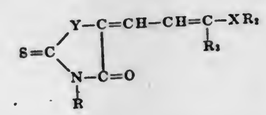
STABILIZED HYPOCHLORITE SOLUTIONS AND PROCESS THEREFOR

Jonas Kamlet, New York, N. Y., assignor to Boyle-Midway Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application September 7, 1944, Serial No. 553,103
8 Claims. (Cl. 23—86)

5. A stabilized aqueous hypochlorite solution, containing a soluble hypochlorite and as a stabilizing agent a minor amount of a member of the group of compounds of the general formula

where R is an aryl group, X is a member of the group consisting of hydrogen and —COOY groups, Y is a member of the group consisting of hydrogen and alkali-metal atoms, and Z is a member of the group consisting of hydrogen, alkali-metal and chlorine atoms, said stabilizing agent being present in an amount in the range 0.001% to 1%.



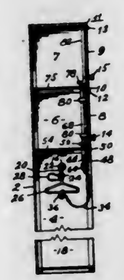
2,438,782

CYANINE DYESTUFFS

John David Kendall, Ilford, England, assignor to Ilford Limited, Ilford, England, a British company

No Drawing. Application April 9, 1943, Serial No. 482,493. In Great Britain April 23, 1942
6 Claims. (Cl. 260—240)

1. Process for the production of dyestuffs which comprises condensing a dyestuff intermediate of the general formula:



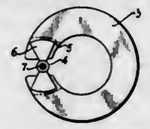
where X and Y are each selected from the class consisting of oxygen atoms and sulphur atoms, R_1 is selected from the class consisting of the hydrogen atom and hydrocarbon groups, and R_2 and R_3 are each hydrocarbon groups, with a second reagent which is a compound selected from the class consisting of alkyl and aralkyl quaternary salts of heterocyclic nitrogen compounds of the thiazole, selenazole and quinoline series having in one of the α and γ positions to the heterocyclic nitrogen atom a substituent reactive methylene group.

2,438,783

CABINET WITH COMPARTMENTS HAVING INTERCONNECTED LOCKING MEANS

Charles H. Kraft, Kansas City, Mo.

Application May 16, 1944, Serial No. 535,887
3 Claims. (Cl. 312—106)



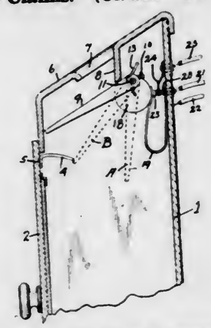
1. In combination, a compartment, a locker superposed upon the compartment and provided with a door for closing the locker, means including a flexible element permanently secured at one end in the compartment, the other end being free to pass through an opening in an article, a bolt extending from the compartment into the locker through an aperture in the bottom of the latter and provided with means for securing the free end of the flexible element to the bottom of the locker, a member fixed to the bottom of the locker and upon which the bolt is slidably mounted, a keeper fixed to the inner side of the locker door to receive the upper end of the bolt and cooperate therewith in locking the door, and member for locking the bolt to said member upon which it is slidably mounted.

2,438,784

TUNER FOR ULTRA HIGH FREQUENCIES

Alexander Landmann, London, England, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain

Application October 11, 1943, Serial No. 505,726
In Great Britain April 28, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires April 28, 1962
4 Claims. (Cl. 250—40)



1. A resonant circuit arrangement tunable in a range of very high frequencies comprising a single incomplete ring of conductive material constituting the greater portion of the inductance of said resonant circuit and having a gap, the adjacent ends of said ring having plurality of slots whose principal surfaces are disposed in parallel planes which are perpendicular to the axis of the ring, and a metallic member located in said gap and rotatable on an axis parallel to said ring axis and having vanes disposed in capacitive relation to the surfaces of said slots.

2,438,785

LETTER BOX

Mary McKallick, Spokane, Wash.

Application January 20, 1947, Serial No. 723,006
4 Claims. (Cl. 232—34)

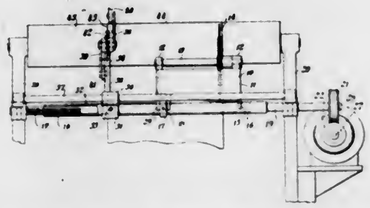
1. In a letter box having a deposit slot in its top wall and an electrical signalling circuit having an open switch located in the box, the combination with a hinged door having an interior spring detent mounted thereon, of a spring lifted and depressible trap arm pivotally mounted within the box beneath the slot in position for co-action with the detent, whereby the free end of the depressed arm is caught by the detent and released when the door is opened, and means actuated by depression of the trap arm for closing the switch.

2,438,786

INK PASTE CARTRIDGE FOR BALL POINT FOUNTAIN PENS

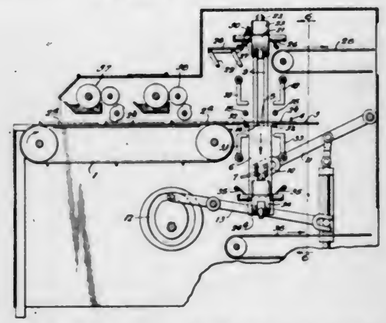
David Pelton Moore, Forest Hills, N. Y., assignor to Premium Merchandising Corporation, a corporation of New York

Application June 7, 1945, Serial No. 597,999
1 Claim. (Cl. 120—42)



An ink paste cartridge for ball-nib fountain pens, consisting of a tubular casing having a

reduced externally threaded outlet and an internally threaded portion at the opposite end, a soft metal seal at the reduced outlet, an externally threaded plug fitted in the internally

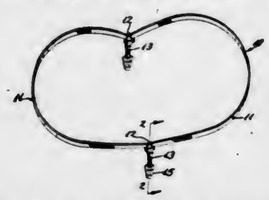


threaded portion of the casing, a floating piston mounted in the casing, and an extension spring disposed between the plug and the piston to exert pressure against the piston to create pressure upon the ink paste within the casing.

2,438,787
PAPER BAG MAKING MACHINERY
John Nicholas, Bristol, England, assignor to E. S. & A. Robinson, Limited, Bristol, England, a company of Great Britain
Application May 23, 1944, Serial No. 536,922
In Great Britain July 27, 1943
5 Claims. (Cl. 91—12)

1. In a paper bag making machine, a rotatable roller supporting a paper web for traveling movement, an externally threaded shaft mounted for rotation in parallel relation to said roller and disposed laterally of the direction of travel of the paper web, an internally threaded sleeve in threaded engagement with said shaft whereby rotation of said shaft will cause said sleeve to move laterally of the direction of travel of the paper web, a seam adhesive device supported on said sleeve and movable therewith laterally of the paper web; said seam adhesive device having an adhesive-applying rotary disc member normally in contact with said paper web adjacent one edge thereof for applying a narrow layer of adhesive to the paper web, a bi-directional rotary device connected to said shaft for rotating it in either direction, and means responsive to lateral movement of the paper web on said roller for determining the direction of rotation of said rotary device, whereby the seam adhesive device is moved in the same direction as and substantially simultaneously with the paper web.

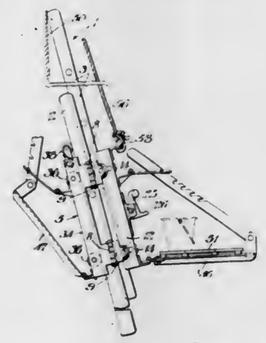
2,438,788
PAPER BOX FORMING APPARATUS
Frank D. Palmer, Chicago, Ill., assignor to F. D. Palmer, Inc., Chicago, Ill., a corporation of Illinois
Application August 11, 1944, Serial No. 549,030
2 Claims. (Cl. 93—51)



1. In a paper box making machine, means for successively delivering box blanks to a predetermined box position, a double-ended plunger, means for reciprocating said plunger so as to cause its opposite ends to successively traverse said box blank position, and a pair of box-forming devices respectively disposed on opposite sides of said box blank position and respectively cooperating with the opposite ends of said plunger for forming boxes on said plunger ends incident to movement of the plunger in opposite directions.

2,438,789
PRODUCTION OF ORGANIC ACIDS
Irwin A. Pearl, Appleton, Wis., assignor, by mesne assignments, to Sulphite Products Corporation, a corporation of Wisconsin
No Drawing. Application April 19, 1946, Serial No. 663,633
2 Claims. (Cl. 260—521)

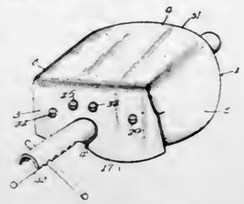
2. In the process of producing the derived mono-carboxylic acids from aldehydes selected from the group consisting of vanillin, ortho-vanillin and syringaldehyde, the improvement which consists in reacting the aldehyde with gold oxide in a hot aqueous solution of alkali metal hydroxide.



2,438,790
REMOVABLE SANITARY BELT TAB
Sarah D. Postlethwaite, New York, N. Y.
Application December 8, 1945, Serial No. 633,781
1 Claim. (Cl. 128—291)

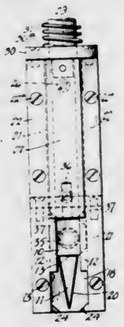
A sanitary belt, comprising a pair of belt sections, a pair of identical triangular members connecting the ends of the belt sections to each other and providing horizontal supporting bars, a pair of identical U-shaped hooks, each of said hooks being engaged with each horizontal supporting

bar of each triangular member and provided with an opening therein, a strap extended through said hook, and a triangular connector plate on the lower end of each strap, each of said connectors having an aperture formed therein providing means for securing one end of a sanitary pad thereto, said U-shaped hooks being detachable from said horizontal bars of said triangular members to wholly detach the sanitary pad from the belt sections.



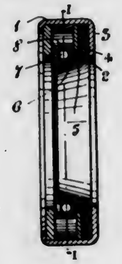
2,438,791
SLIDING LADDER JACK
Albert A. Russell, Phoenix, Ariz.
Application March 17, 1947, Serial No. 735,214
5 Claims. (Cl. 304—31)

2. A sliding ladder jack for use on extension ladders of the type wherein the rails of the lower part are more widely separated than those of the upper part, comprising a case having a front part and a rear part hinged laterally to open and close over said extension ladder sections, said case parts being shaped to substantially enclose the sectional contour of said ladder parts and provided with rollers adapted to bear on both sides of the side rails of each ladder section, trestle brackets attached to the front and rear faces of said case, hoisting means adapted to raise and lower said case upon said ladder parts, and rung engaging mechanism including rung latches hinged to the inner face of said case in vertically spaced relation and positioned to engage adjacent rungs on said ladder sections, adapted to swing from a determined inwardly extending engaging position to a downwardly depending non-engaging position, spring means normally urging said latches to said engaging position, a link connecting said latches so that they swing together, and a dog operable on said link to releasably hold said latches in non-engaging position.



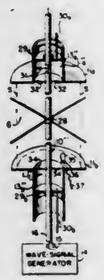
2,438,792
HAND GUARD FOR WELDING APPARATUS
John J. Sandrik, Chicago, Ill.
Application May 4, 1946, Serial No. 667,440
5 Claims. (Cl. 2—17)

1. A hand shield adapted to be carried by a part of a welding apparatus comprising a body having an open back and bottom to permit free movement of the operator's hand and wrist, with a relatively straight front portion, integral side walls and an integral top wall extending rearwardly and outwardly from said front portion, there being an opening in said front portion to permit the guard to be mounted on a handle of a welding apparatus, and fastening means adja-



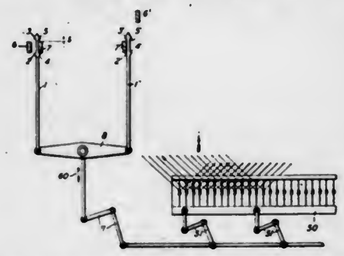
cent said opening to secure the guard to an operating part of the welding apparatus.

2,438,793
NAILING DEVICE AND NAILS INSERTED THEREBY
Max Vogel, Bridgeport, Conn.
Application June 13, 1944, Serial No. 541,199
15 Claims. (Cl. 1—46)



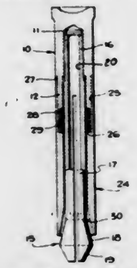
1. A nail structure comprising a head part and a prong part integrally connected together, said head and prong parts in their pre-driven state being disposed in co-planar relation with their front and rear surfaces in the same plane and being entirely free of any projections beyond said surfaces, whereby the rear surface of the head and prong parts may have downward sliding engagement with the front surface of a similar contiguous nail structure disposed in a driving implement, said prong part having at least one of its side edges entirely inwardly offset from and below the side edges of said head part, and said head part having at its upper edge a driver engaging surface for driving engagement by the driver of a driving implement and having at its lower edge an abutment shoulder forming an angular corner with said inwardly offset side edge of said prong part, the straight transverse line of said prong part coinciding with said angular corner constituting the bending line between said head and prong parts, said shoulder adapted in the co-planar relation of said head and prong parts to limit the insertion of the prong part in material being nailed to the full length of said prong part, the marginal portion of said head part between its upper edge and said shoulder being a guide portion for engagement with guide means of a driving implement said head part being bendable with respect to the fully driven prong part about said bending line into angular relation to said prong part to dispose said head part in engagement with the surface of the material being nailed.

2,438,794
PACKING OR SEALING RING
Arthur Waring, Birmingham, England
Application February 8, 1946, Serial No. 646,273
In Great Britain September 1, 1945
3 Claims. (Cl. 288—3)



1. A sealing device having a casing for surrounding a shaft comprising an annular sealing lip which bears on the shaft, a helically coiled garter spring which surrounds the lip, and a rigid ring floatingly mounted in said casing and surrounding the garter spring and in substantial contact with the latter when said sealing lip is in sealing contact with said shaft, so that radial outward deflection on one side of the sealing lip and garter spring will cause said ring, by pressure of the garter spring thereon, to be moved radially outwardly on the said side and radially inwardly on the opposite side and thus cause the garter spring to be adjusted for maintaining a sealing pressure entirely around the sealing lip.

2,438,795
WAVE-GUIDE SYSTEM
Harold A. Wheeler, Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application December 13, 1943, Serial No. 514,071
15 Claims. (Cl. 178—44)

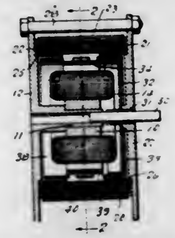


1. A wave-guide system for translating wave signals of predetermined wave length comprising, an open wave guide including an elongated conductor spaced by at least one-quarter wave length from any conductive mass, an electrically conductive structure providing normal to said conductor a wave-signal path having impedance to space much less than the image impedance of said wave guide, and impedance means having a value of impedance approximately matching said image impedance for coupling said structure and said conductor to effect optimum transfer of wave-signal energy through said wave guide in at least one direction.

2,438,796
POSITIVELY OPERATING DOBBY
Otto Zollikofer, St. Gallen, Switzerland, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland
Application April 24, 1944, Serial No. 532,470
11 Claims. (Cl. 139—72)

1. A double-lift open-shed dobby comprising, in combination, a two arm balance lever, a lifter member swingably connected with each arm of said balance lever, harness lever means having an end portion swingably connected with said balance lever at its fulcrum, a two arm operating lever positively operated by the loom, two link members, each of said link members having one end swingably connected with one arm of said operating lever, a draw bar connected with each of said link members at the other ends thereof, said draw bars being adapted to individually engage and positively operate said lifter members in two substantially opposite directions, and abutment means forming part of said operating lever and being adapted to engage said balance lever and fix its position upon engagement.

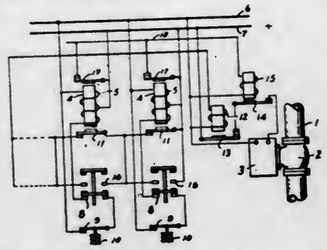
2,438,797
PORTABLE SMALL HAND TOOL VISE
Kaj Bagge, Sunland, Calif.
Application November 12, 1946, Serial No. 709,254
2 Claims. (Cl. 279—51)



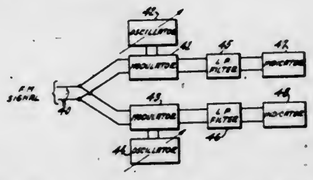
1. A portable, small, hand tool vise and handle comprising: a split collet having a cylindrical body portion, a substantially solid, externally threaded shank end and an enlarged conical head, said collet being split through the conical head and body portion; a hollow, internally threaded cap connected to the threaded shank end of the collet, said cap including a tubular portion surrounding the collet and spaced therefrom; a tubular release sleeve carried by the tubular portion of the cap and extending around the collet for cooperation with the conical head thereof; and spring means between the cap and sleeve for normally engaging the sleeve with the conical head to hold the collet in closed, tool-grasping position.

2,438,798
MANUFACTURE OF STRAIN-INSENSITIVE STEEL
Henry M. Banta, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application October 14, 1941, Serial No. 414,940
4 Claims. (Cl. 75—45)

1. The method of making steel having a reduced strain-sensitivity, which comprises forming a basic open hearth heat containing iron oxide and limestone and having about 1.25% to 1.80% carbon at melt-down of the metallic charge, and oxidizing the carbon intensely and rapidly under a slag the percentage CaO to SiO_2 ratio of which is maintained under 2.3 so that the carbon is not over about .80% when the limestone charge is about half melted, whereby nitrogen is reduced to a low value.



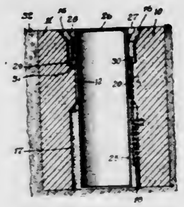
2,438,799
SYNCHRONOUS REPEATER UNIT
Dwight W. Bloser, West Englewood, N. J., assignor, by mesne assignments, to Kearfott Company, Inc., New York, N. Y., a corporation of New York
Application November 21, 1946, Serial No. 711,301
4 Claims. (Cl. 172—120)



1. A synchronous repeater unit comprising an internal stator of magnetic material having external slots carrying distributed windings, an annular exciting coil concentric with said stator and spaced radially therefrom, said coil being symmetrically disposed with respect to said stator and wound to produce opposite polarities at its two axially spaced ends, annular members of magnetic material disposed at said ends interiorly of said coil to be maintained thereby at opposite polarities, and a rotor concentric with said stator comprising a pair of axially spaced rings of magnetic material disposed to rotate within the respective annular members, each of said rotor rings having an axially projecting segmental pole piece disposed to rotate around the periphery of said stator.

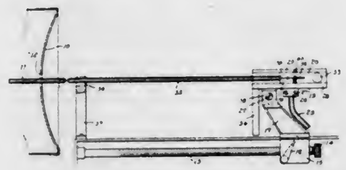
2,438,800
FUEL OIL FILLING SYSTEM
Francis L. Boylan, New Orleans, La.
Application August 13, 1945, Serial No. 610,495
4 Claims. (Cl. 137—68)

1. In a fuel oil filling system of the class described comprising, a plurality of tanks to be filled, a filling system for said tanks, including a manifold valve connecting each tank to said filling system, a stand-pipe connected to said filling system for diverting the flow of fuel oil, a stand-pipe valve in said stand-pipe, means for opening said stand-pipe valve when any one of said tanks become full for diverting the flow away from said full tank, means responsive to the closing of the manifold valve to said full tank for closing said stand-pipe valve, and means for preventing the closing of said stand-pipe valve when all the manifold valves are closed.



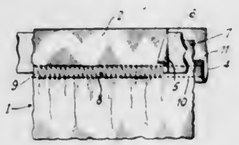
2,438,801
MONITORING AND MEASURING APPARATUS FOR FREQUENCY MODULATED SIGNALS
Rene A. Braden, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application February 27, 1942, Serial No. 432,632, now Patent No. 2,369,011, dated February 6, 1945. Divided and this application August 4, 1944, Serial No. 548,083
7 Claims. (Cl. 179—171.5)

1. Apparatus for indicating over-modulation of frequency modulated signals including in combination, a source of frequency modulated signals, a source of oscillations having a frequency exceeding a predetermined frequency modulation limit of said signals, means for mixing said signals and said oscillations to derive beat frequency currents and an indicator responsive only to beat frequency currents derived from over-modulation of said signals exceeding said frequency limits.



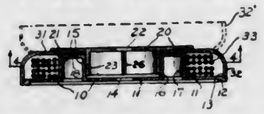
2,438,802
GROUND VASE
Axel S. Carlson, New York, N. Y.
Application August 8, 1945, Serial No. 609,643
2 Claims. (Cl. 47—41)

1. A ground vase including a block of cement or similar material, said block having a bore



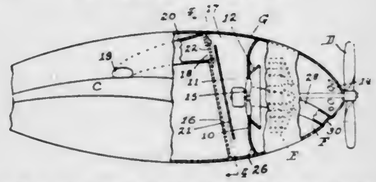
adapted to receive a vase, the top of said bore being enlarged to define oppositely disposed recesses, a vase having an open and a closed end, a pair of oppositely extending flanges adjacent the closed end of said vase and a second pair of oppositely disposed flanges spaced therefrom, said flanges engaging the bottom and sides of said recesses to position said vase in either the open or inverted position.

2,438,803
CARBON CLAMP
Carl E. Graham, Canton, Ohio
Application July 29, 1946, Serial No. 686,933
6 Claims. (Cl. 176—119)



1. A carbon holder for an arc lamp having a movable post therein and feed means for moving the post, said carbon holder comprising an elongated head, means for detachably connecting said head to the post, a clamping member adjustably mounted upon the head and having a socket for receiving one end of the carbon, and means for clamping the clamping member in adjusted position upon the head at any point throughout the length of the head.

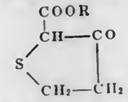
2,438,804
BAND FOR GARMENTS
Harry Hardie, Baltimore, Md., assignor to The Nobelt Company, Baltimore, Md., a corporation of Maryland
Application October 20, 1945, Serial No. 623,497
3 Claims. (Cl. 2—237)



1. An elastic band for a garment, comprising: a U-shaped sheath astride of an edge zone of the garment, the leg of the sheath which is on the inside of the garment having an unhemmed edge and the leg of the sheath which is on the outside of the garment being provided with an inturned hem lying directly against the outer face of the edge zone of the garment, a strip of thin elastic sheet-rubber lying against the inner face of the edge zone of the garment, and first and second longitudinally-extensible rows of stitches extending through the body of the garment and the adjacent parts of said band with covering thread on the inside of the garment extending between said rows of stitches, the first row of stitches passing through the strip of rubber and the second row of stitches being spaced from said strip of rubber, and the covering thread overlying said unhemmed edge of the sheath and protecting it from fraying and holding it flat against said sheet of rubber.

2,438,805
COMBINED STRAND DISPLAY AND TRANSFER REEL
Egbert P. Hoyle, Cortland, N. Y., assignor to Cortland Line Company, Inc., Cortland, N. Y., a corporation of New York
Application September 18, 1946, Serial No. 697,633
3 Claims. (Cl. 242—118)

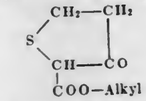
1. A three-part strand container and combined transfer reel comprising a pair of separable flanges mounted for relative rotation about a common axis, mated spacer means interposed to retain said flanges in definite lateral relationship, said means comprising an annulus having a noncircular bore disposed around said axis and fixedly carried by the inner face of one such flange, a plug component fixedly carried by the inner face of the other flange and having an eccentric superficial contour that is telescoped within and cooperatively shaped with respect to the aforesaid bore to initially provide for a radial clearance gap therebetween, said gap being progressively reduced when said flanges are rotated relative to each other thereby bringing said plug contour into wedged tangential interlock with said bore, and a demountable cup-shaped cover member comprising a reversible dual faced basal wall of ring-shape sized to receive said plug therethrough and having its inner marginal edge region clamped between the annulus and the aforesaid other flange and which basal wall is retained in either of its positions by the plug when wedgingly interlocked with said bore.



2,438,806
ENGINE NACELLE CONSTRUCTION
Jeners S. Johnson, Los Angeles, Calif.
Application September 4, 1945, Serial No. 614,259
4 Claims. (Cl. 244—53)

1. An air craft having an elongated body shell provided with a propeller in advance of its forward end and an adjacent laterally extending wing structure, a forward compartment within said body shell having air induction ports back of said propeller and an air eduction passage in its rearward end portion, an engine within said compartment for driving said propeller, a blower in said eduction passage for forcing a draft of air cooling medium rearwardly through said compartment, a bulkhead inclined upwardly and rearwardly across the space in said body shell back of said compartment having a rearwardly extending duct from its upper portion extending outwardly and laterally into the air flow over the surface of the aircraft wing structure, and a baffle plate extending over the major portion and spaced in advance of said rearwardly inclined bulkhead for augmenting the muffling of sound emitted by the engine in the engine compartment.

2,438,807
2-CARBALKOXY-3-KETO-TETRAHYDROTHIOPHENE PRODUCT AND PROCESS
Paul Karrer, Zurich, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application March 22, 1943, Serial No. 480,091. In Switzerland May 5, 1942
4 Claims. (Cl. 260—329)

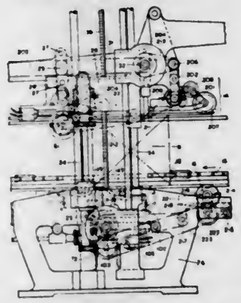


2. A tetrahydrothiophene compound represented by the following formula

where R represents a lower alkyl group.

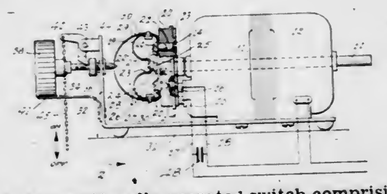
2,438,808
2-CARBALKOXY-3-KETO-TETRAHYDROTHIOPHENE PROCESS
Anthony William d'Aubigny Avison, Franz Bergel, and John Wynne Haworth, Welwyn Garden City, England, assignors, by mesne assignments, to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application December 18, 1943, Serial No. 514,861. In Great Britain December 22, 1942
2 Claims. (Cl. 260—329)

1. A process for the manufacture of heterocyclic sulphur compounds of the general formula:



which comprises treating dibasic acid esters of the general formula:

$$R_1OOC.CH_2.S.CH_2.CH_2.COOR_2$$

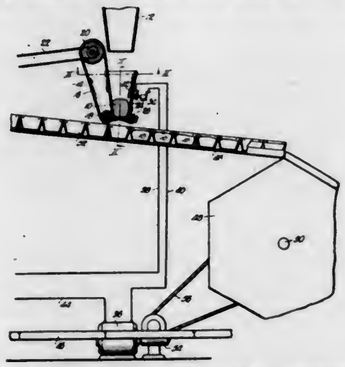


where R_1 and R_2 are alkyl groups with an alkali metal to bring about ring closure with elimination of an alcohol R_2OH.

2,438,809
PACKAGING MACHINERY
James Arthur Kay, Gainsborough, England, assignor to Rose Brothers (Gainsborough) Limited, Gainsborough, England, a British company
Application July 8, 1944, Serial No. 544,049
In Great Britain March 29, 1943
3 Claims. (Cl. 91—50)

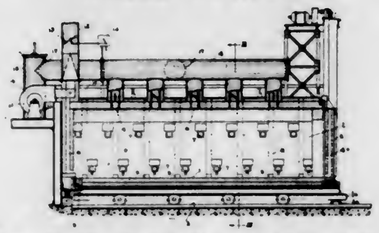
1. Packaging apparatus of the type described, comprising means for feeding a succession of containers through the apparatus, main glue-applying rollers for applying glue to the whole or part of the inside surface of the outside flaps of said containers, means for adjusting the apparatus for the accommodation of containers of different dimensions, said adjusting means including means for simultaneously adjusting said main glue-applying rollers, an auxiliary glue-applying roller for applying a continuous line of glue to that portion of the outer of the outside flaps which in any container overlaps the inner of the outside flaps, and means operating in synchronism with said adjusting means for adjusting said auxiliary glue-applying roller simultaneously with the adjustment of said main glue-applying rollers to such a position relatively to the width of any container that it applies glue only to certain portions of the outer of the outside flaps.

2,438,810
CENTRIFUGALLY OPERATED SWITCH
Harry L. Lambert, Enfield, N. Y., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Application February 24, 1944, Serial No. 523,677
13 Claims. (Cl. 200—80)



4. A centrifugally operated switch comprising a rotatable element, a flexible, ribbon-like, spring strip secured at both ends to said element at approximately diametrically opposite sides of the axis of rotation of said element, with an intermediate, free, bowed portion extending generally across the axis of rotation, a contact carried by said element at approximately said axis of rotation, a contact carried by said intermediate, bowed portion also at approximately said axis of rotation, said contacts being arranged on that side of said strip which will cause their separation from each other in a direction parallel to said axis when the centrifugal force set up in said spring strip by its rotation is sufficient to overcome the resiliency of the strip and move said intermediate portion in a direction parallel to said axis, spring means acting on said spring strip in a direction to decrease the pressure of said strip in opposition to the centrifugal force, and an abutment acting on said spring means to determine the pressure exerted by said spring means on said strip, whereby the pressure which the centrifugal force acting on said strip must overcome in order to cause relative movement of said contacts through a straightening of the intermediate portion of strip may be varied by moving said abutment to various predetermined position.

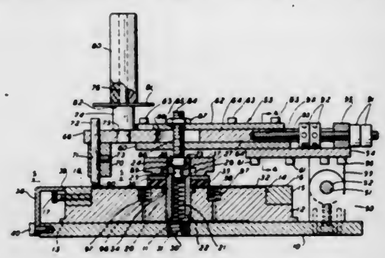
2,438,811
DOUGH PRESSING AND FEEDING APPARATUS
Grover N. Le Sage, Kansas City, Mo.
Application March 10, 1945, Serial No. 582,036
4 Claims. (Cl. 107—9)



1. A feeding apparatus for dough handling equipment comprising a movable belt for the pans receiving the dough pieces; driving means

for the belt; a chute above the belt through which the dough pieces pass to the pans on the belt; and a switch operable by the passage of dough pieces through the chute for actuating the driving means to advance the belt step-by-step

as the dough pieces successively traverse the said chute, said chute progressively decreasing in cross sectional area as the lowermost end is approached to direct the dough piece against the switch as it passes through the chute.



2,438,812
FURNACE AND METHOD OF OPERATING SAME
Fred H. Loftus, Mount Lebanon, Pa.
Application July 31, 1943, Serial No. 496,866
11 Claims. (Cl. 263—43)

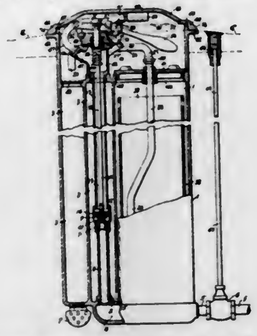
1. In a heating or heat-treating furnace, the combination of means for supplying hot gases to the work-containing chamber of the furnace, a valve-controlled outlet for the waste gases of the furnace, a system of outgo flues opening through the side walls of said chamber and communicating with said outlet, a passage leading from the top of said chamber to said flue system, and means in said passage for drawing gases from the top of said chamber and propelling them under augmented pressure into said flue system and thence into said chamber counter to the normal direction of flow of the waste gases in the system, thereby augmenting the circulation of the gases in said furnace chamber.

2,438,813
ENGRAVING APPARATUS
Carl V. Lundeen, Towson, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 15, 1945, Serial No. 616,624
12 Claims. (Cl. 33—19)

1. A dial engraving apparatus comprising a base, a circular support rotatably mounted on the base, a calibrated ring rotatably mounted on the support, means for clamping a circular dial to be engraved on the support so that its periphery slidably engages the inner periphery of the calibrated ring, means for selectively clamping the calibrated ring to the support to position

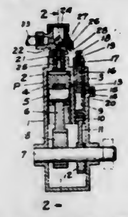
a selected portion thereof with respect to a selected portion of the dial secured on the support, engraving means pivotally mounted on the base, and means for selectively clamping the support to the base to prevent rotation thereof with respect to the engraving means.

2,438,814
CHECKERWORK FOR FURNACES
James E. MacDonald, Latrobe, Pa.
Application November 20, 1944, Serial No. 564,261
3 Claims. (Cl. 263—51)



1. Checkerwork for furnaces, comprising vertical flues formed of bricks in superposed relation and each having vertical ribs in abutting relation with ribs of vertically-adjacent bricks, and certain bricks having their vertical edges in abutting engagement with vertical sides of horizontally-adjacent bricks, the said edges having horizontally-extending depressions formed therein, to provide lateral passageways between the flues, the depressions each being symmetrically disposed with respect to the horizontal median plane of its brick, and each being of materially less vertical width than the edge of its brick and having its upper and lower walls so inclined as to have the passageways slope from each flue to another flue.

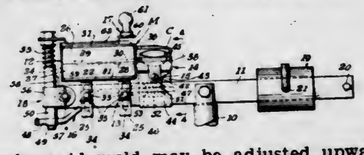
2,438,815
WATER SERVICE APPARATUS
John T. McGarry, Cincinnati, Ohio; Mary Frances McGarry, executrix of said John T. McGarry, deceased, assignor to Railroad Products Company, Cincinnati, Ohio, a corporation of Ohio
Application April 4, 1944, Serial No. 529,485
6 Claims. (Cl. 137—13)



1. In water service apparatus of the character described, underground water-supply means, a riser communicating with said means, a valve controlling flow up through said riser, an embedded box into which said riser enters, a lid to close said box by engaging the upper rim of the box, a detachable flexible hose connection, said lid having a raised enclosing space above the level

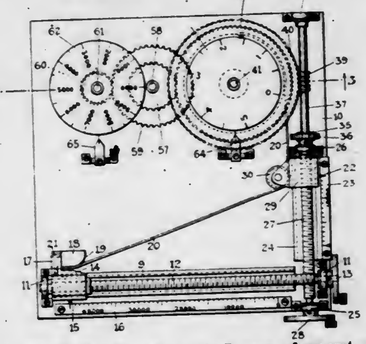
of the box rim when the lid is closed, said hose connection being mounted on said lid within said

space above the box rim, and said connection communicating with said riser.



2,438,816
LUBRICATING MEANS FOR INTERNAL-COMBUSTION ENGINES
Edward Moore, Newark, N. J.
Application April 13, 1946, Serial No. 661,980
11 Claims. (Cl. 184—55)

1. A lubricating structure having a pair of closely associated cylinders with pistons therein, one cylinder having a cross air passage therethrough and extending into the other cylinder which serves as an output cylinder having a feed line extending therefrom while the cylinder having the cross air passage serves as a feed or control cylinder, means for automatically closing off the feed line from the output cylinder during one stroke of its piston whereby a vacuum is set up in the cylinder until its piston uncovers said air passage, an oil line connected by a hole to the interior of the feed cylinder, the piston of which has a circular recess that is in alignment with the oil line hole in one position of the feed piston, the recess being in alignment with said air passage in another position of the feed piston and at a time when the output piston uncovers the air passage whereby the air rushing through said air passage into the vacuum set up in the output cylinder, picks up the oil in the feed piston recess and delivers a fine oil and air mixture to the output cylinder ready for discharge therefrom on the next stroke of its piston and means for operating both pistons simultaneously.

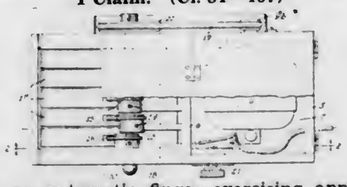


2,438,817
SPINNER
Stanley Nalick, Los Angeles, Calif.
Application October 26, 1945. Serial No. 624,711
4 Claims. (Cl. 18—26)

4. In a centrifugal casting spinner, comprising a horizontal bar mounted on the upper end of a rotatable shaft in a balanceable condition, an actuating mechanism mounted at and on one end of said bar, a mold support on the end portion of said bar adjacent said actuating mechanism, a crucible support slidably mounted on said bar between said mold support and the axis of said rotatable shaft, whereby said crucible support is urged toward said mold support when said spinner is in operation said mold support having means thereon engaging said bar

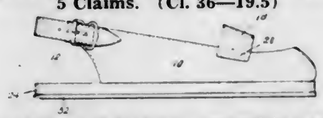
whereby said mold may be adjusted upwardly and downwardly with reference to said bar and said crucible support, said crucible support having means thereon and engaging said bar whereby said crucible support may be adjusted laterally with reference to said bar and said mold support said actuating mechanism constituting a shifting means for said crucible support and a hold down crank for a mold when a mold is on the mold support.

2,438,818
TRIANGLE SOLVER
William H. Newell, New York, and Lawrence S. Brown, Long Island City, N. Y., assignors to Ford Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Application October 5, 1945, Serial No. 620,484
10 Claims. (Cl. 235—61)



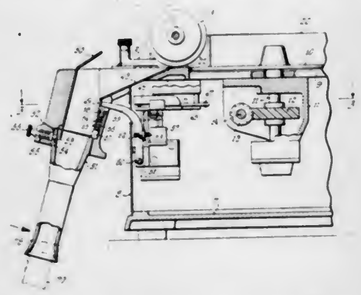
1. Apparatus for computing one element of a triangle having three elements of known value, comprising guide members positioned along two sides of said triangle, a pair of carriages movable along the respective guide members, means positioning said carriages along the respective members, a drum mounted to rotate about a fixed axis, a tape guide carried by the first of said carriages, a tape passing around said guide and having one end secured to the second carriage and its other end secured to and wound onto said drum, means biasing said drum to hold said tape under tension whereby the drum is rotated by the movement of said tape, means positioned by said drum, and means responsive to movement of the first carriage to modify the position of said last means so that the positioned means represents the length of tape between said carriages.

2,438,819
NITRATED ESTROGENIC HORMONES
Joseph B. Niederl, Brooklyn, N. Y.
No Drawing. Application April 28, 1945, Serial No. 590,975
4 Claims. (Cl. 260—397.4)



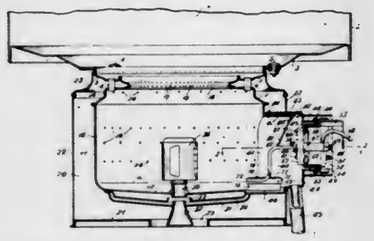
1. A process of producing a nitro estrone which comprises subjecting estrone dissolved in an inert solvent, at an elevated temperature, to the action of concentrated nitric acid.

2,438,820
MUSICAL AUTOMATIC FINGER EXERCISING MACHINE
Jan Obuchowski, Stamford, Conn.
Application April 27, 1945, Serial No. 590,685
1 Claim. (Cl. 84—467)



In an automatic finger exercising apparatus comprising a casing, a series of piano keys pivotally mounted in the casing, with the forward portions of the keys exposed upwardly for access to the fingers of a player, and a driven shaft having eccentrics with pitmans operated thereby and individually connected to the keys, the features which consist in that the casing includes three sections, one behind the other, among which sections the first is open to expose the forward portions of the keys, the second is an intermediate chamber having the rear portions of said keys extending into and terminating within it and also having the driven shaft with the eccentrics and pitmans located therein, said chamber having a partition separating the same from the first mentioned casing section exposing the keys, and the third section is also a chamber having a further partition separating it from the intermediate chamber and containing a prime mover connected operatively to the driven shaft for rotation of the latter in said intermediate chamber.

2,438,821
PLATFORM TYPE SHOE AND METHOD OF MAKING SAME
Arthur H. Quinn, Dorchester, Mass., assignor to Universal Shoe Corporation, Sanford, Maine, a corporation of Massachusetts
Application May 17, 1946, Serial No. 670,620
5 Claims. (Cl. 36—19.5)

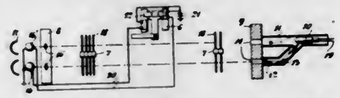


4. An article of footwear comprising an upper and a sock-lining stitched together excepting around the toe portions thereof, the toe portion of the upper being lasted with a lasting allowance thereon laid over upon and cemented to the toe portion of the sock-lining, a wrapper strip stitched only to the upper around the toe portion thereof and stitched to both the upper and the sock-lining rearward of said toe portion, a midsole element, said wrapper strip being turned over the edges of the mid-sole element and secured to the outer marginal portions thereof, and an outsole element secured to the wrapped midsole element.

2,438,822
STARTING CONTROL FOR COIN COUNTING MACHINES
Earl W. Quirk and Arnold R. Buchholz, Watertown, Wis., assignors to Brandt Automatic Cashier Company, Watertown, Wis., a corporation of Wisconsin
Application July 28, 1945, Serial No. 607,558
4 Claims. (Cl. 133—8)

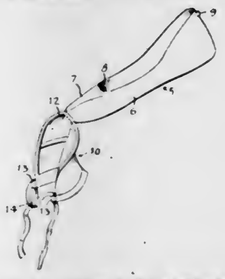
1. In a coin counting machine in which a driven coin feeding wheel is rendered inoperative by the counting mechanism at the termination of a predetermined count and rendered operative by the operation of a starting control member, said coin feeding wheel being associated with a coin discharge passage, the combination of a coin discharge tube forming a continuation of said discharge passage and supported for limited movement, electromagnetically operated means for operating said count starting control member, and control means for said electromagnetically operated means operable by the operator's movement of said discharge tube as when a coin receiving tube is positioned to receive the counted coins from said discharge tube.

2,438,823
ELECTRICAL IGNITER FOR POT-TYPE LIQUID FUEL BURNERS
Marc Resek and Theodore B. Focke, Cleveland Heights, and Joseph R. Kirkpatrick, South Euclid, Ohio, assignors to Perfection Stove Company, Cleveland, Ohio, a corporation of Ohio
Application December 16, 1943, Serial No. 514,468
4 Claims. (Cl. 158—28)



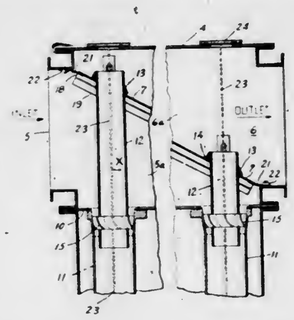
1. In combination with a burner bowl having an opening at one side thereof, a unitary assembly comprising a member of refractory insulating material provided with spaced apertures, electrodes having their outer ends projected through the apertures of said member, means for connecting electrical conductors to the projecting outer ends of the electrodes, an electrical heating element connected to and bridging the inner ends of the electrodes, a yoke attached to one of the electrodes, and a wick supported within and by said yoke with its upper end in close proximity to but spaced from the electrical heating element, the assembly being adapted for application to the bowl with said member disposed across the opening and with the inner ends of the electrodes extending into the bowl through said opening, and means for holding said member in position across said opening.

2,438,824
ALLOYED STEEL
George R. Rich, Battle Creek, Mich., assignor to Rich Manufacturing Corporation, Battle Creek, Mich., a corporation of Michigan
No Drawing. Application December 14, 1945, Serial No. 635,110
2 Claims. (Cl. 75—128)



1. A composition for the manufacture of valve steel, containing carbon .15 to .25%; manganese .90 to 1.50%; silicon .75 to 1.25%; phosphorus .020 maximum; sulphur .020 maximum; chromium 20 to 22%; nitrogen .15 to .25%; nickel 10 to 12%; tungsten 2 to 3%, and the remainder iron.

2,438,825
SELECTOR
Bert W. Roth, Riverdale, N. Y., assignor to Trans-Lux Corporation, New York, N. Y., a corporation of Delaware
Application June 16, 1945, Serial No. 599,857
9 Claims. (Cl. 250—41.5)

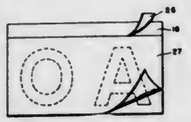


1. A selector including in combination a series of light-sensitive elements, a source of light arranged to act on said elements, a plurality of actuating members mounted for reciprocation, and different permutations of units fixedly associated with said members and movable to interrupt and permit the passage of light rays to said elements.

2,438,826
WOMAN'S PROTECTIVE HOSIERY AND SHOE COVERING
Sophie Sabaneeff, New York, N. Y.
Application January 31, 1946, Serial No. 644,505
2 Claims. (Cl. 36—1)

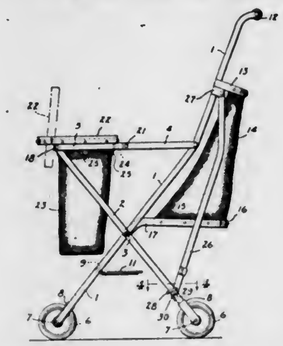
1. A protective covering for a shoe open at the toe end, comprising a member adapted to fit the lower part of the foot and made of an extremely thin water-proof elastic plastic material, and a sheet of material secured to the toe of said member and adapted to pass through the open toe end of the shoe to envelop the shoe and foot adjacent the ankle region to protect same, said sheet of material having a part shaped to cover the toe end of the shoe, loops attached to the rear part of said sheet of material, and a strap for passing through said loops and under the sole of the shoe and around the ankle to properly position said sheet of material.

2,438,827
DUST COLLECTOR VIBRATOR
John R. Shoffner, Kittanning, Pa.
Application April 2, 1945, Serial No. 586,154
2 Claims. (Cl. 183—76)



1. In a dust collector, a casing having an outlet port and an inlet port, a tube sheet located within said casing extending across the interior thereof and separating said ports one from the other, a second tube sheet located within said casing extending across the interior thereof and located below the first mentioned tube sheet, a series of open tubes extending through, depending from and supported by said second tube sheet, in combination with means for resiliently supporting said first mentioned tube sheet, a series of open tubes extending through said first mentioned tube sheet with each tube of such series projecting into one of the tubes of the first mentioned series, a collar secured to each tube of the second mentioned series adjacent the upper end thereof and located above the first mentioned tube sheet, a separate gasket covered by each such collar and sealing the joints between the associated tube and said first mentioned tube sheet, a series of flexible blades within each tube of the first mentioned series, surrounding the associated tube of the second mentioned series and constituting a connection between such tubes, and means for imparting vibratory motion to said first mentioned tube sheet.

2,438,828
STENCIL ASSEMBLY WITH REMOVABLE BACKING AND FACING SHEETS
Clair W. Sims, Pasadena, Calif.
Substituted for application Serial No. 541,104, June 19, 1944. This application January 16, 1946, Serial No. 641,423
6 Claims. (Cl. 101—127)



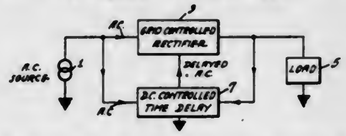
1. A stencil package of the character described, comprising: a sheet forming a stencil body hav-

ing an opening therein, a cut-out, and a filler piece disposed within said opening, the rear faces of said body and said filler piece having an adhesive substance thereon; a tab projecting from one edge of said body; a rear cover sheet removably disposed so as to cover the rear faces of said

body, said filler piece and said cut-out; a tab cover piece removably disposed on the rear face of said tab; and a front cover sheet removably secured to the front face of said stencil, said front cover sheet being so connected to said cut-out that removal of said front cover sheet from said stencil body will remove said cut-out from said opening of said stencil body.

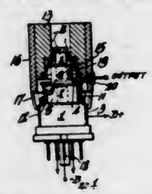
2,438,829
WHEELED CARRIAGE
Max Skolnik, Chicago, Ill., assignor to Leonard A. Fish, Chicago, Ill.
Application May 21, 1945, Serial No. 594,957
14 Claims. (Cl. 280—41)

1. A wheeled carriage having frame members at the sides thereof, a seat mounted between said frame members, a foot rest forwardly of and below the seat, forwardly extending members carried by said frame members above the seat, a receptacle suspended from said forwardly extending members forwardly of said seat, and a table supported upon said forwardly extending members and covering the top of said receptacle.



2,438,830
RADIATION PYROMETER HOUSING FOR FURNACES
Clarence W. Snadecki and Ward F. Richards, Bethlehem, Pa., assignors to Bethlehem Steel Company, a corporation of Pennsylvania
Application April 3, 1945, Serial No. 586,292
6 Claims. (Cl. 136—4)

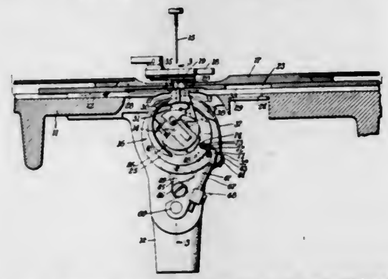
1. The combination with a furnace having a chamber in which material is heated, of a radiation responsive device, a protective casing having an opening for admitting thermal radiation from the material to the radiation responsive device, shutters hinged in said opening, and a slidable sleeve on the casing provided with upwardly projecting arms adapted to push open said shutters upon contact of the sleeve with the ma-



terial and to close them upon withdrawal therefrom.

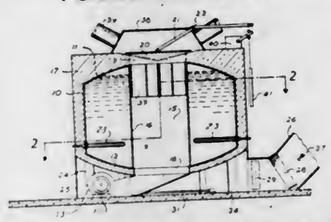
2,438,831
VOLTAGE REGULATING RECTIFYING CIRCUITS
George C. Sziklai, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 24, 1944, Serial No. 523,731
13 Claims. (Cl. 175—363)

1. A voltage regulator circuit comprising a gaseous discharge rectifier tube, means for applying alternating potentials to said tube to derive rectified potentials therefrom, a reactance tbue responsive to said alternating and rectified potentials, and means including said reactance tube connected to said gaseous rectifier tube for controlling the conducting interval of said gaseous rectifier tube for each cycle of said applied alternating potentials in response to the effective reactance of said reactance tube to regulate the magnitude of said derived rectified potentials.



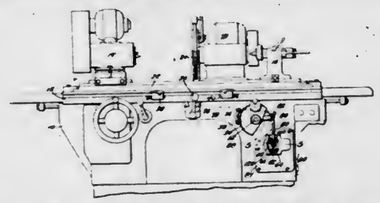
2,438,832
OSCILLATOR FOR CENTIMETER WAVES
Alfred H. Turner, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 16, 1943, Serial No. 502,702
10 Claims. (Cl. 315—39)

1. An ultra-high-frequency oscillator including a thermionic tube having at least an anode,



a cathode and a control electrode, means including first inductive means and first capacitive means connected between said control electrode and said cathode, means including second inductive means and said capacitive means connected between said anode and said cathode, said first and said second inductive means being mutually coupled and portions thereof being disposed substantially coaxially with said tube to provide regenerative feedback to sustain oscillations in said circuit.

2,438,833
THREAD PULL-OFF MECHANISM FOR SEWING MACHINES
Alfred R. Wood, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application August 21, 1945, Serial No. 611,724
10 Claims. (Cl. 112—242)

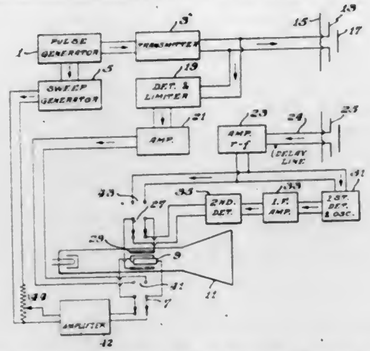


1. A sewing machine having, in combination, a thread-carrying reciprocatory needle, a circularly moving loop-taker cooperating therewith, a bobbin-thread-mass enclosing means journaled in said loop-taker, a rotation-restraining projection on said thread-mass enclosing means having a pair of spaced thread-directing guides, and a thread pull-off member adapted to engage the bobbin-thread between said thread-directing guides during each stitch-forming cycle.

2,438,834
HEAT STORING HOT-AIR CIRCULATING APPARATUS
Lloyd L. Wartes, Opportunity, Wash.
Application December 14, 1944, Serial No. 568,163
7 Claims. (Cl. 219—38)

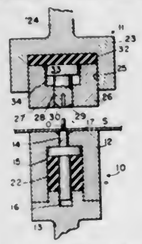
1. A heating apparatus comprising a reservoir containing a heat exchange liquid, an electric heating element immersed in the liquid in said reservoir, means including wall portions of said reservoir defining an air duct, a plurality of fins arranged in a heat exchanging relation with respect to the liquid in said reservoir and extending into said duct, a heat insulating enclosure for said reservoir and said duct, an air inlet to said duct, an outlet for said duct, a hood surrounding said outlet, air distribution pipes connected to said hood, blower means for forcing air through said duct, heat insulated closure means for said duct outlet for precluding flow of air therefrom, means for opening said closure means, control means for said blower and said closure means whereby said blower is turned on simultaneously with the opening of said closure means and vice versa.

2,438,835
CROSS-FEED MECHANISM
Hans C. Weimar, Providence, R. I., assignor to Brown and Sharpe Manufacturing Company, Providence, R. I., a corporation of Rhode Island
Application January 14, 1947, Serial No. 722,002
13 Claims. (Cl. 51—165)



1. In a machine tool having a work support adapted for translatory movement and a tool support adapted for cross feeding movement relatively to the work support, the combination of a cross feed mechanism for the tool support, which comprises a cross feed screw and nut, a cross feed ratchet and pawl, a crank connected to reciprocate the pawl, reversing dogs on the work support and a reversing lever actuated thereby, and means controlled by movement of the reversing lever for selectively moving the crank through approximate 180 degree and 360 degree angles of rotation, comprising a pair of toothed racks, and a connection from the reversing lever for imparting to-and-fro movement to said racks, and gear connections with the crank selectively connectible with said toothed racks.

2,438,836
PULSE ECHO DISTANCE MEASURING SYSTEM
Irving Wolff, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 31, 1941, Serial No. 404,845
18 Claims. (Cl. 343—13)

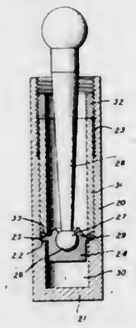


7. A radio frequency pulse echo system including, in combination, a sweep voltage generator, a keyer synchronized with said generator, a transmitter connected to said keyer, means connected to said transmitter for radiating pulses of radio frequency energy, a cathode ray tube including means for deflecting said ray along a distance scale as a function of said sweep voltage, and means for deflecting said ray along an amplitude scale, means for amplifying said sweep voltages whereby shorter distances may be indicated on said distance scale, a radio receiver including means for amplifying the radio frequency components of said pulses and for detecting said pulses, means for applying timing currents derived from the transmitted radio frequency currents to said amplitude scale of said cathode ray tube to mark said shorter distances, and means including said receiver for deflecting said ray on said amplitude scale in response to the radio frequency components of an echo pulse

derived by reflection from objects within a predetermined distance and in response to the de-

tected pulses derived by reflection from objects located beyond said predetermined distance.

2,438,837
TOOL AND METHOD FOR DIMPLING
James O. Archer, Burbank, and Douglas S. Salmi, Glendale, Calif., assignors to Lockheed Aircraft Corporation, Burbank, Calif.
Application November 9, 1944, Serial No. 562,596
16 Claims. (Cl. 153—21)



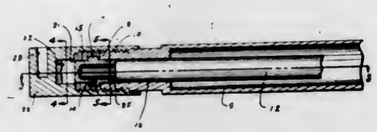
1. A dimpling tool comprising two elements, one a die assembly the other a punch assembly, one element being movable toward the other, the die assembly having a work engaging surface and a dimple depression, a punch on the punch assembly for forming a dimple in said depression and having a forging surface for engaging the work within the dimple, a yieldingly supported ram on the die assembly opposing the forging surface whereby the material at the inner margin of the dimple is forged, and a pressure member on the punch assembly for clamping the work against said surface to resist flow of the material of the work in the area around the dimple during the forming of the dimple and the forging of said material.

16. The method of dimpling a work piece having an opening which comprises resisting material flow in the work piece in directions outwardly from the area around the opening and which is to be dimpled by subjecting an annular zone of the work piece around said area to compressive forces, then forming a dimple in said area around said opening by acting on said area with forming tools while said compressive forces are maintained on said annular zone, and acting on the portion of said area immediately contiguous to said opening, during substantially the entire step of forming the dimple, to forge the material in said portion and cause a radially outward material flow in said area being dimpled.

2,438,838
PROCESS FOR THE PRODUCTION OF THIOPHENOLS
Seaver A. Ballard, Oakland, and De Loss E. Winkler, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application April 26, 1944, Serial No. 532,888
18 Claims. (Cl. 260—609)

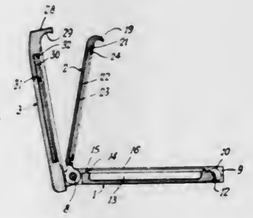
1. A process for the production of thiophenol which comprises reacting phenol with hydrogen sulfide in the presence of an activated bauxite catalyst at a temperature of about 550° C. and at a pressure above about 400 pounds per square inch.

2,438,839
PLUNGER
Louis Beeh, Long Meadow, Mass., assignor to Bulova Watch Company, Inc., New York, N. Y., a corporation of New York
Application July 16, 1945, Serial No. 605,405
2 Claims. (Cl. 309—20)



1. A plunger and connecting rod assembly for a multiple injection pump or the like comprising a hollow cylindrical plunger body closed on one of its ends and having an inner shoulder, a ball headed connecting rod, a hollow, spherical bearing member fitting said connecting rod, and including an outer flange, a tubular member fitting the inner wall of said body and extending between the other end of said body and said flange and constituting a means to hold said flange bearing against said shoulder, said flange being so dimensioned as to break when said connecting rod causes on said member a load substantially exceeding the maximum pressure in normal operation, and said plunger forming between said closed end and said shoulder a chamber of a length at least equal to the intended plunger stroke and of sufficient width to permit the connecting rod when a break of said flange occurs, to reciprocate said member in said chamber.

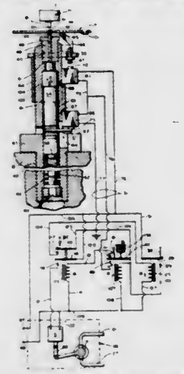
2,438,840
ELECTRODE HOLDER
Charles Camilleri, Detroit, Mich., assignor to Bordon Mfg. Co., Inc., Detroit, Mich., a corporation of Michigan
Application November 23, 1944, Serial No. 564,807
5 Claims. (Cl. 219—8)



1. A device of the class described comprising: a tubular handle of insulating material; a metallic cable connector projected at one end into one end of said handle and extending outwardly at its opposite end from said handle; an electric

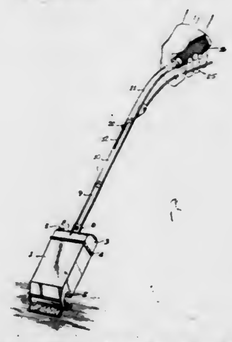
cable secured at one end to said cable connector and terminating at its end adjacent the end of said cable connector; means for rotatably mounting said cable connector on said handle in fixed axial relation thereto; and a head threaded onto said end of said handle and movable axially thereof upon relative rotation thereto, said head having a bore for reception of the outer

end of said cable connector and provided with a lateral opening extending into said bore for insertion of an electrode thereinto across the face of the outer end of said cable connector, a relative rotation of said head and said handle effecting a clamping of said electrode against the end face of said cable connector, said connector being freely rotatable relatively to said head.



2,438,841
COMPACT
Joseph Casalino, Forest Hills Gardens, N. Y., assignor to Nuvoplas Corporation, New York, N. Y., a corporation of New York
Application December 12, 1944, Serial No. 567,805
7 Claims. (Cl. 132—83)

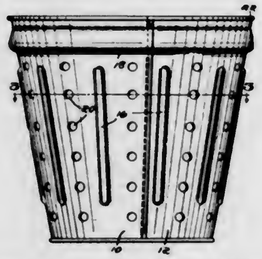
1. A compact comprising three plastic molded elements consisting of a container having a powder cavity, a lid for the powder cavity, and a main cover overlying the container and lid; said container having hinge knuckles projecting outwardly from the rear of the container, an upstanding tongue integral with the container and substantially surrounding the powder cavity, and said container also having two undercut recesses of different depth in the front wall thereof opposite said hinge knuckles; said lid for the powder cavity having outwardly and downwardly projecting hinge knuckles adapted to mesh with certain of the container knuckles, a groove in said lid adapted to register with said tongue, and a resilient tab on said lid having an inwardly directed portion adapted for snap-engagement with the undercut of the deeper of said recesses; said main cover overlying said hinge knuckles and itself having downwardly projecting knuckles adapted to mesh therewith, and a resilient tab on said cover having an inwardly directed portion adapted for snap-engagement with the undercut of the other of said recesses and overlying said first-mentioned tab.



2,438,842
AUTOMATIC DIMPLER
Edwin V. Christensen, Hollywood, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application March 7, 1944, Serial No. 525,412
9 Claims. (Cl. 153—21)

1. In combination with a tool for forming sheet metal, a trigger adjacent the forming portion of

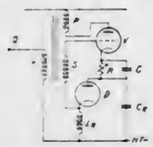
the tool and adapted to be actuated by contact with work material to be formed, a movable pilot member adjacent the forming portion of the tool and adapted to be retracted by improper contact with the material and to project upon registering with a reference element in the material to be formed, a power relay, a switching mechanism adjacent the forming portion of said tool, and means cooperatively associated with said trigger and pilot members to actuate said switching mechanism to cause said power relay to be actuated only when material is properly positioned with respect to said tool in contact with said trigger member and simultaneously in registration with said pilot member, and a time delay means associated with said power relay to limit the actuation of said tool to a single forming operation for each such proper position of the work material.



2,438,843
FLOOR PASTE WAX SPREADER
Alpoim Corrêa, Rio de Janeiro, Brazil
Application June 23, 1944, Serial No. 541,833
In Brazil December 24, 1943
3 Claims. (Cl. 91—25)

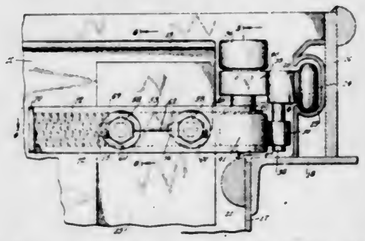
1. A floor paste dispenser comprising a sectional tubular handle portion, a dispensing container at the lower end of said handle portion

adapted to contain paste wax, a piston within said container, a piston rod connected to said piston and extending into said handle portion, a toothed rack bar contained in said handle portion, means connecting said piston rod to said rack bar, a hand lever pivotally connected to said handle portion, and a trigger operatively connected to said lever and to said rack and adapted to impart a step by step dispensing movement to said piston and to the wax in said container, the dispensing container being provided with a hinged cover, said cover being provided with an inner and an outer concentric tubular extension, said tubular handle being received between said concentric tubes and secured thereto by means carried by the outer concentric tube, the inner concentric tube receiving the piston rod and acting as a guide therefor.



2,438,844
BASKET
Wallace W. Dale, Barre Center, N. Y.
Application June 20, 1945, Serial No. 600,441
1 Claim. (Cl. 220—83)

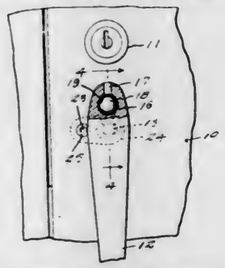
A portable metal container having a bottom and a surrounding perforated side wall of stiff sheet material having a beaded top edge, the side wall tapering inwardly and downwardly to the bottom, the top being open, characterized in that a portion of said side wall, located in close proximity to its top edge, extends outwardly from the main line of its taper and also extends downwardly at a distance outwardly from that line and forming a substantially frusto-conical surface and having a return bend in an arcuate path to that line, these said extents of side wall constituting an interior lug facing downwardly, an interior recess under that lug, and an exterior lug facing downwardly, the said lugs, recess and edge of the wall being combined to constitute a continuous peripheral handle by which the container can be carried when grasped by hands astride the edge without a strong frictional grasp being required.



2,438,845
RELAXATION CIRCUITS FOR PRODUCING ELECTRICAL IMPULSES AT REGULAR RECURRENCE FREQUENCIES
John Mathieson Dodds, Timperley, and Graham John Scoles, East Sheen, London, England, assignors to Metropolitan-Vickers Electrical Company Limited, London, England, a company of Great Britain
Application December 18, 1943, Serial No. 514,866
In Great Britain June 26, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires June 26, 1962
4 Claims. (Cl. 250—36)

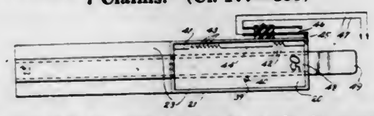
2. A relaxation circuit for producing electrical impulses at regular recurrence frequencies, comprising a relaxation oscillator including an inductance effectively connected in circuit therewith, and means including a rectifier and a condenser with which said rectifier and inductance

resonate at one-half the frequency of said relaxation oscillator for preventing current reversal in the inductance and thereby causing rapid change of potential at the input of said oscillator to initiate an impulse.



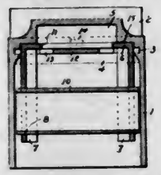
2,438,846
ROLLING HATCH BEAM ASSEMBLY
John G. Deegan, Bronxville, N. Y.
Application January 18, 1945, Serial No. 573,347
8 Claims. (Cl. 114—201)

2. In combination with a hatchway having coamings, and supports for hatch beams, along opposite sides, a hatch beam adapted to rest on said supports, tracks supported by the hatch coamings, roller means adapted to roll along said tracks and mechanisms for raising and lowering said beam from and to its supports, said mechanisms each comprising a member slidably secured to said beam, a roller carrying member, means rotatably associated with said roller carrying member and engaging said first-named member to effect displacement thereof with respect to the roller carrying member, and resilient means tending to bring said slidable members on opposite ends of the hatch beam together to prevent binding of the beam.



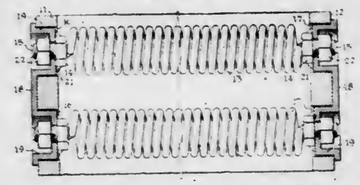
2,438,847
DOOR LOCK LIGHT
Delbert B. Dreese, Larned, Kans.
Application February 12, 1945, Serial No. 577,537
2 Claims. (Cl. 240—2.13)

1. A door lock light for a metal door having a horizontal lever handle pivoted at one end, a lock key hole in vertical alignment above the pivot of said handle, comprising a light bulb in said handle forwardly of the pivot thereof and disposed in a plane parallel to said pivot, said handle formed with an inwardly opening socket within which said bulb is disposed, a contact on said bulb constantly engaging said door, spring means engaging said bulb and the outer end of said socket biasing said contact into engagement with said door, said handle formed with a forwardly directed opening from said first opening through which the light from said bulb may be emitted, an insulating plate on said door formed with a depression adjacent said pivot in a horizontal plane therewith, said contact engageable in said depression in the horizontal position of said lever, and an electric circuit including said door and said contact for lighting said bulb upon rocking said handle from the



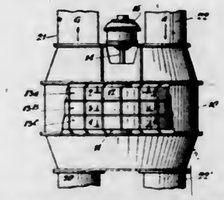
horizontal position thereof whereupon said contact engages said door and the light is directed through said forwardly directed opening for lighting said key hole in the vertical position of said handle.

2,438,848
MULTISELECTIVE PHONOGRAPH
John F. Eakins, Evanston, Ill., assignor to J. P. Seeburg Corporation, Chicago, Ill., a corporation of Illinois
Application April 20, 1944, Serial No. 531,902
7 Claims. (Cl. 177—353)



1. In an automatic phonograph, in combination, an impulser arranged to transmit different trains of impulses comprising a plurality of tokens of generally flat form arranged to be stacked, each token having an individual member of switch actuating formations, a receptacle adapted for the manual insertion of a stack of tokens, means for dispensing said tokens one at a time from one end of said stack and normally conditioned for repeatedly dispensing the tokens, a switch arranged to be closed by each switch actuating formation on each dispensing token as it is being dispensed to create a series of impulses of the same number as the switch actuating formations, a plurality of selector members, means responsive to said series of impulses to displace an individual selector member, and means controlled by a displaced selector member for rendering said dispensing means inoperative.

2,438,849
PISTON WRIST PIN CARRIER
Henry Forster, Broadview, Ill.
Application March 8, 1946, Serial No. 652,883
4 Claims. (Cl. 309—19)



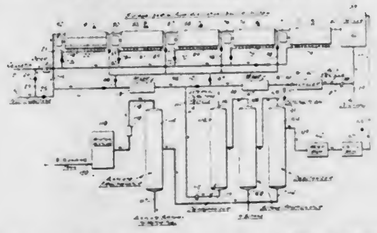
3. A piston comprising a shell having a internally recessed top and a wrist-pin-carrier-receiving seat and having a continuous un-interrupted skirt located next to said seat and having an internal annular groove and a bevelled surface entrance to said groove; a wrist-pin carrier having a top to fit within said shell against said seat and having an opening in its top and having wrist-pin-carrying legs; a wrist pin mounted in said legs; and a spring retainer of S-shape having locking segments fitted into said groove to hold said wrist-pin carrier in place.

2,438,850
TERMINAL CLIPS
Chin Jim Fot, Logan, W. Va., assignor to Guyan Machinery Company, Logan, W. Va., a corporation of West Virginia
Application September 23, 1946, Serial No. 698,615
2 Claims. (Cl. 201—63)

1. The combination of an apertured insulator; an elongated resistor so dimensioned that it may be moved to position endwise through the aperture in the insulator, said resistor having at its end a laterally flattened collar and a threaded stem projecting endwise beyond the collar; a flanged centrally apertured cup-like conducting bushing mounted with its cupped portion confined in the aperture in the insulator and its flange engaging the face thereof, said bushing having means which engage the flattened collar to inhibit relative rotation of the collar and bushing after the stem is inserted through the aperture of the bushing; and a nut threaded on the stem housed in the cupped portion of the bushing and serving to clamp the bushing to the collar.

2,438,851
PLATE ARRANGEMENT FOR PREHEATERS
Robert M. Gates, Scarsdale, N. Y., assignor to The Air Preheater Corporation, New York, N. Y.
Continuation of application Serial No. 424,562, December 27, 1941. This application November 1, 1943, Serial No. 508,452
4 Claims. (Cl. 257—6)

1. In a regenerative air preheater or the like having a rotor comprising a cylindrical shell divided by radial partitions into a plurality of sector-shaped compartments for carrying regenerative heat exchange material through air and gas passages formed in the heater housing, and inlet and outlet ducts for hot gas and relatively cool air so connected to opposite ends of said passages as to provide for counterflow of the hot



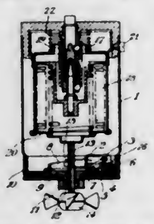
and cold gases through said preheater; regenerative heat exchange material comprising a plurality of superimposed layers of substantially parallel plates mounted in the rotor compartments and formed with corrugations spacing the plates and disposed generally parallel to the direction of fluid flow to form a multiplicity of channels parallel to the direction of fluid flow with the plates in the layer nearest the air inlet and gas outlet end of the rotor having corrugations of greater depth than those in the other layers so as to provide channels of greater cross-sectional area through the first mentioned layer.

2,438,852

MULTISTAGE ALKYLATION METHOD

Arthur R. Goldsby, Beacon, and Claude W. Watson, Eastchester, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

Application January 23, 1945, Serial No. 574,136
4 Claims. (Cl. 260—683.4)



1. In the alkylation of a paraffin having a tertiary carbon atom in the molecule with an alkylating agent in the presence of an alkylation catalyst, the method which comprises introducing the major portion of the said paraffin together with the alkylation catalyst into the first stage of a multistage alkylation system and flowing the same serially through the system, splitting the feed of the said alkylating agent between the various stages, introducing the alkylating agent into each stage by multipoint addition involving injection of the alkylating agent in finely-divided droplets not exceeding ¼ inch in diameter from a large number in excess of five injection points spaced widely from each other and throughout a major portion of the reaction mix of each stage, and controlling the rate of addition of alkylating agent to each stage in accordance with the said paraffin concentration in the reactor hydrocarbon of each stage.

2,438,853

BAROMETRIC FUZE

Hugh Charles Hebard, Greenford, England

Application February 23, 1945, Serial No. 579,384
In Great Britain May 31, 1943
5 Claims. (Cl. 102—70)

1. A barometric fuze device comprising a casing embodying relatively adjustable sections, a firing pin and releasable restraining means therefor mounted in one of said sections, an aneriod capsule carrying means movable thereby for controlling said restraining means, a stop carried by the other casing section and settable by relative adjustment of the casing sections to predetermine the range of positions which the capsule may assume, a cam mounted rotatably in said other casing section and adjustable to vary the position of said stop, a scale and cooperating pointer for indicating the adjustments of the cam, and means for adjusting the stop to different positions corresponding to different indications on the scale.

2,438,854

METHOD AND MATERIAL FOR THE PRODUCTION OF TOY BALLOONS

Jens Gunner Jakobsen, Copenhagen, Denmark, assignor to Niels B. Bach, New York, N. Y.

No Drawing. Application July 31, 1947, Serial No. 765,266. In Denmark August 7, 1946
4 Claims. (Cl. 46—87)

1. The method of blowing toy balloons from a plastic composition of polyvinyl acetate dissolved in a volatile organic solvent which comprises placing a gob of the composition on a tube and at room temperature blowing gas through the tube to expand the gob in an unconfined space and form a balloon, and while expanding the balloon evaporating the solvent leaving a tough gas-tight and dry material forming the finished balloon.

2,438,855

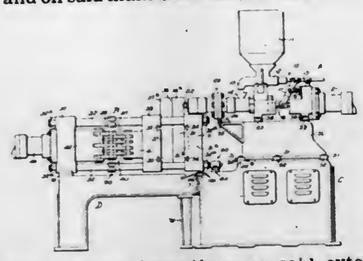
PROCESS OF MODIFYING STARCH

Ralph W. Kerr, Riverside, and Norbert F. Schink, Oak Park, Ill., assignors to Corn Products Refining Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application February 25, 1942, Serial No. 432,248
8 Claims. (Cl. 260—209)

5. Process of modifying sweet potato starch for use as a gelling agent which comprises: introducing into a water suspension of the starch 0.077%–0.155% of dry substance formaldehyde based on the dry substance starch and enough acid to give the suspension a pH of 1.6–2.0; heating the suspension for 3–6 hours at a temperature of 100°–105° F.; neutralizing the suspension to a pH of 6.2–6.8; filtering the suspension; re-suspending the filter cake in water; adding enough sodium bisulfite to react with the free formaldehyde; filtering the suspension and washing and drying the resultant modified starch.

2,438,856



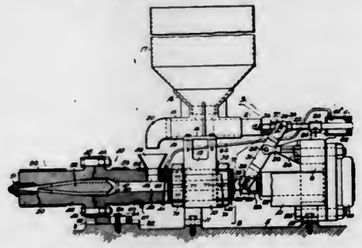
INJECTION MOLDING MACHINE

Edward R. Knowles, Nashua, N. H.

Application February 5, 1944, Serial No. 521,171
1 Claim. (Cl. 18—30)

Plastics molding apparatus comprising, in combination, a plurality of assembly units mutually adapted for installation in different selected operative relations, said units including a material feeding, conditioning and injecting unit provided with spaced mounting and securing formations along its under surface, a main base unit adapted to house actuating and control means for the apparatus, an auxiliary support attached to said main base unit, a molding press mounted on said auxiliary support and adapted to secure molding die parts in operative relation to said injecting unit, mounting and securing formations on said main base unit complementary to those on said

injection unit and having identical spacing, and a demountable top extension disposed horizontally between said units and provided with upper and lower mounting and securing formations complementary respectively to those on said injection unit and on said main base unit, the upper mounting and securing formations on said extension being displaced laterally from the lower formations thereof, whereby said injecting unit may be secured directly to said main base unit in one lateral relationship, or indirectly through the intermediary of said extension at a higher level and in a different lateral relationship.



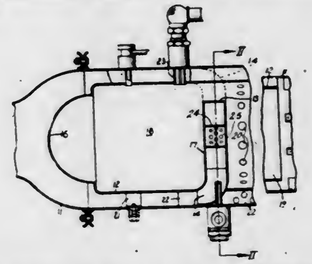
2,438,857

INJECTION UNIT FOR PLASTICS MOLDING

Edward R. Knowles, Nashua, N. H.

Application February 24, 1944, Serial No. 523,678
5 Claims. (Cl. 18—30)

1. In a charging apparatus for plastics molding, a supporting frame, a material conditioning and discharging element associated therewith and having a conditioning chamber, a longitudinal bore leading to the chamber and a charging plunger reciprocable in the bore, between advanced and retracted positions, a feed port communicating laterally with the bore ahead of the retracted plunger position, means for intermittently depositing quantities of molding material through said feed port and into the adjacent bore portion, and other means independent of said material depositing means for distributing the in-fed material forwardly along the bore in advance of the plunger, and means for causing simultaneous operation of said depositing means and said distributing means.



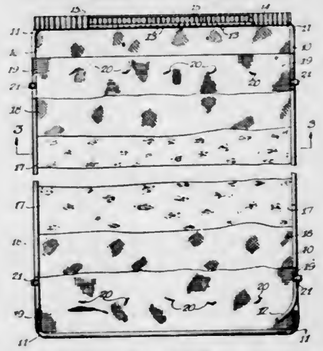
2,438,858

LIQUID-FUEL COMBUSTION CHAMBER

William Henry Lindsey and Sidney Allen, Coventry, England, assignors to Armstrong Siddeley Motors Limited, Coventry, England

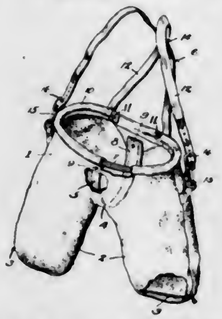
Application July 20, 1943, Serial No. 495,523
In Great Britain September 11, 1942
4 Claims. (Cl. 158—28)

1. A liquid fuel combustion apparatus for an internal combustion power plant including a tube for supplying compressed air to the apparatus, a cylindrical thimble-like member positioned coaxially within said tube with its closed end directed towards the flow of compressed air through said tube, a cylindrical drum-like part of heat conductive material constituting a combustion-initiating chamber positioned coaxially within and spaced from the cylindrical wall of said thimble-like member, means for supplying primary air from said tube to said combustion-initiating chamber, and means for supplying liquid fuel under pressure to said chamber, said combustion-initiating chamber having, in its end wall facing the closed end of said thimble-like member, an aperture concentric with the axis of said chamber providing a sharp-edged outlet orifice into said member for producing turbulence in the burning mixture to facilitate its complete combustion within said member, and the closed end of said member deflecting, in counter-flow, the burning mixture externally around the combustion-initiating chamber to heat the same.



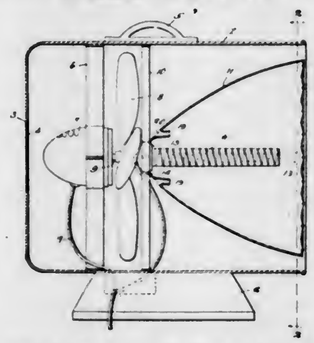
2,438,859

MOISTURE RETAINING PAD FOR AIR COOLING DEVICES



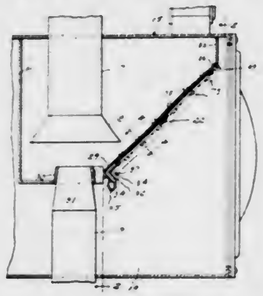
Martin E. Marsalis, Fort Worth, Tex.

Application September 14, 1945, Serial No. 616,184
3 Claims. (Cl. 299—20)



1. In a moisture pad for cooling devices, the combination with a tubular frame having orifices in portions thereof mounting brackets therefor, a porous moisture retaining material arranged in the said frame and having substantially the same thickness as the said frame to form a pad, a fabric covering enveloping the said pad and a wire mesh covering the said fabric and the said frame, means tying the said pad and coverings in a compact unit and means for admitting a liquid into the said tubular frame to be discharged through said orifices.

2,438,860
FRUIT PICKER'S SACK
Christopher G. Miller, Rifle, Colo.
Application November 21, 1944, Serial No. 564,525
1 Claim. (Cl. 150—2)

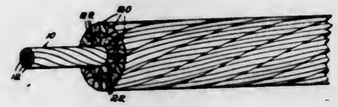


A sack for the convenience of fruit pickers, for example, and comprising a flexible body having depending, flexible bifurcations defining a crotch, a wide expansible U-shaped spring retained in the crotch and extended from a place near the upper, rear edge of the body to a place near the upper, forward edge of the body, the spring constituting means for holding the upper end of the body open, along the median, front-to-back plane of the body, and forming a baffle functioning to check the downward movement of the fruit, and preventing bruising, as the fruit descends into the bifurcations, in combination with an expansible, circumscribing spring mounted on the upper end of the body, and constituting means for holding the upper end of the body open, from front to back, and from side to side, on opposite sides of the U-shaped spring, and means for suspending the sack from the person of the user.

2,438,861
ELECTRIC HEATER
Joseph Neiser, Miami, Fla.
Application March 12, 1945, Serial No. 582,315
1 Claim. (Cl. 219—39)

An electric heater including a drum and a reflector each open at one end, the reflector being mounted in the drum with its open end substantially flush with the open end of the drum, said end of the reflector being relatively smaller than said end of the drum and concentric therewith, whereby to define a circumferential space surrounding the end of the reflector, relatively closely spaced and substantially parallel nozzles in the closed end of the reflector extending toward the open end thereof, a heating unit mounted in the closed end of the reflector between the nozzles and substantially parallel thereto, whereby air jets expelled through the nozzles will be directed longitudinally of the heating unit in lines close to and parallel with the heating unit, and a blower mounted in the drum back of the reflector, said blower constituting means for simultaneously expelling jets of air through the nozzles, and expelling air surrounding the reflector through the circumferential space between the open ends of the reflector and drum.

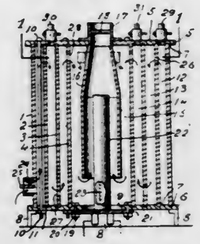
2,438,862
SPARK ARRESTER FRAME FOR LOCOMOTIVES
Benjamin H. Pedigo, Jackson, Tenn.
Application February 16, 1945, Serial No. 578,222
5 Claims. (Cl. 110—122)



1. In a conventional locomotive boiler having a firebox and a smoke box, means communicating with the firebox through its rear wall and with said smoke box for directing the smoke from the firebox to said smoke box, a smokestack extending through the top wall of said smoke box, a nozzle through the bottom of said smoke box aligning with the smokestack, and a baffle secured at its top edge to the top of the smokebox within the smokebox between the stack and nozzle and the point at which the smoke directing means communicates with the smoke box, the side walls of said baffle being secured to the side walls of the smokebox extending downwardly and forwardly from said top edge to a point forwardly of the nozzle, said baffle surrounding the nozzle and having its free edge spaced above the bottom of the smokebox whereby to provide a passageway for the gases of combustion therebeneath and up around said free edge to the stack, a spark arresting means comprising a stationary screen supporting frame disposed in said smokebox, said frame comprising an upper bar fixed within the smokebox to the top thereof forwardly of the stack and nozzle transversely of the smokebox, a pair of opposed side bars extending downwardly from said first bar in contact with the sides of the smokebox to the free edge of the baffle, said side bars being formed with spaced apart elongated slots, a lower horizontal bar extending between the lower ends of said side bars and connected to said free edge of the baffle, means removably supporting said lower bar from said nozzle, screens across the space between the bars and the free edge of the baffle, said screens comprising opposite side screen members, outwardly extending hooks relative to one face of the side screens carried by the outer portions of said side screen members and engageable in said slots for detachably securing said side screen members to said frame, outwardly extending hooks relative to the other face of the side screens carried by the inner portions of said side screen members, and said screens also comprising a central screen member formed with spaced slots in the opposite side portions thereof for receiving said upwardly directed hooks to thereby detachably secure said central screen member to said side screen member.

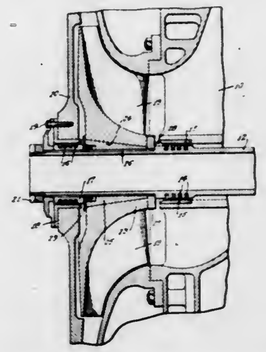
2,438,863
NONFERROUS ALLOY
Clarence O. Prest, Burbank, Calif., assignor of one-half to Lockheed Aircraft Corporation, Burbank, Calif.
No Drawing. Application January 2, 1945, Serial No. 571,113
3 Claims. (Cl. 75—166)

1. A punch and die alloy of the class described consisting of antimony 25% to 30%, copper from a trace to 1%, and the balance lead.



2,438,864
ROPE
Stephen A. Reed, Duxbury, Mass., assignor to Plymouth Cordage Company, North Plymouth, Mass., a corporation of Massachusetts
Application January 10, 1945, Serial No. 572,107
4 Claims. (Cl. 57—144)

1. A rope strand consisting of spun yarns which carry the tensile stresses of the strand and occupy the whole cross section of the strand and are so many in number that some of them are surrounded by others of them, characterized in that each of these yarns is equal to each other of them in length; and in that the whole number of these yarns is divided into groups, each of these groups being twisted on its own axis in form for every yarn of that particular group to meet every other yarn of that group at the axis of the group, the said groups severally constituting units in the strand, formed with one of those group units constituting a core located at the axis of the strand, surrounded by every other said group; every yarn group which surrounds another yarn group being longer, in a given length of strand, than is that group which it surrounds in that same length of strand, but having longer twist-pitch about its own axis than the twist-pitch of the said surrounded group; those said group units which are most distant from the axis of the strand constituting the exterior wearing surface of the strand; whereby the strand combines equality of lengths of all yarns with flexibility and stability of the strand.

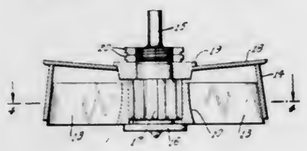


2,438,865
RAPID ELECTRIC FLUID HEATER
Leonard A. Rehard, Kansas City, Mo.
Application April 6, 1946, Serial No. 660,123
1 Claim. (Cl. 219—39)

In a heating unit, in combination with spaced apart tubes of different diameters one within the other, of two heads provided respectively on their inner sides with concentric grooves in which are respectively tightly fitted opposite ends of said tubes forming chambers concentrically in said tubes, means for fastening said heads to said tubes, a fluid discharge pipe extending through one of said heads into the innermost of said tubes and spaced from the other of said heads, a heating element supported by said other head in the innermost of said chambers, the outermost of said tubes having a fluid inlet passage, the inner ones of said tubes having respectively through them

fluid passages connecting adjacent chambers, the fluid passages of next adjacent ones of said tubes being located respectively adjacent to opposite ones of said heads, and valved fluid discharge tubes communicating respectively with different ones of said chambers.

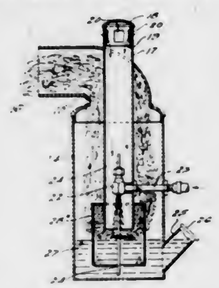
2,438,866
IMPELLER MOUNTING
Albert M. Rockwell, Glastonbury, and Albert H. Beaufrere, Manchester, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application June 1, 1945, Serial No. 597,129
16 Claims. (Cl. 230—134)



1. Apparatus for shrinking a conically tapered member on a correspondingly tapered support, comprising a chamber, means for evacuating said chamber, a rotatable arbor in said chamber, means for securing said tapered support to said arbor while leaving said conically tapered member free to slide on said support, means for rotating said arbor, and means in said chamber for urging said conically tapered member along said support in a direction to frictionally grip the same.

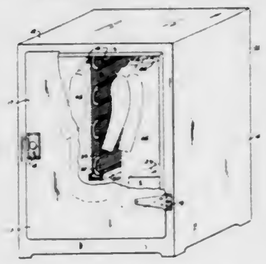
3. The method of assembling a rotatable body having an inner member and an outer member adapted to engage one another frictionally so as to be rigid in use, said inner member having an outer surface arranged for frictional contact with

an inner surface of said outer member, and said outer surface being initially of a larger average diameter than that of said inner surface, so that said members cannot as made initially be assembled to the final desired relative position, and wherein said members after assembly and in use are intended for rotation at speeds up to a predetermined service speed, which comprises the steps of positioning said members coaxially with one another but displaced axially from one another in respect to the final desired relative position thereof, rotating said members about their common axis at substantially the same speed, which latter speed is materially in excess of said predetermined service speed, to expand said outer member by centrifugal force, relatively axially moving said members while they are rotating at said excess speed to the final desired relative position of said members in an axial direction, and thereafter reducing and stopping the rotation of said members to effect a cessation of centrifugal force acting thereon, causing said outer member to shrink on said inner member and to maintain an adequate frictional grip thereon at service speeds.



10. In a supercharger impeller assembly adapted to be rotated at high service speeds, comprising a hub which frictionally engages a stub shaft sleeve which is internally splined to mesh with splines on an engine shaft, a retaining collar disposed at one end of the stub shaft sleeve abutting against a ledge on said engine shaft and a flanged retaining ring disposed at the other end of the stub shaft sleeve abutting against a collar splined on the engine shaft and a spanner nut threaded on the engine shaft to retain the assembled parts, whereby the impeller is restrained from longitudinal movement on the engine shaft.

2,438,867
METHOD OF ASSEMBLING SHROUDS ON IMPELLERS
Albert M. Rockwell, Glastonbury and Albert H. Beaufrere, Manchester, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application June 1, 1945, Serial No. 597,130
2 Claims. (Cl. 29—156.8)

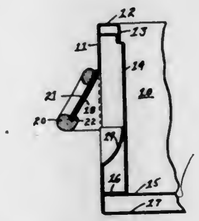


1. The method of assembling a supercharger impeller adapted for rotation up to a predetermined high service speed having an inner member provided with a plurality of substantially radially extending blades, the radial outer end surface portions of which all lie in a single smooth frusto-conical surface, and an outer member forming a shroud for said blades and having an inner complementary frusto-conical surface intended frictionally to engage the first-named frusto-conical surface so as to hold said members together solely by said frictional engagement, and wherein the internal diameter of said outer member prior to the assembly of said members is less than the outer diameter of said inner member at a corresponding plane in respect to said members after assembly, comprising the steps of positioning said members in coaxial relation and as close to their final assembled position as is permitted by their relative dimensions aforesaid, rotating said members about their common axis at a speed substantially in excess of said service speed to expand said outer member uniformly by centrifugal force, relatively axially moving said members while they are rotating at said excess speed to bring them to a final desired relative axial position, and thereafter reducing and stopping the rotation of said members so as to permit said outer member to shrink upon said inner member.

2,438,868
METHOD AND APPARATUS FOR ATOMIZING LIQUIDS
Vernon Anthony Trier, London, England
Application August 22, 1944, Serial No. 550,595
In Great Britain September 9, 1943
3 Claims. (Cl. 261—116)

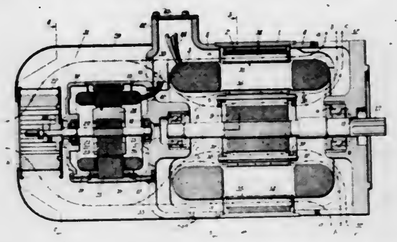
2. An apparatus for producing a mist of fine liquid particles suspended in a gas, which includes a container for a body of liquid and an atomizer nozzle arranged to direct a stream of gas containing an atomized liquid substantially vertically downward against the surface of the body of liquid, and a foraminous splash arrestor shield surrounding the stream of gas and atomized liquid above the liquid surface and extending below the liquid surface.

2,438,869
REFRIGERATED CLOTHES VAULT
Solomon Weiss, Cleveland Heights, Ohio, assignor to Meyer M. Marcus, M. L. Waldman, and Solomon Weiss, as partners
Application October 26, 1946, Serial No. 705,848
4 Claims. (Cl. 62—89)



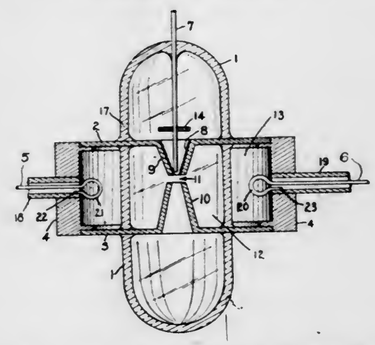
1. A clothes vault comprising in combination, an insulated cabinet having spaced top, bottom, front, rear and side walls, the said front wall having an insulated door hingedly mounted thereon, an air-conditioning means including a humidifying unit and a humidostatically and thermostatically controlled refrigerating unit mounted within the said cabinet, the said refrigerating unit having a vertically extending expansion coil suspended from the top of the cabinet intermediate the said side walls, the said humidifying unit having an evaporating trough disposed below and in close spaced relationship with the expansion coil, capable of collecting the drip from the expansion coil, a protective grill mounted within the cabinet around the said expansion coil in spaced relation thereto, and garment supports mounted in the cabinet proximate to the expansion coil.

2,438,870
INNERSOLE AND METHOD OF MAKING THE SAME
Fred L. Ayers, Waltham, Mass.
Application February 4, 1947, Serial No. 726,335
11 Claims. (Cl. 36—22)



5. An innersole comprising a blank channeled inwardly about its margin to form a marginal lip and a feather, said lip being reinforced with a layer of sheet material and turned inwardly and cemented to a double portion of said sheet material secured to the lip face of the blank and inclined inwardly, the stitch securing rib formed by said lip and sheet material being sharply inwardly inclined and having an inherent tendency to remain in such inclined position.

2,438,871
DRAWER PULL
Earle C. Bullock, Grand Rapids, Mich., assignor to Metal Office Furniture Company, Grand Rapids, Mich., a corporation of Michigan
Application June 13, 1945, Serial No. 599,143
2 Claims. (Cl. 16—124)

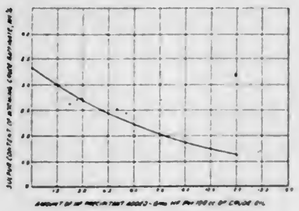


1. The combination with a drawer head whose face is provided with an open lip, of a drawer pull fitted against the outer face of said lip and extending below and in rear of the lower edge of the lip and provided with an upwardly opening slot receiving the lower edge of the lip, and means for securing the drawer pull on said lip.

2,438,872
DYNAMOELECTRIC MACHINE
Harry B. Fuge, Somerville, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application November 14, 1944, Serial No. 563,380
2 Claims. (Cl. 171—252)

1. An induction motor comprising a stator core, a rotor core having a diameter less than 45% of the outside diameter of said stator core, a first end-cover having radial apertures, a second end-cover having end apertures, a frame member located between and forming with said end-covers a housing for said cores, a second frame member mounted on said second end-cover, an auxiliary motor supported by said second frame member, a fan driven by said auxiliary motor, a fan guard formed with an end aperture and mounted on said second end-cover to enclose said fan and auxiliary motor and to form a fan chamber, and ventilating ducts extending axially through said stator and rotor cores and connecting said fan chamber with the radial apertures in said first end-cover.

2,438,873
ULTRA HIGH FREQUENCY SWITCHING DEVICE
Henry J. McCarthy, Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application May 24, 1944, Serial No. 537,143
5 Claims. (Cl. 315—5)

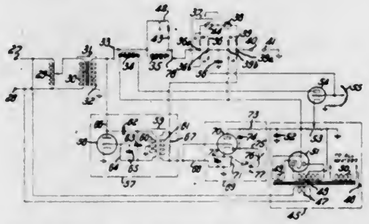


1. An ultra high frequency switching tube comprising a high-frequency copper resonator, an atmosphere comprising water vapor, a keep-alive electrode near a part of said resonator, and a coating of water vapor resistant material only on the part of said resonator in the immediate vicinity of said keep-alive electrode within the tube for preventing clean up of the water vapor.

2,438,874
SEPARATION OF ASPHALT FROM HYDROCARBONS

Jacob R. Meadow, Memphis, Tenn., and Ebenezer Emmet Reid, Baltimore, Md., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application December 16, 1944, Serial No. 568,516
3 Claims. (Cl. 196—22)



1. A method for recovering asphalt in a form readily dispersed in crude petroleum which comprises intimately mixing petroleum oil containing asphalt and sulphur with less than about 5 volume % but sufficient hydrogen fluoride to precipitate a substantial portion of said asphalt but only a minor portion of said sulfur while maintaining a single liquid phase, separating said precipitated asphalt, and passing an inert gas through said asphalt while in the molten state.

2,438,875
ELECTRICAL TREATMENT APPARATUS AND METHOD OF CONTROL

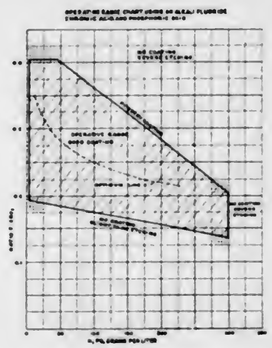
Franklin Offner, Chicago, Ill.

Application November 27, 1941, Serial No. 420,730
7 Claims. (Cl. 128—421)

1. The method of preselecting the magnitude of a low frequency treatment current which comprises passing through a subject to be treated a test current having a frequency of the order of 7000 cycles, measuring the effective impedance of the subject to the test current and adjusting the test circuit and treatment circuit simultaneously and proportionately to a value of the test current having a predetermined relationship to the desired value of the treating current.

2,438,876
MINERAL OIL COMPOSITION

Orland M. Reiff and Harry J. Andress, Jr., Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York



No Drawing. Application February 17, 1945, Serial No. 578,562
19 Claims. (Cl. 252—32.7)

1. An improved mineral oil composition comprising a mineral oil having admixed therewith a minor proportion, sufficient to stabilize said mineral oil against oxidation, of a metal salt of a diaryl sulfide of an alkyl-substituted diaryl dithiophosphoric acid, the alkyl substituent of which is an oil-solubilizing alkyl group containing at least about ten carbon atoms.

2,438,877
COMPOSITION FOR AND METHOD OF COATING ALUMINUM

Frank Palin Spruance, Jr., Ambler, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware

Application September 6, 1945, Serial No. 614,795
12 Claims. (Cl. 148—6.16)

3. In a process for coating metal chosen from the group consisting of aluminum and alloys thereof in which aluminum is the principal ingredient with an adherent greenish coating, the step which consists in subjecting the metal to the action of an acid aqueous solution the essential active coating producing ingredients of which are fluoride ion, dichromate ion, phosphate ion and hydrogen ion, the ions being present in amounts stoichiometrically equivalent to

	Grams per liter
Fluorine	0.9 to 12.5
Chromic acid (CrO_3)	3.75 to 60.0
Phosphate (PO_4)	2 to 285

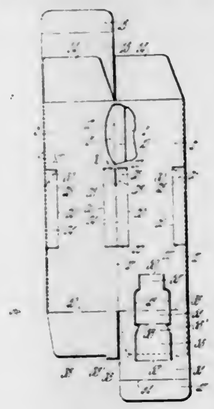
the ratio of fluoride ion to dichromate, expressed as $F:CrO_3$, being between 0.135 and 0.405; the pH of the solution being between about 1.6 and 2.2, as measured by the lowest value indicated by a glass-electrode pH meter within the first ten minutes of immersion of the electrode in the solution.

2,438,878
METHOD AND APPARATUS FOR PROJECTING MOTION PICTURES

Fred Waller, Huntington, N. Y., assignor to The Vitarama Corporation, Huntington Station, Long Island, N. Y., a corporation of New York

Application June 30, 1945, Serial No. 602,522
7 Claims. (Cl. 88—16.8)

1. The method of projecting motion pictures upon a concave curved screen, which comprises continuously advancing a film having a series of film frame images thereon through a gate having an aperture shorter than the length of said images so that only a portion of each of said images is exposed at one time, scanning the advancing film with a stationary beam of light passing through that portion of a film frame image which is exposed by said aperture, said beam impinging upon a mirror and being reflected thereby onto said curved screen, and rotating said mirror continuously to rotate the reflected beam to sweep



the projection area of the screen, said mirror being rotated at an angular velocity such as to project successive increments of each film frame image successively onto said curved screen with each increment projected thereon as a stationary image.

2,438,879
CARTON FOR VACUUM BOTTLE FILLERS

Earl B. Whitehead, Norwich, Conn., assignor to Atlantic Carton Corporation, Norwich, Conn., a corporation of New York

Application April 15, 1946, Serial No. 662,193
3 Claims. (Cl. 229—39)

3. A receptacle for a thermos bottle filler having a nipple on its lower end comprising, opposite and adjacent longitudinally extending vertical side walls forming a tube-like receptacle, closure means at the upper ends of said walls, a lower closure flap hinged to the lower end of one of said side walls for overlying the lower ends of the other walls to close the lower end of the receptacle, and a platform for supporting a thermos bottle filler having a support therefor hinged thereto formed by spaced pairs of slits provided in said one side wall and said closure flap, said platform hinged at its outer end to said one side wall and extending horizontally inwardly from said wall at a distance upwardly from said lower closure flap and said support hinged at its upper end to the inner end of the platform and extending downwardly therefrom with its lower end hinged to said closure flap, the inner end of said platform and support spaced inwardly from the wall opposite to said one wall providing a vertical well therebetween in which a nipple extending downwardly from the bottom of a filler may be disposed, supporting flaps hinged to side walls adjacent said one wall extending upwardly and inwardly therefrom having free edges beneath opposite sides of said platform cooperating with said support for supporting the same, pairs of longitudinally extending panels at adjacent longitudinal edges of adjacent side walls having ends terminating inwardly of opposite ends of said side walls, the panels of each pair thereof having one longitudinal edge hinged to a side wall and extending inwardly therefrom with their opposite longitudinal edges hinged together providing projections extending inwardly at the corners of the receptacle for engaging the sides of a filler supported by said platform and cooperating therewith to hold said filler from contact with said side walls and lower closure flap, and ears at upper ends of the panels extending inwardly for engaging the upper portion of a filler to prevent upward movements thereof; relative to said side walls and platform.

2,438,880
RIBOFLAVIN SOLUTION

Max Frank Furter, Upper Montclair, and Max Hoffer, Nutley, N. J., assignors to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application March 19, 1946, Serial No. 655,599
3 Claims. (Cl. 167—81)

1. An aqueous solution containing riboflavin in a concentration higher than 0.013 percent, gentisic acid, and a water-soluble salt of gentisic acid and a member of the group consisting of alkali metals, ammonia, and organic bases, said solution being at a pH less than 5.

2,438,881
PROCESS OF EPIMERIZING CALCIUM d-ARABONATE

Leo H. Sternbach, Montclair, N. J., assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

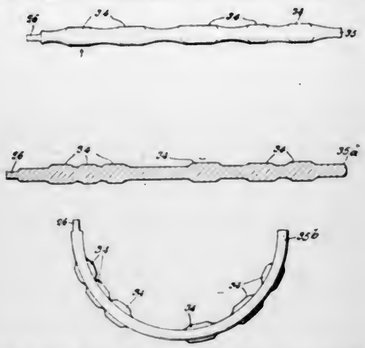
No Drawing. Application February 12, 1946, Serial No. 647,199
5 Claims. (Cl. 260—344)

1. Process of epimerizing calcium d-arabonate, which comprises heating an aqueous solution of that salt for a sufficient length of time to effect epimerization.

2,438,882
RECOVERY OF RIBONOLACTONE

Leo H. Sternbach, Montclair, N. J., assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application February 12, 1946, Serial No. 647,200
3 Claims. (Cl. 260—344)



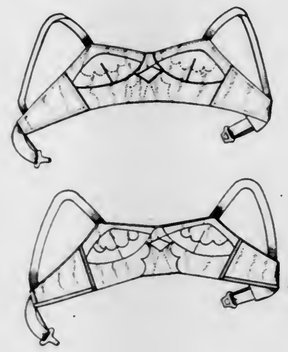
1. Process for treating a composition containing a member of the group consisting of d-ribonic acid and d-ribono-lactone, which comprises treating said composition with an organic solvent for said member, thereafter adding another organic solvent for said member having a lesser solvent action therefor than the initial solvent, removing said initial solvent by distillation, and recovering d-ribono-lactone from the concentrated residue.

2,438,883
PROCESS OF MAKING RIBONOLACTONE
Leo A. Flexser, Elizabeth, N. J., assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application April 2, 1946, Serial No. 659,138
7 Claims. (Cl. 260—344)

1. The process which comprises lactonizing ribonic acid to ribonolactone in an organic solvent, which solvent contains a strong acid as a catalyst for the lactonization, the solvent being a lower aliphatic alcohol.

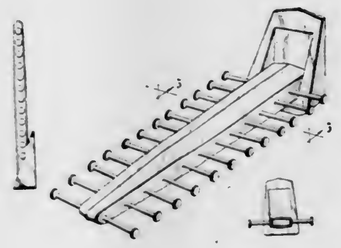
2,438,884
METHOD OF FORMING ENGINE MOUNTINGS
Roy A. Kropp, River Forest, Ill., assignor to Kropp Forge Aviation Co., Cicero, Ill., a corporation of Illinois
Application November 20, 1943, Serial No. 511,078
3 Claims. (Cl. 29—150)

1. A method of forming an airplane engine mounting which comprises thinning a bar stock at certain predetermined points; die forging the piece to more accurately form enlarged portions left by the thinning step; bending the piece into a semi-circular shape; die forging the bent piece to form an H cross-section and to form bosses



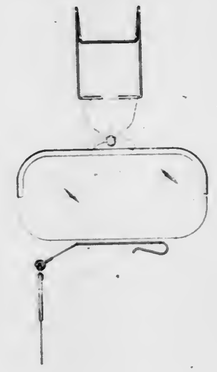
and enlarged end flanges from the enlarged portions; and welding a plurality of sections thus formed at their end flanges to form a ring.

DESIGNS



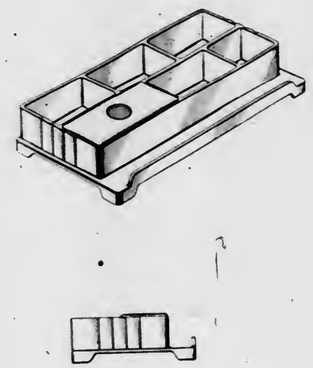
MARCH 30, 1948

149,102
DESIGN FOR A BRASSIÈRE
Pierre Amyot, Quebec, Quebec, Canada
Application March 29, 1946, Serial No. 128,094
In Canada December 21, 1945
Term of patent 14 years
(Cl. D20—4)



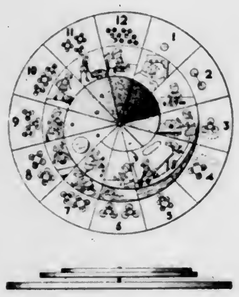
The ornamental design for a brassière, as shown.

149,103
DESIGN FOR A NECKTIE RACK
Allen L. Atkins, Chicago, Ill.
Application September 12, 1946, Serial No. 133,272
Term of patent 14 years
(Cl. D33—8)



The ornamental design for a necktie rack, as shown and described.

149,104
DESIGN FOR AN AUTOMOTIVE VISOR OR SIMILAR ARTICLE
Charles A. Baratelli, Cambridge, Thomas W. F. Chin, Chelsea, and Harold A. Marsh, Brookline, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application September 12, 1946, Serial No. 133,262
Term of patent 3½ years
(Cl. D14—6)

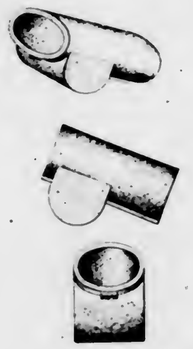


The ornamental design for an automotive visor or similar article, substantially as shown.

149,105
DESIGN FOR A GROOMING TRAY
Burton J. Barnett, Los Angeles, Calif.
Application January 24, 1947, Serial No. 136,363
Term of patent 3½ years
(Cl. D86—10)

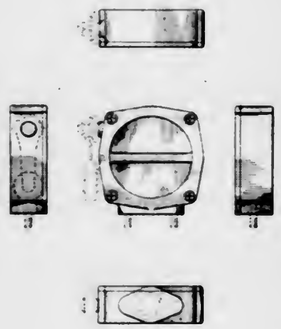
The ornamental design for a grooming tray, substantially as shown and described.

149,106
DESIGN FOR AN EDUCATIONAL APPLIANCE
Esther Berman, Chicago, Ill., now by judicial change of name Esther Berryman
Application July 1, 1946, Serial No. 131,225
Term of patent 7 years
(Cl. D25—1)



The ornamental design for an educational appliance, as shown.

149,107
DESIGN FOR A RUG
Lucien Biva, Catskill, N. Y., assignor to E. F. Timme & Son, New York, N. Y., a limited partnership
Application June 17, 1947, Serial No. 139,777
Term of patent 7 years
(Cl. D92—21)



The ornamental design for a rug, as shown.

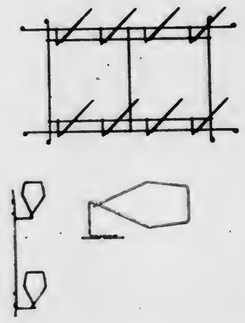
149,108
DESIGN FOR A BABY BOTTLE HOLDER
Leon Breslow, New York, N. Y.
Application October 22, 1946, Serial No. 134,155
Term of patent 3½ years
(Cl. D83—8)

The ornamental design for a baby bottle holder, substantially as shown.

149,109
DESIGN FOR AN ELECTRIC SWITCH HOUSING
Phillip A. Celander, Freeport, Ill., assignor to First Industrial Corporation, Wilmington, Del., a corporation of Delaware
Application January 18, 1946, Serial No. 125,690
Term of patent 7 years
(Cl. D26—13)

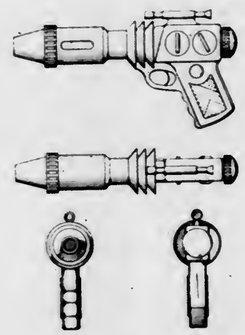
The ornamental design for an electric switch housing, substantially as shown and described.

149,110
DESIGN FOR A MULTIPLE CLOTHESPIN BLOCK
William T. Christmas, University City, Mo., assignor to The Wallace Corporation, St. Louis County, Mo., a corporation of Missouri
Application May 29, 1947, Serial No. 139,369
Term of patent 14 years
(Cl. D17—6)



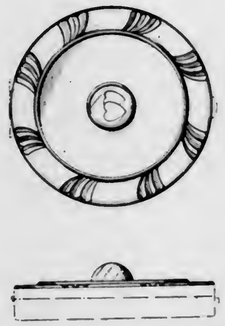
The ornamental design for a multiple clothespin block, substantially as shown.

149,111
DESIGN FOR A CLOTHESPIN
Wayne H. Coble, Ann Arbor, Mich.
Application August 28, 1946, Serial No. 132,921
Term of patent 14 years
(Cl. D17—6)



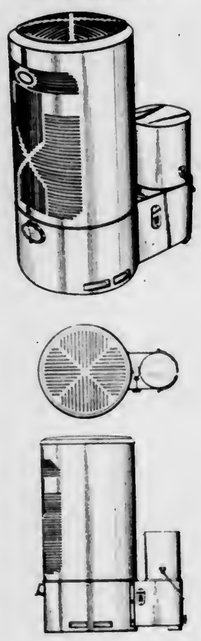
The ornamental design for a clothespin, as shown.

149,112
DESIGN FOR A SHOE RACK
Albert S. Darby, Big Spring, Tex.
Application July 31, 1946, Serial No. 132,148
Term of patent 3½ years
(Cl. D80—8)



The ornamental design for a shoe rack, substantially as shown.

149,113
DESIGN FOR A PISTOL
John F. Dille, Evanston, Ill.
Application October 17, 1946, Serial No. 134,009
Term of patent 7 years
(Cl. D34—15)

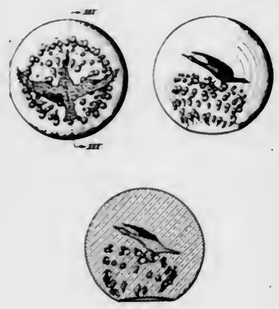


The ornamental design for a pistol, as shown.

149,114
DESIGN FOR A RECEPTACLE FOR COSMETICS AND OTHER ARTICLES
William A. Dion, North Attleboro, Mass., assignor to Evans Case Co., a corporation of Massachusetts
Application July 11, 1946, Serial No. 131,478
Term of patent 14 years
(Cl. D58—11)

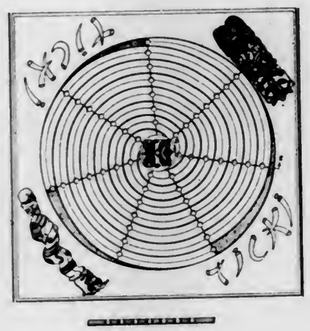
The ornamental design for a receptacle for cosmetics and other articles, substantially as shown and described.

149,115
DESIGN FOR A HEATER
Charles Anthony Fowler, Los Angeles, Calif.
Application November 5, 1946, Serial No. 134,526
Term of patent 3½ years
(Cl. D81—19)



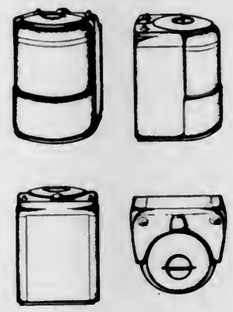
The ornamental design for a heater, as shown.

149,116
DESIGN FOR A TRANSPARENT PAPERWEIGHT
John G. Funfrock, Morgantown, W. Va.
Application February 25, 1947, Serial No. 137,159
Term of patent 7 years
(Cl. D74—12)



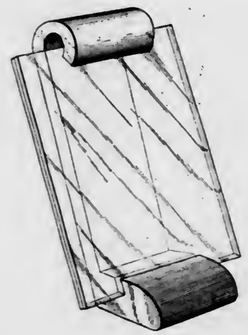
The ornamental design for a transparent paperweight, substantially as shown and described.

149,117
DESIGN FOR A TRANSPARENT PAPERWEIGHT
John G. Funfrock, Morgantown, W. Va.
Application February 25, 1947, Serial No. 137,160
Term of patent 7 years
(Cl. D74—12)



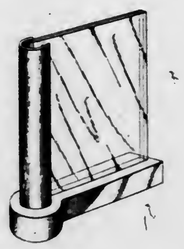
The ornamental design for a transparent paperweight, substantially as shown and described.

149,118
DESIGN FOR A PUZZLE GAME BOARD
Louis D. Gallegos and Harold J. Byrnes, Los Angeles, Calif.
Application November 5, 1946, Serial No. 134,532
Term of patent 7 years
(Cl. D34—5)



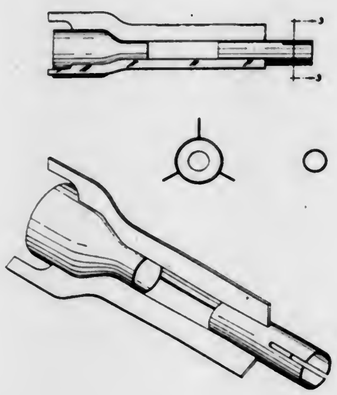
The ornamental design for a puzzle game board, as shown.

149,119
DESIGN FOR A WASHING MACHINE OR SIMILAR ARTICLE
Peter E. Geldhof, St. Joseph, Mich., assignor to Nineteen Hundred Corporation, St. Joseph, Mich., a corporation of New York
Application December 7, 1946, Serial No. 135,337
Term of patent 14 years
(Cl. D49—1)



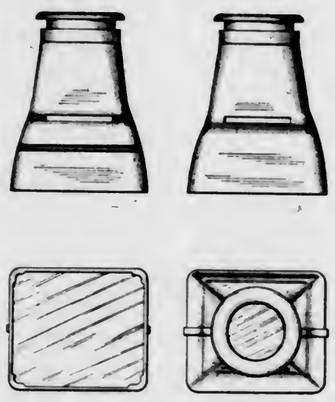
The ornamental design for a washing machine or similar article, as shown.

149,120
DESIGN FOR A PICTURE FRAME
A. George Golden, Brooklyn, N. Y.
Application March 29, 1946, Serial No. 128,067
Term of patent 7 years
(Cl. D29—20)



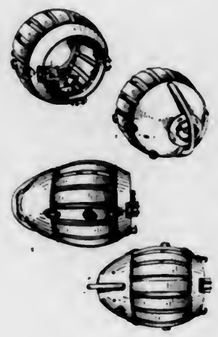
The ornamental design for a picture frame, as shown.

149,121
DESIGN FOR A PICTURE FRAME
A. George Golden. Brooklyn, N. Y.
Application March 29. 1946, Serial No. 128,069
Term of patent 7 years
(Cl. D29—20)



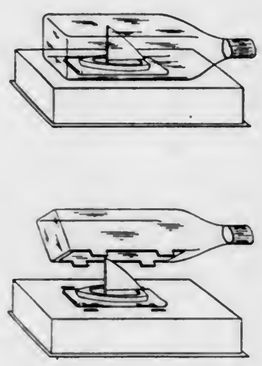
The ornamental design for a picture frame, as shown.

149,122
DESIGN FOR AN AUTOMOBILE TAILPIPE EXTENSION
Grant M. Goodwin, San Francisco, Calif.
Application October 1, 1946, Serial No. 133,676
Term of patent 7 years
(Cl. D14—6)



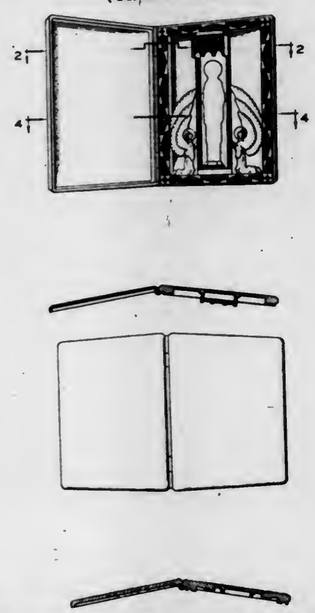
The ornamental design for an automobile tail pipe extension, substantially as shown.

149,123
DESIGN FOR A PHOTOGRAPHIC FILM VIEWER
Ira J. Grey, New York, N. Y.
Application January 25, 1947, Serial No. 136,417
Term of patent 3½ years
(Cl. D61—1)



The ornamental design for a photographic film viewer, substantially as shown.

149,124
DESIGN FOR A SPOT LAMP OR SIMILAR ARTICLE
Norman Ebenezer Hewitt, Sunbury-on-Thames, England
Application April 16, 1946, Serial No. 128,657
In Great Britain November 29, 1945
Term of patent 14 years
(Cl. D48—20)



The ornamental design for a spot lamp or similar article, as shown.

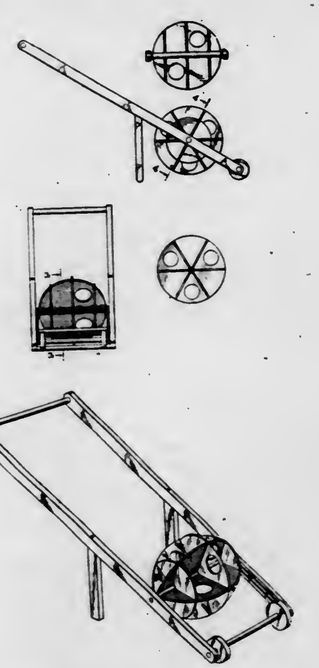
149,125
DESIGN FOR A NOVELTY SOAP AND WASH CLOTH DISPLAY DEVICE
Juliana Gardiner Johns, Orange, N. J.
Application July 19, 1946, Serial No. 131,706
Term of patent 3½ years
(Cl. D80—5)

The ornamental design for a novelty soap and wash cloth display device, as shown.

149,126
DESIGN FOR A COMBINED SHRINE OR SIMILAR ARTICLE AND CASE THEREFOR
William Taylor Jones, Scranton, Pa., assignor to Consolidated Molded Products Corporation, Scranton, Pa., a corporation of Delaware
Application September 2, 1947, Serial No. 141,170
Term of patent 14 years
(Cl. D29—24)

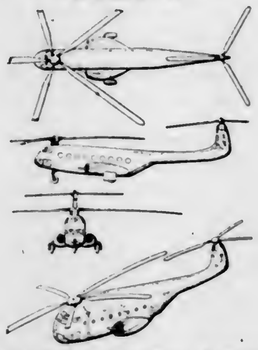
The ornamental design for a combined shrine or similar article and case therefor, as shown.

149,127
DESIGN FOR A TOASTER
Clarence Karstadt, Glen Ellyn, Ill., assignor to Noblitt-Sparks Industries, Incorporated, Columbus, Ind., a corporation of Indiana
Application January 3, 1947, Serial No. 135,926
Term of patent 3½ years
(Cl. D81—10)



The ornamental design for a toaster, as shown.

149,128
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 11, 1947, Serial No. 136,837
Term of patent 3½ years
(Cl. D45—4)



The ornamental design for a bracelet or similar article, substantially as shown.

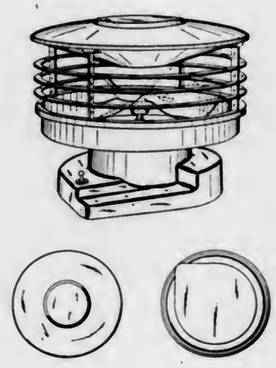
149,129
DESIGN FOR A TRUNDLE TOY OR SIMILAR ARTICLE
Benjamin Katz, New York, N. Y.
Application July 2, 1946, Serial No. 131,272
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a trundle toy or similar article, as shown.

149,130
DESIGN FOR A HELICOPTER
Edward F. Katzenberger and Michael E. Gluhareff, Bridgeport, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application September 24, 1946, Serial No. 133,532
Term of patent 7 years
(Cl. D71—1)

The ornamental design for a helicopter, substantially as shown.

149,131
DESIGN FOR A CABINET FOR SOUND REPRODUCING DEVICES
George Kende, New York, N. Y., assignor to Universal Camera Corporation, New York, N. Y., a corporation of New York
Application April 12, 1946, Serial No. 128,521
Term of patent 14 years
(Cl. D56—4)

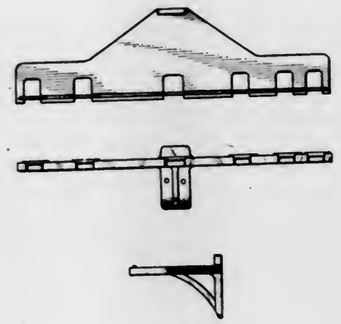


The ornamental design for a cabinet for sound reproducing devices, as shown and described.

149,132
DESIGN FOR A CABINET FOR SOUND REPRODUCING DEVICES
George Kende, New York, N. Y., assignor to Universal Camera Corporation, New York, N. Y., a corporation of New York
Application April 12, 1946, Serial No. 128,522
Term of patent 14 years
(Cl. D56—4)

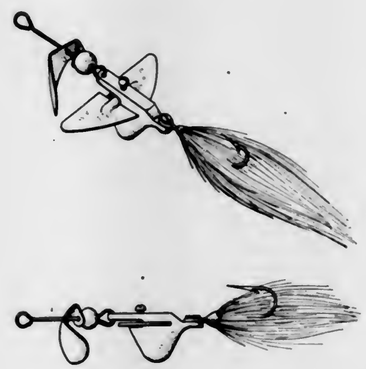
The ornamental design for a cabinet for sound reproducing devices, as shown and described.

149,133
DESIGN FOR AN AIR CIRCULATOR
Jacob W. Kisling, St. Louis County, Mo.
Application June 15, 1946, Serial No. 130,742
Term of patent 14 years
(Cl. D26—7)



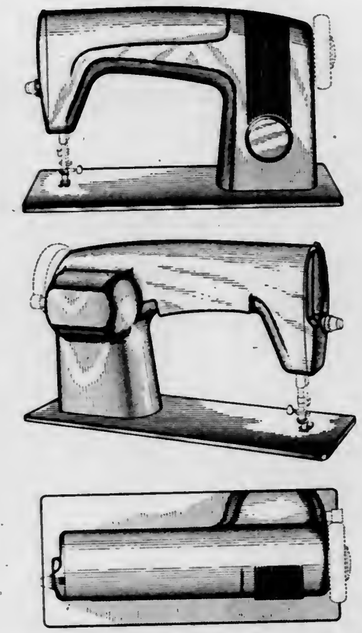
The ornamental design for an air circulator, substantially as shown and described.

149,134
DESIGN FOR A FLOOR BRUSH
Alfred L. Le Febvre, Windsor, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a corporation of Connecticut
Application June 7, 1946, Serial No. 130,497
Term of patent 14 years
(Cl. D9—2)



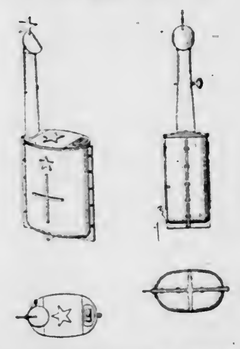
The ornamental design for a floor brush, as shown and described.

149,135
DESIGN FOR A GARDEN TOOL RACK
De Witt McCann, Irving Berlin, and Frank L. Graham, Los Angeles, Calif.
Application April 24, 1946, Serial No. 128,910
Term of patent 14 years
(Cl. D33—3)



The ornamental design for a garden tool rack, as shown.

149,136
DESIGN FOR A FISHING LURE
Joseph R. Moore, Fort Worth, Tex.
Application April 8, 1946, Serial No. 128,394
Term of patent 7 years
(Cl. D31—4)



The ornamental design for a fishing lure, substantially as shown.

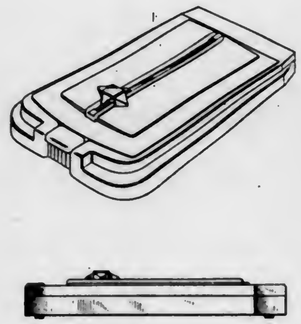
149,137
DESIGN FOR A SEWING MACHINE HEAD
Walter F. Nessen, Prospect Heights, Ill., assignor to Free Sewing Machine Co., Rockford, Ill., a corporation of Illinois
Application August 2, 1946, Serial No. 132,251
Term of patent 14 years
(Cl. D70—1)

The ornamental design for a sewing machine head, substantially as shown and described.

149,138
DESIGN FOR A STOCK TANK HEATER
John K. Newhall, Aurora, Ill.
Application December 28, 1946, Serial No. 135,813
Term of patent 14 years
(Cl. D81—19)

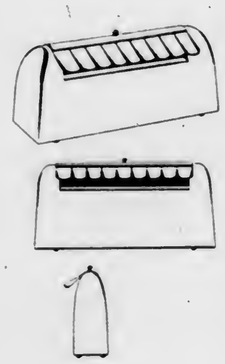
The ornamental design for a stock tank heater, substantially as shown.

149,139
DESIGN FOR A MAN'S ATHLETIC SHOE OR SIMILAR ARTICLE
Ralph A. Parker, Melrose, Mass.
Application November 9, 1946, Serial No. 134,641
Term of patent 14 years
(Cl. D7—7)



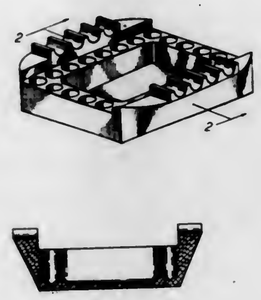
The ornamental design for a man's athletic shoe or similar article, substantially as shown and described.

149,140
DESIGN FOR A LAPEL PIN
Frederick J. Pearsall, Clayville, R. I., assignor to Imperial Pearl Co., Inc., Providence, R. I., a corporation of Rhode Island
Application August 3, 1946, Serial No. 132,262
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a lapel pin, as shown.

149,141
DESIGN FOR A LIST FINDER
Albert Edward Pollock, New York, N. Y.
Application April 18, 1947, Serial No. 138,466
Term of patent 14 years
(Cl. D74—1)

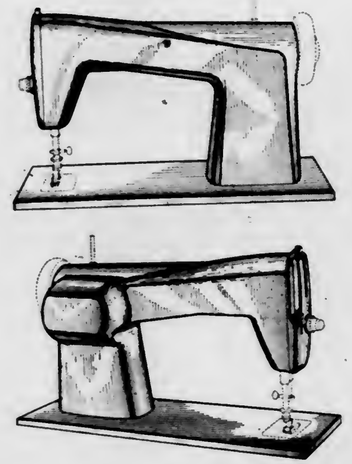


The ornamental design for a list finder, substantially as shown.

149,142
DESIGN FOR A FLUORESCENT DESK LAMP
Joseph F. Poor, Wenham, and Clement T. Baxter, Beverly, Mass., assignors to Salem Manufacturing Company, Salem, Mass.
Application November 8, 1946, Serial No. 134,626
Term of patent 7 years
(Cl. D48—20)

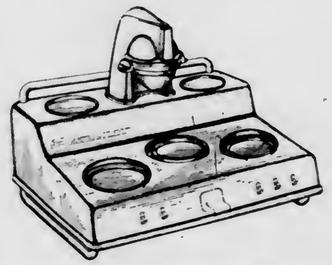
The ornamental design for a fluorescent desk lamp, as shown.

149,143
DESIGN FOR AN ASH TRAY
Bill J. Potter, Fort Worth, Tex.
Application June 17, 1946, Serial No. 130,821
Term of patent 14 years
(Cl. D85—2)



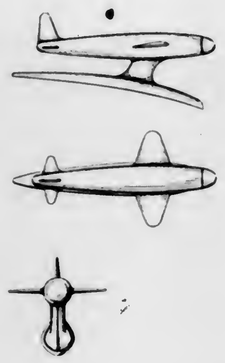
The ornamental design for an ash tray, substantially as shown.

149,144
DESIGN FOR A WALL VASE OR ARTICLE OF SIMILAR NATURE
Clifford Potts, Zanesville, Ohio, assignor to Louis A. Butler and Arvilla K. Butler, doing business as Ohio Porcelain Company, Zanesville, Ohio
Application December 18, 1947, Serial No. 143,212
Term of patent 7 years
(Cl. D29—28)



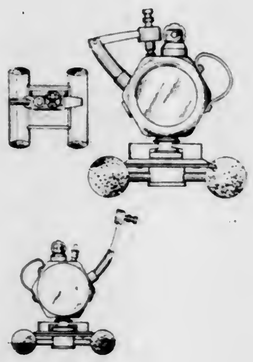
The ornamental design for a wall vase or article of similar nature, substantially as shown.

149,145
DESIGN FOR A SEWING MACHINE HEAD
Jean O. Reinecke, Oak Park, Ill., assignor to Free Sewing Machine Co., Rockford, Ill., a corporation of Illinois
Application August 2, 1946, Serial No. 132,250
Term of patent 14 years
(Cl. D70—1)



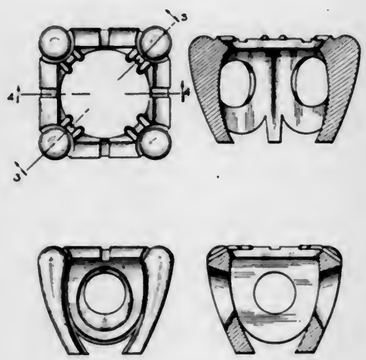
The ornamental design for a sewing machine head, substantially as shown and described.

149,146
DESIGN FOR AN AUTOMATIC BEVERAGE PRODUCER
Harper Richards, Chicago, Ill., assignor to Cory Corporation, Chicago, Ill., a corporation of Delaware
Application January 10, 1947, Serial No. 136,051
Term of patent 14 years
(Cl. D81—10)



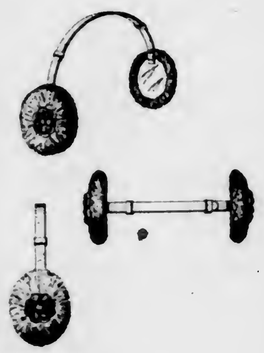
The ornamental design for an automatic beverage producer, as shown and described.

149,147
DESIGN FOR AN AUTOMOBILE HOOD ORNAMENT
Alfred R. Russell, Grosse Pointe Park, Mich.
Application March 3, 1947, Serial No. 137,298
Term of patent 7 years
(Cl. D14—18)



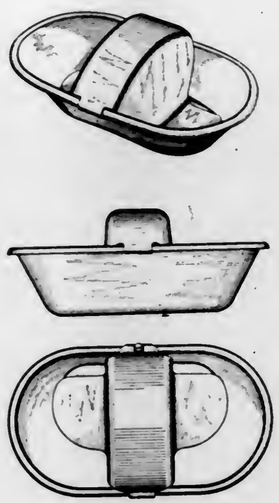
The ornamental design for an automobile hood ornament, substantially as shown.

149,148
DESIGN FOR A CIGARETTE LIGHTER
Abraham Saffron, Pittsburgh, Pa., assignor of one-half to Harry Lazier, Pittsburgh, Pa.
Application May 15, 1946, Serial No. 129,725
Term of patent 7 years
(Cl. D48—27)



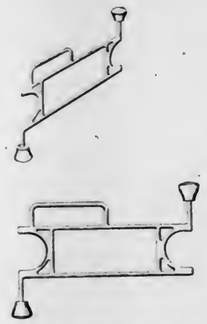
The ornamental design for a cigarette lighter, as shown.

149,149
DESIGN FOR A GEM SETTING OR SIMILAR ARTICLE
Jacob H. Schaeffer, New York, N. Y., assignor to Shiman Bros. & Co. Inc., a corporation of New York
Application October 19, 1946, Serial No. 134,067
Term of patent 14 years
(Cl. D45—1)



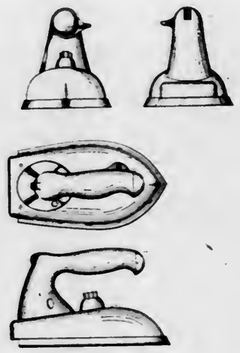
The ornamental design for a gem setting or similar article, substantially as shown.

149,150
DESIGN FOR AN EAR MUFF
Ernest Schwartz, New York, N. Y.
Application June 5, 1946, Serial No. 130,430
Term of patent 3½ years
(Cl. D3—13)



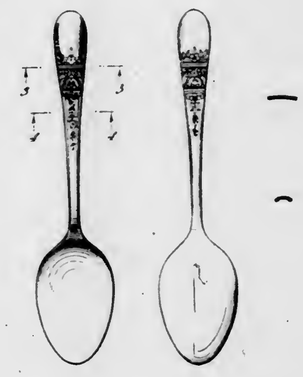
The ornamental design for an ear muff, as shown.

149,151
DESIGN FOR AN ANIMAL WATERING PAN
Pierre D. Southworth, Sturgeon Bay, Wis.
Application May 13, 1946, Serial No. 129,677
Term of patent 3½ years
(Cl. D12—2)



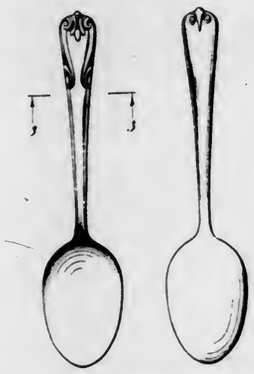
The ornamental design for an animal watering pan, substantially as shown.

149,152
DESIGN FOR A TROLLING REEL
William H. Thompson, Detroit, Mich.
Application June 12, 1946, Serial No. 130,648
Term of patent 3½ years
(Cl. D31—4)



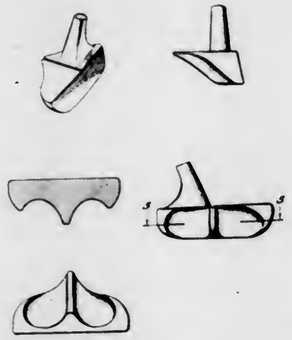
The ornamental design for a trolling reel, as shown.

149,153
DESIGN FOR AN ELECTRIC IRON
Arnold Troy, Scarsdale, N. Y., assignor to Eastern Metal Products Co., Tuckahoe, N. Y., a partnership composed of Seymour Troy and Arnold Troy
Application December 14, 1946, Serial No. 135,502
Term of patent 14 years
(Cl. D49—6)



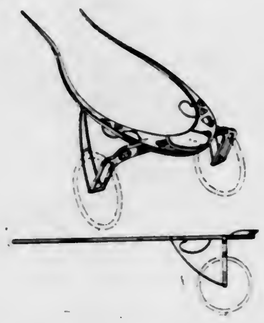
The ornamental design for an electric iron, substantially as shown and described.

149,154
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
William S. Warren, Meriden, Conn., assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn., a corporation of Connecticut
Application March 10, 1947, Serial No. 137,479
Term of patent 14 years
(Cl. D54—12)



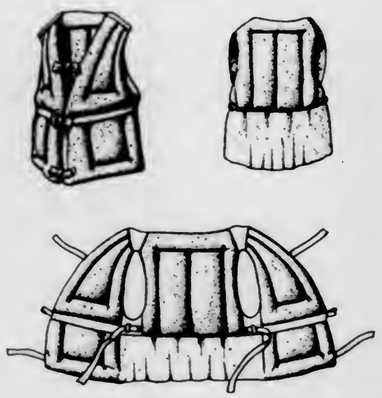
The ornamental design for a spoon or other article of flatware, substantially as shown.

149,155
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
William S. Warren, Meriden, Conn., assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn., a corporation of Connecticut
Application March 10, 1947, Serial No. 137,480
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a spoon or other article of flatware, substantially as shown.

149,156
DESIGN FOR A GOLF CLUB HEAD
Linn J. Weatherington, Los Angeles, Calif.
Application January 11, 1946, Serial No. 125,484
Term of patent 14 years
(Cl. D34—5)



The ornamental design for a golf club head, substantially as shown and described.

149,157
DESIGN FOR A SULKY
Al B. White, Freeport, N. Y., assignor to Al B. White Manufacturing Co., Inc., Freeport, N. Y., a corporation of New York
Application October 22, 1946, Serial No. 134,174
Term of patent 14 years
(Cl. D14—3)

The ornamental design for a sulky, substantially as shown and described.

149,158
DESIGN FOR A LIFE PRESERVER
Bernard M. Wilber, Berkeley, Calif.
Application September 3, 1946, Serial No. 133,036
Term of patent 7 years
(Cl. D3—4)

The ornamental design for a life preserver, as shown.

FEDERAL REGISTER

Official Daily Service

The FEDERAL REGISTER publishes daily the full text of Presidential Proclamations and Executive orders and any order, regulation, notice, or similar document promulgated by Federal administrative agencies which has general applicability and legal effect. A partial list of subjects covered includes:

Agriculture	Housing
Aviation	Labor Relations
Business Credit	Mineral Resources
Communications	Price Control
Contracts:	Priorities
Procurement	Reconversion
Renegotiation	Securities
Termination	Shipping
Customs	Surplus Property
Fair Trade Practice	Taxation
Food and Drugs	Transportation
Foreign Relations	Wages and Hours

$1.50 A MONTH
$15 A YEAR

Condition of Applications Under Examination at Close of Business Mar. 19, 1948

(Total number of applications awaiting action, excluding Trade-Mark Division, 152,388; Trade-Mark Division, 33,041. Oldest new case, Apr. 6, 1946; oldest amended, Mar. 4, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application awaiting office action	Oldest amended application awaiting office action	Applications awaiting action
1. GOLDBERG, A. J., Food Apparatus; Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons, Sewerage.	June 15	July 11	3,585
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Bee Culture; Dairy; Animal Husbandry; Presses; Tobacco; Textile Wringers; Butchering.	May 3	Apr. 12	4,094
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	†June 10	†Jan. 25	1,530
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	Aug. 2	July 12	3,611
5. ROBINSON, C. W., Harvesters; Acoustics; Sound Recording; Knotters	Apr. 15	Apr. 22	1,835
6. SURLE, H., Carbon Chemistry (part)	†June 2	†May 7	1,806
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†May 22	†Jan. 28	1,765
8. IMUS, A. E., Furniture: Racks and Cabinets	June 4	May 13	4,096
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	Aug. 19	Apr. 19	2,359
10. ANDRUS, L. M., Radiant Energy (part, e.g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	†Apr. 11	†Mar. 19	1,396
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†June 19	†July 5	828
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	†May 23	June 24	2,027
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	June 3	May 1	2,488
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Mar. 31	†Feb. 4	1,205
15. HENKIN, B., Plastics: Plastic Block and Earthenware Apparatus; Glass	Oct. 5	May 3	1,962
16. LOVEWELL, N. N., Telegraphy, Telephony	†June 4	Oct. 29	1,842
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	Oct. 17	July 24	1,858
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	Aug. 28	Apr. 23	1,746
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	Aug. 16	Aug. 27	1,863
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	Aug. 12	Aug. 3	2,068
21. MADER, R. C., Textiles	†Apr. 23	†Mar. 17	1,171
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	Sept. 11	July 15	1,884
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	July 3	May 28	1,344
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	Nov. 4	Aug. 5	2,365
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†Feb. 24	June 14	1,759
26. YOUNG, R. R., Electricity—Generation and Motive Power	†Mar. 15	July 30	1,438
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush; Broom and Mop Making.	†Feb. 4	Aug. 30	3,045
28. SOLYOM, H. L., Heating; Metallurgical Apparatus; Internal-Combustion Engines (part); Clyinders; Pistons.	†Feb. 12	Oct. 29	1,212
29. SHKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools.	Oct. 21	June 25	2,973
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Illumination; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	†Apr. 18	Aug. 9	2,384
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	†June 10	†June 2	2,134
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	Oct. 10	Apr. 30	2,907
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements.	May 25	May 8	3,430
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators.	Aug. 17	May 29	1,369
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	Oct. 30	July 16	2,897
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	Apr. 14	Apr. 15	2,028
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	†Apr. 15	Nov. 14	1,492
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	Nov. 23	Sept. 12	1,707
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	May 1	Apr. 8	2,843
40. DRUMMOND, E. J., Receptacles (part); Packages	†Apr. 9	Aug. 14	2,979
41. HERTZ, M., Recorders: Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	May 7	May 4	2,734
42. MARANS, H., Electric Signaling; Variable Transformer and Reactor Structure; Electricity, Voltage Magnitude and Phase Control Systems.	†July 12	†June 18	862
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	†June 2	†May 23	1,433
44. HARVEY, L. P., Refrigeration; Preserving	Apr. 6	Apr. 20	1,312
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	June 6	May 28	2,797
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	Aug. 2	June 4	1,905

NOTE.—The dates given are 1946 except where † indicates 1947.

(Total number of applications awaiting action, excluding Trade-Mark Division, 152,388; Trade-Mark Division, 33,941. Oldest new case, Apr. 6, 1946; oldest amended, Mar. 4, 1946.)

DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application awaiting office action: New	Oldest new application awaiting office action: Amended	Applications awaiting action
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	†May 1	Nov. 15	1,998
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	Sept. 13	Aug. 31	1,540
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	†Jan. 17	Aug. 16	1,631
50. LEVIN, SAMUEL, Synthetic Resins	†June 11	Nov. 6	2,277
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	†May 2	Sept. 16	1,825
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	July 13	Aug. 16	3,872
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter; Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	Aug. 2	Mar. 15	3,686
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	†May 10	Dec. 26	1,829
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	†Feb. 25	Apr. 5	1,814
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Acetylene; Gas Mixing	†June 6	†Apr. 2	1,133
57. NICOLSON, G. D., Toys; Amusement and Exercising Devices; Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Jewelry; Nut and Bolt Locks.	May 27	May 27	3,584
58. DOWELL, E. F., Abrading; Bottles and Jars; Stone Working; Making Metal Tools and Implements	†Apr. 14	Nov. 12	1,302
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	July 30	June 20	2,087
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	†June 3	Nov. 18	1,442
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	Sept. 13	May 25	3,259
62. PUGH, E. C., Games; Tables; Mechanical Guns and Projectors	Oct. 18	June 11	1,552
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	†May 17	†Feb. 5	1,440
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	†July 29	†July 30	1,821
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors	†July 11	†Jan. 27	1,049
66. LISANN, I., Geometrical Instruments	May 21	Mar. 4	2,265
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	Oct. 19	July 18	1,993
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	†Apr. 12	Nov. 22	1,563
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters.	†Apr. 17	Aug. 17	923
TRADE-MARKS: MERCHANT, J. H.	†July 7	†Sept. 4	33,941
DESIGNS: BREHM, G. L.	July 22	†Oct. 14	8,135

NOTE.—The dates given are 1946 except where † indicates 1947.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Adams Plastics Co., Inc., Holyoke, Mass. Handles for cutlery, kitchen utensils and housewares. Serial No. 539,589, Apr. 6. Class 23.

Advance Laboratories, Incorporated, Saginaw, Mich. Cleaning and washing compound. Serial No. 482,777, Apr. 6. Class 4.

Agricultural Chemical Mills: *See*—
Turner, F. C.

Ajax Electric Company, Inc., Philadelphia, Pa. Electric furnaces. Serial No. 499,186, Apr. 6. Class 21.

Allard, Emelie B., Ottawa, Canada. Remedy for the scalp and for the hair. Serial No. 509,624, Apr. 6. Class 6.

Allied Venetian Blind Corporation, Tallapoosa, Ga. Venetian blinds. Serial No. 523,882, Apr. 6. Class 32.

Alltex Products Company: *See*—
Simon, Irving.

Aloe, A. S., Company, St. Louis, Mo. Surgeons' gloves. Serial No. 528,980, Apr. 6. Class 44.

Altman, B., & Co., New York, N. Y. Eau de cologne, toilet powder, toilet cream and shampoo. Serial No. 538,701, Apr. 6. Class 6.

American Cyanamid Company, New York, N. Y. Folic acid derivatives. Serial Nos. 529,335–6, Apr. 6. Class 6.

American Optical Company, Southbridge, Mass. Artificial eyes. Serial No. 517,175, Apr. 6. Class 44.

American Woolen Company, New York, N. Y. Wool blankets. Serial No. 533,115, Apr. 6. Class 42.

American Beauty Florist, Inc., New York, N. Y. Desk type stapling machines used, in the main, by florists. Serial No. 525,173, Apr. 6. Class 23.

American Lady Corset Co., Detroit, Mich. Corsets, girdles, brassières, etc. Serial No. 507,875, Apr. 6. Class 39.

Anglo Fabrics Company, Inc., New York, N. Y. Woolen and worsted suitings and overcoatings in the piece. Serial No. 502,096, Apr. 6. Class 42.

Anglo American Leather Co., Inc., Newark, N. J. Processed skins and leather. Serial No. 522,979, Apr. 6. Class 1.

Antoine Chiris Company, Inc., New York, N. Y. Olive oil, vanilla beans, tonka beans, etc. Serial No. 498,583, Apr. 6. Class 46.

Autographic Register Company, Hoboken, N. J. Typewriter-paper supports in the form of containers or boxes carrying paper in rolled or folded form, etc. Serial No. 527,568, Apr. 6. Class 23.

Automatic Wire Goods Mfg. Co. Inc., New York, N. Y. Mixer strainers. Serial No. 525,178, Apr. 6. Class 23.

Barber-Colman Company, Rockford, Ill. Ventilating grilles. Serial No. 531,189, Apr. 6. Class 34.

Batcheller, Campbell R., doing business as Robinwood, New York, N. Y. Earrings, cuff-links, bracelets, necklaces and ornamental pins. Serial No. 503,627, Apr. 6. Class 28.

Bayshore Industries; Inc., Elkton, Md. Round play ball having a removable inflatable bladder and a waterproof cover or casing. Serial No. 522,515, Apr. 6. Class 22.

Beebe Bros., Inc., Seattle, Wash. Jig saws. Serial No. 528,332, Apr. 6. Class 23.

Berger Brothers Company, The, New Haven, Conn. Corsets, girdles, and brassières. Serial No. 522,715–16, Apr. 6. Class 39.

Besco Shirt Company, Inc., Elizabeth, N. J. Men's and boys' shirts. Serial No. 529,957, Apr. 6. Class 39.

Birdsong, Velma, North Sacramento, Calif. Umbrella coverings. Serial No. 515,404, Apr. 6. Class 41.

Booth, F. E., Company, Inc., San Francisco, Calif. Vitamin A and D supplement. Serial No. 514,685, Apr. 6. Class 6.

Boston Woven Hose & Rubber Company, Cambridge, Mass. Plastic material. Serial No. 513,385, Apr. 6. Class 1.

Boyle and Company, Los Angeles, Calif. Sun tan lotion. Serial No. 508,969, Apr. 6. Class 6.

Boyle-Midway Inc., Jersey City, N. J. Wax appliers and dust and polish mops. Serial No. 540,246, Apr. 6. Class 29.

Lime. Woodville Lime Products Company. 233,048, Sept. 20, 1927. Republished Apr. 6.
Poles, Treated wood. Page & Hill Co. 407,792, June 27, 1944. Republished Apr. 6.

CLASS 13

Bale ties. Keystone Steel & Wire Company. 234,403, Oct. 25, 1927. Republished Apr. 6.
Bowls, and molded plastic handles, Aluminum and stainless steel upper. Hill-Shaw Company. 417,471, Oct. 30, 1945. Republished Apr. 6.
Caster wheels, Furniture. Bassick Company. 395,433, May 26, 1942. Republished Apr. 6.
Casters. Bassick Company. 149,347–8, Dec. 13, 1921. Republished Apr. 6.
Casters. Bassick Company. 150,727, Jan. 10, 1922. Republished Apr. 6.
Cookware, Cast aluminum non-electric. Advance Aluminum Castings Corp. 437,952, Apr. 6; Serial No. 507,227, published Jan. 13, 1948.
Couplings, Pipe. Victaulic Company of America. 438,012, Apr. 6; Serial No. 516,515, published Jan. 13, 1948.
Fence, Wire. Keystone Steel & Wire Company. 238,257, Jan. 31, 1928. Republished Apr. 6.
Heel braces, shoe nails, etc., Shoe. Adler Bros. Lace Corp. 438,107, Apr. 6; Serial No. 525,754, published Jan. 13, 1948.
Nails. Keystone Steel & Wire Company. 233,175, Sept. 27, 1927. Republished Apr. 6.
Pipe and tubing, Plastic. Federal Electric Company, Inc. 418,882, Jan. 15, 1946. Republished Apr. 6.
Pots, kettles, tea kettles, etc. Wagner Manufacturing Company. 211,388, Apr. 13, 1926. Republished Apr. 6.
Strainers intended primarily for fruit juices and the like, Metal. California Fruit Growers Exchange. 437,991, Apr. 6; Serial No. 514,408, published Jan. 13, 1948.
Urns, Coffee. Continental Coffee Company, Inc. 391,965, Dec. 2, 1941. Republished Apr. 6.

CLASS 14

Bars, blocks, disks, etc., Steel. Firth-Sterling Steel Company. 238,319, renewed Feb. 7, 1948. O. G. Apr. 6.
Bars, steel disks, forgings, etc., Steel. Firth-Sterling Steel Company. 238,338, renewed Feb. 7, 1948. O. G. Apr. 6.
Castings and forgings, Ferrous metal. International Harvester Company. 369,959, Aug. 8, 1939. Republished Apr. 6.
Castings comprising parts for power transmission machinery. Dodge Manufacturing Corporation. 419,588, Feb. 26, 1946. Republished Apr. 6.
Steel, alloy steel, semisteel, etc., Carbon. Symington-Gould Corporation. 397,914, Sept. 29, 1942. Republished Apr. 6.
Steel, Die and tool. Kloster Steel Corporation. 395,921, June 16, 1942. Republished Apr. 6.
Wire, Galvanized stapling. Acme Steel Company. 233,751, Oct. 11, 1927. Republished Apr. 6.
Wire, Welding. Williams and Company, Inc. 234,322, Oct. 25, 1927. Republished Apr. 6.

CLASS 15

Oil, Lubricating. Pure Oil Company. 396,570, July 28, 1942. Republished Apr. 6.
Oils, Lubricating. Pure Oil Company. 254,907, Apr. 2, 1929. Republished Apr. 6.

CLASS 16

Cast for wood, cement, plaster or brick, and for a filler, sealer, and grain raising inhibition for lumber and plywood, Under or priming. I. F. Laucks, Inc.. 349,406, Aug. 24, 1937. Republished Apr. 6.
Lacquers, Cellulose-ester. Röhm & Haas Company. 232,759, Sept. 13, 1927. Republished Apr. 6.
Lacquers, lacquer enamels, stains, etc. Egyptian Lacquer Manufacturing Company. 237,410, renewed Jan. 10, 1848. O. G. Apr. 6.
Lacquers, prepared shellac substitutes, and varnishes, Brushing. True-Tagg Paint Company. 235,850, Nov. 29, 1927. Republished Apr. 6.
Paint, Paste. Morgan Company. 235,296, Nov. 15, 1927. Republished Apr. 6.
Paints, and asphaltic priming and sealing paints, Asphaltic. Cork Import Corporation. 417,619, Nov. 6, 1945. Republished Apr. 6.
Paints, Ready mixed dry, paste, and powdered. I. F. Laucks, Inc. 350,790, Oct. 5, 1937. Republished Apr. 6.
Wax for polishing floors, woodwork, etc., Prepared liquid. Davies-Young Soap Company. 391,784, Nov. 25, 1941. Republished Apr. 6.

CLASS 17

Tobacco, Chewing. R. C. Owen Company. 438,059, Apr. 6; Serial No. 521,277, published Jan. 13, 1948.
Tobacco, Natural-leaf twist. R. C. Owen Company. 438,060, Apr. 6; Serial No. 521,283, published Jan. 13, 1948.
Tobacco, Plug cut chewing. P. Lorillard Company. 438,106, Apr. 6; Serial No. 525,344, published Jan. 13, 1948.
Tobacco, Smoking. I. A. Rose. 438,103, Apr. 6; Serial No. 525,250, published Jan. 13, 1948.

CLASS 19

Airplanes. Piper Aircraft Corporation. 437,966, Apr. 6; Serial No. 510,025, published Nov. 25, 1947.
Brake drums and brake discs for automotive vehicles and other apparatus. Hunt-Spiller Manufacturing Corporation. 239,162, Feb. 21, 1928. Republished Apr. 6.

CLASS 20

Coverings of the linoleum type, Lightweight floor, wall and similar surface. Armstrong Cork Company. 423,610, Sept. 3, 1946. Republished Apr. 6.

CLASS 21

Accessories, Automobile. Jambor Tool & Stamping Co. 234,113, renewed Oct. 18, 1947. O. G. Apr. 6.
Apparatus for electrically recording sound upon wire, etc. Molded Insulation Company. 437,964–5, Apr. 6; Serial Nos. 509,784–5, published Dec. 23, 1947.
Attenuators, fixed resistors, slider resistors, etc. Clarostat Mfg. Co. Inc. 437,922, Apr. 6; Serial No. 499,484, published Dec. 23, 1947.
Batteries and separator plates for storage batteries, Storage. Globe-Union Inc. 351,355, Oct. 26, 1937. Republished Apr. 6.
Batteries, Storage. Nickel Cadmium Battery Corporation. 437,997, Apr. 6; Serial No. 515,126, published Jan. 6, 1948.
Cable, Electrical. American Phenolic Corporation. 403,807, Oct. 10, 1943. Republished Apr. 6.
Connectors for securing cables or conduits to outlet boxes or connection bores. Appleton Electric Company. 386,447, June 20, 1939. Republished Apr. 6.
Crystals and holders, Piezo electric. Reeves Hoffman Corporation. 437,088, Apr. 6.

Electrical apparatus. Mutual-Sunset Manufacturing Co., Inc. 438,100, Apr. 6; Serial No. 524,614, published Jan. 13, 1948.
Electrolytic capacitors, Dry. Solar Manufacturing Corporation. 437,971, Apr. 6; Serial No. 510,901, published Jan. 6, 1948.
Generating sets, Electric light and power. Budn Company. 260,926, Sept. 3, 1929. Republished Apr. 6.
Governors for motors, Electrical. Dynamatic Corporation. 390,430, Sept. 23, 1941. Republished Apr. 6.
Heaters, Electrical. E. M. Walker. 438,025, Apr. 6; Serial No. 517,937, published Jan. 6, 1948.
Iron oxide, granulated magnetic, for use in the production of magnetic cores, etc. Foote Mineral Company. 437,962, Apr. 6; Serial No. 508,471, published Dec. 23, 1947.
Irons, Electric soldering. Hexacon Electric Company. 438,063, Apr. 6; Serial No. 521,332, published Jan. 6, 1948.
Lamp shades, Electric. P. H. Humphreys. 438,064, Apr. 6; Serial No. 521,450, published Jan. 6, 1948.
Lamp shades, Electric. S. J. Schwartz. 437,992, Apr. 6; Serial No. 514,435, published Jan. 6, 1948.
Lighting equipment and more particularly light fixtures, Electric. E. F. Guth Company. 392,634, Jan. 6, 1942. Republished Apr. 6.
Louvers. Day-Brite Lighting, Inc. 438,093, Apr. 6; Serial No. 524,059, published Dec. 23, 1947.
Motors, Electric. Dynamatic Corporation. 361,642, Oct. 25, 1938. Republished Apr. 6.
Motors, Electric. Dynamatic Corporation. 365,866, Mar. 21, 1939. Republished Apr. 6.
Motors, electrical brakes, electrical switches, etc., Electrical. Harnischfeger Corporation. 409,963, Oct. 31, 1944. Republished Apr. 6.
Pots and percolators, electric dishwashing machines, etc., Electric coffee and tea. Buckley, Newhall Company. 241,979, renewed May 8, 1948. O. G. Apr. 6.
Radio and television receiving, sets and parts thereof, Coin operated. Telecoin Corporation. 438,053, Apr. 6; Serial No. 520,656, published Jan. 6, 1948.
Radio apparatus and parts thereof. Buckley, Newhall Company, The. 241,985, renewed May 8, 1948. O. G. Apr. 6.
Radio, phonograph and television receiving sets, Electric. Colma Built Radio Company. 438,058, Apr. 6; Serial No. 521,176, published Jan. 13, 1948.
Radio receiving sets, radio transmitting sets, etc. Aircraft and Mechanical Productions Limited. 437,901, Apr. 6; Serial No. 491,303, published Jan. 13, 1948.
Recording paper, Electrosensitive. Radio Inventions, Inc. 438,141, Apr. 6; Serial No. 506,611.
Resistors and electrical condensers, Electrical. Erie Resistor Corporation. 416,719, Sept. 25, 1945. Republished Apr. 6.
Separators, spout magnets, etc., Magnetic. Stearns Magnetic Mfg. Co. 438,027, Apr. 6; Serial No. 518,056, published Jan. 6, 1948.
Signs, Electrically illuminated advertising display. Ohio Advertising Display Company. 438,075, Apr. 6; Serial No. 521,994, published Jan. 6, 1948.
Socket for electronic tubes, Miniature. H. H. Eby, Inc. 437,999, Apr. 6; Serial No. 515,263, published Jan. 6, 1948.
Sockets; electric bushings; electric signs; etc., Electric. Federal Electric Company, Inc. 412,286, Feb. 27, 1945. Republished Apr. 6.
Solenoids, transformers, converters, and condensers, Electric. Automatic Products Company. 380,181, Aug. 13, 1940. Republished Apr. 6.
Switches, Electric foot. Burke & James, Inc. 437,894, Apr. 6; Serial No. 484,235, published Jan. 6, 1948.
Toaster for restaurants, hotels and the like, Electric. Savory Equipment, Inc. 437,970, Apr. 6; Serial No. 510,804, published Dec. 23, 1947.
Toasters, Electric. Radiron Corporation. 438,127, Apr. 6; Serial No. 526,329, published Dec. 30, 1947.
Welding torches and parts thereof, Electric. Linde Air Products Company. 437,895, Apr. 6; Serial No. 485,226, published Jan. 13, 1948.

CLASS 22

Automobiles, Miniature. Fleet Products Inc. 438,056, Apr. 6; Serial No. 520,800, published Jan. 6, 1948.
Bait casting fishing lines. Norwich Line Company, Inc. 437,976, Apr. 6; Serial No. 511,284, published Jan. 6, 1948.
Blocks and pieces to be assembled to simulate various objects, etc. J. Kuna. 437,914, Apr. 6; Serial No. 497,483, published Jan. 6, 1948.
Bubble solution and device for making bubbles. Fairy Dew Company. 437,975, Apr. 6; Serial No. 511,075, published Dec. 23, 1947.
Cases and plastic cases, Fly rod. Jorus Company. 437,917, Apr. 6; Serial No. 498,423, published Dec. 9, 1947.
Christmas stockings, Cellophane. Star Band Co. Inc. 438,061, Apr. 6; Serial No. 521,294, published Jan. 6, 1948.
Darts, dart flights, dart canes, etc. Unicorn Products Limited. 437,933, Apr. 6; Serial No. 502,355, published Jan. 6, 1948.
Direction indicating attachments for golf clubs. C. F. Forsell. 437,916, Apr. 6; Serial No. 498,278, published Jan. 6, 1948.
Dolls. A. M. Danzig. 437,947, Apr. 6; Serial No. 506,650, published Jan. 6, 1948.
Dolls. International Doll Company, Inc. 437,946, Apr. 6; Serial No. 506,601, published Dec. 2, 1947.
Dolls. Vanity Doll Company, Inc. 438,051, Apr. 6; Serial No. 520,244, published Jan. 6, 1948.
Dolls. Vogue Dolls, Inc. 438,038, Apr. 6; Serial No. 519,304, published Jan. 6, 1948.
Dolls and dolls' dresses. Majestic Doll & Toy Corp. 438,052, Apr. 6; Serial No. 520,407, published Jan. 6, 1948.
Dolls, toy animals, footballs and softballs. Victory Manufacturing Company. 437,954, Apr. 6; Serial No. 507,606, published Dec. 2, 1947.
Educational sets. Creato Products Company. 437,913, Apr. 6; Serial No. 497,374, published Dec. 2, 1947.
Fish lures. Whopper-Stopper Bait Company. 437,951, Apr. 6; Serial No. 507,177, published Dec. 2, 1947.
Fish trawls and accessories, Deep water. Deep Rig Trout Reel Co. 437,911, Apr. 6; Serial No. 496,896, published Jan. 6, 1948.
Fishing lines. Cortland Line Company, Inc. 438,135, Apr. 6; Serial No. 499,992.
Fishing-lines. Horton Manufacturing Company. 135,263, Sept. 28, 1920. Republished Apr. 6.
Fishing-lines. E. J. Martin Sons. 70,994, Oct. 20, 1908. Republished Apr. 6.
Fishing lines. Norwich Line Company, Inc. 437,982, Apr. 6; Serial No. 512,526, published Jan. 6, 1948.
Fishing-lines, steel shafts for golf clubs, fishing reels, and golf clubs. Horton Manufacturing Company. 303,259, May 16, 1933. Republished Apr. 6.
Fishing lures, Artificial. George & Son Mfg., Co. 438,068, Apr. 6; Serial No. 521,660, published Jan. 6.
Fishing reels. Langley Corporation. 500,029, Apr. 6; Serial No. 526,882, published Dec. 23, 1947.
Fishing rods, fishing rod bags, and fishing rod cases. Pepper Fishing Rod and Tackle Corporation. 437,983, Apr. 6; Serial No. 512,858, published Dec. 2, 1947.
Fishing rods, fishing rod handles, fishing rod cases, etc. American Fork & Hoe Company. 383,070, Nov. 19, 1940. Republished Apr. 6.
Footballs, baseball gloves, golf balls, etc. Shapiro Distributing Co. 438,073, Apr. 6; Serial No. 521,962, published Jan. 6, 1948.
Game of skill in which a golf ball is driven into scoring receptacles with a golf club. M. D. May. 437,993, Apr. 6; Serial No. 514,550, published Jan. 6, 1948.
Game played with cards. Sterling Offset Company. 437,938, Apr. 6; Serial No. 505,081, published Dec. 23, 1947.
Games, Coin actuated amusement. D. D. Levitt. 438,026, Apr. 6; Serial No. 518,015, published Jan. 6, 1948.
Games played with boards and movable game pieces. A. Barrett. 437,986, Apr. 6; Serial No. 513,155, published Jan. 6, 1948.
Golf ball tees. Swivel Tee, Inc. 500,049, Apr. 6; Serial No. 526,519.
Golf clubs. Sporting Goods, Inc. 438,020, Apr. 6; Serial No. 517,210, published Jan. 6, 1948.
Jumping sticks. Foulk Engineering Company, The. 437,906, Apr. 6; Serial No. 494,667, published Jan. 6, 1948.
Playing cards, chess, checkers, etc. Abercrombie & Fitch Company. 240,424, renewed Mar. 27, 1948. O. G. Apr. 6.
Poker chips. Tupper Corporation. 500,050, Apr. 6; Serial No. 528,839.
Pull-toys with hopping action. United Manufacturers, Inc. 437,961, Apr. 6; Serial No. 508,455, published Dec. 2, 1947.
Rackets, Tennis and badminton. Bentley-Wilson Inc. 437,967, Apr. 6; Serial No. 510,157, published Dec. 23, 1947.
Spoon-baits, Fluted. M. E. Skinner. 69,003, re-renewed May 12, 1948. O. G. Apr. 6.
Tennis balls. Hungarian Rubber Goods Factory Limited, The. 438,042, Apr. 6; Serial No. 519,582, published Jan. 6, 1948.
Toy and educational blocks. Emmett Manufacturing Company. 437,981, Apr. 6; Serial No. 511,867, published Jan. 6, 1948.
Toy animals. Flying Tigers (American Volunteer Group-Chinese Air Force) Incorporated. 437,943, Apr. 6; Serial No. 506,024, published Jan. 6, 1948.
Toy hobby horses. A. L. Walt, Jr., doing business as Walt Manufacturing Co. 437,905, Apr. 6; Serial No. 493,704, published Dec. 9, 1947.
Toy spinning tops. Copar Industries. 437,945, Apr. 6; Serial No. 506,158, published Dec. 2, 1947.
Toy stuffed elephants. D. M. Pierce. 500,045, Apr. 6; Serial No. 508,857.
Toy, Whirling. P. A. Drummond, doing business as Drummond Specialty Company. 437,929, Apr. 6; Serial No. 501,242, published Dec. 2, 1947.
Toys, wood action toys, etc., Wood pull. Hardwood Toy Manufacturing Corporation. 437,904, Apr. 6; Serial No. 493,119, published Jan. 6, 1948.

CLASS 23

Aprons, Leather textile. Henry K. Barnes Company. 394,490, Apr. 7, 1942. Republished Apr. 6.
Carburetors and accessories therefor. Bendix Aviation Corporation. 398,195, Oct. 13, 1942. Republished Apr. 6.
Carburetors, governors, and accessories therefor. Bendix Aviation Corporation. 401,472, May 18, 1943. Republished Apr. 6.
Clippers, bolt cutters, and nut splitters, Wire. Carolus Manufacturing Company. 235,882, Nov. 29, 1927. Republished Apr. 6.
Cotton-ginning machinery. Gullett Gin Co. 238,026, Jan. 24, 1928. Republished Apr. 6.
Derricks, walking beams, crown blocks, etc. Parkersburg Rig and Reel Company, The. 233,888, Oct. 11, 1927. Republished Apr. 6.
Dishwashing machines. Fearless Dishwasher Company, Inc. 236,676, renewed Dec. 20, 1947. O. G. Apr. 6.
Harness straps, lug straps, loop pickers, etc., Loom. Gates Rubber Company. 409,815, Oct. 24, 1944. Republished Apr. 6.
Jacks, Hydraulic. W. M. Dudgeon. 65,063, Sept. 3, 1907. Republished Apr. 6.
Jacks, Hydraulic. W. M. Dudgeon. 65,066, Sept. 3, 1907. Republished Apr. 6.
Jacks, presses, pumps, etc., Hydraulic. R. Dudgeon, Inc. 238,140, Jan. 31, 1928. Republished Apr. 6.
Knives, machine tools, twist drills, etc., Machine. Jno. Hy. Andrew & Co. Ld. 65,611, Oct. 8, 1907. Republished Apr. 6.
Lawn mowers. Eclipse Lawn Mower Co. 242,435, renewed May 22, 1948. O. G. Apr. 6.
Lawn mowers. Peter Henderson & Co. 66,207, Nov. 12, 1907. Republished Apr. 6.
Lubricating apparatus, Stationary. Lincoln Engineering Company. 286,785, Sept. 1, 1931. Republished Apr. 6, 1948.
Machine parts of copper base alloy, Wear resistant and corrosion resistant. Ampco Metal, Inc. 419,045, Feb. 5, 1946. Republished Apr. 6.
Pump shafts and poppet valves. Thompson Products, Inc. 235,942, renewed Nov. 29, 1947. O. G. Apr. 6.
Roll covers, Cork. Armstrong Cork Company. 391,300, Oct. 28, 1941. Republished Apr. 6.
Saw blades, Hack. E. C. Atkins and Company. 388,869. July 15. 1941. Republished Apr. 6.
Sprayers, Manually controlled automatic. Westinghouse Electric Corporation. 500,023, Apr. 6; Serial No. 481,506, published Dec. 2, 1947.
Tool handles, Wooden. Turner Day & Woolworth Handle Company. 200,447–52, June 30, 1925. Republished Apr. 6.
Tool handles, Wooden. Turner, Day & Woolworth Handle Company. 201,030, July 14, 1935. Republished Apr. 6.
Tool handles, Wooden. Turner Day & Woolworth Handle Company. 202,788–9, Sept. 1, 1925. Republished Apr. 6.
Tools, Hand. American Fork and Hoe Company, The. 374,759, Jan. 23, 1940. Republished Apr. 6.
Tractors. International Harvester Company. 374,801, Jan. 23, 1940. Republished Apr. 6.
Valves, Automatic mechanical water-unloading. Gray Company, Inc. 423,547, Sept. 3, 1946. Republished Apr. 6.
Wrenches. Mossberg Company. 64,165, re-renewed July 30, 1947. O. G. Apr. 6.
Yarn carriers and yarn carrier tubes and yarn carrier fingers. Ernest A. Feustel, Inc. 391,257, Oct. 28, 1941. Republished Apr. 6.

CLASS 24

Clothespins, Plastic. Mastro Plastics Corp. 500,043, Apr 6; Serial No. 506,118.
Garment finisher, Steam. New Way Co., Inc. 437,935, Apr. 6; Serial No. 503,924, published Jan. 13, 1948.
Ironers, Garment pocket. Leef Bros., Inc. 383,992, Dec. 31, 1940. Republished Apr. 6.
Washing machines, Laundry. Altorfer Bros. Company. 235,362, Nov. 15. 1927. Republished Apr. 6.

CLASS 26

Drafting machines and drawing instruments comprising compasses dividers, bow compasses, etc. V. & E. Engineering Co. 396,655, July 28, 1942. Republished Apr. 6.
Drawing instruments. V. & E. Engineering Co. 399,580, Jan. 19, 1943. Republished Apr. 6.
Frames, lenses, and ophthalmic mountings, Optical. M. Jacoby. 437,940, Apr. 6; Serial No. 505,304, published Jan. 6, 1948.
Gauges, Liquid level. W. S. Krueger. 437,989, Apr. 6; Serial No. 513,890, published Jan. 6, 1948.
Glasses, eye glasses, goggles, etc., Sun. Zenith Optical Mfg. Co. 437,985, Apr. 6; Serial No. 513,091, published Sept. 9, 1947.
Glasses, Sun. American Spectacle Co., Inc. 438,008, Apr. 6; Serial No. 516,246, published Jan. 6, 1948.
Hygrometers, thermostats, humidity conditioning control units, etc. Automatic Products Company. 380,180, Aug. 13, 1940. Republished Apr. 6.
Indicators, Liquid level. Penberthy Injector Company. 438,003, Apr. 6; Serial No. 515,678, published Jan. 13, 1948.
Instruments for testing electronic tubes, etc. Precision Apparatus Company, Inc. 438,006, Apr. 6; Serial No. 515,790, published Jan. 6, 1948.
Lenses and lens mountings, Camera. Wollensak Optical Company. 365,404, Mar. 7, 1939. Republished Apr. 6.
Measuring instruments, Electrical. Associated Research, Incorporated. 437,984, Apr. 6; Serial No. 513,017, published Jan. 6, 1948.
Photographic goods. General Aniline & Film Corporation. 378,951, June 25, 1940. Republished Apr. 6.
Photographic material, Light-sensitive. General Aniline & Film Corporation. 385,672–3, Mar. 11, 1941. Republished Apr. 6.

Neufeld, Leonard C., assignor to Fol-Dee Seat Company, Des Moines, Iowa. Child's foldable toilet seat. 149,204, Apr. 6.
Newman, Monroe H., assignor to Duranol Products, Inc., Brooklyn, N. Y. Display stand or similar article. 149,205, Apr. 6.
Otto, Carl L., assignor to The Aviation Corporation, New York, N. Y. Faucet unit. 149,206, Apr. 6.
Peterson, Wilbur P., Independence, Mo. Compressor. 149,207, Apr. 6.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 149,208, Apr. 6.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 149,209, Apr. 6.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Bracelet or similar article. 149,210, Apr. 6.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 149,211, Apr. 6.

Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 149,212, Apr. 6.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 149,213, Apr. 6.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 149,214, Apr. 6.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman and Fishel, Inc., New York, N. Y. Necklace or similar article. 149,215, Apr. 6.
Platt, Joseph B., New York, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Radio cabinet or the like. 149,216, Apr. 6.
Polaroid Corporation, assignee: *See*—
Teague, Walter D.
Richards, Kenneth D., Gardner, Mass. Fish lure. 149,217, Apr. 6.
Richards, Kenneth D., Gardner, Mass. Fly box. 149,218, Apr. 6.
Riedel, Arno E., North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y. Embroidered trimming or similar article. 149,219, Apr. 6.
Riedel, Arno E., North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y. Embroidered trimming or similar article. 149,220, Apr. 6.
Riedel, Arno E., North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y. Embroidered trimming or similar article. 149,221, Apr. 6.
Riedel, Arno E., North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y. Embroidered trimming or similar article. 149,222, Apr. 6.
Riedel, Arno E., North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y. Embroidered trimming or similar article. 149,223, Apr. 6.
Riedel, Arno E., North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y. Embroidered trimming or similar article. 149,224, Apr. 6.
Riedel, Arno E., North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y. Embroidered trimming or similar article. 149,225, Apr. 6.
Riedel, Arno E., North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y. Embroidered trimming or similar article. 149,226, Apr. 6.
Riedel, Arno E., North Bergen, N. J., assignor to Ellen Lace & Embroidery Co., New York, N. Y. Embroidered trimming or similar article. 149,227, Apr. 6.
Salsbury, Hubert I., Los Angeles, Calif. Combination desk unit. 149,228, Apr. 6.
Sanford Products, Inc., assignee: *See*—
Eaton, Wilfred A.
Scherff, Gustave, New York, N. Y. Paperweight. 149,229, Apr. 6.
Schlotterbeck, Fred, New York, N. Y., assignor to Guth, Stern & Co., Inc. Flashlight or like article. 149,230, Apr. 6.
Sharaf, Nathan, Brookline, Mass. Store front. 149,231, Apr. 6.
Stafford, Robert M., Kansas City, Mo. Combined ash tray and glass holder. 149,232, Apr. 6.
Sullenberger, Burton E.: *See*—
Meeker, David A., Fox, and Sullenberger.
Teague, Walter D. Annandale, N. J., assignor to Polaroid Corporation, Cambridge, Mass. Camera or similar article. 149,233, Apr. 6.
Thomssen, Amy L.: *See*—
Little, John M., and Thomssen.
Thomssen, Amy L., and J. M. Little, Toledo, Ohio. Sink fixture. 149,234, Apr. 6.
Tobler, Hans, Teaneck, N. J. Embroidered trimming or similar article. 149,235, Apr. 6.
Treat, Floyd C., Barrington, assignor to Athletic Shoe Company, Chicago, Ill. Winter sport shoe. 149,236, Apr. 6.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Trifari, Krussman and Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Tutt, John W., Glendale, Calif. Golf tee or similar article. 149,237, Apr. 6.
Vaars, Eugene P., assignor to Electronic Units Inc., Dayton, Ohio. Artificial fish lure. 149,238, Apr. 6.
Wolf, Leo, assignor to M. Wolf and S. S. Elgort, Chicago, Ill. Shelf. 149,239, Apr. 6.
Wolf, Maurice, assignee, et al.: *See*—
Wolf, Leo.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 6TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrahamson, Edmund, Baldwin, N. Y. Vibration actuated indicator. 2,438,958, Apr. 6.
Acme Visible Records, Inc., assignee: *See*—
Hall, Marchand B.
Adams, Emilio M., Miami, Fla. Wire-end loop forming and twisting means. 2,438,984, Apr. 6.
Adelson, Samuel L., assignor to Infilco Incorporated, Chicago, Ill. Rate of flow telemetering actuator. 2,439,121, Apr. 6.
Agriculture, United States of America as represented by the Secretary of: *See*—
Barthel, William F.
Air-way Electric Appliance Corporation, assignee: *See*—
Nuffer, Joseph H., and Latta.
Albert, Carl B., assignee: *See*—
Coney, James D.
Allan, William G.: *See*—
Wright, Harold R., and Allan.
Allen-Bradley Company, assignee: *See*—
Glogau, Manfred L.
Allen, Harry W., Dayton, Ohio. Automatic braking device. 2,438,887, Apr. 6.
Alliance Manufacturing Company, The, assignee: *See*—
Schneider, Emmor V.
Allied Chemical & Dye Corporation, assignee: *See*—
Tryon, Sager, and de Benneville.
Almen, John O., Royal Oak, assignor to General Motors Corporation, Detroit, Mich. Shot blasting nozzle. 2,439,032, Apr. 6.
Ambrose, Anthony A., Dayton, Ohio. Electromagnet. 2,438,985, Apr. 6.
American Brake Shoe Company: *See*—
Wilson, Rosser L.
American Cyanamid Company, assignee: *See*—
Booth, Robert B., and Herkenhoff.
Dixon, James K., and Cook.
Hultquist, Martin E.
Kropa, Edward L.
Stearns, Edwin I., Jr.
Vanderscheer, James, and Hull.
American Ecla Corporation, assignee: *See*—
Chavannes, Marc A.
American Locomotive Company, assignee: *See*—
Gloyer, Walter.
American Optical Company, assignee: *See*—
Hasenzahl, Herbert E.
American Safety Razor Corporation, assignee: *See*—
Dalkowitz, Godfrey.
American Seating Company, assignee: *See*—
Orton, Merritt K.
American Steel Foundries, assignee: *See*—
Tack, Carl E., and Bachman.
American Telephone and Telegraph Company, assignee, et al.: *See*—
Beardsley, Harry I., and Meehan.
American Viscose Corporation, assignee: *See*—
Battista, Orlando A.
Coe, Elvin L.
Anderson, George W., Santa Monica, Calif. Delayed-action switch. 2,439,069. Apr. 6.
Andrews, Ernest G., Baldwin, N. Y., and O. Cesareo, Washington Township, Bergen County, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Radio object detector training device. 2,438,888, Apr. 6.
Andrus, Bert R., Eugene, Oreg. Saw-tooth sharpener. 2,439,279, Apr. 6.
Anthony Company, assignee: *See*—
Hatala, Raymond F., and Kimber.
Antonson, John O., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Vaned tire. 2,439,033, Apr. 6.
Arden, Thomas R., assignor to Bard-Parker Company, Inc., Danbury, Conn. Timer for internal-combustion engines. 2,438,889, Apr. 6.
Arens, Charles A., assignor to Arens Controls, Inc., Chicago, Ill. Control mechanism for related control of operated mechanisms. 2,439,356, Apr. 6.
Arens Controls, Inc., assignee: *See*—
Arens, Charles A.
Arvey Corporation, assignee: *See*—
Roach, Earl M.
Ashworth, Fred, Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Shoe machine. 2,438,986, Apr. 6.
Attorney General of the United States: *See*—
Wilnsch, Guido, Weinkauff, Sadowski, and Kobischke.
Austenal Laboratories, Incorporated, assignee: *See*—
Feagin, Roy C.
Automatic Electric Laboratories, Inc., assignee: *See*—
Crabtree, Leonard F.
Evers, Harry G.
Obergfell, Herbert F.
Autoyre Company, Incorporated, The, assignee: *See*—
Sanford, Roy S., and Kurti.
Bachman, Fred E.: *See*—
Tack, Carl E., and Bachman.
Bailey, Christopher E. G., Bournemouth, Hants, England, assignor to Radio Transmission Equipment Limited, London, England. Radio navigational aid. 2,438,987, Apr. 6.
Bailey Meter Company, assignee: *See*—
Johnson, Clarence.
Bailey, Richard W., and M. M. Harding, assignors to Milo Harding Co., Los Angeles, Calif. Duplicating machine. 2,439,070, Apr. 6.
Baker, James A., Rushford, assignor of one-half to E. Kjos, Lanesboro, Minn. Pole gin. 2,439,122, Apr. 6.
Baker Oil Tools, Inc., assignee: *See*—
Childers, Roscoe O.
Baldridge, Ernest B.: *See*—
Donicht, Harry L., Fischer, and Baldridge.
Baldwin Locomotive Works, The, assignee: *See*—
Ruge, Arthur C.
Balsam, Henry M.: *See*—
Balsam, Maurice M. and H. M.
Balsam, M. M., Inc., assignee: *See*—
Balsam, Maurice M. and H. M.
Balsam, Maurice M. and H. M., assignors to M. M. Balsam, Inc., New York, N. Y. Machine for making belts and straps. 2,439,280, Apr. 6.
Bard-Parker Company, Inc., assignee: *See*—
Arden, Thomas R.
Barsky, George, assignor to E. F. Drew & Co., Inc. New York, N. Y. Flashless propellant powder composition. 2,439,281, Apr. 6.
Bartelheim, Leland A., Berwyn, and M. W. Lane, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Assembling arcuate terminal banks. 2,438,959, Apr. 6.
Barthel, William F., College Park, Md., assignor to the United States of America, as represented by the Secretary of Agriculture. Plural section distillation column with top feed. 2,438,988, Apr. 6.
Basham, Lawrence H., Alderson, W. Va. Detachable handle for knives, hatchets, etc. 2,439,071, Apr. 6.
Baskin, Charles M., Toronto, Ontario, Canada, assignor to Standard Oil Development Company. Making bitumen coated fibrous material. 2,438,890, Apr. 6.
Battista, Orlando A., Claymont, assignor to American Viscose Corporation, Wilmington, Del. Forming porous artificial masses. 2,439,034, Apr. 6.
Bausch & Lomb Optical Company, assignee: *See*—
Bouchard, Samuel E.
Beaa, Roscoe D., Red Bank, N. J., assignor to Signal Engineering & Manufacturing Company, New York, N. Y. Warning signal system for refrigerators. 2,439,331, Apr. 6.
Beardsley, Harry I., Chatham, N. J., and H. W. Meehan, Scarsdale; said Beardsley assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., and said Meehan assignor to American Telephone and Telegraph Company. Telephone booth. 2,438,891, Apr. 6.
Becker, Joseph A., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrical translating materials and devices and methods of making them. 2,438,892, Apr. 6.
Becker, Rudolph, North Plainfield, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Looper-actuating mechanisms for sewing machines. 2,439,332, Apr. 6.
Beckett, Thomas G., Dallas, Tex. Float valve. 2,439,282, Apr. 6.
Bedford, Alda V., Princeton, N. J., assignor to Radio Corporation of America. Servomotor control circuit 2,439,198, Apr. 6.
Belar, Herbert: *See*—
Cunningham, David H., and Belar.
Bell Aircraft Corporation, assignee: *See*—
Wolf, Robert A.

Bell, Fannie M., Bellevue, Ohio. Fish lure. 2,439,123, Apr. 6.

Bell, Henderson M., III, Cleveland, Ohio, assignor to Chromium Corporation of America, New York, N. Y. Apparatus for electroplating rings and discs. 2,438,885, Apr. 6.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Andrews, Ernest G., and Cesareo.
Beardsley, Harry I., and Meehan.
Becker, Joseph A.
Bieling, Carl A.
Brown, John T. L.
Campbell, Thaddeus C.
Goodall, William M.
Havstad, Harald.
Krantz, Hubert K.
Mason, Warren P.
Mott, Edward E.
Pennoyer, Douglas H.
Rieke, John W., and Shank.
Riesz, Robert R.
Townes, Charles H.

Belmont, Edgar, Port Chester, N. Y. Rack. 2,438,886, Apr. 6.

Beloit Iron Works, assignee: *See*—
Hornbostel, Lloyd.

Bendix Aviation Corporation, assignee: *See*—
Divoll, Richard L.
Miles, George S.
Thieme, George B.
Walker, Howard.

Bennett, Irving K., Baldwin, N. Y. Broiler grill. 2,439,283, Apr. 6.

Bergstrom, Carl O., Boston, Mass., assignor, by mesne assignments, to Westinghouse Electric Corporation. Centrifugal fan. 2,439,124, Apr. 6.

Berning, Theodore J., Dayton, and M. P. Hoover, Lewisburg, Ohio. Ball game. 2,439,333, Apr. 6.

Berry, Harry: *See*—
McGinnis, Albert S., and Berry.

Bidwell, Joseph B., Philadelphia, Pa., and A. F. Underwood, Grosse Pointe, assignors to General Motors Corporation, Detroit, Mich. Bearing testing machine. 2,439,035, Apr. 6.

Bieling, Carl A., Westfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Translating device. 2,438,893, Apr. 6.

Billman, Walter E., Philadelphia, Pa. Clamping holder for screws, bolts, and the like. 2,438,989, Apr. 6.

Blitz, Daniel, Princeton, N. J., assignor to Radio Corporation of America. Balanced amplifier. 2,438,960, Apr. 6.

Bloom, Oscar T., assignor to Industrial Patents Corporation, Chicago, Ill. Surface cleaning machine. 2,439,334, Apr. 6.

Blossom Products Corporation, assignee: *See*—
Smicker, Emma A.

Boese, Albert B., Jr., Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation. Production of derivatives of 3-substituted 2,4 diketones. 2,438,894, Apr. 6.

Boese, Albert B., Jr., Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation. Gamma-acetyl pimelic acid and diesters thereof. 2,438,961, Apr. 6.

Bohnsack, John A., Waynesboro, Va., assignor to Hopeman Bros., Inc., New York, N. Y. Adjustable lock keeper. 2,439,036, Apr. 6.

Bolinger, George N., Shelbyville, Ill. Ice-cream scoop. 2,439,125, Apr. 6.

Bollmann, Carl: *See*—
Weber, Ernst, Pudelko, Bollmann, and Wermeille.

Booth, Robert B., Springdale, and E. C. Herkenhoff, assignors to American Cyanamid Company, Stamford, Conn. Flotation of iron with organic acid and petroleum sulfonate. 2,439,200, Apr. 6.

Borg, Gustave A., Naugatuck, Conn. Coupling device. 2,439,199, Apr. 6.

Bouchard, Samuel E., Brighton, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Lens holding means for semirimless tension spectacle mountings. 2,439,357, Apr. 6.

Bouffard, Joseph A., Garden City, and J. G. Greemen, assignors to C. B. Gates, Detroit, Mich. Crayon container. 2,438,895, Apr. 6.

Bowen, Rees T., A. W. Head, and F. G. Lesniak, assignors to Masonite Corporation, Laurel, Miss. Multiple press loading and/or unloading apparatus. 2,438,896, Apr. 6.

Brantly, Newby O., Mount Holly, N. J., assignor to Kite Aircraft Corporation, Philadelphia, Pa. Apparatus for contouring metal. 2,439,234, Apr. 6.

Brassel, Jakob: *See*—
Straub, Fritz, Brassel, and Pieth.

Bristol Company, The, assignee: *See*—
Pattee, John R.

Brouillard, Robert E.: *See*—
Scalera, Mario, and Brouillard.

Brown, George H., Princeton, N. J., assignor to Radio Corporation of America. Reactance compensation system. 2,439,235, Apr. 6.

Brown, John T. L., Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Plating contact surfaces of magnetic reeds. 2,438,897, Apr. 6.

Brown, Louis, and L. Lacey, Camp Wood, Tex. Carrier for aircraft delivery. 2,439,236, Apr. 6.

Brown, Preston, Selma, Ala. Welding rod holder. 2,438,990, Apr. 6.

Buckwalter, Tracy V., Massillon, assignor to The Timken Roller Bearing Company, Canton, Ohio. Locomotive eccentric crankpin bearing. 2,439,284, Apr. 6.

Budd Company, The, assignee: *See*—
Eksergian, Carolus L., Temple, and Hawthorne.

Burlingame, Ernest D., Eggertsville, R. W. Carlson, Depew, M. G. Nicholson, Jr., Snyder, and M. C. Scott, Lancaster, assignors to Colonial Radio Corporation, Buffalo, N. Y. Protection of thyratron in impulse generating circuits. 2,438,962, Apr. 6.

Bussey, William H., Chicago, Ill., assignor, by mesne assignments, to R. L. Kahn, trustee. Amplifying coupling between a low resistance source and a high resistance circuit. 2,439,072, Apr. 6.

Butterfield, John P., assignor to Chrysler Corporation, Highland Park, Mich. Seal construction. 2,439,073, Apr. 6.

Buttrey, Ronald N., assignor to Cooke & Ferguson Limited, Openshaw, Manchester, England. Electric circuit breaker. 2,439,126, Apr. 6.

Caldwell, John R., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulose acetate fibers having wool dyeing properties and a spinning solution therefor. 2,439,074, Apr. 6.

Callear, Thomas E.: *See*—
Sun, Kuan-Han, and Callear.

Callison, Charles H., assignee, et al.: *See*—
Linstrom, Floyd T.

Cameron Iron Works, assignee: *See*—
Works, Madden T.

Camp, Eugene V., Atlanta, Ga. Highway traffic guard. 2,438,991, Apr. 6.

Campbell, Robert G., Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Ice removing covering for aircraft. 2,439,037, Apr. 6.

Campbell, Thaddeus C., Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Radio object locating system training device. 2,438,898, Apr. 6.

Carbide and Carbon Chemicals Corporation, assignee: *See*—
Boese, Albert B., Jr.
Feild, Theophilus A., Jr., Rugeley, and Petrokubi.

Carlson, Robert W.: *See*—
Burlingame, Ernest D., Carlson, Nicholson, and Scott.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Dailey, William H., Jr., and Di Nucci.

Carnell, Paul H.: *See*—
Hovey, Roger S., and Carnell.

Cartter, William G., Monrovia, Calif. Overhead gas-fired radiator and reflector. 2,439,038, Apr. 6.

Casnati, Lola A., New York, N. Y. Sanitary holder for small articles. 2,439,335, Apr. 6.

Cass, William E., Schenectady, N. Y., assignor to General Electric Company. Preparation of tetrahalogenated benzenes and benzoic acids. 2,439,237, Apr. 6.

Castle, Carl H., assignor to The Sturgis Products Company, Sturgis, Mich. Method of tumbling barrel finishing and material and production thereof. 2,439,156, Apr. 6.

Celanese Corporation of America, assignee: *See*—
Jones, John E.

Cesareo, Orfeo: *See*—
Andrews, Ernest G., and Cesareo.

Chain Belt Company, assignee: *See*—
Hilkemeier, Louis G.

Champion Spark Plug Company, assignee: *See*—
Habicht, Louis A., and Vogel.

Chandler, Leslie O., assignee: *See*—
Keithley, Tim P., and Chandler.

Chavannes, Marc A., Genthod, Switzerland, assignor to American Ecla Corporation, Dover, Del. Making thin rubber films. 2,439,157, Apr. 6.

Chesus, Frank O.: *See*—
Richardson, Avery G., Chesus, and Thomas.

Chevigny, Paul G., and G. J. Lehmann, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Electron discharge device. 2,438,899, Apr. 6.

Childers, Roscoe O., Olney, Ill., assignor to Baker Oil Tools, Inc., Vernon, Calif. Well cementing apparatus. 2,438,992, Apr. 6.

Christiansen, Andrew L., Willowbrook, Calif. Can transfer and orienting mechanism. 2,439,075, Apr. 6.

Chromium Corporation of America, assignee: *See*—
Bell, Henderson M., III.

Chrysler Corporation, assignee: *See*—
Butterfield, John P.

Clapp, Roger E., East Cambridge, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Wave guide mode transformer. 2,439,285, Apr. 6.

Clark, Charles C., Kenmore, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Copolymer of dichlorostyrene, butadiene-1,3 and piperylene. 2,439,076, Apr. 6.

Clark, Robert A., Jr., assignor to A. C. Nielsen Company, Chicago, Ill. Remote radio receiver tuning indicating apparatus. 2,439,201, Apr. 6.

Coe, Elvin L., Nitro, W. Va., assignor to American Viscose Corporation, Wilmington, Del. Producing medullated artificial filaments. 2,439,039, Apr. 6.

Cohen, Harry L., New York, assignor to S & S Corrugated Paper Machinery Co. Inc., Brooklyn, N. Y. Conveyor slat securement. 2,439,040, Apr. 6.

Colbar, Inc., assignee: *See*—
Munshower, Clarence F.

Collins, Leon L., Savannah, Ga. Safety soap and washcloth hanger. 2,439,238, Apr. 6.

Colonial Radio Corporation, assignee: *See*—
Burlingame, Ernest D., Carlson, Nicholson, and Scott.

Commerce, United States of America as represented by the Secretary of, assignee: *See*—
Peters, Chauncey G., Harris, Emerson, Cooter, and Neffien.

Coney, James D., Chicago, assignor to C. B. Albert, Sullivan, Ill. Adjustable connector for sliding members and the like. 2,439,078, Apr. 6.

Conner, Guy O., Cleveland Heights, Ohio. Forming machine. 2,439,077, Apr. 6.

Contardi, Nano F.: *See*—
Pernini, Henry M., and Contardi.

Cook, Elmer W.: *See*—
Dixon, James K., and Cook.

Cooke & Ferguson Limited, assignee: *See*—
Buttrey, Ronald N.

Cooke, William H., Liverpool, and J. C. Smart, Widnes, England, assignors to Imperial Chemical Industries Limited. Separating benzene hexachloride isomers. 2,438,900, Apr. 6.

Cooter, Irvin L.: *See*—
Peters, Chauncey G., Harris, Emerson, Cooter, and Neffien.

Coxe, Charles D., Bridgeport, Conn. Oriented polymeric sheath. 2,438,901, Apr. 6.

Crabtree, Leonard F., Oak Park, Ill., assignor to Automatic Electric Laboratories, Inc. Vote indicating system. 2,439,041, Apr. 6.

Crever, Frederick E., Scotia, N. Y., assignor to General Electric Company. Cabin supercharger regulator system. 2,439,239, Apr. 6.

Crews, John F.: *See*—
Meade, Reginald E., and Crews.

Crosby, David R., Haddonfield, N. J., assignor to Radio Corporation of America. Oscillation generator. 2,439,286, Apr. 6.

Cummings, Robert E., University Heights, assignor to Thompson Products, Inc., Cleveland, Ohio. Braced head dome valve. 2,439,240, Apr. 6.

Cunningham, David H., Haddonfield, and H. Belar, Palmyra, N. J., assignors to Radio Corporation of America. Magnetic field detector. 2,438,964, Apr. 6.

Cunningham, Firmin M.: *See*—
Kratoville, Frank M., and Cunningham.

Cunningham, George L., and R. S. Robinson, Niagara Falls, assignors to The Mathieson Alkali Works, Inc., New York, N. Y. Manufacture of alkali metal alcoholates. 2,438,963, Apr. 6.

Curtis Pump Company, assignee: *See*—
Curtis, Russell R.
Curtis, Russell R., and Gates.

Curtis, Russell R., assignor to Curtis Pump Company, Dayton, Ohio. Pump valve construction. 2,439,242, Apr. 6.

Curtis, Russell R., and R. L. Gates, assignors to Curtis Pump Company, Dayton, Ohio. Pump assembly. 2,439,241, Apr. 6.

Daboll, Walter F., Greensboro, N. C., assignor to Watson-Williams Manufacturing Company, Millbury, Mass. Self-threading shuttle eye. 2,439,158, Apr. 6.

Dailey, William H., Jr., Library, and E. A. Di Nucci, Pittsburgh, Pa., assignors to Carnegie-Illinois Steel Corporation. Shaft and bearing cooling means. 2,439,127, Apr. 6.

Dalkowitz, Godfrey, Washington, D. C., assignor to American Safety Razor Corporation, Brooklyn, N. Y. Blade container. 2,439,243, Apr. 6.

Daly, Lawrence E., Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y. Composition of butadiene-acrylonitrile copolymer and styrene-acrylonitrile copolymer. 2,439,202, Apr. 6.

Dalzen, Frederick R., assignee, trustee: *See*—
Overstedt, Ernest A.

Dalzen, Louella M., assignee, trustee: *See*—
Overstedt, Ernest A.

Dalzen, Russel, assignee, trustee: *See*—
Overstedt, Ernest A.

Dalzen Trust, assignee: *See*—
Overstedt, Ernest A.

Dasher, Paul J., Stow, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Self-sealing fuel tank. 2,438,965, Apr. 6.

Daven Company, The, assignee: *See*—
Doucette, Edmund.

Davidson, Isaac F., Portland, Oreg. Transmission. 2,439,079, Apr. 6.

Davis, James A., Scarsdale, assignor to The Texas Company, New York, N. Y. Utilizing gas mixtures in the alkylation of aromatic hydrocarbons. 2,439,080, Apr. 6.

Debelius, James G.: *See*—
Grzech, Albert S., and Debelius.

De Benneville, Peter L.: *See*—
Tryon, Sager, and de Benneville.

De Boer, Jan H., London, England, assignor to The Hartford National Bank and Trust Company, Hartford, Conn. Flashlight lamp. 2,438,993, Apr. 6.

De Havilland Aircraft Company, Limited, The, assignee: *See*—
Halford, Frank B.

Deloraine, Edmond M., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Pulse multiplex system employing fixed pulse-time displacement for signaling. 2,438,902, Apr. 6.

Deloraine, Edmond M., New York, and D. D. Greig, Forest Hills, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Pulse communication system employing pulse frequency reduction for signaling. 2,438,903, Apr. 6.

De Oliensis, Gertrude, St. Louis, Mo. Combination outergarment. 2,439,128, Apr. 6.

De Rosa, Louis A., Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Timing system. 2,438,904, Apr. 6.

Detroit Lubricator Company, assignee: *See*—
Dillman, Earnest J.

De Weese, Joseph C., Essex, assignor to The Glenn L. Martin Company, Middle River, Md. Fluid seal for fittings. 2,439,244, Apr. 6.

Dickey, Joseph B., and F. C. Duennebier, assignors to Eastman Kodak Company, Rochester, N. Y. Polymers of cyanoacrylic acid derivatives. 2,439,081, Apr. 6.

Dillinger, Joy F., Riverside, and C. C. Patton, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Fluxing method in soldering. 2,439,159, Apr. 6.

Dillman, Earnest J., assignor to Detroit Lubricator Company, Detroit, Mich. Thermostatic valve. 2,439,336, Apr. 6.

Di Nucci, Edward A.: *See*—
Dailey, William H., Jr., and Di Nucci.

Di Pietro, Carmelo V., Birmingham, Mich., assignor to Richardson Corporation, Rochester, N. Y. Method and apparatus for sterilizing glasses, dishes, or the like. 2,439,042, Apr. 6.

Divoll, Richard L., Concord, Mass., assignor to Bendix Aviation Corporation, Teterboro, N. J. Attitude gyro. 2,439,358, Apr. 6.

Dixon, James K., Riverside, Conn., and E. W. Cook, assignors to American Cyanamid Company, New York, N. Y. Production of aminopropionitriles. 2,439,359, Apr. 6.

Dominion Tar & Chemical Company, assignee: *See*—
Sturrock, Murray G., Lawe, and Kemp.

Donahue, John S., Brookline, Mass., and G. E. Strehan, Leonia, N. J.; said Strehan assignor to said Donahue. Building column. 2,439,129, Apr. 6.

Donicht, Harry L., R. F. Fischer, and E. B. Baldridge, Dayton, Ohio. Automatic compensating gun control system. 2,438,905, Apr. 6.

Doucette, Edmund, assignor to The Daven Company, Newark, N. J. Attenuator. 2,439,160, Apr. 6.

Douglas Aircraft Company, Inc., assignee: *See*—
Farr, Alton E.
Klemperer, Wolfgang B., and Pier.
Tuttle, Eugene F.

Dow Chemical Company, The, assignee: *See*—
Thayer, Gordon B., and Lowry.

Drew, E. F., & Co., Inc., assignee: *See*—
Barsky, George.

Drown, William L., Paxton, assignor to Norton Company, Worcester, Mass. Infeed for grinding machines. 2,439,360, Apr. 6.

Du Bois, George B., Radburn, N. J., assignor to Wright Aeronautical Corporation. Attaching means. 2,439,161, Apr. 6.

Duennebier, Fred C.: *See*—
Dickey, Joseph B., and Duennebier.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Pohle, Eric.

Dunn, James C., assignor, by mesne assignements, to Philco Corporation, Philadelphia, Pa. Resistance-capacitance type oscillator. 2,439,245, Apr. 6.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Ellingboe, Ellsworth K.
Gresham, William F.
Jacobson, Henning W.
Leekley, Robert M.
Lindsey, Richard V., Jr.

Durat, Hector, Corona, Long Island, N. Y. Valve grinding machine. 2,438,994, Apr. 6.

Eastman Kodak Company, assignee: *See*—
Caldwell, John R.
Dickey, Joseph B., and Duennebier.
Harvey, Douglass C.
Meyer, Lester W. A.
Porter, Henry D., Weissberger, and Gregory.
Salo, Martin, and Vivan.
Staehle, Henry C.
Sun, Kuan-Han, and Callear.
Tamblyn, John W., and Morey.
Teague, Walter D.
Thuline, Horace C., Parsons, and Waugh.
Weissberger, Arnold, and Porter.
Wilson, Charles V.

Eclipse Moulded Products Company, assignee: *See*—
Nash, James.
Edwards, Walter, Calgary, Alberta, Canada. Eraser holder. 2,439,162, Apr. 6.
Eltzen, Louis C., New York, N. Y. Viscosity instrument. 2,439,287, Apr. 6.
Eksergian, Carolus L., Detroit, R. B. Temple, Grosse Pointe Park, and E. P. Hawthorne, Detroit, Mich., assignors to The Budd Company, Philadelphia, Pa. Wheel. 2,438,966, Apr. 6.
Ellingboe, Ellsworth K., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing beta-fluoroethyl thiolacetate. 2,439,203, Apr. 6.
Ellsworth, Harold D., Clinton, N. J., assignor to The Indium Corporation of America, New York, N. Y. Indium-gold article and method. 2,438,967, Apr. 6.
Elsas, William D., Kew Gardens, P. Lowengardt, Forest Hills, and A. Scheftel, New York, N. Y. Closure. 2,438,906, Apr. 6.
Embree, Harold K.: *See*—
Sholtis, John, Jr., and Embree.
Emerson, Walter B.: *See*—
Peters, Chauncey G., Harris, Emerson, Cooter, and Neffen.
Emerson, William S., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Para-acetylbenzyl compounds. 2,439,204, Apr. 6.
Emmey, Charles, and M. Katzenstein, New York, N. Y., assignors to Press-On Inc. Identifying goods and identifying labels used therewith. 2,439,082, Apr. 6.
Evans, Benjamin A., Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Making an endless belt. 2,439,043, Apr. 6.
Evans, Walter E., Warsaw, Ind. Object lifting and moving jack. 2,439,288, Apr. 6.
Evers, Harry G., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Remote control system. 2,439,205, Apr. 6.
Ex-Cell-O Corporation, assignee: *See*—
Seyferth, Harold N.
Fairey Aviation Company, Limited, The, assignee: *See*—
Hodson, Charles F.
Falconbridge Nickel Mines, Limited, assignee: *See*—
Gronningsaeter, Anton M.
Fanslow, Benjamin O., Rockville Centre, N. Y. Ear protector. 2,439,289, Apr. 6.
Farmer, Melvin M., Blue Island, Ill. Invalid transfer device. 2,439,163, Apr. 6.
Farr, Alton E., Los Angeles, assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif. Control surface lock for aircraft. 2,439,206, Apr. 6.
Feagin, Roy C., assignor to Austenal Laboratories, Incorporated, New York, N. Y. Thermoplastic composition. 2,439,207, Apr. 6.
Federal Telephone and Radio Corporation, assignee: *See*—
Chevigny, Paul G., and Lehmann.
Deloraine, Edmond M.
Deloraine, Edmond M., and Grieg.
De Rosa, Louis A.
Frankel, Sidney, and Silver.
Grieg, Donald D.
Knorr, Camillo A.
Kotterman, Chester A.
Labin, Emile, and Grieg.
Litton, Charles V.
Mahren, Arthur.
Richardson, Avery G., Chesus, and Thomas.
Warner, Arthur J.
Feild, Theophilus A., Jr., E. W. Rugeley, and J. L. Petrokubi, Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation. Production of textile filaments, fibers, and yarns. 2,438,968, Apr. 6.
Ferrill, Thomas M., Jr., Hempstead, N. Y., assignor to The Sperry Corporation. Course softening system. 2,439,044, Apr. 6.
Fetterley, Guy H., Chippawa, Ontario, Canada, assignor to Norton Company, Worcester, Mass. Composition for igniter for rectifiers. 2,439,290, Apr. 6.
Feucht, Albert, Garfield Heights, Ohio, assignor, by mesne assignments, to Le Roi Company, Milwaukee, Wis. Lubricator. 2,438,969, Apr. 6.
Fielding, David T. E., Middleton Junction, England. Set shift parallel rule. 2,439,291, Apr. 6.
Firestone, Floyd A., Ann Arbor, Mich., assignor to United Aircraft Corporation, East Hartford, Conn. Surface and shear wave method and apparatus. 2,439,130, Apr. 6.
Firestone, Floyd A., Ann Arbor, Mich., assignor to United Aircraft Corporation, East Hartford, Conn. Resonance inspection method. 2,439,131, Apr. 6.
First Industrial Corporation, assignee: *See*—
Vacha, Fred P.
Fischer, Richard F.: *See*—
Donicht, Harry L., Fischer, and Baldridge.
Forney, Elbridge W., Canton, Ohio. Drying machine of the air circulating, rotary drum, and enclosing casing type. 2,438,995, Apr. 6.
Forss, Frithiof P., Aurora, assignor to Independent Pneumatic Tool Company, Chicago, Ill. Impact clutch. 2,439,337, Apr. 6.
Fox, Charles A., Oakland Village, assignor to James R. Kearney Corporation, St. Louis, Mo. Electrical switch. 2,439,164, Apr. 6.
Fox, Philip, Bala, Pa. Jewel case. 2,439,045, Apr. 6.
Frankel, Sidney, Forest Hills, and M. Silver, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Condenser discharge control circuit. 2,438,907, Apr. 6.
Frawley, Robert N.: *See*—
Grinstead, Carl E., and Frawley.
French, Elby E., assignor to O. K. Ko-Op Rubber Welding System, Denver, Colo. Tire repair device. 2,439,083, Apr. 6.
Fronmuller, Douglas: *See*—
Rowland, Ben W., and Brouillard.
Fuge, Harry B., and J. W. Momberg, Somerville, assignors to The Singer Manufacturing Company, Elizabeth, N. J. Signal device for thermostatic switches. 2,439,338, Apr. 6.
Gates, Cecil B., assignee: *See*—
Bouffard, Joseph A., and Greemen.
Gates, Richard L.: *See*—
Curtis, Russell R., and Gates.
Gaubert, Rene J., assignor to Simplex Wrapping Machine Co., Oakland, Calif. Label or liner applying machine. 2,439,361, Apr. 6.
General Aniline & Film Corporation, assignee: *See*—
Heimbach, Newton.
General Electric Company, assignee: *See*—
Cass, William E.
Crever, Frederick E.
Gittings, William N.
Longfellow, Richard C.
Lord, Harold W.
Lum, Walter O.
Matricon, Marcel.
Paul, William E.
Silvester, Austin G.
General Electric Company, Limited, The, assignee: *See*—
Ransley, Charles E.
General Foods Corporation, assignee: *See*—
Ozai-Durrani, Ataullah K.
General Motors Corporation, assignee: *See*—
Almen, John O.
Bidwell, Joseph B., and Underwood.
Grinstead, Carl E., and Frawley.
General Spring Corporation, assignee: *See*—
Wood, Joseph K.
General Tire & Rubber, The, assignee: *See*—
Te Grotenhuis, Theodore A.
Gibbons, James, Company, The, assignee: *See*—
Middlestadt, William F.
Gibian, Emil F., Cleveland Heights, Ohio, assignor to Thompson Products, Inc. Pressure welding machine. 2,439,246, Apr. 6.
Gill, Franklin C., Flint, Mich. Method and means for adjusting contacts. 2,439,362, Apr. 6.
Gittings, William N., Oakmont, Pa., assignor to General Electric Company. Protective arrangement for translating devices. 2,439,247, Apr. 6.
Globe Slicing Machine Co., Inc., assignee: *See*—
Metzler, Charles L.
Glogau, Manfred L., Shorewood, assignor to Allen-Bradley Company, Milwaukee, Wis. Preset switch. 2,438,970, Apr. 6.
Gloyer, Walter, Port Washington, assignor to American Locomotive Company, New York, N. Y. Heat exchanger. 2,439,208, Apr. 6.
Golden, Roann, Oakland, Calif. Massage table. 2,439,292, Apr. 6.
Goodall-Sanford, Inc., assignee: *See*—
Wilson, Sydney S.
Goodall, William M., Oakhurst, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Pulse code modulation communication system. 2,438,908, Apr. 6.
Goodrich, B. F., Company, The, assignee: *See*—
Antonson, John O.
Campbell, Robert G.
Dasher, Paul J.
Evans, Benjamin A.
Sternad, Frank S.
Graham, Luell M.: *See*—
Wolf, Robert A.
Graves, Herbert C., Jr., West Chester, assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa. Insulated reinforced circuit breaker contact bar. 2,439,084, Apr. 6.
Graves, Herbert C., Jr., West Chester, assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa. Selective tripping of circuit breakers in a system. 2,439,165, Apr. 6.
Gray, George F.: *See*—
Pratt, Verneur E., and Gray.
Gray-Mills Corporation: *See*—
Morse, Normand W.
Greemen, John G.: *See*—
Bouffard, Joseph A., and Greemen.
Greene, Raymond J., Sebring, Ohio. Radiant oven and broiler burner. 2,438,996, Apr. 6.

Gregory, Eli E., Millington, N. J., assignor, by mesne assignments, to Gregory Motors, Inc., Brooklyn, N. Y. Electromotor. 2,439,248, Apr. 6.
Gregory Motors, Inc., assignee: *See*—
Gregory, Eli E.
Gregory, Walter A.: *See*—
Porter, Henry D., Weissberger, and Gregory.
Gresham, William F.: *See*—
Nalbach, John R., and Gresham.
Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymers of linear formals. 2,438,909, Apr. 6.
Grieg, Donald D.: *See*—
Deloraine, Edmond M., and Grieg.
Labin, Emile, and Grieg.
Grieg, Donald D., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Pulse generator. 2,438,910, Apr. 6.
Grim, Forrest D., Allentown, Pa. Window sash control. 2,439,046, Apr. 6.
Grinstead, Carl E., and R. N. Frawley, assignors to General Motors Corporation, Detroit, Mich. Pressure indicator. 2,439,047, Apr. 6.
Griplock, Inc., assignee: *See*—
Sholtis, John, Jr., and Embree.
Grisanti, Amedeo D., Mount Vernon, N. Y. Trouser waist grip belt. 2,439,339, Apr. 6.
Gronningsaeter, Anton M., New York, N. Y., assignor to Falconbridge Nickel Mines, Limited, Toronto, Ontario, Canada. Recovering metal values from slags. 2,438,911, Apr. 6.
Grzech, Albert S., and J. G. Debellus, Baltimore, Md. Automatic antitip device. 2,439,085, Apr. 6.
Guanella, Gustav, Zurich, Switzerland, assignor to Radio Patents Corporation, New York, N. Y. Speech transmission system. 2,439,293, Apr. 6.
Habicht, Louis A., and H. H. Vogel, assignors to Champion Spark Plug Company, Toledo, Ohio. Gap gauge for spark plugs. 2,439,363, Apr. 6.
Halford, Frank B., assignor to The De Havilland Aircraft Company, Limited, Edgware, England. Controlling the temperature of gases. 2,438,998, Apr. 6.
Hall, Marchand B., assignor to Acme Visible Records, Inc., Chicago, Ill. Holder for cards and photographs. 2,438,997, Apr. 6.
Halsey, Arthur S., Washington, D. C., assignor to the United States of America, as represented by the Secretary of Navy. Torpedo director. 2,439,209, Apr. 6.
Hammond Instrument Company, assignee: *See*—
Hammond, Laurens.
Hammond, Laurens, and Hanert.
Hammond, Laurens, assignor to Hammond Instrument Company, Chicago, Ill. Steering control apparatus. 2,439,294, Apr. 6.
Hammond, Laurens, Chicago, and J. M. Hanert, Park Ridge, assignors to Hammond Instrument Company, Chicago, Ill. Speed responsive apparatus. 2,439,295, Apr. 6.
Hanert, John M.: *See*—
Hammond, Laurens, and Hanert.
Hanley, William W., Wetumka, Okla. Full view peep sight. 2,439,086, Apr. 6.
Hannifin Corporation, assignee: *See*—
Peterson, Victor W.
Hansen, William W., Garden City, N. Y., assignor to The Sperry Corporation. High-frequency filter structure. 2,438,913, Apr. 6.
Hansen, William W., Garden City, N. Y., assignor to The Sperry Corporation. Wave guide impedance transformer. 2,438,914, Apr. 6.
Hansen, William W., Garden City, N. Y., assignor to The Sperry Corporation. High-frequency terminating impedance. 2,438,915, Apr. 6.
Hansen, William W., and J. R. Woodyard, Garden City, and Morris Nelson, Kew Garden, N. Y., assignors to The Sperry Corporation. Impedance transformer. 2,438,912, Apr. 6.
Harding, Milo M.: *See*—
Bailey, Richard W., and Harding.
Harding, Milo, Co., assignor: *See*—
Bailey, Richard W., and Harding.
Harper, George M., Jr., assignee: *See*—
Webb, Byron H.
Harris, Forest K.: *See*—
Peters, Chauncey G., Harris, Emerson, Cooter & Neffen.
Hartford National Bank and Trust Company, The, assignee: *See*—
De Boer, Jan H.
Hartley, Emmett C., and H. E. Hull, assignors to The Parker Appliance Company, Cleveland, Ohio. Automatic means for clamping and deforming the ends of tubes. 2,438,999, Apr. 6.
Harvey, Douglass C., assignor to Eastman Kodak Company, Rochester, N. Y. Protective casing for enclosing photographic shutters to exclude moisture and dirt therefrom. 2,439,087, Apr. 6.
Harvey, Valentine P.: *See*—
Molins, Desmond W., Harvey, Mason, and Powell.
Hasenzahl, Herbert E., assignor to American Optical Company, Southbridge, Mass. Snap fastener. 2,439,000, Apr. 6.

Hatala, Raymond F., and A. Kimber, assignors to Anthony Company, Streator, Ill. Safety means for receptacles. 2,439,132, Apr. 6.
Havstad, Harald, Northport, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Work holding nest. 2,438,916, Apr. 6.
Hawkins, General A., Dallas, Tex. Electric soldering iron. 2,439,296, Apr. 6.
Hawthorne, Eugene P.: *See*—
Eksergian, Carolus L., Temple, and Hawthorne.
Hayes, Meyers and Hoagland: *See*—
Meyers, Eugene J.
Head, Adam W.: *See*—
Bowen, Rees T., Head, and Lesniak.
Heimbach, Newton, Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Photographic Silver-halide emulsions containing 1,3,4-triazaindolizine cyanine dyes. 2,439,210, Apr. 6.
Hendrickson, Severine, Templeton, assignor to Heywood-Wakefield Company, Gardner, Mass. Wheel construction. 2,439,340, Apr. 6.
Hennessey, James J., Montclair, N. J. Railway journal bearing. 2,439,297, Apr. 6.
Herkenhoff, Earl C.: *See*—
Booth, Robert B., and Herkenhoff.
Herr, Vincent A., Collinsville, Ill. Collar shaping device. 2,439,088, Apr. 6.
Heywood-Wakefield Company, assignee: *See*—
Hendrickson, Severine.
Hickman, Clarence N., Washington, D. C., assignor to the United of America, as represented by the Secretary of Navy. Submarine mine. 2,439,211, Apr. 6.
Hickman, Elie, Detroit, Mich. Bath cloth. 2,439,249, Apr. 6.
Hilkemeier, Louis G., West Allis, assignor to Chain Belt Company, Milwaukee, Wis. Transit concrete mixer. 2,439,250, Apr. 6.
Hill, C. V., & Company, Inc., assignee: *See*—
Hoffman, Cyrus F.
Hillier, James, Cranbury, N. J., assignor to Radio Corporation of America. Compound electron objective lens. 2,438,971, Apr. 6.
Hippard, Ralph M., Middleboro, Ky. Shuttle car. 2,439,001, Apr. 6.
Hlobil, Charles, Astoria, Long Island, N. Y. Moccasin with ornamental edging. 2,439,341, Apr. 6.
Hodson, Charles F., Burnham, assignor to The Fairey Aviation Company, Limited, Hayes, Middlesex, England. Control of rotating wing aircraft. 2,439,089, Apr. 6.
Hoertz, Norman: *See*—
Newton, John A., and Hoertz.
Hof, Rufus C., La Bolt, S. Dak. Power lever and engine using the same. 2,439,002, Apr. 6.
Hoffman, Cyrus F., assignor to C. V. Hill & Company, Inc., Trenton, N. J. Refrigerated display case. 2,438,972, Apr. 6.
Hoffman, Widof J., and O. P. Olson, Chicago, Ill. Dispensing toothbrush. 2,439,166, Apr. 6.
Hoover, Melvin P.: *See*—
Berning, Theodore J., and Hoover.
Hopeman Bros., Inc., assignee: *See*—
Bohnsack, John A.
Horan, Timothy F., New Haven, Conn. Casting reel. 2,439,298, Apr. 6.
Hornbostel, Lloyd, assignor to Beloit Iron Works, Beloit, Wis. Band guide. 2,439,251, Apr. 6.
Hotpoint Inc., assignee: *See*—
Sharp, John C.
Hovey, Roger S., Charleston, W. Va., and P. H. Carnell, Bartlesville, Okla., assignors to Phillips Petroleum Company. Production of halogenated hydrocarbons containing fluorine. 2,439,299, Apr. 6.
Howald, Werner, Zurich, Switzerland. Transmission mechanism. 2,439,003, Apr. 6.
Huber, Gustav, assignor to Kangol Wear Limited, Cleator, England. Flat single bed knitting machine. 2,439,300, Apr. 6.
Hudson, Thomas B., and J. D. Upham, assignors to Phillips Petroleum Company, Bartlesville, Okla. Isomerization of hydrocarbons. 2,439,301, Apr. 6.
Hudson, William J., Milwaukee, Wis. Pressure measuring apparatus. 2,439,342, Apr. 6.
Hull, Elizabeth H.: *See*—
Vanderscheer, James, and Hull.
Hull, Henry E.: *See*—
Hartley, Emmett C., and Hull.
Hultquist, Martin E., Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y. Preparation of benzotetronic acid. 2,439,302, Apr. 6.
Hurley, Ralph L., Xenia, Ohio. Storage container for electric irons. 2,439,004, Apr. 6.
Hydraulic Control Engineering Company, assignee: *See*—
Stephens, William T.
I-T-E Circuit Breaker Company, assignee: *See*—
Graves, Herbert C., Jr.
Imperial Brass Manufacturing Company, The, assignee: *See*—
McIntosh, Robert D.
Imperial Chemical Industries Limited, assignee: *See*—
Cooke, William H., and Smart.
McGill, John H.
Wright, Harold R., and Allan.

Independent Pneumatic Tool Company, assignee: *See*—
Forss, Frithiof P.

Indge, Herbert S., Westboro, assignor to Norton Company, Worcester, Mass. Centerless grinder. 2,439,303, Apr. 6.

Indium Corporation of America, The, assignee: *See*—
Ellsworth, Harold D.

Industrial Patents Corporation, assignee: *See*—
Bloom, Oscar T.
McGinnis, Albert S., and Berry.
McKee, Harry H., Keefer, and McCue.

Infilco Incorporated, assignee: *See*—
Adelson, Samuel L.

Institute of Paper Chemistry, The, assignee: *See*—
Rowland, Ben W., and Fronmuller.

International Staple and Machine Company, assignee: *See*—
Schafroth, Werner.

Jackson, Marshal E., Kalamazoo, Mich. Decoy. 2,439,167, Apr. 6.

Jackson, William H., Johnstown, Pa. Aeroplane empennage. 2,439,304, Apr. 6.

Jacobson, Henning W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Dithiadecane diester. 2,439,212, Apr. 6.

Jenkins, Francis J., Hurlstone Park, New South Wales, Australia. Combined table and electrically heated hot plates. 2,439,133, Apr. 6.

Jensen, Frants V., assignor to Jensen Specialties, Inc., Detroit, Mich. Oven with infrared lamp. 2,439,005, Apr. 6.

Jensen Specialties, Inc., assignee: *See*—
Jensen, Frants V.

Jerome, Arthur L., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Coded track circuits for highway crossing signals. 2,439,006, Apr. 6.

Johnson, Clarence, South Euclid, Ohio, assignor to Bailey Meter Company. Fluid flow regulator. 2,438,973, Apr. 6.

Johnson, Theodore M., Burbank, and E. G. Reed, Los Angeles, Calif. **Movable base mounted** axially collapsing type tire removing device. 2,439,135, Apr. 6.

Johnson, William C., assignor to Pfister and Vogal Tanning Company, Milwaukee, Wis. Machine for brushing and cleaning plates. 2,439,305, Apr. 6.

Jones, David D., Towson, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Extruding apparatus. 2,438,974, Apr. 6.

Jones, George E., London, England. Clutch and brake mechanism. 2,439,134, Apr. 6.

Jones, John E., Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America. Alkyl cellulose stabilized with an N,N, dialkylated diamine. 2,438,975, Apr. 6.

Jordan, Clayton E., Prescott, Ariz. Pencil sharpener. 2,439,252, Apr. 6.

Kahn, Earl, Chicago, Ill. Toy bank. 2,439,136, Apr. 6.

Kahn, Robert L., trustee: *See*—
Bussey, William H.

Kall, Karl A., Montrose, Pa., assignor to Link Aviation, Inc. Constant speed propeller simulating means for aviation trainers. 2,439,168, Apr. 6.

Kamborian, Jacob S., West Newton, Mass. Apparatus for lasting footwear. 2,438,917, Apr. 6.

Kamborian, Jacob S., West Newton, Mass. Method of and apparatus for use in lasting footwear. 2,438,918, Apr. 6.

Kamborian, Jacob S., West Newton, Mass. Lasting shoes. 2,438,919, Apr. 6.

Kamborian, Jacob S., West Newton, Mass. Shoe counter. 2,438,920, Apr. 6.

Kamborian, Jacob S., West Newton, Mass. Retaining means for expansible lasts. 2,438,921, Apr. 6.

Kangol Wear Limited, assignee: *See*—
Huber, Gustav.

Katzenstein, Max: *See*—
Emmey, Charles, and Katzenstein.

Kearney, James R., Corporation, assignee: *See*—
Fox, Charles A.
Kratoville, Frank M., and Cunningham.

Keating, Harry C., Buffalo, N. Y. Electrical outlet box. 2,439,090, Apr. 6.

Keating, Harry C., Buffalo, N. Y. Electrical outlet box mounting. 2,439,091, Apr. 6.

Keefer, Herbert W.: *See*—
McKee, Harry H., Keefer, and McCue.

Keithley, Tim P., and L. O. Chandler, Middletown, Mo.; said Keithley assignor to said Chandler. Two-way cattle and hog feeder. 2,439,007, Apr. 6.

Kellem, James F., assignor of one-half to T. E. Meade, Vancouver, Wash. Drill stand and gauge. 2,439,008, Apr. 6.

Keller, Auguste V., Long Island City, assignor to Thompson's Ltd., New York, N. Y. Laminated plastic article. 2,439,137, Apr. 6.

Kemp, Woodrow E.: *See*—
Sturrock, Murray G., Lowe, and Kemp.

Kendrick, John F., Elizabeth, N. J. Self-locking nut. 2,439,253, Apr. 6.

Kern & Co. A. G., assignee: *See*—
Wild, Heinrich.

Kernan, William: *See*—
Mulligan, Wayne A., and Kernan.

Kimber, Arthur: *See*—
Hatala, Raymond F., and Kimber.

King, John W., and J. J. McNamee, assignors to Miles Park Machine & Tool, Inc., Cleveland, Ohio. Clamp. 2,439,364, Apr. 6.

Kispersky, John P.: *See*—
Seymour, Raymond B., and Kispersky.

Kispersky, John P., West La Fayette, Ind., and R. B. Seymour, Chattanooga, Tenn., assignors to Monsanto Chemical Company. Heat-resistant copolymer of styrene and parachloro-alpha methylstyrene. 2,439,213, Apr. 6.

Kite Aircraft Corporation, assignee: *See*—
Brantly, Newby O.

Kittredge, Raymond E., Binghamton, N. Y., assignor to Link Aviation, Inc. Training device. 2,439,169, Apr. 6.

Kjos, Earl, assignee: *See*—
Baker, James A.

Klemperer, Wolfgang B., Los Angeles, and E. H. Pier, West Los Angeles, assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Computer. 2,439,365, Apr. 6.

Knorr, Camillo A., East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Telephone set. 2,438,922, Apr. 6.

Kobischke, Herbert: *See*—
Wunsch, Guido, Weinkauff, Sadowski, and Kobischke.

Koch, Winfield R., Haddonfield, N. J., assignor to Radio Corporation of America. Rectifier. 2,439,224, Apr. 6.

Kohrman, Hubert, Danbury, Conn. Apparatus for making artificial teeth. 2,439,138, Apr. 6.

Korff, Walter H., assignor to Lockheed Aircraft Corporation, Burbank, Calif. Tailless airplane. 2,439,048, Apr. 6.

Kotterman, Chester A., Livingston, N. J., assignor to Federal Telephone & Radio Corporation, New York, N. Y. Making selenium elements. 2,438,923, Apr. 6.

Kramer, Alexander E., Hyattsville, Md., and V. F. Lucht, Washington, D. C. Muzzle closure device for guns. 2,438,924, Apr. 6.

Krantz, Hubert K., Rockville Centre, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetostrictive submarine signal transmitter or receiver. 2,438,925, Apr. 6.

Kratoville, Frank M., St. Louis, and F. M. Cunningham, Maplewood, assignors to James R. Kearney Corporation, St. Louis, Mo. Rolling machine. 2,439,170, Apr. 6.

Kreider, Benjamin R., Manheim, Pa. Wiping device for oil gauge rods. 2,439,171, Apr. 6.

Kropa, Edward L., Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y. Liquid copolymer of beta myrcene and para methyl styrene. 2,439,343, Apr. 6.

Kujawski, Barney, assignor to Thurner Engineering Company, Milwaukee, Wis. Flexible joint. 2,439,009, Apr. 6.

Kurti, Alexander: *See*—
Sanford, Roy S., and Kurti.

Labin, Emile, New York, and D. D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation. Modulation means and method. 2,438,927, Apr. 6.

Labin, Emile, New York, and D. D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y. Cathode-ray tube pulse demodulator system. 2,438,928, Apr. 6.

Lacey, Leo: *See*—
Brown, Louis, and Lacey.

La Chapelle, Albert L., assignee, et al.: *See*—
La Chapelle, Euclid I.

La Chapelle, Beatrice H., assignee, et al.: *See*—
La Chapelle, Euclid I.

La Chapelle, Euclid I., Brockton, Mass., assignor of one-fourth to A. L. La Chapelle, one-fourth to B. H. La Chapelle, and one-fourth to R. E. La Chapelle. Shoe forepart bottom filler. 2,439,172, Apr. 6.

La Chapelle, Rachel E., assignee, et al.: *See*—
La Chapelle, Euclid I.

La Crosse Rubber Mills Company: *See*—
Larkin, Leo J., Regan, and Larkin.

Lacy Manufacturing Company, assignee: *See*—
Sandberg, William A.

Laidley, Clarence D., Los Angeles, Calif. Gasket. 2,439,306, Apr. 6.

Landis & Gyr, A. G., assignee: *See*—
Weber, Ernst, Pudelko, Bollmann, and Wermeille.

Lane, Maurice W.: *See*—
Bartelheim, Leland A., and Lane.

Lange, Edward H., Baltimore, Md. Portable collapsible power-distribution tower for electric lawn mowers. 2,439,010, Apr. 6.

Langmuir, David B., Englewood, N. J., assignor to Radio Corporation of America. Electron discharge device. 2,439,173, Apr. 6.

Larkin, Gerald A.: *See*—
Larkin, Leo J., Regan, and G. A. Larkin.

Larkin, Leo J., J. J. Regan, and G. A. Larkin, assignors to La Crosse Rubber Mills Company, La Crosse, Wis. Vulcanizer. 2,439,011, Apr. 6.

Larson, Charles J., Warren, Minn. Brush attachment for mop handles. 2,439,174, Apr. 6.

Latta, Lynn H.: *See*—
Nuffer, Joseph H., and Latta.

Lautmann, Alfred J., Detroit, Mich. Rivet. 2,438,976, Apr. 6.

Lawe, Thomas: *See*—
Sturrock, Murray G., Lawe, and Kemp.

Leaf, Walter B., Denver, Colo. Foam suppressing apparatus. 2,438,929, Apr. 6.

Ledford, Hershel B., Dahlonega, Ga. Wheel and axle construction. 2,439,012, Apr. 6.

Lee, Russell: *See*—
Simpson, Thomas P., Lee, and Ray.

Leekley, Robert M., Chicago, Ill., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Simultaneous dimerization and reduction. 2,439,308, Apr. 6.

Legatski, Harold R., Bartlesville, Okla., assignor to Phillips Petroleum Company. Recovery and purification of cyclopentadiene. 2,439,307, Apr. 6.

Lehmann, Gerard J.: *See*—
Chevigny, Paul G., and Lehmann.

Lenske, Louis G., Los Angeles, Calif., now, by change of name, Gene Shelly. Shoulder pad. 2,438,930, Apr. 6.

Le Roi Company, assignee: *See*—
Feucht, Albert.

Lesko, John S., Bridgeport, Conn. Display rack. 2,439,049, Apr. 6.

Lesniak, Frank G.: *See*—
Bowen, Rees T., Head, and Lesniak.

Le Tourneau, R. G., Inc., assignee: *See*—
Le Tourneau, Robert G.

Le Tourneau, Robert G., Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif. Power scoop. 2,439,130, Apr. 6.

Levin, Joseph H., Brooklyn, N. Y. Joint for air ducts and the like. 2,439,254, Apr. 6.

Lindsey, Richard V., Jr., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Copolymers of alpha, beta-ethylenically unsaturated phosphonic acid derivatives. 2,439,214, Apr. 6.

Link Aviation, Inc., assignee: *See*—
Kall, Karl A.
Kittredge, Raymond E.

Linstrom, Floyd T., assignor of one-third to G. B. Waldron and one-third to C. H. Callison, Denver, Colo. Apparatus for indicating pressure at a distance. 2,439,092, Apr. 6.

Litton, Charles V., Redwood City, Calif., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Variable condenser. 2,438,931, Apr. 6.

Lloyd, George G., assignor to Loftus Engineering Corporation, Inc., Pittsburgh, Pa. Industrial furnace and operating the same. 2,439,309, Apr. 6.

Lockheed Aircraft Corporation, assignee: *See*—
Korff, Walter H.

Loftus Engineering Corporation, Inc., assignee: *See*—
Lloyd, George G.

Longfellow, Richard C., Schenectady, N. Y., assignor to General Electric Company. Capacitor switch. 2,439,255, Apr. 6.

Lord, Harold W., Schenectady, N. Y., assignor to General Electric Company. Timing circuit. 2,439,256, Apr. 6.

Lowengardt, Paul: *See*—
Elsas, William D., Lowengardt, and Scheftel.

Lower, Carl F., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for the control of highway crossing signals. 2,439,013, Apr. 6.

Lowry, Robert D.: *See*—
Thayer, Gordon B., and Lowry.

Lucht, Victor F.: *See*—
Kramer, Alexander E., and Lucht.

Luhrmann, George W., Cedar Brook, N. J. Apparatus for preparing finely divided fibre stock for fluid conveyance. 2,439,014, Apr. 6.

Lum, Walter O., Schenectady, N. Y., assignor to General Electric Company. Fuel atomizing nozzle. 2,439,257, Apr. 6.

Lund, Arthur D., Minneapolis, Minn., assignor to Solar Corporation, Milwaukee, Wis. Clothes-washing machine having reciprocating clothes receptacle with restricted passageway. 2,439,215, Apr. 6.

Lundquist, Wilton G., Hohokus, N. J., assignor to Wright Aeronautical Corporation. Valve gear. 2,439,175, Apr. 6.

M. P. P. (Products) Limited, assignee: *See*—
Willetts, Arthur K., and Rendle.

Mahren, Arthur, Long Island City, N. Y., assignor to Federal Telephone and Radio Corporation, East Newark, N. J. Testing cables. 2,438,932, Apr. 6.

Mallard, Logan L., Norfolk, assignor of one-half to B. M. Wolf, Norfolk County, Va. Connector. 2,439,176, Apr. 6.

Mallory, Henry R., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Vibratory switching device for oscillographs. 2,439,050, Apr. 6.

Mallory, P. R. & Co., Inc., assignee: *See*—
Mallory, Henry R.
Slater, Ira M.

Mancuso, Frank M., Concord, Staten Island, N. Y. Detachable heel. 2,439,310, Apr. 6.

Manning, Lester C., assignor to R. L. Senter, Oklahoma City, Okla. Apparatus for dehydration of oil. 2,439,177, Apr. 6.

Marchand, Michelle, Flushing, N. Y. Illuminated ornament. 2,439,178, Apr. 6.

Markin, Louis, Chicago, Ill., assignor to Society Brand Clothes, Inc. Trousers. 2,438,933, Apr. 6.

Marsh, Walter H., Crafton, Pa., assignor to Rockwell Manufacturing Company. Temperature compensated meter. 2,438,934, Apr. 6.

Marsh, Walter H., Crafton, Pa., assignor to Rockwell Manufacturing Company. Temperature compensated meter. 2,438,935, Apr. 6.

Marshall Furnace Co., assignee: *See*—
Stout, Claude S.

Martin, Glenn L., Company, The, assignee: *See*—
De Weese, Joseph C.

Mason, George T., Glendale, assignor to Alfred A. Nathanson, North Hollywood, Calif. Combination lock. 2,439,140, Apr. 6.

Mason, James A.: *See*—
Molins, Desmond W., Harvey, Mason and Powell.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electromechanical transducer. 2,438,936, Apr. 6.

Masonite Corporation, assignee: *See*—
Bowen, Rees T., Head and Lesniak.

Mathieson Alkali Works, Inc., The, assignee: *See*—
Clark, Charles C.
Cunningham, George L., and Robinson.

Matricon, Marcel, Paris, France, assignor to General Electric Company. Vacuum pump. 2,439,258, Apr. 6.

Maybery, Elbert, St. Louis, Mo. Snow skate. 2,439,311, Apr. 6.

McBee Company, The, assignee: *See*—
Welk, Nelson S.

McClelland, James B., Wilkinsburg, Pa. Metalworking machine. 2,439,015, Apr. 6.

McCormack, Arden J., Portland, Mich. Field pick up hay chopper. 2,439,259, Apr. 6.

McCue, William J.: *See*—
McKee, Harry H., Keefer and McCue.

McLaughlin, Leone, assignor to Wingfoot Corporation, Akron, Ohio. Self-sealing container. 2,439,366, Apr. 6.

McGill, John H., Manchester, England, assignor to Imperial Chemical Industries Limited. Flexible sheet material comprising a surface coating containing polyvinyl chlorides. 2,439,051, Apr. 6.

McGinnis, Albert S., and Harry Berry, Cairo, assignors to Industrial Patents Corporation, Chicago, Ill. Lint cleaning apparatus. 2,439,179, Apr. 6.

McGlaun, Jasper E., Shellman, Ga. Resilient wheel. 2,439,312, Apr. 6.

McIntosh, Robert D., River Forest, assignor to The Imperial Brass Manufacturing Company, Chicago, Ill. Shutoff valve mechanism. 2,439,052, Apr. 6.

McKee, Harry H., Herbert W. Keefer, and William J. McCue, assignors to Industrial Patents Corporation, Chicago, Ill. Producing dried meat. 2,439,180, Apr. 6.

McLellan, David S., Longview, Wash., assignor to Reynolds Metals Company, Richmond, Va. Removing metallic iron from a fused alumina-cryolite composition. 2,439,216, Apr. 6.

McNamee, James J.: *See*—
King, John W. and McNamee.

Meade, Reginald E., and John F. Crews, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif. Apparatus for heating sensitive materials. 2,439,260, Apr. 6.

Meade, Thomas E., assignee: *See*—
Kellem, James F.

Meagher, Ralph E., Watertown, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Electrical circuit. 2,439,313, Apr. 6.

Meehan, Howard M.: *See*—
Beardsley, Harry I. and Meehan.

Meidenbauer, Phillip E., Jr., assignor to Scott Aviation Corporation, Lancaster, N. Y. Breathing apparatus. 2,439,016, Apr. 6.

Meighan, William A., Portland, Oreg. Flat terminal fitting. 2,439,141, Apr. 6.

Metzler, Charles L., Palisades Park, N. J., assignor to Globe Slicing Machine Co. Inc., Stamford, Conn. Slice receiving mechanism for reciprocating carriage slicing machines. 2,438,937, Apr. 6.

Meyer, Lester W. A., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Thermoplastic compositions containing cellulose acetate butyrate. 2,439,093, Apr. 6.

Meyers, Eugene J., assignor to Hayes, Meyers and Hoagland, Los Angeles, Calif. Thermal timer for heating apparatus. 2,439,017, Apr. 6.

Middlestadt, William F., Baltimore, assignor to The James Gibbons Company, Relay, Md. Apparatus for melting plastic compositions. 2,439,367, Apr. 6.

Miles, George S., New York, N. Y., assignor to Bendix Aviation Corporation, Teterboro, N. J. Linear follow-up system. 2,439,094, Apr. 6.

Miles Park Machine & Tool, Inc., assignee: *See*—
King, John W. and McNamee.

Miller, Edward A., Milwaukee, Wis. Mechanical scrub brush. 2,439,344, Apr. 6.

Miller, Homer D., Canton, Ohio. Safety clip. 2,439,018, Apr. 6.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Wilson, John M.

Independent Pneumatic Tool Company, assignee: *See*—
Forss, Frithiof P.

Kobischke, Herbert: *See*—
Wunsch, Guido, Weinkauff, Sadowski, and Kobischke.

Koch, Winfield R., Haddonfield, N. J., assignor to Radio Corporation of America. Rectifier. 2,439,224, Apr. 6.

Kohrman, Hubert, Danbury, Conn. Apparatus for making artificial teeth. 2,439,138, Apr. 6.

Korff, Walter H., assignor to Lockheed Aircraft Corporation, Burbank, Calif. Tailless airplane. 2,439,048, Apr. 6.

Kotterman, Chester A., Livingston, N. J., assignor to Federal Telephone & Radio Corporation, New York, N. Y. Making selenium elements. 2,438,923, Apr. 6.

Kramer, Alexander E., Hyattsville, Md., and V. F. Lucht, Washington, D. C. Muzzle closure device for guns. 2,438,924, Apr. 6.

Krantz, Hubert K., Rockville Centre, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetostrictive submarine signal transmitter or receiver. 2,438,925, Apr. 6.

Kratoville, Frank M., St. Louis, and F. M. Cunningham, Maplewood, assignors to James R. Kearney Corporation, St. Louis, Mo. Rolling machine. 2,439,170, Apr. 6.

Kreider, Benjamin R., Manheim, Pa. Wiping device for oil gauge rods. 2,439,171, Apr. 6.

Kropa, Edward L., Old Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y. Liquid copolymer of beta myrcene and para methyl styrene. 2,439,343, Apr. 6.

Kujawski, Barney, assignor to Thurner Engineering Company, Milwaukee, Wis. Flexible joint. 2,439,009, Apr. 6.

Kurti, Alexander: *See*—
Sanford, Roy S., and Kurti.

Labin, Emile, New York, and D. D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation. Modulation means and method. 2,438,927, Apr. 6.

Labin, Emile, New York, and D. D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y. Cathode-ray tube pulse demodulator system. 2,438,928, Apr. 6.

Lacey, Leo: *See*—
Brown, Louis, and Lacey.

La Chapelle, Albert L., assignee, et al.: *See*—
La Chapelle, Euclid I.

La Chapelle, Beatrice H., assignee, et al.: *See*—
La Chapelle, Euclid I.

La Chapelle, Euclid I., Brockton, Mass., assignor of one-fourth to A. L. La Chapelle, one-fourth to B. H. La Chapelle, and one-fourth to R. E. La Chapelle. Shoe forepart bottom filler. 2,439,172, Apr. 6.

La Chapelle, Rachel E., assignee, et al.: *See*—
La Chapelle, Euclid I.

La Crosse Rubber Mills Company: *See*—
Larkin, Leo J., Regan, and Larkin.

Lacy Manufacturing Company, assignee: *See*—
Sandberg, William A.

Laidley, Clarence D., Los Angeles, Calif. Gasket. 2,439,306, Apr. 6.

Landis & Gyr, A. G., assignee: *See*—
Weber, Ernst, Pudelko, Bollmann, and Wermeille.

Lane, Maurice W.: *See*—
Bartelheim, Leland A., and Lane.

Lange, Edward H., Baltimore, Md. Portable collapsible power-distribution tower for electric lawn mowers. 2,439,010, Apr. 6.

Langmuir, David B., Englewood, N. J., assignor to Radio Corporation of America. Electron discharge device. 2,439,173, Apr. 6.

Larkin, Gerald A.: *See*—
Larkin, Leo J., Regan, and G. A. Larkin.

Larkin, Leo J., J. J. Regan, and G. A. Larkin, assignors to La Crosse Rubber Mills Company, La Crosse, Wis. Vulcanizer. 2,439,011, Apr. 6.

Larson, Charles J., Warren, Minn. Brush attachment for mop handles. 2,439,174, Apr. 6.

Latta, Lynn H.: *See*—
Nuffer, Joseph H., and Latta.

Lautmann, Alfred J., Detroit, Mich. Rivet. 2,438,976, Apr. 6.

Lawe, Thomas: *See*—
Sturrock, Murray G., Lawe, and Kemp.

Leaf, Walter B., Denver, Colo. Foam suppressing apparatus. 2,438,929, Apr. 6.

Ledford, Hershel B., Dahlonega, Ga. Wheel and axle construction. 2,439,012, Apr. 6.

Lee, Russell: *See*—
Simpson, Thomas P., Lee, and Ray.

Leekley, Robert M., Chicago, Ill., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Simultaneous dimerization and reduction. 2,439,308, Apr. 6.

Legatski, Harold R., Bartlesville, Okla., assignor to Phillips Petroleum Company. Recovery and purification of cyclopentadiene. 2,439,307, Apr. 6.

Lehmann, Gerard J.: *See*—
Chevigny, Paul G., and Lehmann.

Lenske, Louis G., Los Angeles, Calif., now, by change of name, Gene Shelly. Shoulder pad. 2,438,930, Apr. 6.

Le Roi Company, assignee: *See*—
Feucht, Albert.

Lesko, John S., Bridgeport, Conn. Display rack. 2,439,049, Apr. 6.

Lesniak, Frank G.: *See*—
Bowen, Rees T., Head, and Lesniak.

Le Tourneau, R. G., Inc., assignee: *See*—
Le Tourneau, Robert G.

Le Tourneau, Robert G., Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif. Power scoop. 2,439,130, Apr. 6.

Levin, Joseph H., Brooklyn, N. Y. Joint for air ducts and the like. 2,439,254, Apr. 6.

Lindsey, Richard V., Jr., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Copolymers of alpha, beta-ethylenically unsaturated phosphonic acid derivatives. 2,439,214, Apr. 6.

Link Aviation, Inc., assignee: *See*—
Kail, Karl A.
Kittredge, Raymond E.

Linstrom, Floyd T., assignor of one-third to G. B. Waldron and one-third to C. H. Callison, Denver, Colo. Apparatus for indicating pressure at a distance. 2,439,092, Apr. 6.

Litton, Charles V., Redwood City, Calif., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Variable condenser. 2,438,931, Apr. 6.

Lloyd, George G., assignor to Loftus Engineering Corporation, Inc., Pittsburgh, Pa. Industrial furnace and operating the same. 2,439,309, Apr. 6.

Lockheed Aircraft Corporation, assignee: *See*—
Korff, Walter H.

Loftus Engineering Corporation, Inc., assignee: *See*—
Lloyd, George G.

Longfellow, Richard C., Schenectady, N. Y., assignor to General Electric Company. Capacitor switch. 2,439,255, Apr. 6.

Lord, Harold W., Schenectady, N. Y., assignor to General Electric Company. Timing circuit. 2,439,256, Apr. 6.

Lowengardt, Paul: *See*—
Elsas, William D., Lowengardt, and Scheftel.

Lower, Carl F., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for the control of highway crossing signals. 2,439,013, Apr. 6.

Lowry, Robert D.: *See*—
Thayer, Gordon B., and Lowry.

Lucht, Victor F.: *See*—
Kramer, Alexander E., and Lucht.

Luhrmann, George W., Cedar Brook, N. J. Apparatus for preparing finely divided fibre stock for fluid conveyance. 2,439,014, Apr. 6.

Lum, Walter O., Schenectady, N. Y., assignor to General Electric Company. Fuel atomizing nozzle. 2,439,257, Apr. 6.

Lund, Arthur D., Minneapolis, Minn., assignor to Solar Corporation, Milwaukee, Wis. Clothes-washing machine having reciprocating clothes receptacle with restricted passageway. 2,439,215, Apr. 6.

Lundquist, Wilton G., Hohokus, N. J., assignor to Wright Aeronautical Corporation. Valve gear. 2,439,175, Apr. 6.

M. P. P. (Products) Limited, assignee: *See*—
Willetts, Arthur K., and Rendle.

Mahren, Arthur, Long Island City, N. Y., assignor to Federal Telephone and Radio Corporation, East Newark, N. J. Testing cables. 2,438,932, Apr. 6.

Mallard, Logan L., Norfolk, assignor of one-half to B. M. Wolf, Norfolk County, Va. Connector. 2,439,176, Apr. 6.

Mallory, Henry R., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Vibratory switching device for oscillographs. 2,439,050, Apr. 6.

Mallory, P. R. & Co., Inc., assignee: *See*—
Mallory, Henry R.
Slater, Ira M.

Mancuso, Frank M., Concord, Staten Island, N. Y. Detachable heel. 2,439,310, Apr. 6.

Manning, Lester C., assignor to R. L. Senter, Oklahoma City, Okla. Apparatus for dehydration of oil. 2,439,177, Apr. 6.

Marchand, Michelle, Flushing, N. Y. Illuminated ornament. 2,439,178, Apr. 6.

Markin, Louis, Chicago, Ill., assignor to Society Brand Clothes, Inc. Trousers. 2,438,933, Apr. 6.

Marsh, Walter H., Crafton, Pa., assignor to Rockwell Manufacturing Company. Temperature compensated meter. 2,438,934, Apr. 6.

Marsh, Walter H., Crafton, Pa., assignor to Rockwell Manufacturing Company. Temperature compensated meter. 2,438,935, Apr. 6.

Marshall Furnace Co., assignee: *See*—
Stout, Claude S.

Martin, Glenn L., Company, The, assignee: *See*—
De Weese, Joseph C.

Mason, George T., Glendale, assignor to Alfred A. Nathanson, North Hollywood, Calif. Combination lock. 2,439,140, Apr. 6.

Mason, James A.: *See*—
Molins, Desmond W., Harvey, Mason and Powell.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electromechanical transducer. 2,438,936, Apr. 6.

Masonite Corporation, assignee: *See*—
Bowen, Rees T., Head and Lesniak.

Mathieson Alkali Works, Inc., The, assignee: *See*—
Clark, Charles C.
Cunninghan, George L., and Robinson.

Matricon, Marcel, Paris, France, assignor to General Electric Company. Vacuum pump. 2,439,258, Apr. 6.

Maybery, Elbert, St. Louis, Mo. Snow skate. 2,439,311, Apr. 6.

McBee Company, The, assignee: *See*—
Welk, Nelson S.

McClelland, James B., Wilkinsburg, Pa. Metalworking machine. 2,439,015, Apr. 6.

McCormack, Arden J., Portland, Mich. Field pick up hay chopper. 2,439,259, Apr. 6.

McCue, William J.: *See*—
McKee, Harry H., Keefer and McCue.

McLaughlin, Leone, assignor to Wingfoot Corporation, Akron, Ohio. Self-sealing container. 2,439,366, Apr. 6.

McGill, John H., Manchester, England, assignor to Imperial Chemical Industries Limited. Flexible sheet material comprising a surface coating containing polyvinyl chlorides. 2,439,051, Apr. 6.

McGinnis, Albert S., and Harry Berry, Cairo, assignors to Industrial Patents Corporation, Chicago, Ill. Lint cleaning apparatus. 2,439,179, Apr. 6.

McGlaun, Jasper E., Shellman, Ga. Resilient wheel. 2,439,312, Apr. 6.

McIntosh, Robert D., River Forest, assignor to The Imperial Brass Manufacturing Company, Chicago, Ill. Shutoff valve mechanism. 2,439,052, Apr. 6.

McKee, Harry H., Herbert W. Keefer, and William J. McCue, assignors to Industrial Patents Corporation, Chicago, Ill. Producing dried meat. 2,439,180, Apr. 6.

McLellan, David S., Longview, Wash., assignor to Reynolds Metals Company, Richmond, Va. Removing metallic iron from a fused alumina-cryolite composition. 2,439,216, Apr. 6.

McNamee, James J.: *See*—
King, John W. and McNamee.

Meade, Reginald E., and John F. Crews, Appleton, Wis., assignors to Western Condensing Company, San Francisco, Calif. Apparatus for heating sensitive materials. 2,439,260, Apr. 6.

Meade, Thomas E., assignee: *See*—
Kellem, James F.

Meagher, Ralph E., Watertown, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Electrical circuit. 2,439,313, Apr. 6.

Meehan, Howard M.: *See*—
Beardsley, Harry I. and Meehan.

Meidenbauer, Phillip E., Jr., assignor to Scott Aviation Corporation, Lancaster, N. Y. Breathing apparatus. 2,439,016, Apr. 6.

Meighan, William A., Portland, Oreg. Flat terminal fitting. 2,439,141, Apr. 6.

Metzler, Charles L., Palisades Park, N. J., assignor to Globe Slicing Machine Co. Inc., Stamford, Conn. Slice receiving mechanism for reciprocating carriage slicing machines. 2,438,937, Apr. 6.

Meyer, Lester W. A., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Thermoplastic compositions containing cellulose acetate butyrate. 2,439,093, Apr. 6.

Meyers, Eugene J., assignor to Hayes, Meyers and Hoagland, Los Angeles, Calif. Thermal timer for heating apparatus. 2,439,017, Apr. 6.

Middlestadt, William F., Baltimore, assignor to The James Gibbons Company, Relay, Md. Apparatus for melting plastic compositions. 2,439,367, Apr. 6.

Miles, George S., New York, N. Y., assignor to Bendix Aviation Corporation, Teterboro, N. J. Linear follow-up system. 2,439,094, Apr. 6.

Miles Park Machine & Tool, Inc., assignee: *See*—
King, John W. and McNamee.

Miller, Edward A., Milwaukee, Wis. Mechanical scrub brush. 2,439,344, Apr. 6.

Miller, Homer D., Canton, Ohio. Safety clip. 2,439,018, Apr. 6.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Wilson, John M.

Missien, Edward J.: *See*—
Weyandt, Carl S., and Missien.

Mitchell, Bert J., Dallas, Tex. Roof. 2,439,095, Apr. 6.

Molins, Desmond W., V. P. Harvey, J. A. Mason, and G. F. W. Powell, assignors to Molins Machine Company Limited, Deptford, London, England. Loading and firing mechanism for quick-firing guns. 2,439,142, Apr. 6.

Molins Machine Company, Limited, assignee: *See*—
Molins, Desmond W., Harvey, Mason and Powell.

Momberg, James W.: *See*—
Fuge, Harry B. and Momberg.

Monsanto Chemical Company, assignee: *See*—
Emerson, William S.
Kispersky, John P. and Seymour.
Seymour, Raymond B.
Seymour, Raymond B., and Kispersky.

Moore, George L., Detroit, Mich. Lubricating device. 2,439,053, Apr. 6.

Morey, Donald R.: *See*—
Tamblyn, John W. and Morey.

Morris, Rupert C., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Hydrocarbon-substituted thiacyclopentane-1,1-dioxide. 2,439,345, Apr. 6.

Morse, Normand W., Chicago, assignor, by mesne assignments, to Gray-Mills Corporation, Evanston, Ill. Key shafts and rotors and producing same. 2,439,019, Apr. 6.

Mosthof, Edwin, Orange, N. J. Model aeroplane. 2,4393,054, Apr. 6.

Mott, Edward E., Upper Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetostrictive supersonic transducer. 2,438,926, Apr. 6.

Mulligan, Wayne A., Utica, and W. Kernan, New Hartford, assignors to Skenandoa Rayon Corporation, Utica, N. Y. Apparatus for treating yarn packages with fluids. 2,439,314, Apr. 6.

Mullins Manufacturing Corporation, assignee: *See*—
Stanitz, Jacques.

Munchauer, Frederick E., assignor to Niagara Machine & Tool Works, Buffalo, N. Y. Machine tool. 2,439,368, Apr. 6.

Munshower, Clarence F., assignor to Colbar, Inc., Columbus, Ohio. Forced air circulation cooler for bottled beverages. 2,439,261, Apr. 6.

Naidor, George, Gouldsboro, Pa. Open heel shoe having a heel covering and making same. 2,439,217, Apr. 6.

Nalbach, John R., Oak Park, and W. F. Gresham, Chicago, Ill. Power operated mechanism. 2,439,262, Apr. 6.

Nash, James, assignor to Eclipse Moulded Products Company, Milwaukee, Wis. Parallel ruler and making the same. 2,439,346, Apr. 6.

Nathanson, Alfred A., assignee: *See*—
Mason, George T.

National Folding Box Company, Incorporated, assignee: *See*—
Williamson, M. I.

National Lead Company, assignee: *See*—
Worrall, George H.

National Pneumatic Company, assignee: *See*—
Parvin, Edward G.

Navy, United States of America as represented by the Secretary of the, assignee: *See*—
Halsey, Arthur S.
Hickman, Clarence N.

Neffen, Karl F.: *See*—
Peters, Chauncey G., Harris, Emerson, Cooter, and Neffen.

Nell, Burnice W., assignee, et al.: *See*—
Nell, Orville.

Nell, Johnnie E., assignee, et al.: *See*—
Nell, Orville.

Nell, Orville, assignor of one-fourth to J. E. Nell, Bridgeport, and one-fourth to B. W. Nell, Mount Carmel, Ill. Railway switch operating and locking means. 2,439,020, Apr. 6.

Nemeth, Stephan P., Chicago, Ill. Toy helicopter. 2,439,143, Apr. 6.

Nesbitt, William J.: *See*—
Wollin, Robert H.

New, Archibald A.: *See*—
Scott, Thomas R., and New.

Newhall, Carl A., Peabody, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Sewing machine shuttle. 2,438,938, Apr. 6.

Newton, John A., and N. Hoertz, assignors to Thompson Products, Inc., Cleveland, Ohio. Seal construction. 2,439,315, Apr. 6.

Niagara Machine & Tool Works, assignee: *See*—
Munschauer, Frederick E.

Nicholson, Madison G., Jr.: *See*—
Burlingame, Ernest D., Carlson, Nicholson, and Scott.

Nicol, William H., Cuyahoga Falls, assignor to Wingfoot Corporation, Akron, Ohio. Condensation derivatives of rubber. 2,439,369, Apr. 6.

Nicoll, Frederick H., Princeton, N. J., assignor to Radio Corporation of America. Luminescent screen. 2,439,181, Apr. 6.

Nielsen, A. C., Company, assignee: *See*—
Clark, Robert A., Jr.

Norton Company, assignee: *See*—
Drown, William L.
Fetterley, Guy H.
Indge, Herbert S.

Nuffer, Joseph H., Toledo, Ohio, and L. H. Latta, Deerfield, Ill., assignors to Air-Way Electric Appliance Corporation, Toledo, Ohio. Blower control device for suction cleaners. 2,439,182, Apr. 6.

O. K. Ko-Op Rubber Welding System, assignee: *See*—
French, Elby E.

Obergfell, Amanda, executrix: *See*—
Obergfell, Herbert F.

Obergfell, Herbert F., deceased, late of River Forest, Ill., by A. Obergfell, executrix, River Forest, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Telephone substation set. 2,439,218, Apr. 6.

O'Connor, John C., Dayton, Ohio. Apparatus for transmitting intense vibrations for performing work. 2,439,219, Apr. 6.

Olson, Olaf P.: *See*—
Hoffman, Widof J.

Orton, Merritt K., assignor to American Seating Company, Grand Rapids, Mich. Retracting type theater chair. 2,439,370, Apr. 6.

Overstedt, Ernest A., assignor to L. M., W. R., and F. R. Dalzen, trustees, Dalzen Trust, Detroit, Mich. Grinding wheel dresser. 2,439,263, Apr. 6.

Ozai-Durrani, Ataullah K., Stuttgart, Ark., assignor to General Foods Corporation, New York, N. Y. Quick-cooking rice and making same. 2,438,939, Apr. 6.

Page, Herbert E., Pasadena, Calif. Hydraulic jack. 2,439,183, Apr. 6.

Parco Manufacturing Company, assignee: *See*—
Rhodes, Harry E.

Parker Appliance Company, The, assignee: *See*—
Hartley, Emmett C., and Hull.

Parsons, William F.: *See*—
Thuline, Horace C., Parsons, and Waugh.

Parvin, Edward G., Roselle, N. J., assignor to National Pneumatic Company, New York, N. Y. Magnetic flaw detector. 2,439,184, Apr. 6.

Patt, Conrad J., Chicago, Ill. Ladder attachment step. 2,439,185, Apr. 6.

Pattee, John R., assignor to The Bristol Company, Waterbury, Conn. Electric motor control system. 2,439,096, Apr. 6.

Patton, Charles C.: *See*—
Dillinger, Joy F., and Patton.

Paul, William E., Schenectady, N. Y., assignor to General Electric Company. Electric switch. 2,439,264, Apr. 6.

Payne, F. S., Co., assignee: *See*—
Tarbox, Arthur M.

Peacock, Willie S., Atlanta, Ga. Crutch. 2,439,316, Apr. 6.

Pennoyer, Douglas H., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Range and azimuth simulating system for radar instruction. 2,438,940, Apr. 6.

Perkins, John, London, England. Device for sharpening drills. 2,439,144, Apr. 6.

Pernini, Henry M., Chicago, and Nano F. Contardi, Highland Park, Ill. Hot clamp. 2,439,347, Apr. 6.

Peters, Chauncey G., Calvert County, Md., F. K. Harris, Washington, D. C., W. B. Emerson, York County, Maine, I. L. Cooter, Arlington, Va., and K. F. Neffen, Elkins, W. Va., assignors to the United States of America as represented by the Secretary of Commerce. Diamond die production and the like. 2,438,941, Apr. 6.

Peterson, Victor W., Chicago, Ill., assignor to Hannifin Corporation. Cylinder honing. 2,439,317, Apr. 6.

Petrokubi, John L.: *See*—
Feild, Theophilus A., Jr., Rugeley, and Petrokubi.

Pfister and Vogel Tanning Company, assignee: *See*—
Johnson, William C.

Ressetar, Nicholas J., Oneida, N. Y. Guard device for lock mechanism. 2,439,099, Apr. 6.

Reynolds Metals Company, assignee: *See*—
McLellan, David S.

Rhodes, Harry E., Kent, assignor to Parco Manufacturing Company, Cuyahoga Falls, Ohio. Comb. 2,438,945, Apr. 6.

Richards, Arthur R., Kalamazoo, Mich. Orthopedic device. 2,439,100, Apr. 6.

Richardson, Avery G., Boonton, N. J., and F. O. Chesus and F. G. Thomas, Islip, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J. Radio direction finding system. 2,438,946, Apr. 6.

Richardson Corporation, assignee: *See*—
Di Pietro, Carmelo V.

Rieke, John W., and R. J. Shank, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electronic modulation and modulation correction circuits. 2,438,947, Apr. 6.

Riesz, Robert R., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Modulating system. 2,438,948, Apr. 6.

Roach, Earl M., assignor to Arvey Corporation, Chicago, Ill. Collapsible display frame. 2,439,022, Apr. 6.

Robinson, Richard S.: *See*—
Cunningham, George L., and Robinson.

Robinson, Sam P., Bartlesville, Okla., assignor to Phillips Petroleum Company. Hydrocarbon conversion process. 2,439,023, Apr. 6.

Rockwell Manufacturing Company, assignee: *See*—
Marsh, Walter H.

Rogers, Elizabeth H. H., Toronto, Ontario, Canada. Safety gown. 2,439,101, Apr. 6.

Roos, Delmar G., assignor to Willys-Overland Motors, Inc., Toledo, Ohio. Apparatus for flushing foreign matter from bearings. 2,439,187, Apr. 6.

Rosemeyer, Charles E., Seattle, Wash. Sanding device. 2,438,977, Apr. 6.

Rosen, Henri E., Brookline, Mass. Child's boot. 2,438,978, Apr. 6.

Rothfuchs, Oscar E., Michigan City, Ind., assignor to Pullman-Standard Car Manufacturing Company, Chicago, Ill. Floor clip. 2,439,220, Apr. 6.

Rothweiler, Charles O., Milwaukee, Wis. Indicator adjustment for sextants. 2,439,102, Apr. 6.

Rowland, Ben W., and D. Fronmuller, assignors to The Institute of Paper Chemistry, Appleton, Wis. Silk treatment. 2,439,221, Apr. 6.

Ruebel, Harry N., Berlin, Md. Renewable valve seat. 2,439,024, Apr. 6.

Ruf, Casper A., assignee: *See*—
Settle, Samuel B.

Ruge, Arthur C., Cambridge, Mass., assignor to The Baldwin Locomotive Works. Load weighing device. 2,439,146, Apr. 6.

Rugeley, Edward W.: *See*—
Feild, Theophilus A., Jr., Rugeley, and Petrokubi.

Runcie, Walter O., Lima, Peru. Air pump attachment for sewing machines. 2,439,319, Apr. 6.

Ruppe, Peter B.: *See*—
Wyman, Thomas P., and Ruppe.

Russell, Fred J., Beverly Hills, assignor to Weiser Company, South Gate, Calif. Door or drawer latch. 2,439,057, Apr. 6.

Ryan, Lester R., Plymouth, Conn. Making hand tools. 2,439,058, Apr. 6.

S & S Corrugated Paper Machinery Co. Inc., assignee: *See*—
Cohen, Harry L.

Sadowski, Walter: *See*—
Wunsch, Guido, Weinkauff, Sadowski, and Kobischke.

Saffady, Thomas F., Detroit, assignor to Sav-Way Industries, Inc., Warren Township, Macomb County, Mich. Electric iron. 2,439,059, Apr. 6.

Saffady, Thomas F., Detroit, assignor to Sav-Way Industries, Inc., Warren Township, Macomb County, Mich. Electric iron. 2,439,060, Apr. 6.

Sage, Edwin R., Los Angeles, Calif. Tire pressure stabilizer. 2,439,188, Apr. 6.

Salo, Martin, and H. F. Vivian, assignors to Eastman Kodak Company, Rochester, N. Y. Cellulose ester melt-coating composition. 2,439,103, Apr. 6.

Sammons, Gordon W., Hagerstown, Md. Slide rule. 2,439,025, Apr. 6.

Sandberg, William A., assignor to Lacy Manufacturing Company, Los Angeles, Calif. Grounding system for gas tank welders. 2,439,371, Apr. 6.

Sandell, Henry K., assignor to Clarence E. Threedy, Chicago, Ill., as trustee. Amusement device. 2,439,104, Apr. 6.

Sanford, Roy S., and A. Kurti, Woodbury, assignors to The Autoyre Company, Incorporated, Oakville, Conn. Recoil absorber. 2,439,105, Apr. 6.

Sav-Way Industries, Inc., assignee: *See*—
Saffady, Thomas F.

Scalera, Mario, and R. E. Brouillard, Somerville, N. J., assignor to American Cyanamid Company, New York, N. Y. Pigment compositions. 2,439,222, Apr. 6.

Schade, Otto H., West Caldwell, N. J., assignor to Radio Corporation of America. Rectifier system. 2,439,223, Apr. 6.

Schafroth, Werner, Brookline, assignor to International Staple and Machine Company, Clifton Heights, Pa. Staple feeder. 2,439,189, Apr. 6.

Scheftel, Alexander: *See*—
Elsas, William D., Lowengardt, and Scheftel.

Schneider, Emmor V., assignor to The Alliance Manufacturing Company, Alliance, Ohio. Adjustable compensating turntable drive. 2,439,026, Apr. 6.

Schroeder, Leroy E., Elmwood Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Electroplating rack. 2,439,190, Apr. 6.

Schroeder, William M., Wnukegan, Ill. Internal-combustion engine. 2,439,265, Apr. 6.

Schwartz, Fernand F., Santiago, Chile. Manufacture of colloidal sulphur. 2,439,147, Apr. 6.

Scott Aviation Corporation, assignee: *See*—
Meldenbauer, Phillip E., Jr.

Scott, Maxwell C.: *See*—
Burlingame, Ernest D., Carlson, Nicholson, and Scott.

Scott, Thomas R., and A. A. New, assignors to Standard Telephones and Cables Limited, London, England. Electric insulation composition of polyvinyl chloride and polyalkylene polysulfide. 2,438,949, Apr. 6.

Scrivener, Arthur, Birmingham, England. Workpiece feeding device for centerless grinding and like machines. 2,439,225, Apr. 6.

Senter, Ralph L., assignee: *See*—
Manning, Lester C.

Settle, Samuel B., assignor to C. A. Ruf, Parkersburg, W. Va. Fabricating tanks. 2,439,266, Apr. 6.

Seyferth, Harold N., East Detroit, assignor to Ex-Cell-O Corporation, Detroit, Mich. Grinding machine for operating upon workpieces. 2,439,106, Apr. 6.

Seymour, Raymond B.: *See*—
Kispersky, John P., and Seymour.

Seymour, Raymond B., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Copolymers of fumarodinitrile and alpha-substituted styrenes. 2,439,226, Apr. 6.

Seymour, Raymond B., and J. P. Kispersky, assignors to Monsanto Chemical Company, Dayton, Ohio. Ternary interpolymers of styrene maleic anhydride and acrylonitrile. 2,439,227, Apr. 6.

Shafer, Julius E., Chicago, Ill. Resiliently mounted bearing. 2,439,267, Apr. 6.

Shafer, Julius E., Chicago, Ill. Floating pressure cam. 2,439,268, Apr. 6.

Shafer, Julius E., Chicago, Ill. Bearing mounting. 2,439,269, Apr. 6.

Shank, Robert J.: *See*—
Rieke, John W., and Shank.

Sharp, John C., Glen Ellyn, Ill., assignor to Hotpoint, Inc. Heating system. 2,439,270, Apr. 6.

Shaver, James B., University Heights, Ohio. Ventilator. 2,439,271, Apr. 6.

Shell Development Company, assignee: *See*—
Morris, Rupert C.

Shelly, Gene, change of name: *See*—
Lenske, Louis G.

Shields, Willie A., Powderly, Ala. Garment bag applying and removing device. 2,439,148, Apr. 6.

Sholtis, John, Jr., Farrell, Pa., and H. K. Embree, Hamilton, Ontario, Canada, assignors to Griplock, Inc., Hoboken, N. J. Machine for making wire straps. 2,439,272, Apr. 6.

Short, Frank L., New York, N. Y. Frame and harness for dog baths. 2,438,979, Apr. 6.

Shur-Antenna-Mount Inc.: *See*—
Shur, John W.

Shur, John W., assignor to Shur-Antenna-Mount Inc., Sea Cliff, N. Y. Antenna mounting. 2,439,061, Apr. 6.

Shur, John W., assignor to Shur-Antenna-Mount Inc., Sea Cliff, N. Y. Antenna mounting bracket. 2,439,062, Apr. 6.

Shur, John W., assignor to Shur-Antenna-Mount Inc., Sea Cliff, N. Y. Bracket for mounting antenna masts. 2,439,063, Apr. 6.

Signal Engineering & Manufacturing Company, assignee: *See*—
Bean, Roscoe D.

Silver, Martin: *See*—
Frankel, Sidney, and Silver.

Silvester, Austin G., Danvers, Mass., assignor to General Electric Company. Turbo-jet engine for aircraft propulsion. 2,439,273, Apr. 6.

Simplex Wrapping Machine Co., assignee: *See*—
Gaubert, Rene J.

Simpson, George, Toronto, Ontario, Canada. Milk bottle cover. 2,439,320, Apr. 6.

Simpson, Thomas P., Woodbury, and R. Lee and F. E. Ray, Mantua, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for conversion of hydrocarbons. 2,439,348, Apr. 6.

Simpson, Thomas P., Woodbury, N. J., assignor to Socony-Vacuum Oil Company. Hydrocarbon conversion. 2,439,372, Apr. 6.

Simpson, William R., Jr.: *See*—
Witmyer, Harry M.

Singer Manufacturing Company, The, assignee: *See*—
Becker, Rudolph.
Fuge, Harry B., and Momberg.

Skenandon Rayon Corporation, assignee: *See*—
Mulligan, Wayne A., and Kernan.

Slater, Ira M., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Vibrator circuit. 2,439,107, Apr. 6.

Smart, James C.: *See*—
Cooke, William H., and Smart.

Smicker, Emma A., assignor to Blossom Products Corporation, Allentown, Pa. Slipover garment. 2,439,149, Apr. 6.

Smith, Carl H., Jr., Washington, D. C. Pulse frequency modulation. 2,438,950, Apr. 6.

Smith, Frederick H., Buffalo, N. Y. Internal-combustion engine. 2,439,150, Apr. 6.

Smith, Robert W., Brunswick, Maine. Lock nut. 2,439,191, Apr. 6.

Society Brand Clothes, Inc., assignee: *See*—
Markin, Louis.

Society of Chemical Industry in Basle, assignee: *See*—
Straub, Fritz, Brassel, and Pieth.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Simpson, Thomas P.
Simpson, Thomas P., Lee, and Ray.

Solar Corporation, assignee: *See*—
Lund, Arthur D.

Spector, Theodore, New York, N. Y. Wrist band or strap for watches. 2,439,274, Apr. 6.

Sperry Corporation, The, assignee: *See*—
Ferrill, Thomas M., Jr.
Hansen, William W.

Spinnler, Viktor, Zurich, Switzerland. Adjustable clamping fixture for work-benches. 2,439,151, Apr. 6.

Spotz, Donald R., Cleveland, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio. Piston type quick disconnect coupling. 2,439,275, Apr. 6.

Staehle, Henry C., assignor to Eastman Kodak Company, Rochester, N. Y. Coating with polyvinyl alcohol. 2,439,108, Apr. 6.

Standard Oil Development Company, assignee: *See*—
Baskin, Charles M.

Standard Telephones and Cables Limited, assignee: *See*—
Scott, Thomas R., and New.

Stanitz, Jacques, Warren, assignor to Mullins Manufacturing Corporation, Salem, Ohio. Table top construction. 2,439,027, Apr. 6.

Starr, Merle A., Belmont, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Electrical circuit. 2,439,321, Apr. 6.

Stearns, Edwin I., Jr., Plainfield, N. J., assignor to American Cyanamid Company, New York, N. Y. Flickering beam photometer. 2,439,373, Apr. 6.

Stephens, William T., assignor to Hydraulic Control Engineering Company, Cleveland, Ohio. Hydraulic overload-release device or cushion for presses. 2,438,951, Apr. 6.

Sternad, Frank S., Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Tool for manipulating rubber. 2,439,064, Apr. 6.

Stewart, Welby E., Indianapolis, Ind., assignor to Radio Corporation of America. Speed control by means of tuning forks. 2,439,065, Apr. 6.

Stockton, Mason: *See*—
Stockton, William A. and M.

Stockton, William A. and M., Willows, Calif. Feeder for hay balers. 2,439,152, Apr. 6.

Stout, Claude S., assignor to Marshall Furnace Co., Marshall, Mich. Air-heating furnaces with selectively controlled radiator structure. 2,439,109, Apr. 6.

Straub, Fritz, Kaiseraugst, and J. Brassel and P. Pieth, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Azo dyes from dihydroxy benzidine. 2,439,153, Apr. 6.

Strehan, George E.: *See*—
Donahue, John S., and Strehan.

Strike, George N., Los Angeles, Calif. Valve. 2,439,110, Apr. 6.

Sturgis Products Company, The, assignee: *See*—
Castle, Carl H.

Sturrock, Murray G., T. Lawe, and W. E. Kemp, assignors to Dominion Tar & Chemical Company, Limited, Montreal, Quebec, Canada. Diaryl paraffins and their production. 2,439,228, Apr. 6.

Sulzer Frères, Société Anonyme, assignee: *See*—
Wiesendanger, Fritz.

Sun, Kuan-Han, and T. E. Callear, assignors to Eastman Kodak Company, Rochester, N. Y. Silicoborate glass. 2,439,192, Apr. 6.

Swartout Company, The, assignee,: *See*—
Wiseman, Earl L.

Syntron Company, assignee: *See*—
Weyandt, Carl S., and Missien.

Tack, Carl E., and F. E. Bachman, assignors to American Steel Foundries, Chicago, Ill. Shock strut. 2,439,349, Apr. 6.

Tamblyn, John W., and D. R. Morey, assignors to Eastman Kodak Company, Rochester, N. Y. Fractional precipitation of cellulose butyrates. 2,439,111, Apr. 6.

Tarbox, Arthur M., Belmont, assignor to F. S. Payne Co., Cambridge, Mass. Automatic adjustment for elevator brakes. 2,439,350, Apr. 6.

Taylor, Eugene V., Chicago, Ill. Food grinder having a perforated disc, a presser plate, and a rotary knife. 2,439,028, Apr. 6.

Teague, Walter D., New York, assignor to Eastman Kodak Company, Rochester, N. Y. Two-film camera. 2,439,112, Apr. 6.

Te Grotenhuis, Theodore A., Olmsted Falls, assignor to The General Tire & Rubber Company, Akron, Ohio. Curing pneumatic tires. 2,438,952, Apr. 6.

Temple, Robert B.: *See*—
Eksergian, Carolus L., Temple, and Hawthorne.

Texas Company, The, assignee: *See*—
Davies, James A.

Thaden, Herbert V., assignor to Thaden Jordan Furniture Corporation, Roanoke, Va. Chair. 2,439,322, Apr. 6.

Thaden Jordan Furniture Corporation, assignee: *See*—
Thaden, Herbert V.

Thayer, Gordon B., Saginaw, and R. D. Lowry, Midland, assignors to The Dow Chemical Company, Midland, Mich. Plastic tube fitting. 2,439,351, Apr. 6.

Thiele, Hazel L., St. Louis, Mo. Basket liner. 2,439,276, Apr. 6.

Thieme, George B., Jamaica, assignor to Bendix Aviation Corporation, Brooklyn, N. Y. Valve controlling mechanism. 2,439,113, Apr. 6.

Thomas, Frank G.: *See*—
Richardson, Avery G., Cheaus, and Thomas.

Thompson, Albert E., administrator: *See*—
Thompson, Francis E.

Thompson, Francis E., deceased, late of Lawrence, by A. E. Thompson, administrator, Methuen, Mass. Lawn mower gear and locking device. 2,438,980, Apr. 6.

Thompson Products, Inc., assignee: *See*—
Cummings, Robert E.
Giblan, Emil F.
Newton, John A., and Hoertz.
Spotz, Donald R.

Thompson's Ltd., assignee: *See*—
Keller, Auguste V.

Threedy, Clarence E., assignee: *See*—
Sandell, Henry K.

Thuline, Horace C., W. F. Parsons, and G. P. Waugh, assignors to Eastman Kodak Company, Rochester, N. Y. Thermoplastic lens cement. 2,438,953, Apr. 6.

Thurner Engineering Company, assignee: *See*—
Kujawski, Barney.

Timken Roller Bearing Company, The, assignee: *See*—
Buckwalter, Tracy V.

Townes, Charles H., Mendham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electronic oscillator of the cavity resonator type. 2,438,954, Apr. 6.

Tryon, Sager, Long Island City, and P. La Roche de Benneville, New York, N. Y., assignors to Allied Chemical & Dye Corporation. Insecticide comprising monoalkylated diphenylene sulfides and using same. 2,438,955, Apr. 6.

Tuttle, Eugene F., North Hollywood, assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif. Riveting machine. 2,439,323, Apr. 6.

Underwood, Arthur F.: *See*—
Bidwell, Joseph B., and Underwood.

Union Switch & Signal Company, The, assignee: *See*—
Jerome, Arthur L.
Lower, Carl F.

United Aircraft Corporation, assignee: *See*—
Firestone, Floyd A.

United Shoe Machinery Corporation: *See*—
Ashworth, Fred.
Newhall, Carl A.

United States Rubber Company, assignee: *See*—
Daly, Lawrence E.

Upham, John D.: *See*—
Hudson, Thomas B., and Upham.

Vacha, Fred P., Atlantic, Mass., assignor, by mesne assignments, to First Industrial Corporation, Wilmington, Del. Electrical apparatus collector conditioning. 2,439,114, Apr. 6.

Vanderlyn, Daniel F., Ellenville, and J. N. Vanderlyn, Kingston, N. Y. T. S. Vanderlyn, executor of the estate of D. F. Vanderlyn, deceased. Invalid lift. 2,439,066, Apr. 6.

Vanderlyn, Jay N.: *See*—
Vanderlyn, Daniel F. and J. N.

Vanderlyn, Tracy S., executor: *See*—
Vanderlyn, Daniel F. and J. N.

Vanderscheer, James, Ridgewood, and E. H. Hull, Allendale, N. J., assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y. Rocky Mountain spotted fever diagnostic antigen and preparation of the same. 2,439,229, Apr. 6.

Vivian, Harold F.: *See*—
Salo, Martin, and Vivian.

Viviano, Salvatore, Richmond Heights, Mo. Support for drying paste products. 2,439,115, Apr. 6.

Vogel, Howard H.: *See*—
Habicht, Louis A., and Vogel.

Waldron, Gerald B., assignee, et al.: *See*—
Linstrom, Floyd T.

Walker, Howard, Baltimore County, Md., assignor to Bendix Aviation Corporation, New York, N. Y. High-frequency coil. 2,439,277, Apr. 6.

Walker, Robert M., Belmont, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of War. Electrical circuit. 2,439,324, Apr. 6.

War, Government of the United States of America, as represented by the Secretary of, assignee: *See*—
Clapp, Roger E.
Meagher, Ralph E.
Starr, Merle A.
Walker, Robert M.

Warner, Arthur J., South Orange, assignor to Federal Telephone and Radio Corporation, Newark, N. J. High-frequency cable. 2,438,956, Apr. 6.

Waterman, William, Chicago, Ill. Automatic cutoff. 2,439,116, Apr. 6.

Waterman, William, Chicago, Ill. Automatic cutoff. 2,439,117, Apr. 6.

Waterman, William, Chicago, Ill. Automatic cutoff device. 2,439,118, Apr. 6.

Waters, Harry F., New York, N. Y. Packaging method. 2,438,981, Apr. 6.

Watson-Williams Manufacturing Company, assignee: *See*—
Daboll, Walter F.

Waugh, George P.: *See*—
Thuline, Horace C., Parsons, and Waugh.

Webb, Byron H., assignor of one-half to G. M. Harper, Jr., Chicago, Ill. Detachable calendar mechanism for clocks. 2,439,154, Apr. 6.

Weber, Ernst, Uster, R. Pudelko, Zug, C. Bollmann, Zurich-Albisrieden, and H. Wermeille, Zug, assignors to Landis & Gyr, A. G., Zug, Switzerland. Small motor, particularly synchronous fractional horsepower motor. 2,439,193, Apr. 6.

Weinkauff, Bruno: *See*—
Wunsch, Guido, Weinkauff, Sadowski, and Kobischke.

Welser Company, assignee: *See*—
Russell, Fred J.

Weissberger, Arnold: *See*—
Porter, Henry D., Weissberger, and Gregory.

Weissberger, Arnold, and H. D. Porter, assignors to Eastman Kodak Company, Rochester, N. Y. Open chain active methylene color couplers. 2,439,352, Apr. 6.

Welk, Nelson S., assignor to The McBee Company, Athens, Ohio. Combined card punching and slotting machine. 2,439,029, Apr. 6.

Welk, Nelson S., assignor to The McBee Company, Athens, Ohio. Key-punch slotting machine. 2,439,030, Apr. 6.

Wermeille, Henri: *See*—
Weber, Ernst, Pudelko, Bollmann, and Wermeille.

Western Condensing Company, assignee: *See*—
Meade, Reginad E., and Crews.

Western Electric Company, Incorporated, assignee: *See*—
Bartelheim, Leland A., and Lane.
Dillinger, Joy F., and Patton.
Jones, David D.
Schroeder, Leroy E.

Westinghouse Electric Corporation, assignee: *See*—
Bergstrom, Carl O.

Weyandt, Carl S., Homer City, and E. J. Missien, Indiana, assignors, to Syntron Company, Homer City, Pa. Intermittent current operated motor. 2,439,230, Apr. 6.

Whitehouse, Herbert G., Tipton, England. Universal joint coupling. 2,439,231, Apr. 6.

Wiesendanger, Fritz, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland. Governing arrangement with servomotor. 2,439,325, Apr. 6.

Wild, Heinrich, Kuttigen, assignor to the firm Kern & Co. A. G., Aarau, Switzerland. Stand with an adjustable reception-plate capable of being tipped over in every direction. 2,439,194, Apr. 6.

Wilkes, Claude E., Birmingham, Ala. Ignition lock. 2,439,155, Apr. 6.

Willetts, Arthur K., and T. Rendle, Histon, assignors, by mesne assignments, to M. P. P. (Products) Limited, Norwich, England. Production of mashed potato powder. 2,439,119, Apr. 6.

Williamson, Marshall L., assignor, by mesne assignments, to National Folding Box Company, Incorporated, New Haven, Conn. Container. 2,438,982, Apr. 6.

Willys-Overland Motors, Inc., assignee: *See*—
Roos, Delmar G.

Wilson, Charles V., assignor to Eastman Kodak Company, Rochester, N. Y. 1-nitro-3-alkylanthrapyridone compounds and their preparation. 2,439,120, Apr. 6.

Wilson, John M., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control panel. 2,439,326, Apr. 6.

Wilson, Rosser L., Mahwah, N. J., assignor to American Brake Shoe Company, New York, N. Y. Speed control apparatus. 2,438,983, Apr. 6.

Wilson, Sydney S., assignor to Goodall-Sanford, Inc., Sanford, Maine. Stop motion for pile wire looms. 2,439,031, Apr. 6.

Wingfoot Corporation, assignee: *See*—
McLaughlin, Leone.
Nicol, William Howard.

Wiseman, Earl L., University Heights, assignor to The Swartout Company, Cleveland, Ohio. Smoke jack. 2,439,353, Apr. 6.

Witmyer, Harry M., and William R. Simpson, Jr., Manheim, Pa. Artificial limb. 2,439,195, Apr. 6.

Wolcott, Herbert, Columbia, Mo. Supervisory signal system for water softeners. 2,439,354, Apr. 6.

Wolf, Barry M., assignee: *See*—
Mallard, Logan L.

Wolf, Robert A., Eggertsville, and Luell M. Graham, Williamsville, assignors to Bell Aircraft Corporation, Wheatfield, N. Y. Pneumatic aircraft float. 2,439,196, Apr. 6.

Wollin, Robert H., assignor to W. J. Nesbitt, Milwaukee, Wis. Garment hanger. 2,439,355, Apr. 6.

Wood, Joseph K., assignor to General Spring Corporation, New York, N. Y. Support device. 2,439,067, Apr. 6.

Woodyard, John R.: *See*—
Hansen, William W., Woodyard and Relson.

Works, Madden T., assignor to Cameron Iron Works, Houston, Tex. Crossover flow device. 2,439,327, Apr. 6.

Worrall, George H., Kirkwood, Mo., assignor to National Lead Company, New York, N. Y. Soft lead solder. 2,439,068, Apr. 6.

Wright, Harold R., West Kilbride, and W. G. Allan, Saltcoats, Scotland, assignors to Imperial Chemical Industries Limited. Plastic detonating compositions. 2,439,328, Apr. 6.

Wright Aeronautical Corporation, assignee: *See*—
Du Bois, George B.
Lundquist, Wilton G.

Wünsch, Guido, B. Weinkauff, W. Sadowski, and H. Kobischke, Berlin, Germany; vested in the Attorney General of the United States. Rudder machine for automatic pilots. 2,438,957, Apr. 6.

Wurtele, Allan R., Mix, La. Harvester-loader. 2,439,278, Apr. 6.

Wykoff, Garrett J., Yorktown, Va. Sheathed knife fastening. 2,439,197, Apr. 6.

Wyman, Thomas P., Suffern, and P. B. Ruppe, Bronxville, N. Y. Industrial truck and trailer. 2,439,232, Apr. 6.

Yardeny, Michel N., New York, N. Y. Electric control apparatus for rapidly placing a load in any desired position. 2,439,329, Apr. 6.

Yingling, Frank B., Hamilton, Ohio. Spot welding apparatus. 2,439,233, Apr. 6.

Zander, Otto J., Huguenot, N. Y. Signal and searchlight shutter. 2,439,330, Apr. 6.

LIST OF DESIGN INVENTIONS

Applicator or similar article for beauty and health treatments. D. M. Ackerman. 149,159, Apr. 6.
Ash tray and glass holder, Combined. R. M. Stafford. 149,232, Apr. 6.
Bottle. H. Genske. 149,178, Apr. 6.
Box, Fly. K. D. Richards. 149,218, Apr. 6.
Box, Novelty. G. H. Jolley. 149,184, Apr. 6.
Bracelet or similar article. A. Philippe. 149,210, Apr. 6.
Brooch or similar article. N. E. Jansen. 149,183, Apr. 6.
Brooch or similar article. A. Katz. 149,186, Apr. 6.
Brooch or similar article. A. Philippe. 149,212–14, Apr. 6.
Brooch or similar article, Separable. A. Katz. 149,187, Apr. 6.
Brooch or similar article, Separable. A. Katz. 149,189, Apr. 6.
Brush for camera lens and container for cleaning fluid, Combined. R. F. Matthews. 149,201, Apr. 6.
Cabinet or the like, Radio. J. B. Platt. 149,216, Apr. 6.
Camera or similar article. W. D. Teague. 149,233, Apr. 6.
Chair, Folding. W. H. Bond, Jr. 149,161, Apr. 6.
Chair, Bathroom vanity. E. J. Lux. 149,197, Apr. 6.
Compressor. W. P. Peterson. 149,207, Apr. 6.
Container, Boxlike. W. A. Eaton. 149,174, Apr. 6.
Desk unit, Combination. H. I. Salsbury. 149,228, Apr. 6.
Doll. R. De Vries. 149,172, Apr. 6.
Earring or similar article. M. Chernow. 149,167–8, Apr. 6.
Earring or the like. M. Chernow. 149,169–70, Apr. 6.
Earring or similar article. A. Philippe. 149,211, Apr. 6.
Electric rectifier, Portable. D. Chapman. 149,166, Apr. 6.
Faucet unit. J. M Little and A. L. Thomssen. 149,196, Apr. 6.
Faucet unit. C. L. Otto. 149,206, Apr. 6.
Fish lure. K. D. Richards. 149,217, Apr. 6.
Fish lure, Artificial. E. P. Vaars. 149,238, Apr. 6.
Fixture, Sink. J. M. Little. 149,195, Apr. 6.
Fixture, Sink. A. L. Thomssen and J. M. Little. 149,234, Apr. 6.
Flashlight or like article. F. Schlotterbeck. 149,230, Apr. 6.
Frame, Picture. S. Maugham. 149,202, Apr. 6.
Front, Store. N. Sharaf. 149,231, Apr. 6.
Golf tee or similar article. J. W. Tutt. 149,237, Apr. 6.
Headlight, Bicycle. O. F. Ingle. 149,182, Apr. 6.
Holder, Napkin. B. Katsben, Sr. 149,185, Apr. 6.
Juicer, Fruit. A. L. Lynne. 149,199, Apr. 6.
Knife holder and towel rack, Combined. J. T. Generale. 149,177, Apr. 6.
Knob for kitchen utensils. R. F. Krause. 149,191, Apr. 6.
Milling machine. W. B. Dulaney. 149,173, Apr. 6.
Mixer, Tilting type concrete. G. A. Fleischmann. 149,176, Apr. 6.
Necklace or similar article. A. Katz. 149,188, Apr. 6.
Necklace or similar article. A. Philippe. 149,208–9, Apr. 6.
Necklace or similar article. A. Philippe. 149,215, Apr. 6.
Ornament, Desk. V. Brown. 149,163–4, Apr. 6.
Paperweight. G. Scherff. 149,229, Apr. 6.
Ring, Finger. F. P. Kinsley. 149,190, Apr. 6.
Saw, Meat. D. A. Meeker, G. B. Fox, and B. E. Sullenberger. 149,203, Apr. 6.
Shelf. L. Wolf. 149,239, Apr. 6.
Shelf for bathroom cabinet or similar article. W. Fanelli and C. A. Laystrom. 149,175, Apr. 6.
Shoe or similar article. R. Bodie and S. C. Bronson. 149,160, Apr. 6.
Shoe, Winter sport. F. C. Treat. 149,236, Apr. 6.
Skimmer, Cream. F. E. Hale. 149,181, Apr. 6.
Slipper or similar article. J. Gregg. 149,179–80, Apr. 6.
Stand, Coffee maker. J. Cohen. 149,171, Apr. 6.
Stand or similar article, Display. M. H. Newman. 149,205, Apr. 6.
Standard, Chair end. W. H. Bond, Jr. 149,162, Apr. 6.
Templet, Drafting. R. I. Martin. 149,200, Apr. 6.
Toilet seat, Child's foldable. L. C. Neufeld. 149,204, Apr. 6.
Top, Percolator. R. F. Krause. 149,192, Apr. 6.
Toy vanity. E. J. Lux. 149,198, Apr. 6.
Toy, Walking figure. S. Capillo. 149,165, Apr. 6.
Trimming or similar article, Embroidered. A. E. Riedel. 149,219–27, Apr. 6.
Trimming or similar article, Embroidered. H. Tobler. 149,235, Apr. 6.
Vehicle or similar article, Wheeled. E. Larralde. 149,193–4, Apr. 6.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 6TH DAY OF APRIL, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Absorber, Recoil. R. S. Sanford and A. Kurti. 2,439,105, Apr. 6.
Adjustable compensating turntable drive. E. V. Schneider. 2,439,026, Apr. 6.
Adjusting contacts. F. C. Gill. 2,439,362, Apr. 6.
Aeroplane empennage. W. H. Jackson. 2,439,304, Apr. 6.
Aeroplane, Model. E. Mosthof. 2,439,054, Apr. 6.
Airplane, Tailless. W. H. Korff. 2,439,048, Apr. 6.
Air pump attachment for sewing machines. W. O. Runcie. 2,439,319, Apr. 6.
Alkyl cellulose stabilized with an N,N,dialkylated diamine. J. E. Jones. 2,438,975, Apr. 6.
Amplifier, Balanced. D. Blitz. 2,438,960, Apr. 6.
Amplifying coupling between a low resistance source and a high resistance circuit. W. H. Bussey. 2,439,072, Apr. 6.
Amusement device. H. K. Sandell. 2,439,104, Apr. 6.
Antenna mounting. J. W. Shur. 2,439,061, Apr. 6.
Antenna mounting bracket. J. W. Shur. 2,439,062, Apr. 6.
Apparatus for contouring metal. N. O. Brantly. 2,439,234, Apr. 6.
Apparatus for dehydration of oil. L. C. Manning. 2,439,177, Apr. 6.
Apparatus for electroplating rings and discs. H. M. Bell, III. 2,438,885, Apr. 6.
Apparatus for flushing foreign matter from bearings. D. G. Roos. 2,439,187, Apr. 6.
Apparatus for heating sensitive materials. R. E. Meade and J. F. Crews. 2,439,260, Apr. 6.
Apparatus for indicating pressure at a distance. F. T. Linstrom. 2,439,092, Apr. 6.
Apparatus for lasting footwear. J. S. Kamborian. 2,438,917, Apr. 6.
Apparatus for making artificial teeth. H. Kohrman. 2,439,138, Apr. 6.
Apparatus for melting plastic compositions. W. F. Middlestadt. 2,439,367, Apr. 6.
Apparatus for preparing finely divided fibre stock for fluid conveyance. G. W. Luhrmann. 2,439,014, Apr. 6.
Apparatus for the control of highway crossing signals. C. F. Lower. 2,439,013, Apr. 6.
Apparatus for transmitting intense vibrations for performing work. J. C. O'Connor. 2,439,219, Apr. 6.
Apparatus for treating yarn packages with fluids. W. A. Mulligan and W. Kernan. 2,439,314, Apr. 6.
Applicator, Teeth cleaning. H. R. Rathbun. 2,439,056, Apr. 6.
Applying and removing device, Garment bag. W. A. Shields. 2,439,148, Apr. 6.
Arrangement for translating devices, Protective. W. N. Gittings. 2,439,247, Apr. 6.
Assembling arcuate terminal banks. L. A. Bartelheim and M. W. Lane. 2,438,959, Apr. 6.
Attaching means. G. B. Du Bois. 2,439,161, Apr. 6.
Attenuator. E. Doucette. 2,439,160, Apr. 6.
Attitude gyro. R. L. Divoll. 2,439,358, Apr. 6.
Automatic adjustment for elevator brakes. A. M. Tarbox. 2,439,350, Apr. 6.
Automatic antitip device. A. S. Grzech and J. G. Debelius. 2,439,085, Apr. 6.
Automatic braking device. H. W. Allen. 2,438,887, Apr. 6.
Automatic clamping and deforming the ends of tubes. E. C. Hartley and H. E. Hull. 2,438,999, Apr. 6.
Automatic compensating gun control system. H. L. Donicht, R. F. Fischer, and E. B. Baldridge. 2,438,905, Apr. 6.
Automatic cutoff. W. Waterman. 2,439,116–18, Apr. 6.
Azo dyes from dihydroxy benzidine. F. Straub, J. Brassel, and P. Pieth. 2,439,153, Apr. 6.
Bag applying and removing device, Garment. W. A. Shields. 2,439,148, Apr. 6.
Ball game. T. J. Berning and M. P. Hoover. 2,439,333, Apr. 6.
Bearing: *See*—
  Resiliently mounted bearing. — Railway journal bearing.
Bearing mounting. J. E. Shafer. 2,439,269, Apr. 6.
Bearing testing machine. J. B. Bidwell and A. F. Underwood. 2,439,035, Apr. 6.
Belt, Trouser waist grip. A. D. Grisanti. 2,439,339, Apr. 6.
Belts, Making endless. B. A. Evans. 2,439,043, Apr. 6.
Beta-fluoroethyl thiolacetate, Producing. E. K. Ellingboe. 2,439,203, Apr. 6.
Bitumen coated fibrous material, Making. C. M. Baskin 2,438,890, Apr. 6.
Blade container. G. Dalkowitz. 2,439,243, Apr. 6.
Blower control device for suction cleaners. J. H. Nuffer and L. H. Latta. 2,439,182, Apr. 6.
Boot, Child's. H. E. Rosen. 2,438,978, Apr. 6.
Booth, Telephone. H. I. Beardsley and H. W. Meehan. 2,438,891, Apr. 6.
Box: *See*—
  Electrical outlet box.
Braced head dome valve. R. E. Cummings. 2,439,240, Apr. 6.
Bracket: *See*—
  Antenna mounting bracket.
Bracket for mounting antenna masts. J. W. Shur. 2,439,063, Apr. 6.
Breathing apparatus. P. E. Meidenbauer, Jr. 2,439,016, Apr. 6.
Brush attachment for mop handles. C. J. Larson. 2,439,174, Apr. 6.
Cable: *See*—
  High-frequency cable.
Calender mechanism for clocks, Detachable. B. H. Webb. 2,439,154, Apr. 6.
Camera, Two-film. W. D. Teague. 2,439,112, Apr. 6.
Can transfer and orienting mechanism. A. L. Christiansen. 2,439,075, Apr. 6.
Capacitor switch. R. C. Longfellow. 2,439,255, Apr. 6.
Car: *See*—
  Shuttle car.
Card punching and slotting machine, Combined. N. S. Welk. 2,439,029, Apr. 6.
Carrier for aircraft delivery. L. Brown and L. Lacey. 2,439,236, Apr. 6.
Case: *See*—
  Jewel case. — Refrigerated display case.
Casing for enclosing photographic shutters to exclude moisture and dirt therefrom, Protective. D. C. Harvey. 2,439,087, Apr. 6.
Casting reel. T. F. Horan. 2,439,298, Apr. 6.
Cathode-ray tube pulse demodulator system. E. Labin and D. D. Grieg. 2,438,928, Apr. 6.
Cellulose acetate fibers having wool dyeing properties and a spinning solution therefor. J. R. Caldwell. 2,439,074, Apr. 6.
Cellulose ester melt-coating composition. M. Salo and H. F. Vivian. 2,439,103, Apr. 6.
Cement, Thermoplastic lens. H. C. Thuline, W. F. Parsons, and G. P. Waugh. 2,438,953, Apr. 6.
Centrifugal fan. C. O. Bergstrom. 2,439,124, Apr. 6.
Chair: *See*—
  Retracting type theater chair.
Chair. H. V. Thaden. 2,439,322, Apr. 6.
Chopper, Field pick up hay. A. J. McCormack. 2,439,259, Apr. 6.
Circuit: *See*—
  Condenser discharge control circuit. — Timing circuit.
  Electrical circuit. — Vibrator circuit.
  Servomotor control circuit.
Circuit breaker contact bar, Insulated reinforced. H. C. Graves, Jr. 2,439,084, Apr. 6.
Circuits for highway crossing signals, Coded track. A. L Jerome. 2,439,006, Apr. 6.
Clamp: *See*—
  Hot clamp.
Clamp. J. W. King and J. J. McNamee. 2,439,364, Apr. 6.
Clamping fixture for work-benches, Adjustable. V. Spinnler. 2,439,151, Apr. 6.
Clamping holder for screws, bolts, and the like. W. E. Billman. 2,438,989, Apr. 6.
Cleaning apparatus, Lint. A. S. McGinnis and H. Berry. 2,439,179, Apr. 6.
Cleaning machine, Surface. O. T. Bloom. 2,439,334, Apr. 6.
Clip: *See*—
  Floor clip. — Safety clip.
Closure. W. D. Elsas, P. Lowengardt, and A. Scheftel. 2,438,906, Apr. 6.
Cloth, Bath. E. Hickman. 2,439,249, Apr. 6.
Clothes-washing machine having reciprocating clothes receptacle with restricted passageway. A. D. Lund. 2,439,215, Apr. 6.
Clutch: *See*—
  Impact clutch.
Clutch and brake mechanism. G. E. Jones. 2,439,134, Apr. 6.

Coating with polyvinyl alcohol. H. C. Staehle. 2,439,108, Apr. 6.
Collapsible display frame. E. M. Roach. 2,439,022, Apr. 6.
Collar shaping device. V. A. Herr. 2,439,088, Apr. 6.
Color couplers, Open chain active methylene. A. Weissberger and H. D. Porter. 2,439,352, Apr. 6.
Column, Building. J. S. Donahue and G. E. Strehan. 2,439,129, Apr. 6.
Comb. H. E. Rhodes. 2,438,945, Apr. 6.
Combination lock. G. T. Mason. 2,439,140, Apr. 6.
Communication system employing pulse frequency reduction for signaling, Pulse. E. M. Deloraine and D. D. Grieg. 2,438,903, Apr. 6.
Communication system, Pulse code modulation. W. M. Goodall. 2,438,908, Apr. 6.
Composition for igniter for rectifiers. G. H. Fetterley. 2,439,290, Apr. 6.
Composition of butadiene-acrylonitrile copolymer and styrene-acrylonitrile copolymer. L. E. Daly. 2,439,292, Apr. 6.
Computer. W. B. Klemperer and E. H. Pier. 2,439,365, Apr. 6.
Condensation derivatives of rubber. W. H. Nicol. 2,439,369, Apr. 6.
Condenser: *See*—
  Variable condenser.
Condenser discharge control circuit. S. Frankel and M. Silver. 2,438,907, Apr. 6.
Connector. L. L. Mallard. 2,439,176, Apr. 6.
Connector for sliding members and the like, Adjustable. J. D. Coney. 2,439,078, Apr. 6.
Constant speed propeller simulating aviation trainers. K. A. Kail. 2,439,168, Apr. 6.
Container: *See*—
  Blade container.
  Crayon container.
  Self-sealing container.
Container. M. I. Williamson. 2,438,982, Apr. 6.
Container for electric irons, Storage. R. L. Hurley. 2,439,004, Apr. 6.
